Using this list of available services, you can quickly enable or disable firmware components such as Media Player, Extra Font Services, etc. By deactivating e.g. unused features, you can save storage space.

If a service was disabled, the associated session type will no longer be available when the system is restarted. Existing sessions will no longer be shown but will not be deleted either.

For further information, see [Disabling Features to Reduce Firmware Size](#)(see page 376).

A disabled session type will not be updated during a firmware update. Therefore, you should disable unused services in order to speed up update processes.

#### Features with Limited Support

A number of products feature functions with “limited support”. These functions are offered ‘as is’ without any warranty. Any support for these functions is provided on a non-binding, “best effort” basis.

### 3.14.8 Registry

Menu path: **System > Registry**

In the registry, you can change virtually any firmware parameter. You will find information on the individual items in the tooltips.

Changes to the registry should only be made by experienced administrators. Incorrect parameter settings can easily destroy the configuration and cause the system to crash. In cases like these, the only way to restore the functionality is to reset the device to the factory defaults!

**Search parameter....:** Search for setup parameters in the registry.

- **Search criterion:** Criterion for searching.

The following can be selected:

- Parameter name

- **Parameter name:** Any search term.

- Logical search restriction:

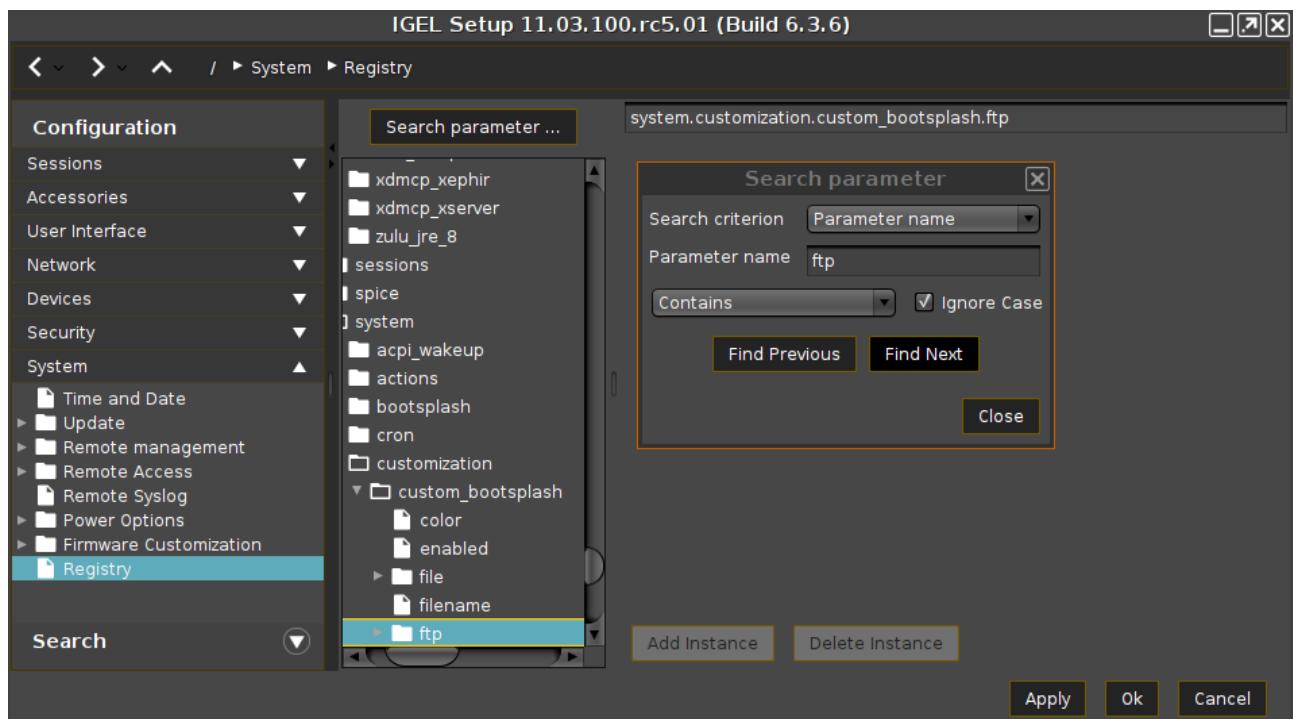

- Contains
- Exact match
- Use regular expressions

- **Ignore case**

- **Find previous:** Go back if there are a number of hits.

- **Find next:** Go forwards if there are a number of hits.

Example: If you would like to find the FTP settings for updating the Linux firmware, you can search for the parameter name `ftp`. The parameter found in the registry structure is highlighted. Click on **Find next** until you find your desired parameter:

**Add instance:** Adds instances. This is possible with parameters which have a percent sign as their last character, e.g. nfymount%. The new instances are numbered consecutively: nfymount1, nfymount2 etc.

**Delete instance:** Deletes a previously added instance.

## 4 UD Pocket (UDP) Reference Manual

This reference manual applies to **UD Pocket<sup>350</sup>** and **UD Pocket2<sup>351</sup>**.

- General Information(see page 1284)
- Devices Supported by OSC and UD Pocket(see page 1284)
- Setup and Startup(see page 1291)

### 4.1 IGEL TechChannel

Sorry, the widget is not supported in this export.  
But you can reach it using the following URL:

<https://www.youtube.com/watch?v=iURhgESSn6k>

### 4.2 General Information

UD Pocket boots IGEL OS on your computer. However, it does not make any changes to the operating system already installed on the hard disk, SSD or flash storage - UD Pocket runs entirely from the USB stick.

UD Pocket has a partition which contains this manual and is readable under Windows.

UD Pocket, like all IGEL operating systems, can be managed centrally using the Universal Management Suite (UMS).

This document describes setting up and starting UD Pocket on your computer.

UD Pocket uses IGEL OS, which is described in detail in the [IGEL OS Reference Manual](#)(see page 750).

### 4.3 Devices Supported by OSC and UD Pocket

#### 4.3.1 Core Requirements

- CPU with 64-bit support
- CPU speed ≥ 1 GHz
- ≥ 2 GB memory (RAM)

With devices that have 2 GB RAM and shared video memory, a maximum of 512 MB may be used as video memory.

<sup>350</sup> <https://kb.igel.com/display/hardware/Technical+Specification+UD+Pocket>

<sup>351</sup> <https://kb.igel.com/display/hardware/Technical+Specification+UD+Pocket2>

- Recommended: ≥ 4 GB; minimum 2 GB storage

**Storage Requirements for IGEL OS 11.04 or Higher**

IGEL OS 11.04.100 or higher requires at least 2.4 GB storage if the full feature set is applied. Thus, the feature set must be modified accordingly; for more information, see Error: "Not enough space on local drive" when Updating to IGEL OS 11.04 or Higher(see page 231).

- No VIA graphic adapter; VIA graphics support is discontinued in IGEL OS.
- Legacy Bios and EFI/UEFI are supported.

### 4.3.2 Devices Officially Supported by OSC and UD Pocket with IGEL OS 11

The following list only includes those devices that are **tested by IGEL** (with each major release of IGEL OS). By no means it implies that the devices which are not included in this list but meet the [core requirements](#)(see page 1284) will not function with IGEL OS.

Further supported devices can be found on the [IGEL Ready](#)<sup>352</sup> Showcase at <https://www.igel.com/ready/showcase-categories/endpoints/>.

Integrated drivers and supported peripherals are listed in the [Third-Party Hardware Database](#)<sup>353</sup>. For more solutions compatible with IGEL OS, see [Partner Solutions](#)<sup>354</sup>.

For some of the devices listed here, Flash memory must be extended to ≥ 2 GB. For these devices, an appropriate note is added.

#### ADS-Tec

| SATELLITE R50  | Laptop/Notebook | 4 GB         | 500 GB  | Intel i3-6006U      | 11.01.100                      |

## 4.3.3 USB Memory Sticks That Can Be Used as Alternative UD Pocket Hardware

## DIGITTRADE

| Name        | Storage | Supported from IGEL OS Version |
|-------------|---------|--------------------------------|
| Kobra Stick | ≥ 4GB   | 11.05.133                      |

#### 4.3.4 Officially Supported Virtual Environments

- Tested with Ubuntu (64-bit) and default settings

Note that the use of a UD Pocket within a virtual machine is **not** supported by IGEL.

| Name                 | Memory (RAM) | Storage | Type  | Supported from IGEL OS Version |
|----------------------|--------------|---------|-------|--------------------------------|
| Oracle VM VirtualBox | ≥ 2 GB       | ≥ 4 GB  | Linux | 11.04.100                      |
| VMware Workstation   | ≥ 2 GB       | ≥ 4 GB  | Linux | 11.04.100                      |

\* Delock Adapter DP 1.2 to DVI does not work.

\*\* When using an additional 4k screen with this device, please edit the BIOS settings as follows:

1. Go to the **Chipset** screen.
2. Set **Integrated Graphics** to “Force”.
3. Set **UMA Frame Buffer Size** to “256M” or higher.

### 4.4 Setup and Startup

- Requirements(see page 1291)
- Boot Settings(see page 1291)
- Starting Your UD Pocket(see page 1292)

#### 4.4.1 Requirements

In order to use UD Pocket, your computer must meet the following requirements:

- 64-bit-capable CPU
- At least 2 GB RAM
- Intel, ATI/AMD or Nvidia graphics chip
- USB 3.0 or 2.0 port from which the computer can boot
- Ethernet or wireless adapter

You will find a detailed list of supported graphics and network chips in the [IGEL Linux 3rd Party Hardware Database](#)<sup>355</sup>

#### 4.4.2 Boot Settings

UD Pocket works on systems with BIOS and UEFI.

---

<sup>355</sup> <https://www.igel.com/linux-3rd-party-hardware-database/>

It is essential that your system supports booting from USB storage media. This may already be enabled, or you may have to enable it yourself. The required key presses for this may vary from vendor to vendor. However, here are some hints:

- ▶ While the device is booting, try pressing [F12] (in general), [F10] (Intel devices) or [F9] (Hewlett-Packard devices) in order to access a list of boot devices and select UD Pocket.
- ▶ If the above does not work, access the BIOS settings via pressing [Del], [F1] or [F2] during boot and activate booting from USB storage media and/or change the boot order.
- ▶ See the BIOS/UEFI documentation for your system for details of how to boot from USB storage media.

IGEL OS supports UEFI Secure Boot. Refer to the manual of your device's manufacturer to learn whether your device supports Secure Boot and how to enable it. Enabling Secure Boot often consists of two steps. First, the boot mode has to be changed to UEFI Boot in the BIOS; after that, Secure Boot can be activated, also in the BIOS. How to check whether Secure Boot has been properly enabled you can learn [here](#).

If UD Pocket fails to boot in UEFI mode, try it in legacy/BIOS mode.

Do not remove UD Pocket from the computer until you have shut down the IGEL OS contained on it. Otherwise, you can damage the operating system on UD Pocket and lose your settings as well as data on other removable media.

#### 4.4.3 Starting Your UD Pocket

##### The First Boot Procedure

1. Plug the UD Pocket into a free USB slot of your device.
2. Turn on your device; if the device is already switched on, restart it.

##### Should the UD Pocket Boot-Up Fail

- ▶ If the device does not boot into UD Pocket, but into its pre-installed operating system instead, change the boot settings appropriately. For further information, see [Boot Settings](#)(see page 1291).

##### After the First Boot-Up

The Setup Assistant guides you through the basic configuration. For a detailed description of each step, see the [Setup Assistant](#)(see page 757) chapter in the IGEL OS manual.

## 5 IGEL OS Creator

- [IGEL OS Creator Manual](#)(see page 1293)
- [IGEL OS Creator Articles](#)(see page 1328)

### 5.1 IGEL OS Creator Manual

With the IGEL OS Creator, you can install IGEL OS 11 on any device that supports it. Moreover, you can use the IGEL OS Creator for recovering a broken installation of IGEL OS which is not able to boot anymore.

For rolling out IGEL OS via the IGEL OS Deployment Appliance, you need to have installed IGEL OS Deployment Appliance 11.0.

- [General Information](#)(see page 1293)
- [Devices Supported by IGEL OS 11](#)(see page 1293)
- [Licensing](#)(see page 1295)
- [Installation](#)(see page 1295)

#### 5.1.1 General Information

The IGEL OS Creator (OSC) software allows the migration of existing hardware to create a functionally standardized IGEL Workspace infrastructure. In the process, the existing operating system is replaced by IGEL OS. The devices can then be administered via the IGEL Universal Management Suite (UMS).

Installing the IGEL OS operating system via OSC destroys all data on the target device's mass storage device (hard disk, flash memory, SSD).

This manual describes the installation of IGEL OS 11 using OSC.

#### 5.1.2 Devices Supported by IGEL OS 11

##### IGEL Devices

##### IGEL UD (Universal Desktop)

| Product Line | Device Type | Hardware ID | 64 Bit | Memory | Storage | HW Video Acceleration |
|--------------|-------------|-------------|--------|--------|---------|-----------------------|
| UD2          | D220        | 40          | Yes    | 2 GB   | 4 GB    | Yes                   |
| UD2          | M250C       | 50          | Yes    | 2 GB   | 4 GB    | Yes                   |
| UD2          | M250C       | 51/52       | Yes    | 2 GB   | 8 GB    | Yes                   |

| Product Line          | Device Type | Hardware ID     | 64 Bit | Memory | Storage | HW Video Acceleration |
|-----------------------|-------------|-----------------|--------|--------|---------|-----------------------|
| UD3*(see page 1294)   | M340C       | 50              | Yes    | 2 GB   | 4 GB    | Yes                   |
| UD3                   | M340C       | 51              | Yes    | 2 GB   | 4 GB    | Yes                   |
| UD3                   | M350C       | 60              | Yes    | 4 GB   | 8 GB    | Yes                   |
| UD5                   | H830C       | 50              | Yes    | 2 GB   | 4 GB    | Yes                   |
| UD6                   | H830C       | 51              | Yes    | 2 GB   | 4 GB    | Yes                   |
| UD7                   | H850C       | 10              | Yes    | 4 GB   | 4 GB    | Yes                   |
| UD7***(see page 1294) | H850C       | 11              | Yes    | 4 GB   | 4 GB    | Yes                   |
| UD7                   | H860C       | 20              | Yes    | 8 GB   | 8 GB    | Yes                   |
| UD9                   | TC215B      | 40 / 41 (Touch) | Yes    | 2 GB   | 4 GB    | Yes                   |

\* IGEL UD3-LX 50 is officially supported up to IGEL OS 11.05, incl. private builds.

\*\*As of December 2019, IGEL UD7 model H850C is equipped with the AMD Secure Processor<sup>356</sup>; for further information, see [UD7 Model H850C](#)<sup>357</sup>.

## IGEL Zero

### Note on IZ Devices

The IZ devices listed below can be upgraded to IGEL OS 11. To upgrade your IZ devices to IGEL OS 11, please contact your IGEL sales representative. See also <https://www.igel.com/tradeup/> and [The IGEL OS 11 Trade-Up](#)<sup>358</sup>.

| Product Line | Device Type | Hardware ID | 64 Bit | Memory | Storage | UEFI Secure Boot Support | HW Video Acceleration |
|--------------|-------------|-------------|--------|--------|---------|--------------------------|-----------------------|
| IZ2          | D220        | 40          | Yes    | 2 GB   | 4 GB    | Yes                      | Yes                   |
| IZ3          | M340C       | 50          | Yes    | 2 GB   | 4 GB    | Yes                      | Yes                   |
| IZ3          | M340C       | 51          | Yes    | 2 GB   | 4 GB    | Yes                      | Yes                   |

<sup>356</sup> <https://kb.igel.com/display/securitysafety/AMD+Secure+Processor>

<sup>357</sup> <https://kb.igel.com/display/securitysafety/UD7+Model+H850C>

<sup>358</sup> <https://kb.igel.com/display/licensesmoreigelos11/The+IGEL+OS+11+Trade+up>

## Third-Party Devices

For an up-to-date list, see <https://kb.igel.com/os11-supported-hardware>.

### 5.1.3 Licensing

For information on licensing, see [IGEL Software License Overview<sup>359</sup>](#) and [Deploying Licenses<sup>360</sup>](#).

### 5.1.4 Installation

- [Create USB installation medium \(Windows\)](#)(see page 1295)
- [Create USB installation medium \(Linux\)](#)(see page 1298)
- [Create DVD installation medium](#)(see page 1299)
- [Boot Settings](#)(see page 1299)
- [Installation Procedure](#)(see page 1302)
- [Installation Procedure for Factory Images](#)(see page 1314)

#### Create USB installation medium (Windows)

1. Download the ZIP archive for OSC from our [download server<sup>361</sup>](#).
  - For new devices, use the standard installer (e. g. OSC\_11.01.100.zip).
  - For older devices or if you haven't been able to boot the installer at all, use the legacy installer (e. g. OSC\_11.01.100\_legacy.zip).
2. Unzip the contents into a local directory.
3. Connect a USB memory stick with at least 4 GB capacity to the computer.

All existing data on the USB memory stick will be destroyed.

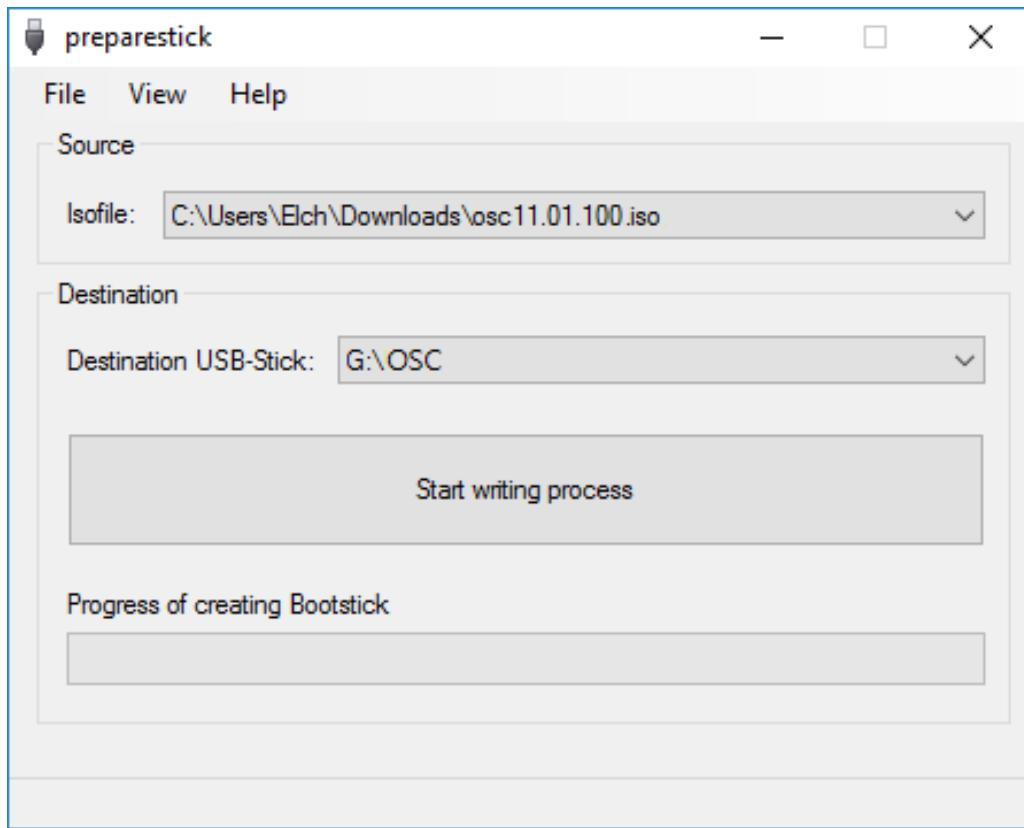

4. Double-click the preparestick.exe file from the unzipped directory.

If you are in the "administrators" group, the program will start after you have confirmed a dialog. If you are not in the "administrators" group, you must enter the administrator password to start the program.

<sup>359</sup> <https://kb.igel.com/display/licensesmoreigelos11/IGEL+Software+License+Overview>

<sup>360</sup> <https://kb.igel.com/display/licensesmoreigelos11/Deploying+Licenses>

<sup>361</sup> <https://www.igel.com/software-downloads/>

The dropdown menu **Isofile** shows the ISO files contained in the unzipped directory.

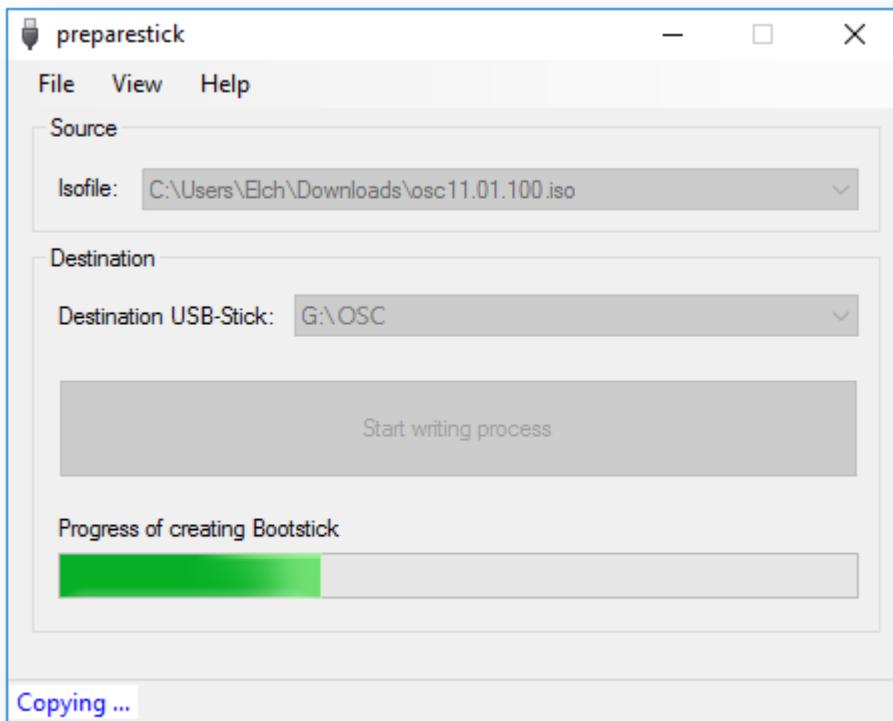

5. Under **Isofile**, select the appropriate ISO file, e. g. osc11.01.100.iso
6. Under **Destination USB stick**, select the USB storage medium on which you would like to save the installation data.

It is recommended that you only have one USB storage medium connected during this procedure. If you accidentally select the wrong medium, all data on it will be lost.

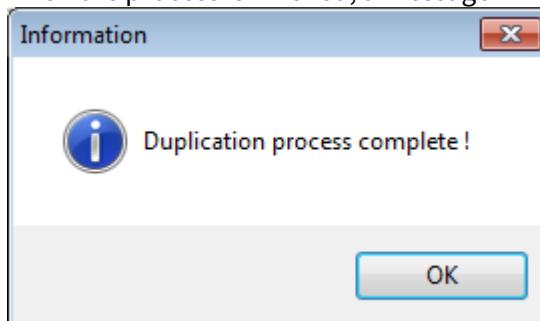

Generally speaking, the list of available USB storage media is refreshed automatically. If, however, you would like to refresh it manually, click on **View > Refresh USB Device List**.

7. Click on **Start writing process**.

In the program window, the progress of the process is shown.

When the process is finished, a message window is displayed.

8. Close the message window and the program.
9. After about 3 seconds, remove the USB memory stick.

If you remove the USB memory stick immediately, there is a possibility that the writing process has not been completed. In this case, the data on the memory stick gets corrupted.

## Create USB installation medium (Linux)

1. Download the ZIP archive for OSC from our [download server](#)<sup>362</sup>:
  - For new devices, use the standard installer (e. g. OSC\_11.01.100.zip).
  - For older devices or if you haven't been able to boot the installer at all, use the legacy installer (e. g. OSC\_11.01.100\_legacy.zip).
2. Unzip the contents into a local directory.
3. From this directory, you will need the ISO file (e. g. osc11.01.100.iso or osc11.01.100\_legacy.iso) to create a bootable medium.
4. Connect a USB memory stick with at least 4 GB capacity to the computer.

All existing data on the USB memory stick will be destroyed.

5. Open a terminal emulator and enter the command dmesg to determine the device name of the USB memory stick.

Example output:

```
[...]
[19514.742229] scsi 3:0:0:0: Direct-Access JetFlash Transcend 8GB 1100 PQ: 0
ANSI: 6
[19514.742805] sd 3:0:0:0: Attached scsi generic sg1 type 0
[19514.744688] sd 3:0:0:0: [sdb] 15425536 512-byte logical blocks: (7.89 GB/
7.35 GiB)
[19514.745370] sd 3:0:0:0: [sdb] Write Protect is off
[19514.745376] sd 3:0:0:0: [sdb] Mode Sense: 43 (0) 00 00 00
[19514.746040] sd 3:0:0:0: [sdb] Write cache: enabled, read cache: enabled,
doesn't support DPO or FUA
[19514.752438] sdb: sdb1
```

In this example, the device name searched for is /dev/sdb.

Ensure that you have determined the correct device name. Use of the dd command in the next step can destroy your operating system if you use the wrong device name.

6. The following command writes the installation data to the USB memory stick:  
`dd if=osc11.01.100.iso of=/dev/sdX bs=1M oflag=direct`  
 Replace sdX with the device name of the USB memory stick that you have determined.  
 When the dd command has terminated, you can see the terminal emulator input prompt again.
7. Wait for about 3 seconds after the dd command has terminated, and remove the USB memory stick.

If you remove the USB memory stick immediately, there is a possibility that the writing process has not been completed. In this case, the data on the memory stick gets corrupted.

<sup>362</sup> <https://www.igel.com/software-downloads/>

The USB memory stick for OSC installation is ready for use.

## Create DVD installation medium

The ISO file in the installation directory for OSC is a so-called hybrid image. It can not only be copied onto USB storage devices but can also be used to create a bootable DVD.

### Burn ISO Image (Windows)

1. In Explorer, open the directory that contains the ISO file.
2. Right-click on the ISO file.
3. Select **Burn disc image**.

### Burn ISO Image (Linux)

Under Linux, various burning programs with a graphical user interface or for the command line are available.

The [Ubuntu Wiki<sup>363</sup>](#) explains how to burn an ISO image onto a DVD using a number of programs.

## Boot Settings

OSC works on systems with BIOS and UEFI.

It is essential that your system supports booting from USB storage media or from DVD. This may already be enabled, or you may have to enable it yourself.

IGEL OS 11 supports UEFI Secure Boot. Refer to the manual of your device's manufacturer to learn whether your device supports Secure Boot and how to enable it. Enabling Secure Boot often consists of two steps. First, the boot mode has to be changed to UEFI Boot in the BIOS; after that, Secure Boot can be activated, also in the BIOS.

If IGEL OS fails to boot in UEFI mode, try it in legacy/BIOS mode. IGEL OS will then be installed in legacy/BIOS mode.

For older devices or if you haven't been able to boot the installer at all, use the legacy installer under <https://www.igel.com/software-downloads/workspace-edition/> > **OS 11 > OS CREATOR > LEGACY**.

## Third-Party Devices

The required key presses for this may vary from vendor to vendor. However, here are some hints:

- While the device is booting, try pressing [F12] (in general), [F10] (Intel devices) or [F9] (Hewlett-Packard devices) in order to access a list of boot devices and select UD Pocket.

<sup>363</sup> [https://help.ubuntu.com/community/BurningIsoHowto#Burning\\_from\\_Ubuntu](https://help.ubuntu.com/community/BurningIsoHowto#Burning_from_Ubuntu)

- ▶ If the above does not work, access the BIOS settings via pressing [Del], [F1] or [F2] during boot and activate booting from USB storage media and/or change the boot order.
- ▶ See the BIOS/UEFI documentation for your system for details of how to boot from USB storage media.

## IGEL Devices

### UD7 (H850C and H860C)

1. Power up the device while pressing the [Del] button repeatedly in rapid succession.
2. If a password prompt is shown, enter the BIOS password.
3. Select **Setup Utility**.
4. Select the **Boot** tab.
5. Set **USB Boot** to <ENABLED>.
6. Save the settings and exit.
7. Connect the USB stick to the device.
8. Reboot the device while pressing the [Del] button repeatedly in rapid succession.
9. Select **Boot Manager**.
10. Select the USB stick as the boot medium and press **Enter**.
11. You can continue with the [installation procedure](#)(see page 1302).

### UD6 (H830C)

1. Power up the device while pressing the [Del] button repeatedly in rapid succession.
2. Select **SCU**.
3. If a password prompt is shown, enter the BIOS password.
4. Select the **Boot** tab.
5. Set **USB Boot** to <ENABLED>.
6. Save the settings and exit.
7. Connect the USB stick to the device.
8. Reboot the device while pressing the [Del] button repeatedly in rapid succession.
9. Select **Boot Manager**.
10. Select the USB stick as the boot medium and press **Enter**.
11. You can continue with the [installation procedure](#)(see page 1302).

### UD5 (H830C)

1. Power up the device while pressing the [Del] button repeatedly in rapid succession.
2. If a password prompt is shown, enter the BIOS password.
3. Select the **Boot** tab.
4. Select **Boot Options Priorities**.
5. Select the entry for the USB stick and move it to the first position using the [+] key.
6. Save the settings and exit.
7. You can continue with the [installation procedure](#)(see page 1302).

## UD3 (M350C)

1. Power up the device while pressing the [Del] button repeatedly in rapid succession.
2. If a password prompt is shown, enter the BIOS password.
3. Select **Setup Utility**.
4. Select the **Boot** tab.
5. Set **USB Boot** to <ENABLED>.
6. Save the settings and exit.
7. Connect the USB stick to the device.
8. Reboot the device while pressing the [Del] button repeatedly in rapid succession.
9. Select **Boot Manager**.
10. Select the USB stick as the boot medium and press **Enter**.
11. You can continue with the [installation procedure](#)(see page 1302).

## UD3 (M340C)

1. Power up the device while pressing the [Del] button repeatedly in rapid succession.
2. If a password prompt is shown, enter the BIOS password.
3. Select the **Boot** tab.
4. Set **USB Boot** to <ENABLED>.
5. Select **Legacy > Boot Type Order**.
6. Select **USB** and move it to the first position using the [+] key.
7. Save the settings and exit.
8. You can continue with the [installation procedure](#)(see page 1302).

## UD2 (M250C)

1. Power up the device while pressing [Del] button repeatedly in rapid succession.
2. Select **SCU**.
3. If a password prompt is shown, enter the BIOS password.
4. Select the **Boot** tab.
5. Set **USB Boot** to <ENABLED>.
6. Save the settings and exit.
7. Connect the USB stick to the device.
8. Reboot the device while pressing the [Del] button repeatedly in rapid succession.
9. Select **Boot Manager**.
10. Select the USB stick as the boot medium and press **Enter**.
11. You can continue with the [installation procedure](#)(see page 1302).

## UD2 (D220)

1. Power up the device while pressing the [F2] (older devices) or [Del] (newer devices) button repeatedly in rapid succession.
2. Select **SCU**.
3. If a password prompt is shown, enter the BIOS password.
4. Select the **Boot** tab.
5. Set **USB Boot** to <ENABLED>.

6. Save the settings and exit.
7. Connect the USB stick to the device.
8. Reboot the device while pressing the [F2] or [Del] (newer devices) button repeatedly in rapid succession.
9. Select **Boot Manager**.
10. Select the USB stick as the boot medium and press **Enter**.
11. You can continue with the [installation procedure](#)(see page 1302).

#### UD9 (TC215B)

1. Power up the device while pressing the [F2] button repeatedly in rapid succession.
2. If a password prompt is shown, enter the BIOS password.
3. Select the **Boot** tab.
4. Select **Boot Option Priorities**.
5. Select the entry for the USB stick and move it to the first position using the [+] key.
6. Save the settings and exit.
7. You can continue with the [installation procedure](#)(see page 1302).

### Installation Procedure

This article describes the regular installation procedure for single devices with the IGEL OS Creator (OSC). If you are an IGEL third-party endpoint partner (i.e. hardware manufacturer, independent hardware vendor, reseller) that has a factory ID from IGEL, please refer to [Installation Procedure for Factory Images](#)(see page 1314).

The installation will overwrite all existing data on the target drive.

1. Connect the prepared USB memory stick to the target device and switch the target device on.

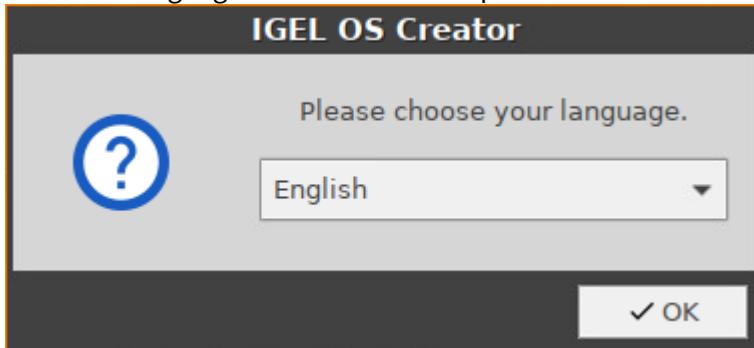

2. Select one of the following options from the boot menu:

- **Standard Installation + Recovery:** Boots the system with just a few messages from the USB memory stick and launches the installation program. (Default)
- **Verbose Installation + Recovery:** Boots the system from the USB memory stick and shows the Linux boot messages in the process.
- **Failsafe Installation + Recovery:** Fallback mode to be used if the graphical boot screen cannot be displayed.
- **Memory Test:** Memory test, only available in legacy/BIOS mode. This option does not carry out an installation.
- **EFI Debug Shell:** Available only in UEFI boot mode. If the hardware in use is EFI-capable, boot problems can be analyzed with that.

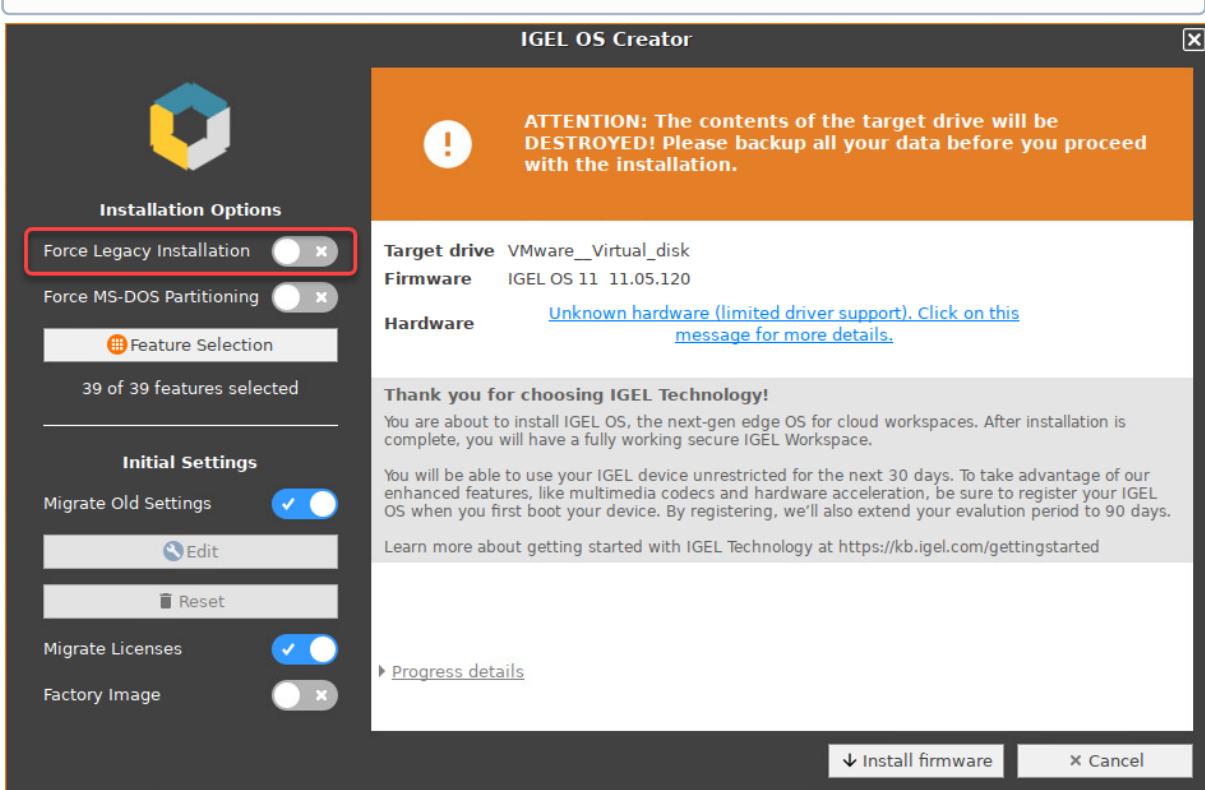

3. Select the language for the installation process.

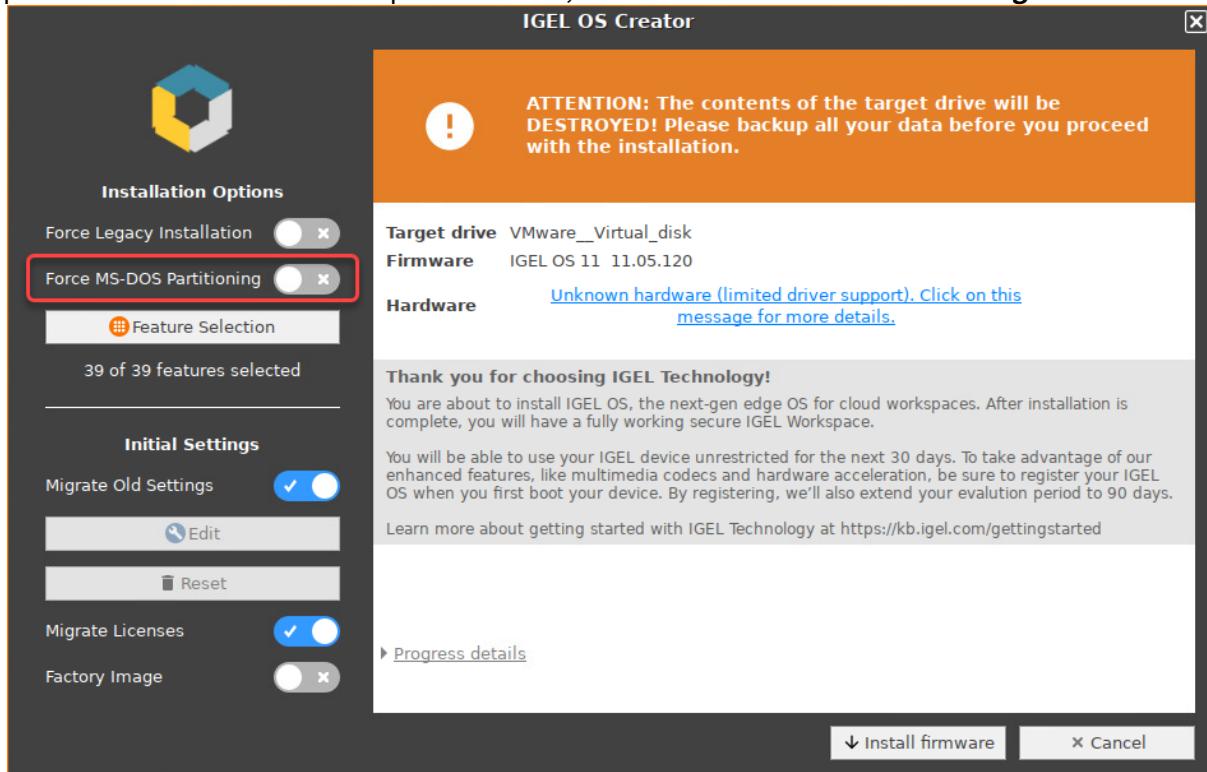

4. Optional, only available if your device has booted in UEFI mode: If you want to install the legacy/BIOS version of IGEL OS 11, activate **Force Legacy Installation**.

If you have activated **Force Legacy Installation**, remember to set the system to legacy/BIOS mode after installation.

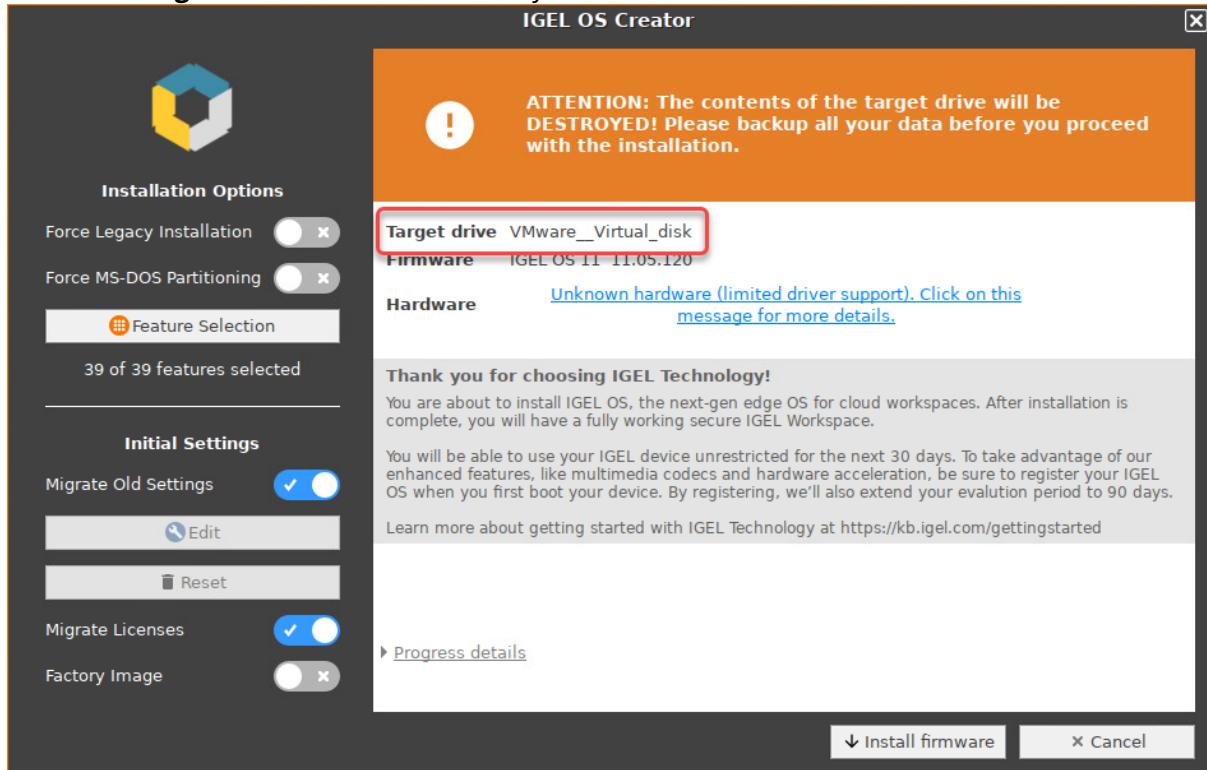

5. Optional, only available if your device has booted in UEFI mode: If you want to use an MS-DOS partition table instead of a GPT partition table, activate **Force MS-DOS Partitioning**.

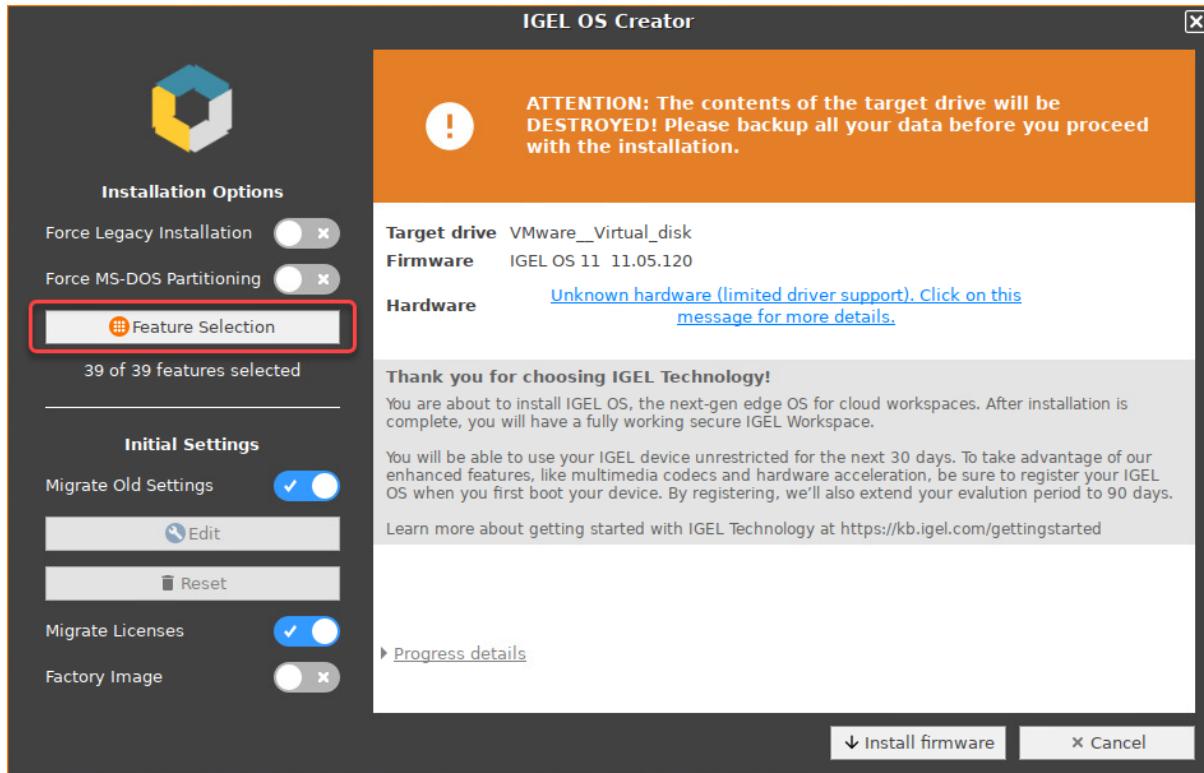

6. Check the **Target drive** to ensure that the system is installed on the desired drive.

7. If you want to exclude features of IGEL OS, e.g. to save storage space, click **Feature Selection** and edit the settings as required.

**Feature Selection**

Disk size 17.2 GB, firmware size 2.7 GB

Select the set of features to be installed on the target device.

All      None      Total size of all features: 1.9 GB

| Install                             | Feature                              | Size     |
|-------------------------------------|--------------------------------------|----------|
| <input checked="" type="checkbox"/> | Citrix ICA                           | 301.7 MB |
| <input checked="" type="checkbox"/> | Imprivata                            | 273.4 MB |
| <input checked="" type="checkbox"/> | Local browser (Chromium)             | 198.7 MB |
| <input checked="" type="checkbox"/> | VMware Horizon                       | 137.6 MB |
| <input checked="" type="checkbox"/> | Local Browser (Firefox)              | 133.7 MB |
| <input checked="" type="checkbox"/> | NVIDIA graphics driver               | 132.9 MB |
| <input checked="" type="checkbox"/> | Windows Virtual Desktop Client (WVD) | 93.6 MB  |
| <input checked="" type="checkbox"/> | IBM i Access Client Solutions        | 76.0 MB  |
| <input checked="" type="checkbox"/> | VirtualBox                           | 66.8 MB  |
| <input checked="" type="checkbox"/> | Cisco JVDI client                    | 64.7 MB  |
| <input checked="" type="checkbox"/> | Zoom VDI                             | 49.5 MB  |
| <input checked="" type="checkbox"/> | Cisco Webex Teams VDI                | 45.9 MB  |

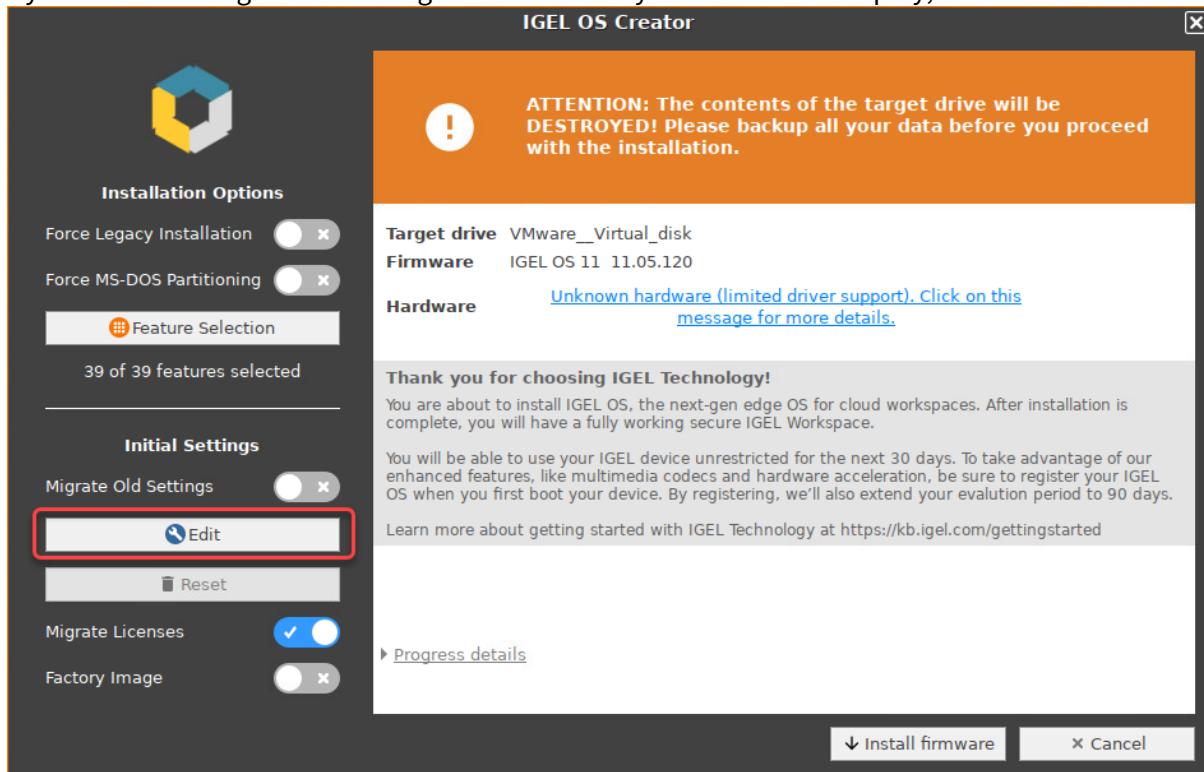

✓ OK

A screenshot of a software window titled "Feature Selection". It displays a message about disk and firmware sizes, a note to select features for installation, and two buttons ("All" and "None"). Below is a table listing installed features with their sizes. The table has columns for "Install" (checkboxes), "Feature" (list items), and "Size" (MB values). A "Total size of all features: 1.9 GB" summary is shown at the top right. An "OK" button is at the bottom right.

- **All:** Select all features
- **None:** Select no feature
- **Feature:** Sort the list alphabetically
- **Size:** Sort the list by the memory requirements of the features

8. If you want to change initial settings for the devices you are about to deploy, click **Edit**.

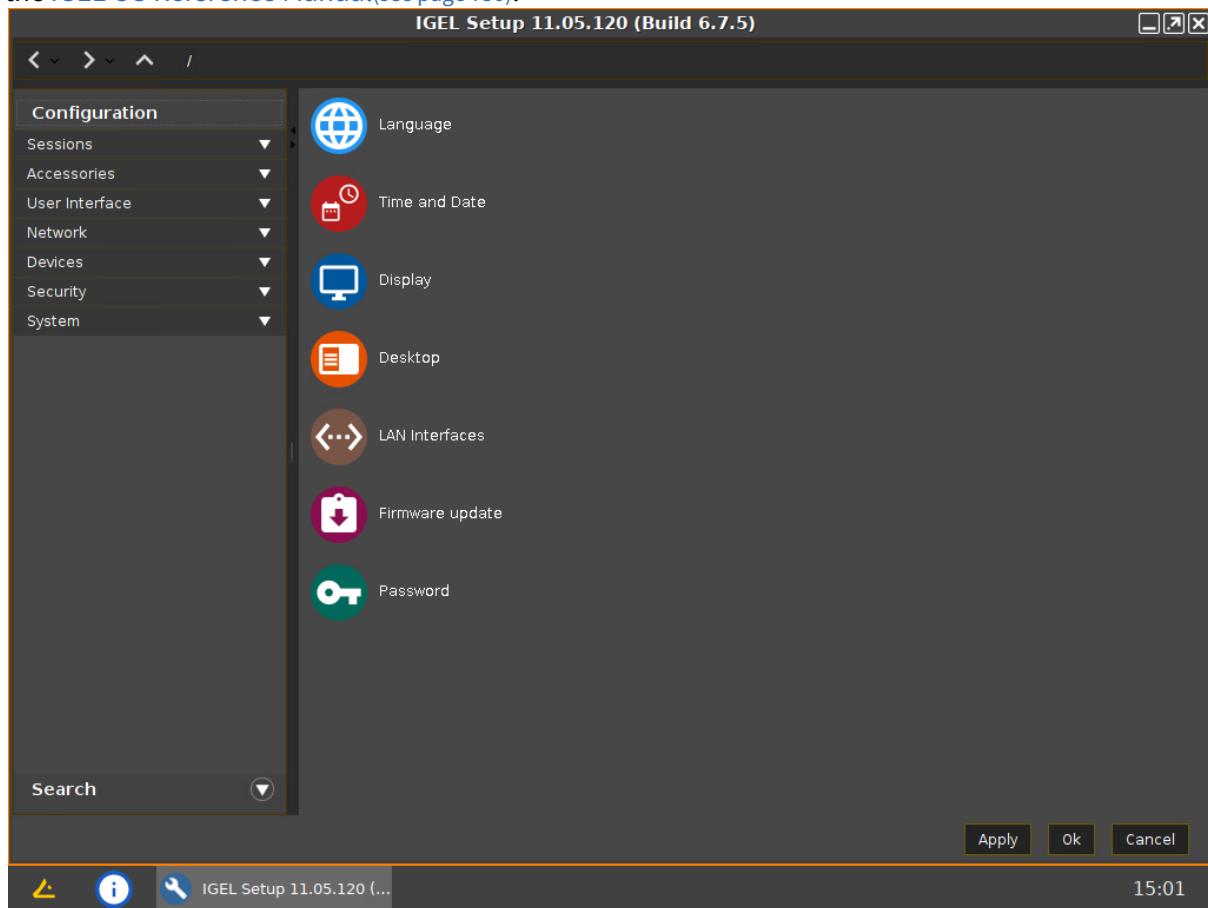

The IGEL Setup opens, enabling you to change the settings in the same way as with a regular IGEL OS installation.

The changes are stored on the USB memory stick from which the IGEL OS Creator (OSC) is executed. When you use this USB memory stick for subsequent OSC installations, your custom settings will be re-used. This allows you to easily create a number of IGEL OS installations with custom settings.

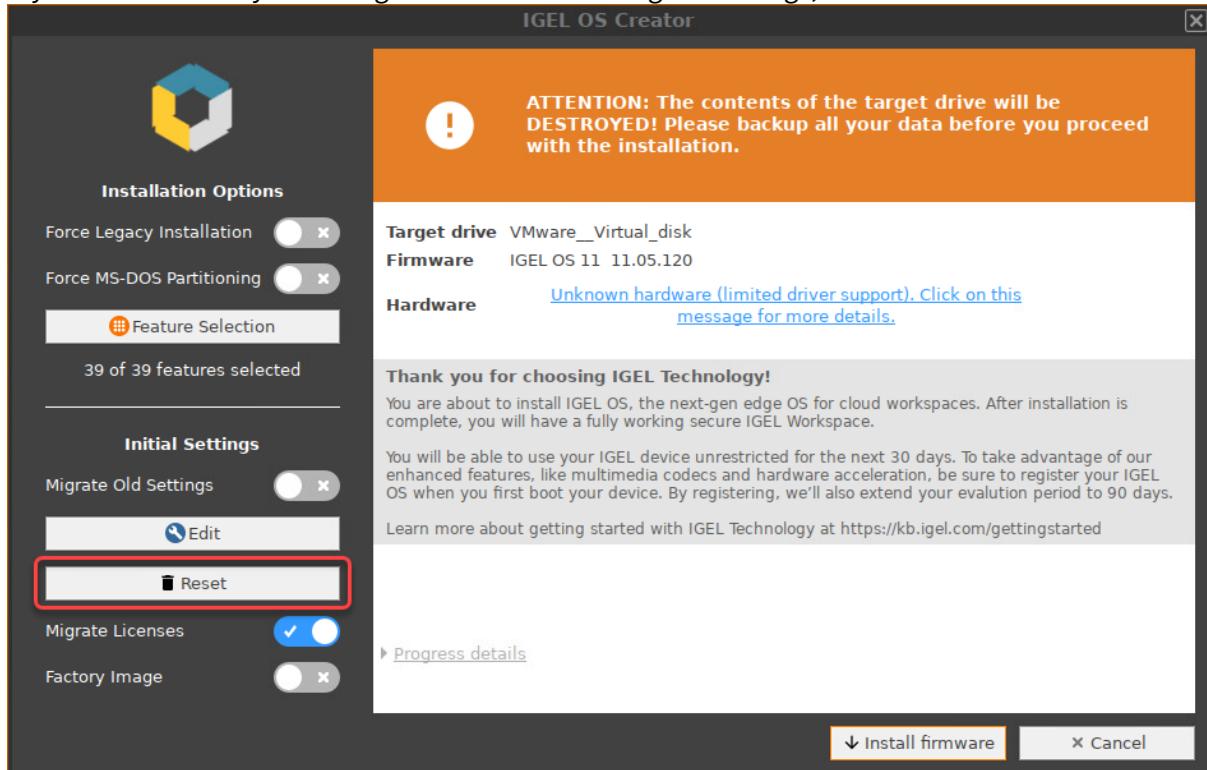

For details about the settings, see the chapters [Setup](#)(see page 772) and the subsequent chapters in the [IGEL OS Reference Manual](#)(see page 750).

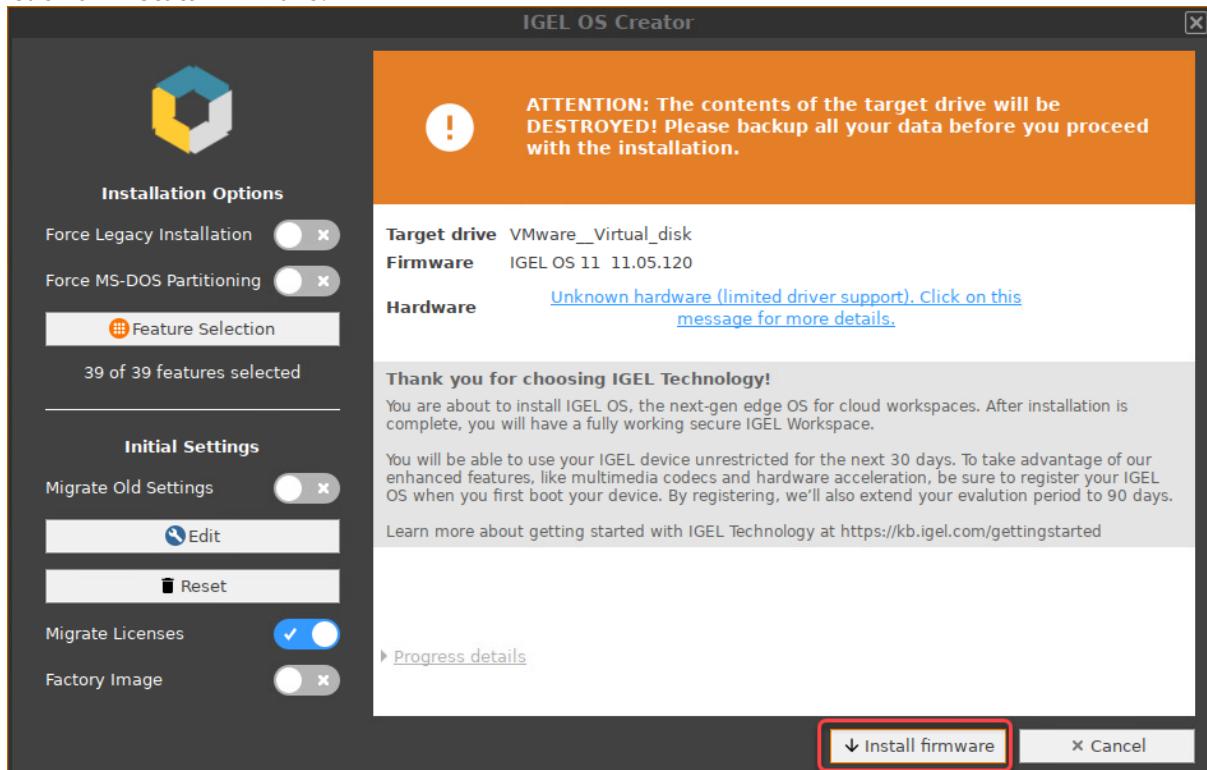

9. If you want to undo your changes and restore the original settings, click **Reset**.

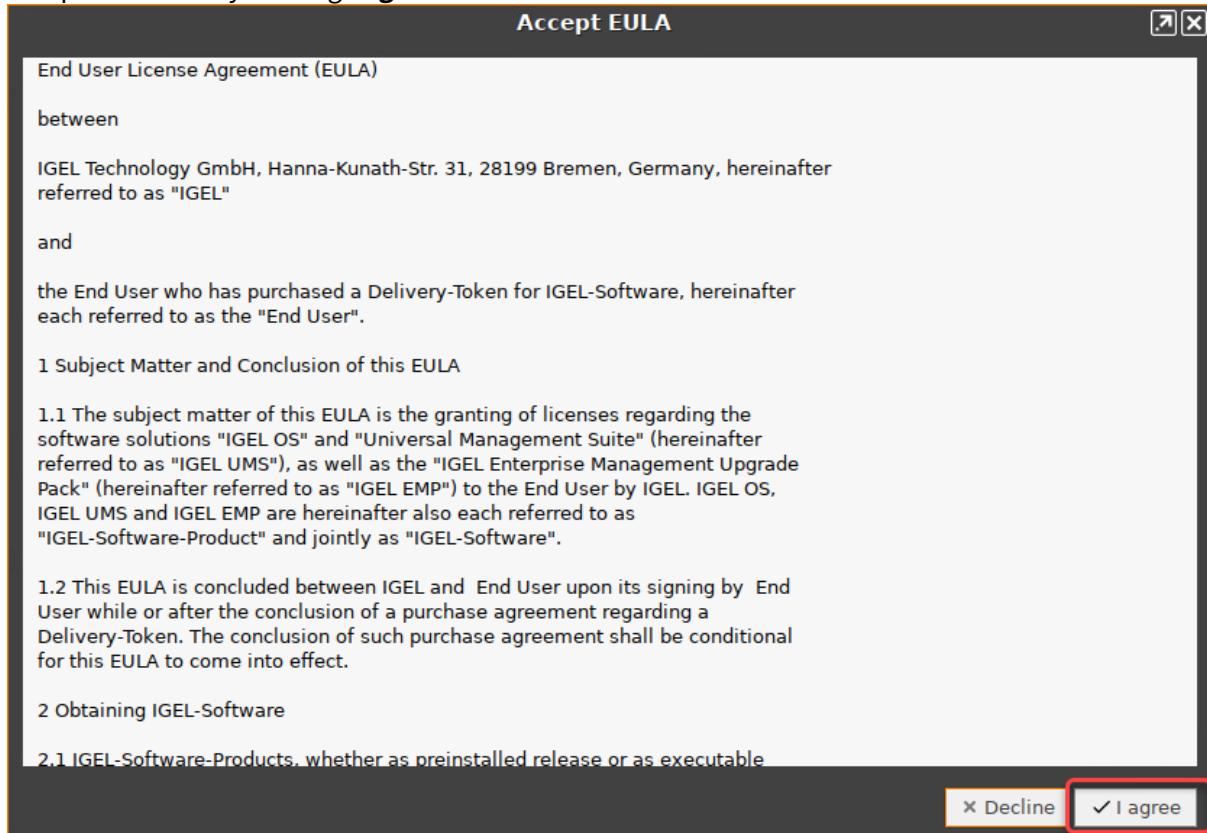

10. Click on **Install firmware**.

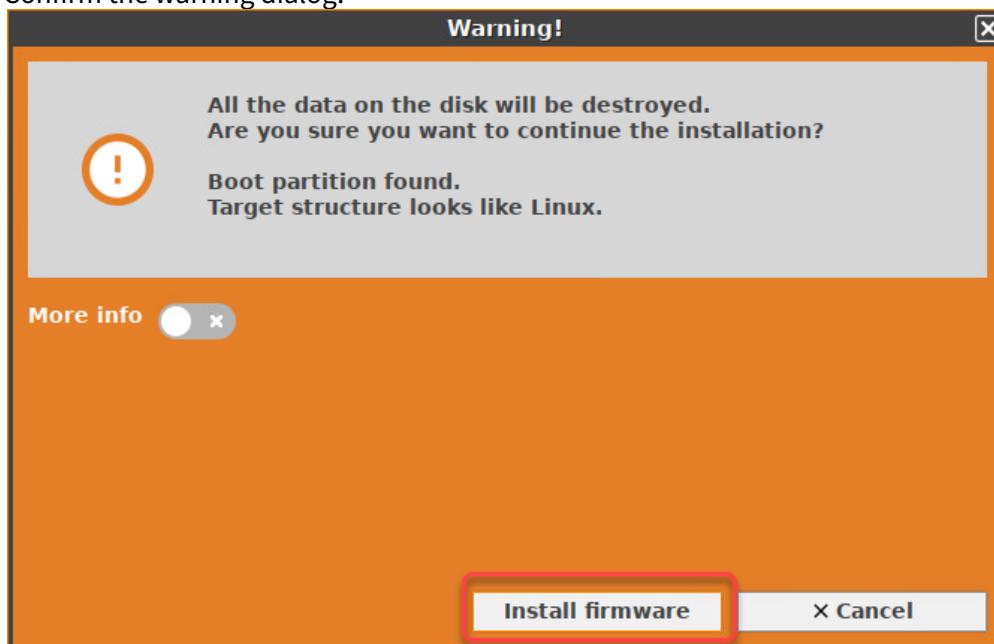

11. Accept the **EULA** by clicking **I agree**.

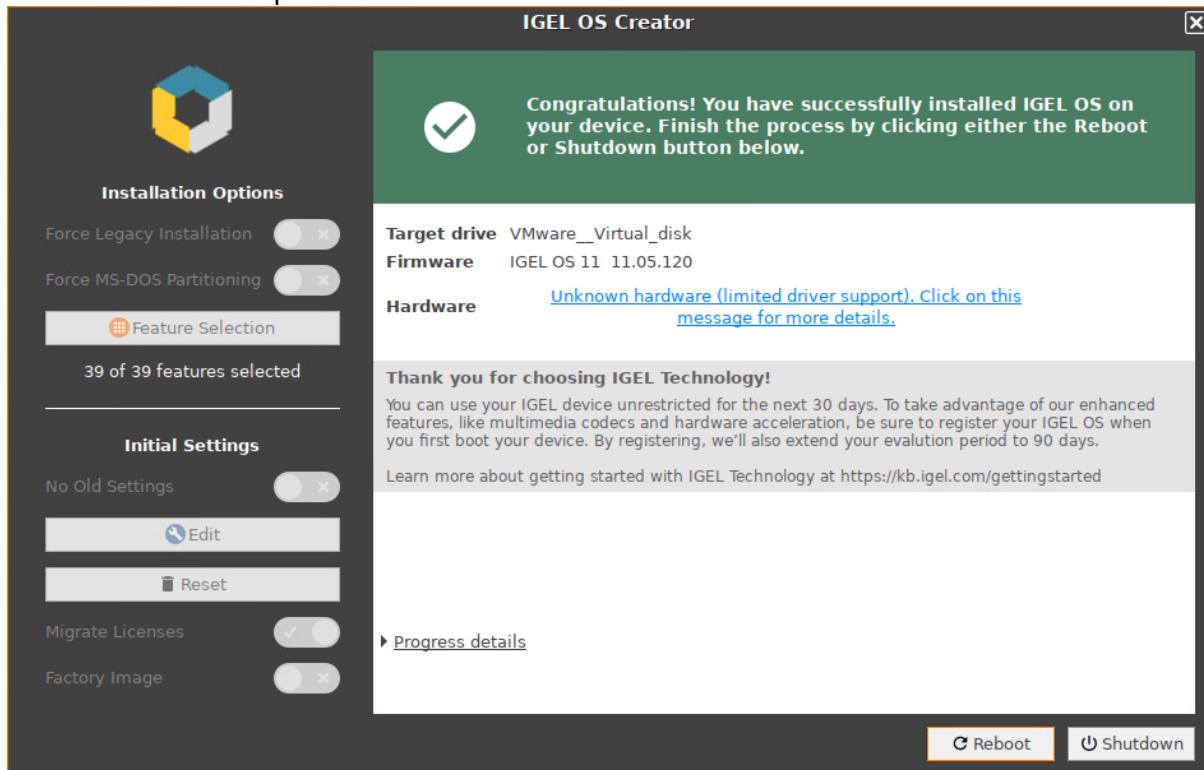

12. Confirm the warning dialog.

The installation program will install IGEL OS 11 on the target drive. If you see the success message,

the installation is complete.

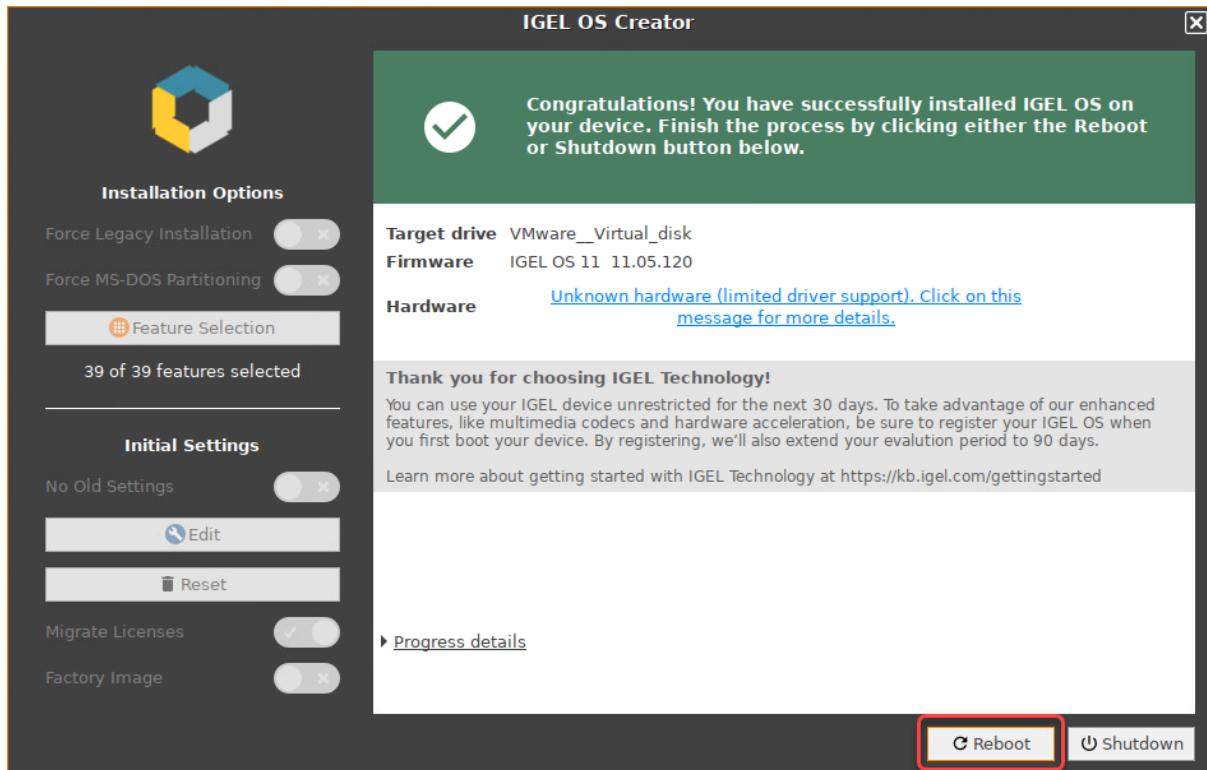

13. Detach any external network adapters from the device.

In this way, you ensure that the unit ID for the device is derived from the built-in network adapter. The unit ID will be saved on the device persistently, regardless of any external network adapter that may be used in the future. This is important for licensing.

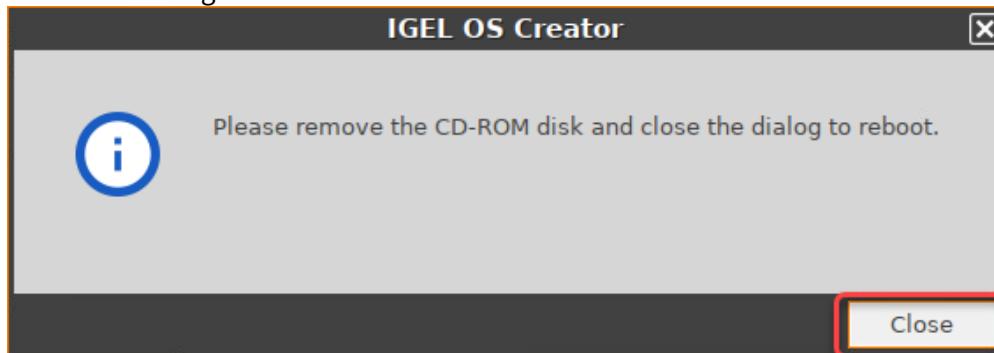

**14. Click on Reboot.**

15. Remove the USB memory stick.

16. Close the message window.

The system will shut down and then boot IGEL OS 11.

### Installation Procedure for Factory Images

The installation will overwrite all existing data on the target drive.

#### Preparing the Image

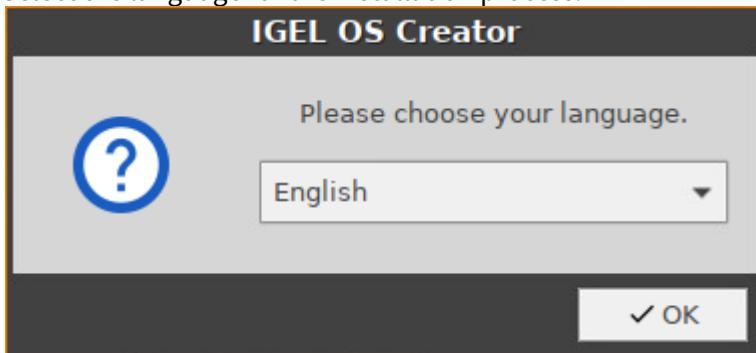

1. Connect the prepared USB memory stick to the target device and switch on the target device.

2. Select **Standard Installation + Recovery** or **Verbose Installation + Recovery**.

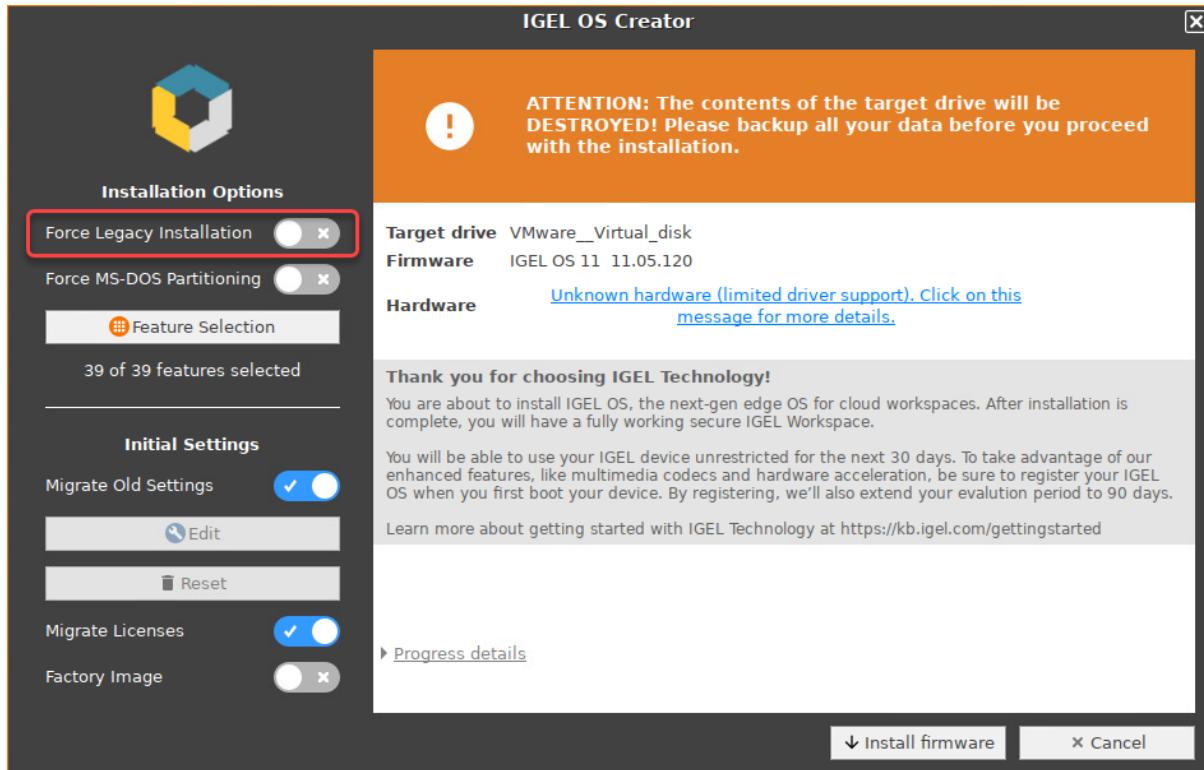

3. Select the language for the installation process.

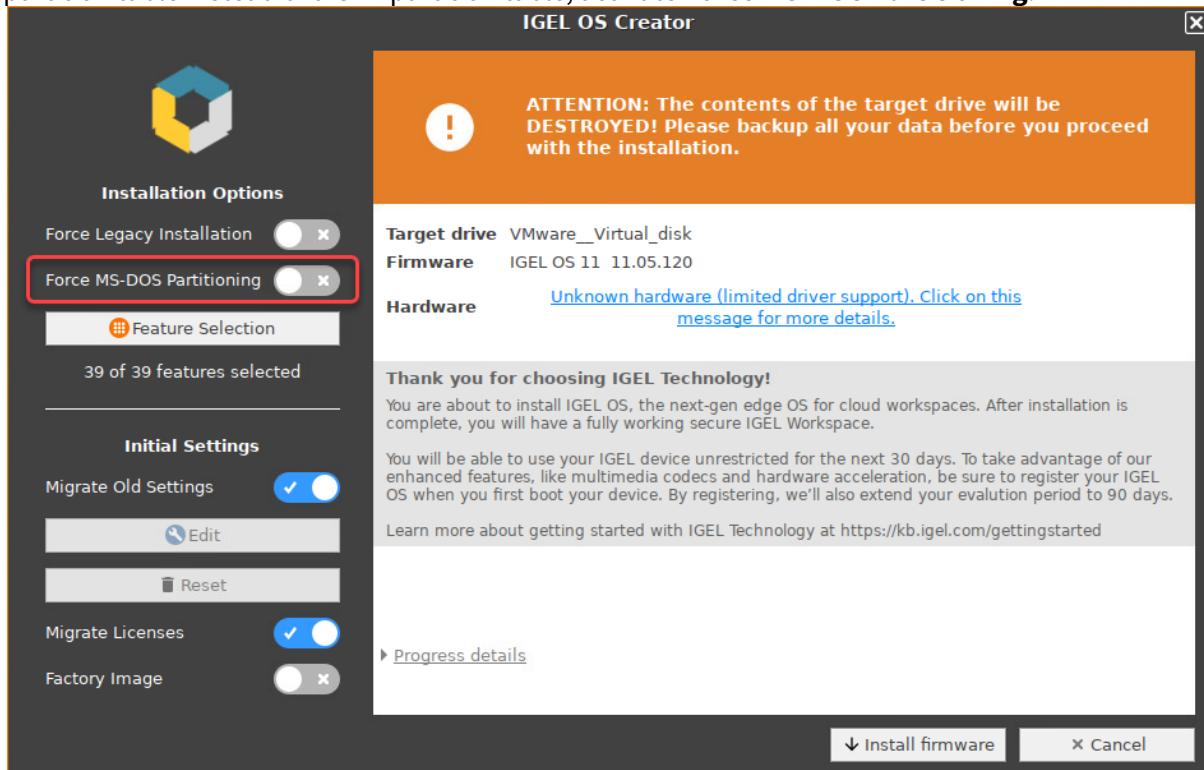

The installation program **IGEL OS Creator** opens. Here, you can configure settings for the installation process and start it.

4. Optional; only available if your device has booted in UEFI mode: If you want to install the legacy/BIOS version of IGEL OS 11, activate **Force Legacy Installation**.

If you have activated **Force Legacy Installation**, remember to set the system to legacy/BIOS mode after installation.

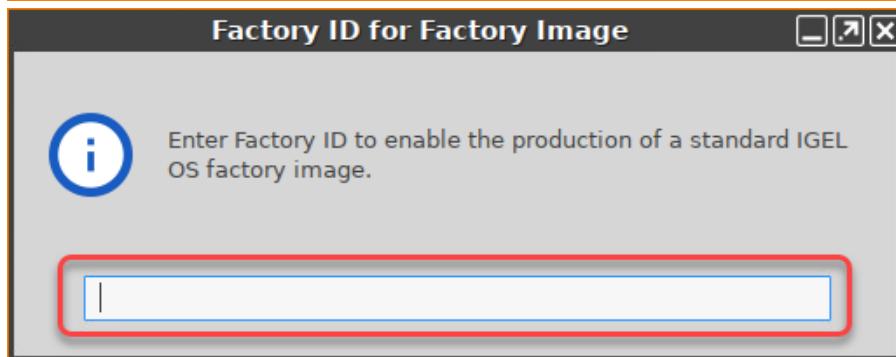

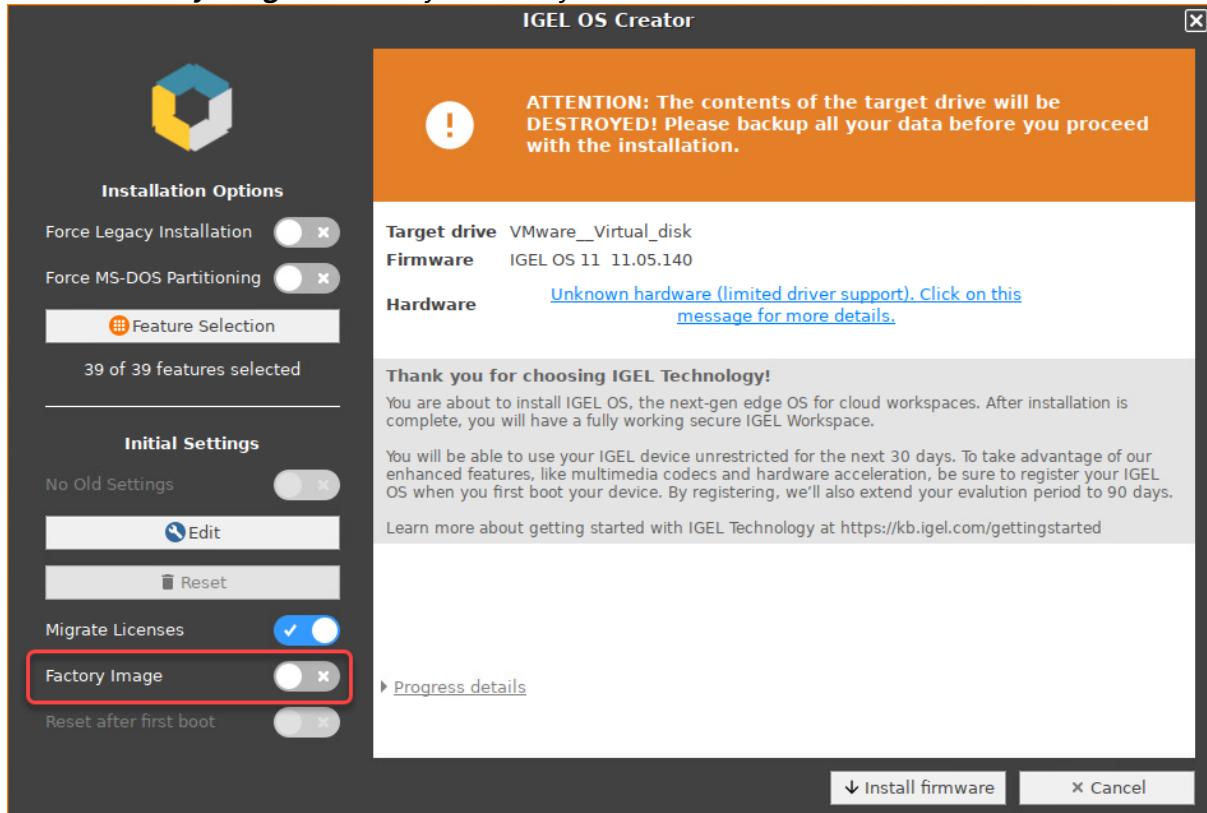

5. Optional; only available if your device has booted in UEFI mode: If you want to use an MS-DOS partition table instead of a GPT partition table, activate **Force MS-DOS Partitioning**.

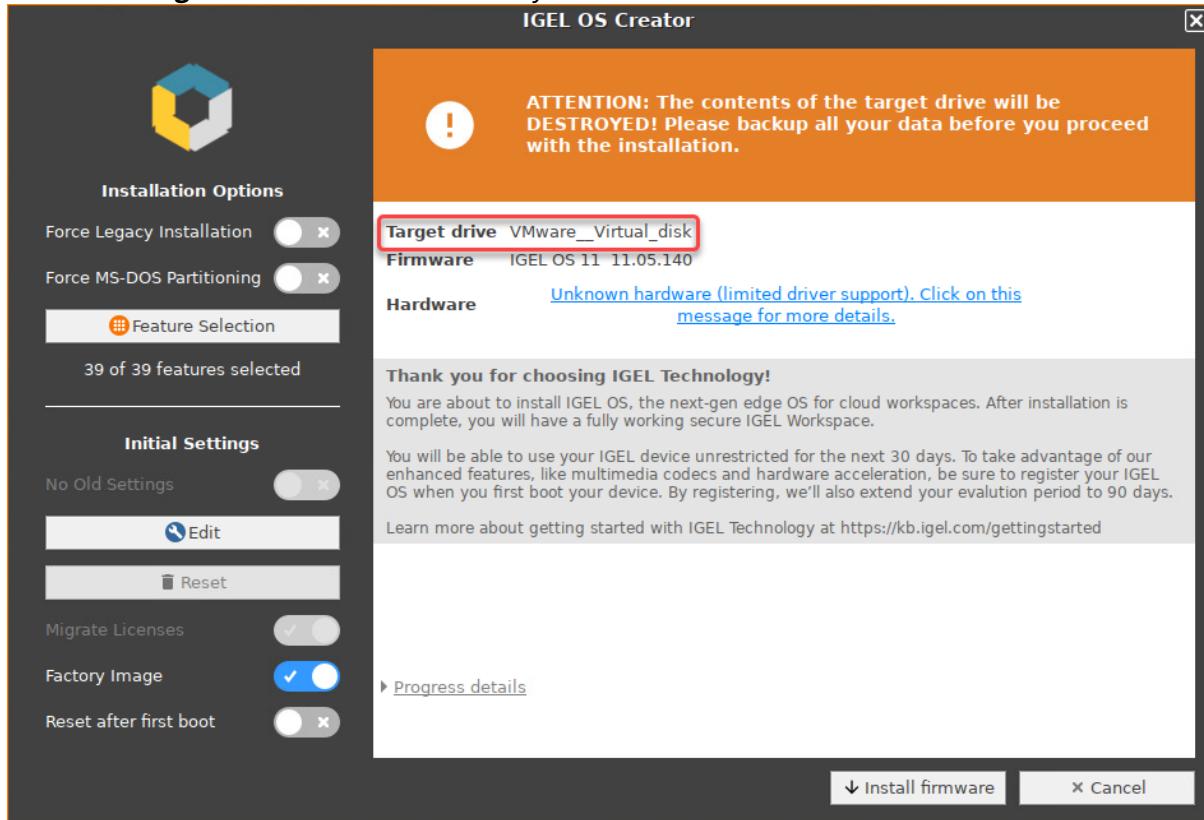

6. Activate **Factory Image** and enter your factory ID.

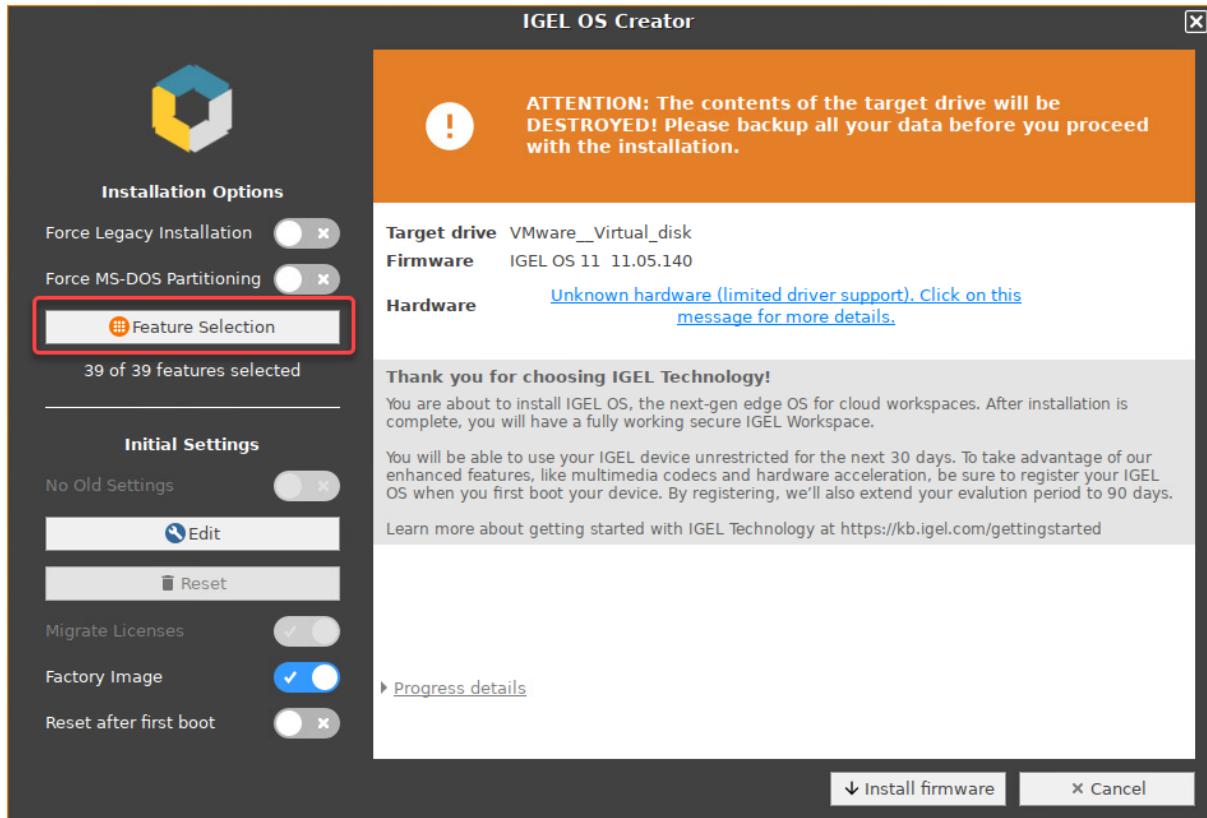

7. Check the **Target drive** to ensure that the system is installed on the desired drive.

8. If you want to exclude features of IGEL OS, e.g. to save storage space, click **Feature Selection** and edit the settings as required.

**Feature Selection**

Disk size 17.2 GB, firmware size 2.7 GB

Select the set of features to be installed on the target device.

All      None      Total size of all features: 1.9 GB

| Install                             | Feature                              | Size     |
|-------------------------------------|--------------------------------------|----------|
| <input checked="" type="checkbox"/> | Citrix ICA                           | 301.7 MB |
| <input checked="" type="checkbox"/> | Imprivata                            | 273.4 MB |
| <input checked="" type="checkbox"/> | Local browser (Chromium)             | 198.7 MB |
| <input checked="" type="checkbox"/> | VMware Horizon                       | 137.6 MB |

| <input checked="" type="checkbox"/> | Cisco Webex Teams VDI                | 45.9 MB  |

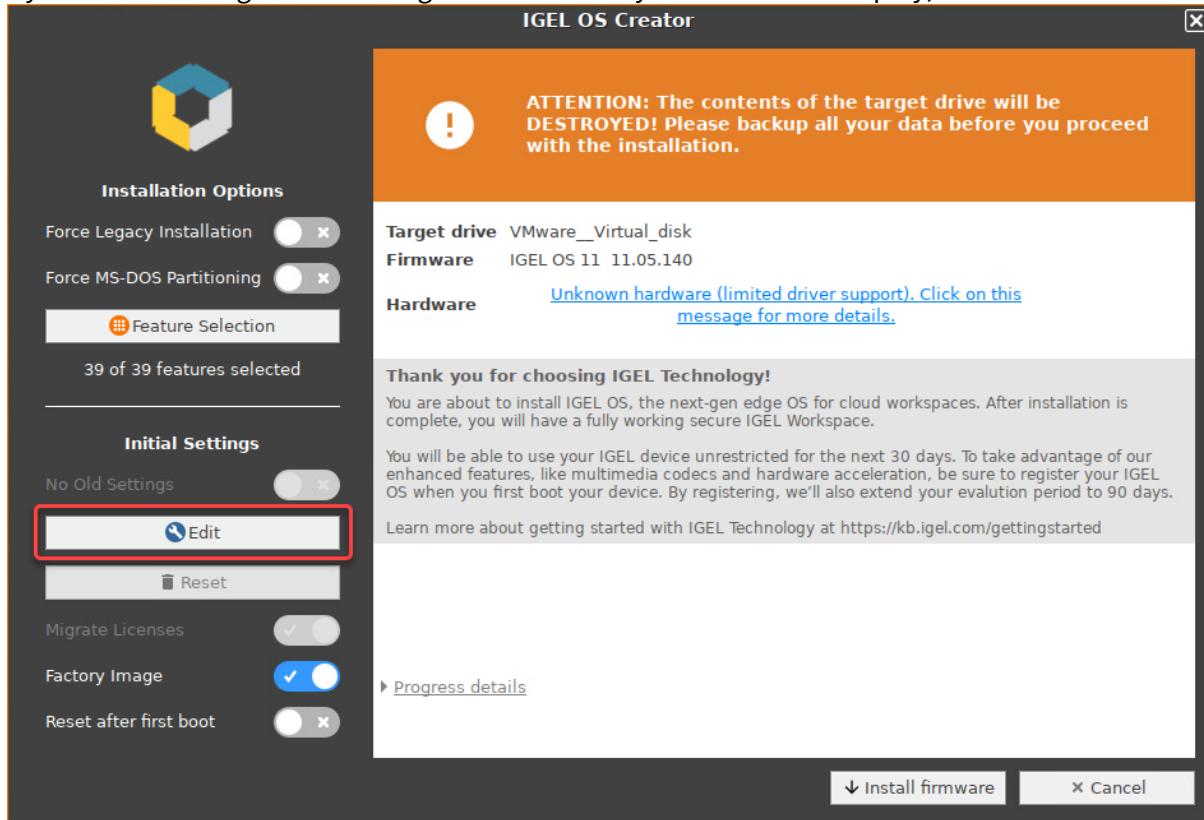

✓ OK

A screenshot of a software window titled "Feature Selection". It displays a message about disk and firmware sizes, a note to select features for installation, and two buttons ("All" and "None"). Below is a table listing installed features with their sizes. The table has columns for "Install" (checkboxes), "Feature" (list items), and "Size" (MB). A "Total size of all features: 1.9 GB" summary is shown at the top right of the table area. At the bottom right is an "OK" button with a checkmark.

- **All:** Select all features
- **None:** Select no feature
- **Feature:** Sort the list alphabetically
- **Size:** Sort the list by the memory requirements of the features

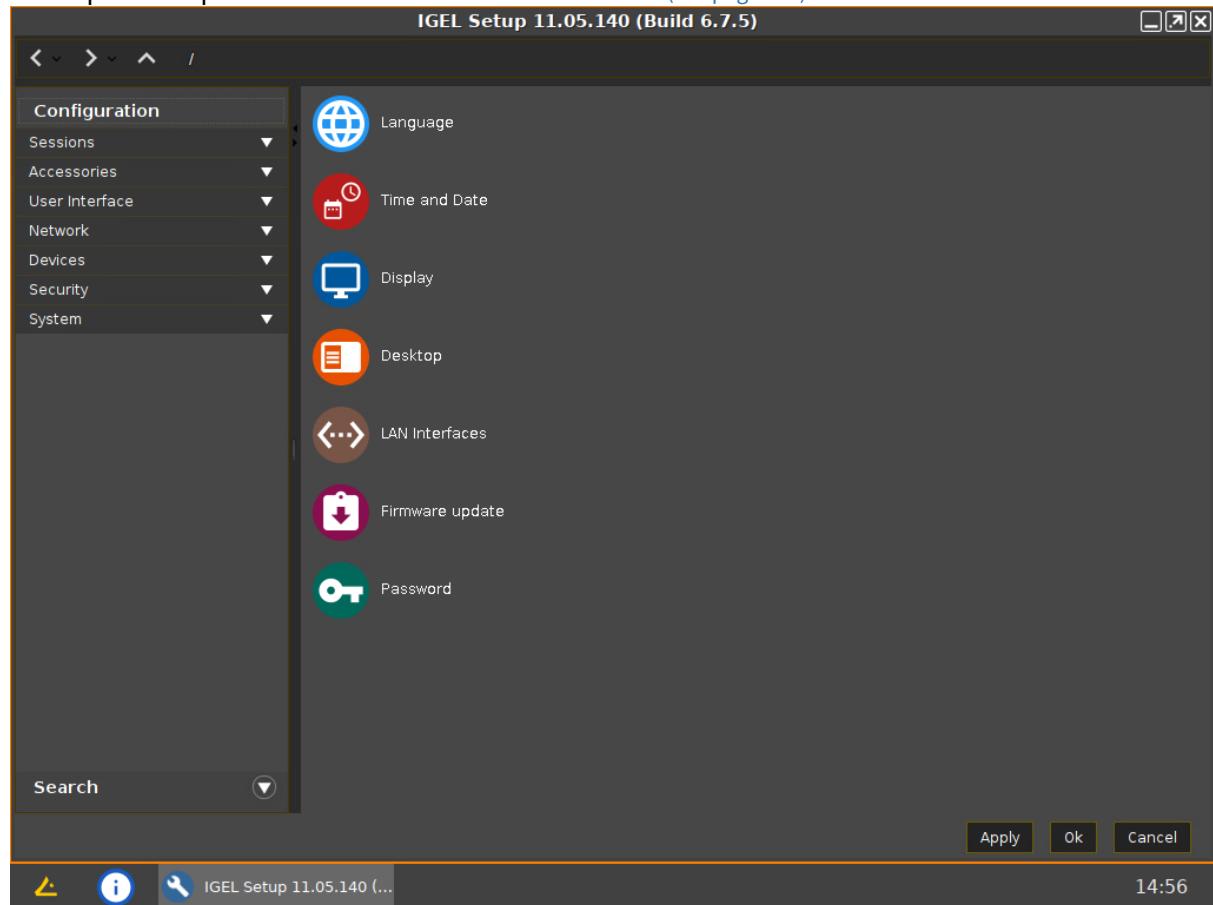

9. If you want to change initial settings for the devices you are about to deploy, click **Edit**.

The IGEL Setup opens, enabling you to change the settings in the same way as with a regular IGEL OS installation. The changes are stored on the USB memory stick from which the IGEL OS Creator (OSC) is executed. For details about the settings, see the chapters [Setup](#)(see page 772) and the

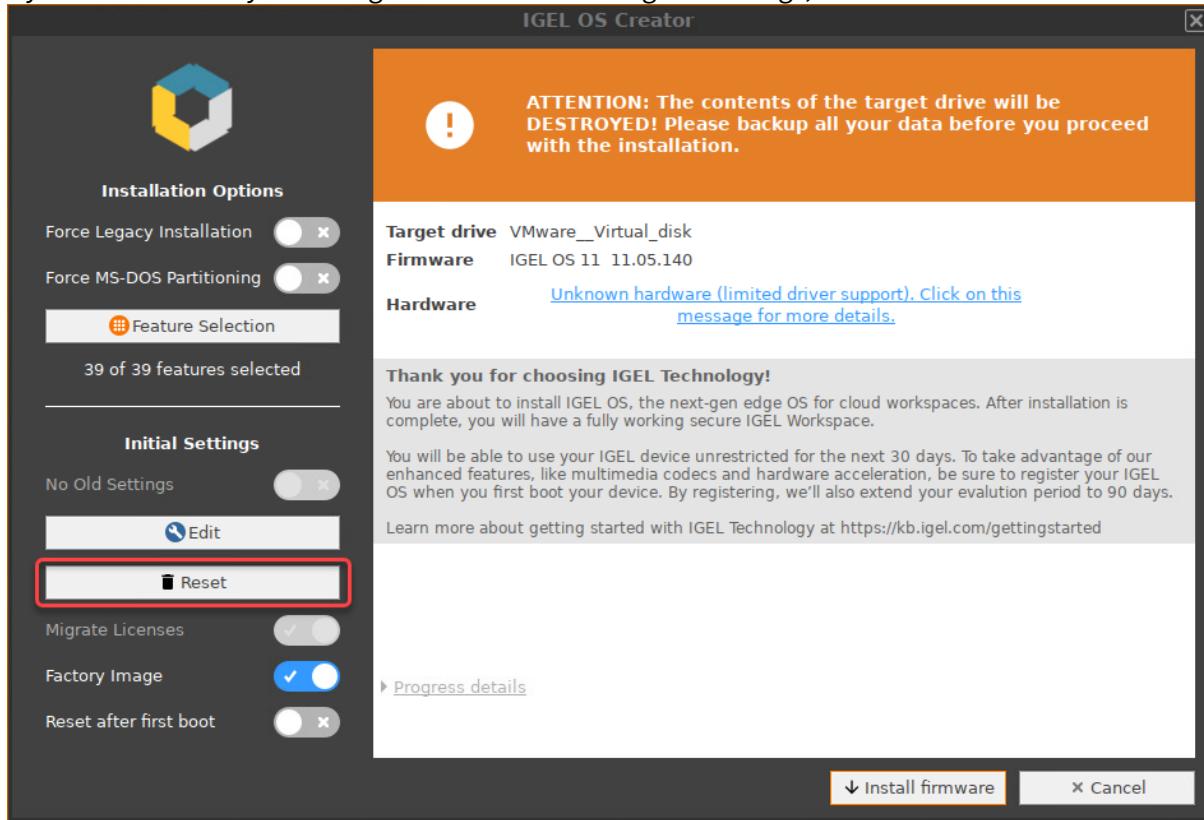

subsequent chapters in the **IGEL OS Reference Manual** (see page 750).

10. If you want to undo your changes and restore the original settings, click **Reset**.

11. If you want to change some device settings after the first boot for functional testing, enable **Reset after first boot**. These changes will not be persistent; after the second boot, the image will be restored to its initial state.

#### Important Note

If **Reset after first boot** is activated in your factory preload image, the first boot of your devices MUST take place BEFORE shipment to end customers!

**IGEL OS Creator**

**ATTENTION: The contents of the target drive will be DESTROYED! Please backup all your data before you proceed with the installation.**

**Target drive** VMware\_Virtual\_disk  
**Firmware** IGEL OS 11 11.05.140  
**Hardware** [Unknown hardware \(limited driver support\). Click on this message for more details.](#)

**Thank you for choosing IGEL Technology!**  
You are about to install IGEL OS, the next-gen edge OS for cloud workspaces. After installation is complete, you will have a fully working secure IGEL Workspace.  
You will be able to use your IGEL device unrestricted for the next 30 days. To take advantage of our enhanced features, like multimedia codecs and hardware acceleration, be sure to register your IGEL OS when you first boot your device. By registering, we'll also extend your evaluation period to 90 days.  
Learn more about getting started with IGEL Technology at <https://kb.igel.com/gettingstarted>

**Initial Settings**

No Old Settings

[Edit](#) [Reset](#)

Migrate Licenses

Factory Image

Reset after first boot

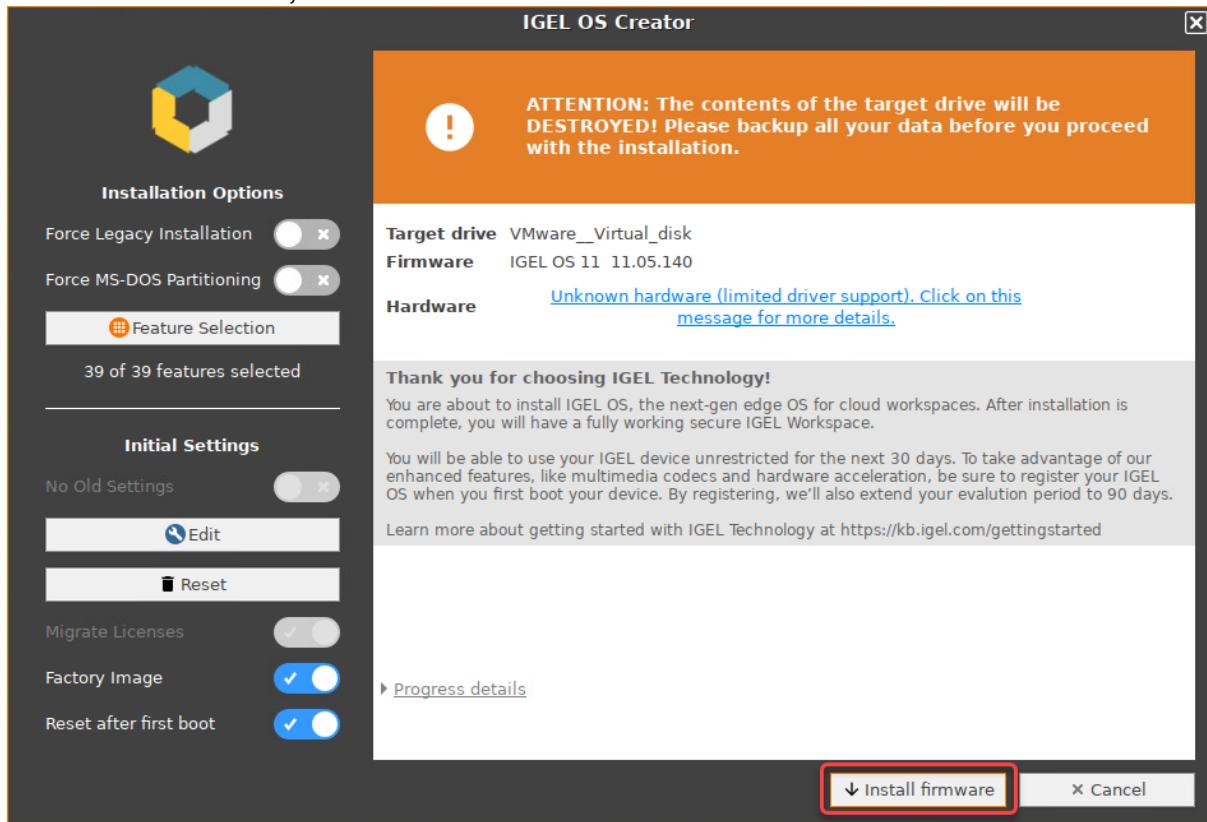

[Progress details](#)

**Install firmware** **Cancel**

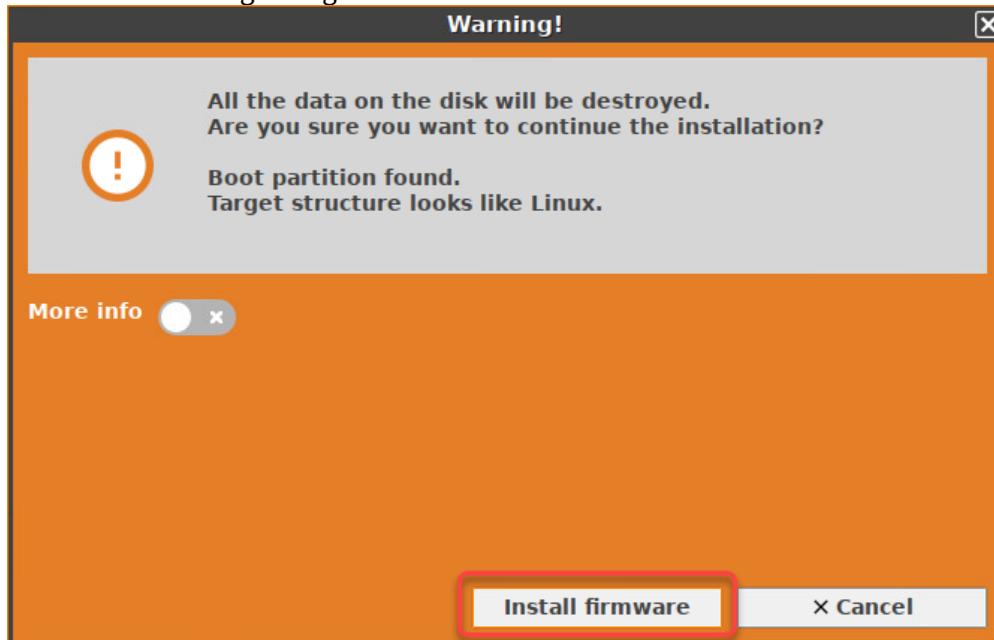

A screenshot of the IGEL OS Creator software window. On the left, there's a sidebar with a hexagonal logo and sections for 'Installation Options' (Force Legacy Installation, Force MS-DOS Partitioning), 'Feature Selection' (39 of 39 features selected), and 'Initial Settings' (No Old Settings, Migrate Licenses, Factory Image, Reset after first boot). The main area has an orange header warning about data destruction. It shows the target drive (VMware\_Virtual\_disk), firmware version (IGEL OS 11 11.05.140), and hardware information (Unknown hardware). Below that is a 'Thank you for choosing IGEL Technology!' message with instructions for registration and links for getting started. At the bottom are 'Install firmware' and 'Cancel' buttons.

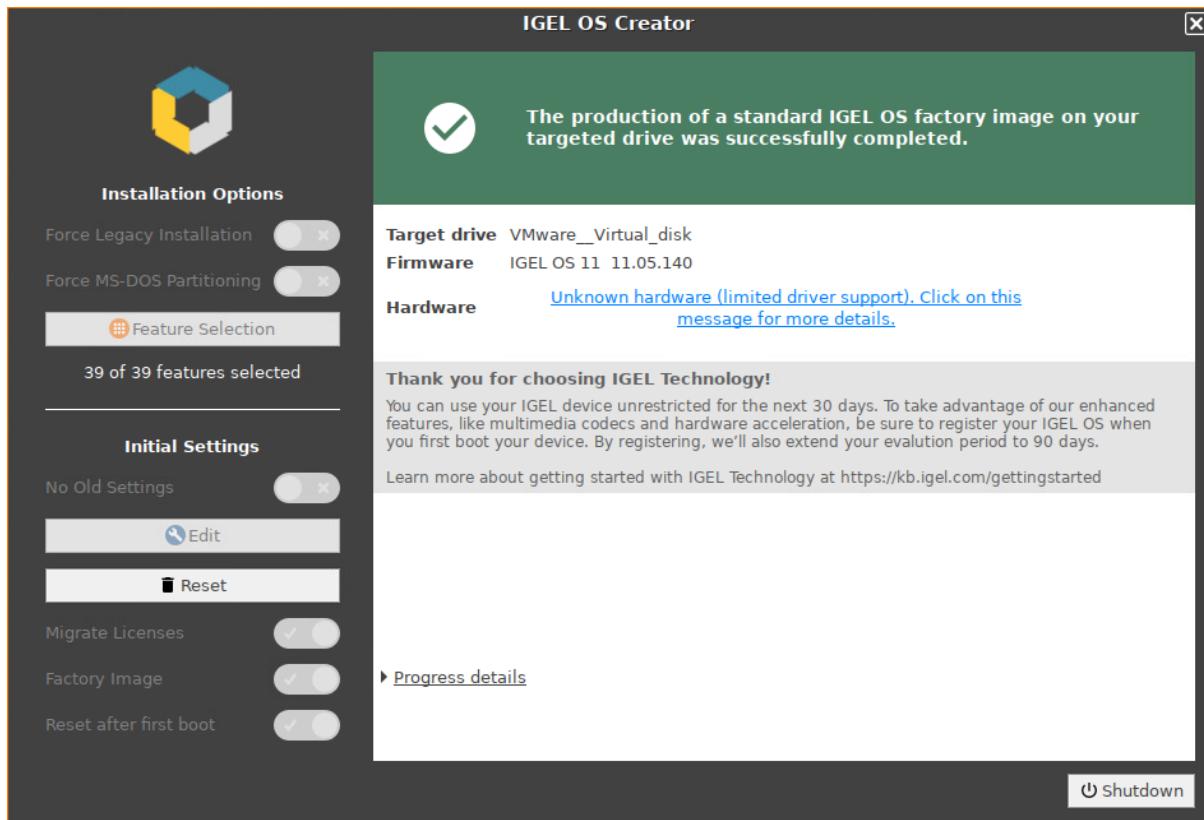

12. To start the installation, click **Install firmware**.

13. Confirm the warning dialog.

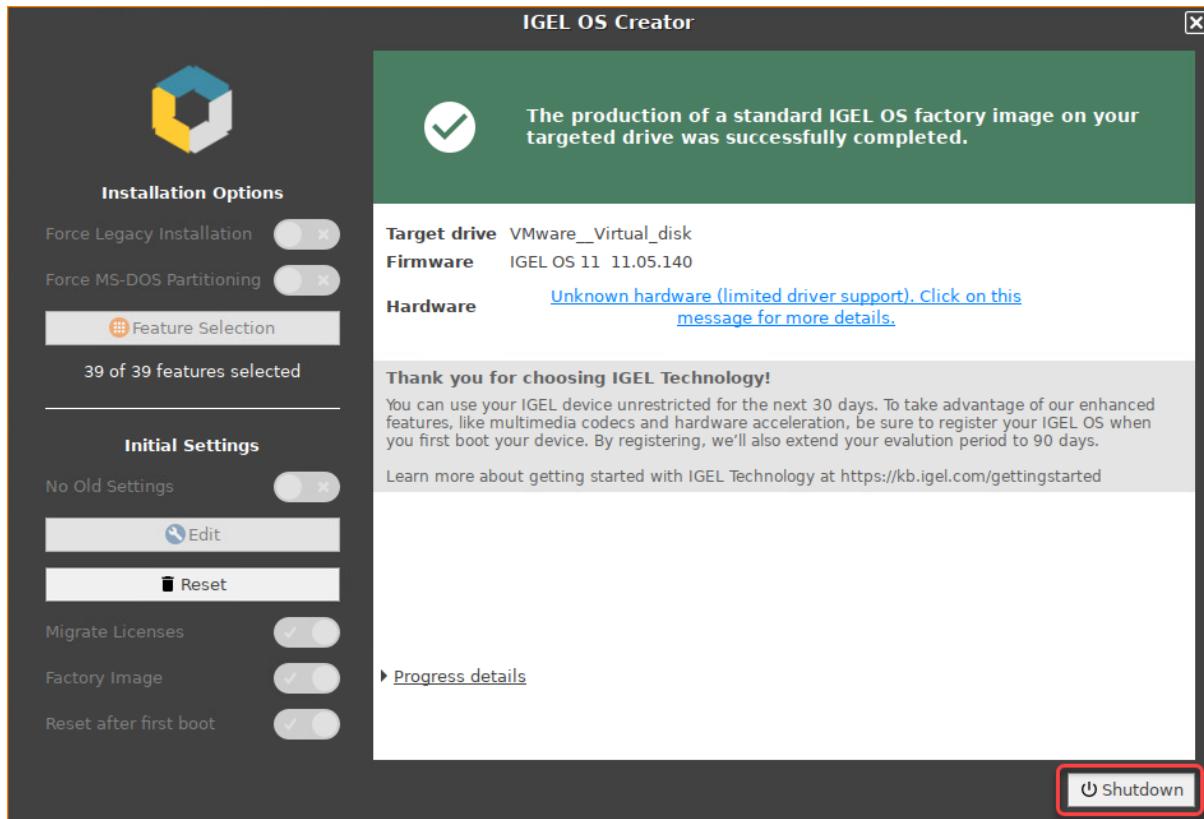

The installation program will set up IGEL OS 11 on the target drive. If you see the success message, the installation is complete.

**14. Click on Shutdown.**

15. Read out the image from your device to deploy it on the units.
16. To ensure the integrity of the image, you should create checksums of the original image and of the images that are deployed, and then compare them. For details, see [IGEL Third-party Endpoint Partners: Ensuring Image Integrity with Checksums](#)(see page 749).
17. Proceed as appropriate:
  - If **Reset after first boot** is inactive, you can deploy the images on the units and roll them out straight away. The deployment should include comparing the checksums.
  - If **Reset after first boot** has been activated, deploy the images on the units and continue with [Unit Testing](#)(see page 1327).(see page 0)

### Unit Testing

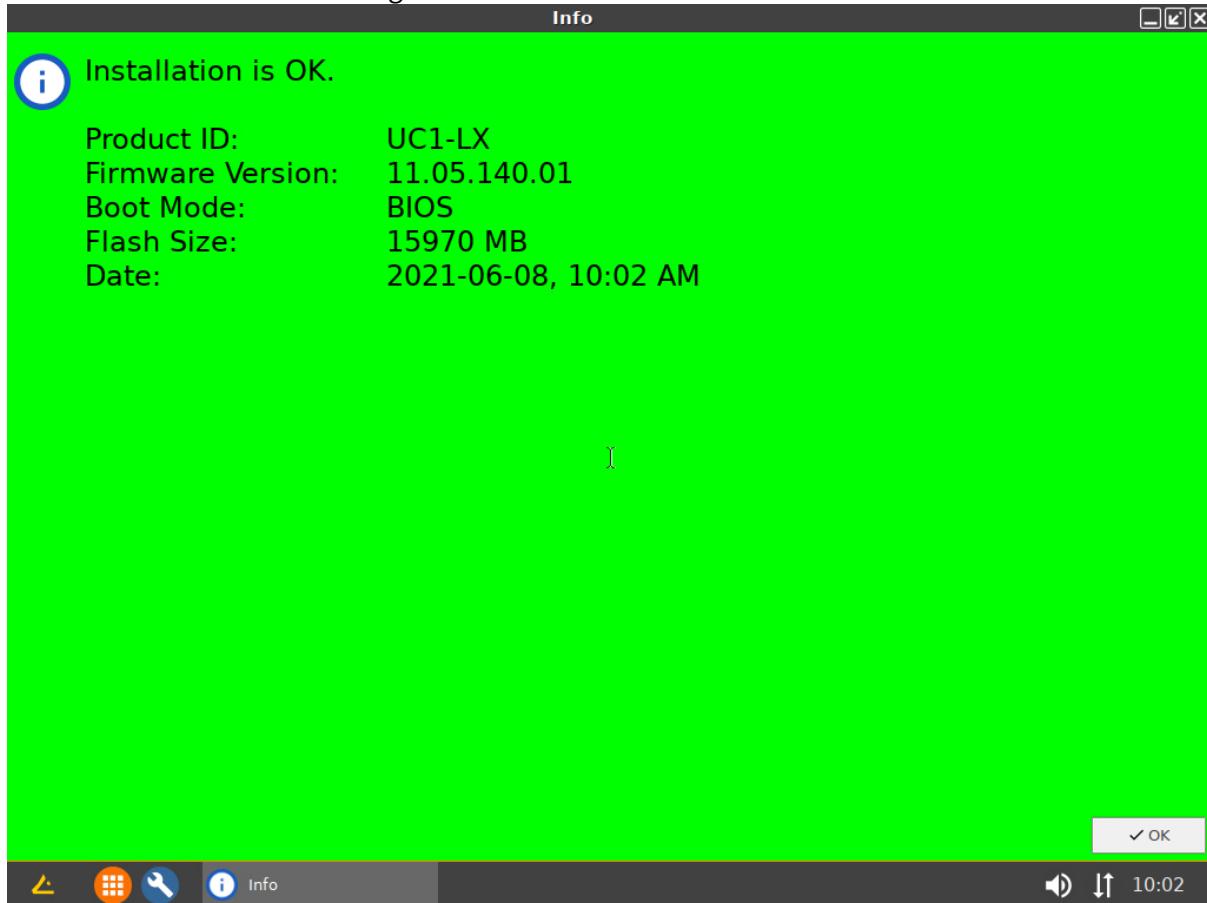

Perform the following procedure on the original device and on every unit on which the image has been deployed.

#### Important Note

The first boot test MUST take place with each unit BEFORE it is rolled out. (Otherwise, the device would present the green test screen instead of the IGEL Setup Assistant.)

1. Start the device and review the green test screen.

2. Click **OK**.

You can access IGEL OS in a regular way and perform your tests.

3. Shut the device down.

The device is ready for roll-out.

## 5.2 IGEL OS Creator Articles

- [Café Wireless \(Wi-Fi\)](#)(see page 1328)
- [Reduce CPU Power Consumption](#)(see page 1332)
- [Installing UDC3 on Secunet SINA Workstation](#)(see page 1333)
- [Setting up UDC3 on Mobile Devices](#)(see page 1335)

### 5.2.1 Café Wireless (Wi-Fi)

When you use your mobile device frequently at different Wi-Fi hotspots, automatic Wi-Fi roaming may be useful. This is what IGEL Café Wireless does. The IGEL Café Wireless feature can be used, for instance, with IGEL UDC3. After you have configured your wireless networks, your mobile device is ready to roam.

For optimizing the network switchover, please see [Configuring Wi-Fi Network Roaming](#)(see page 393).

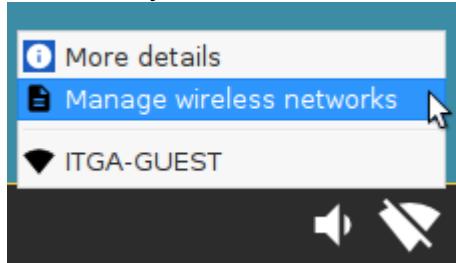

If the network's SSID is hidden, see [Connecting to a Wi-Fi Network with Hidden SSID](#)(see page 395).

See also the manual chapter "[Wireless](#)(see page 1178)".

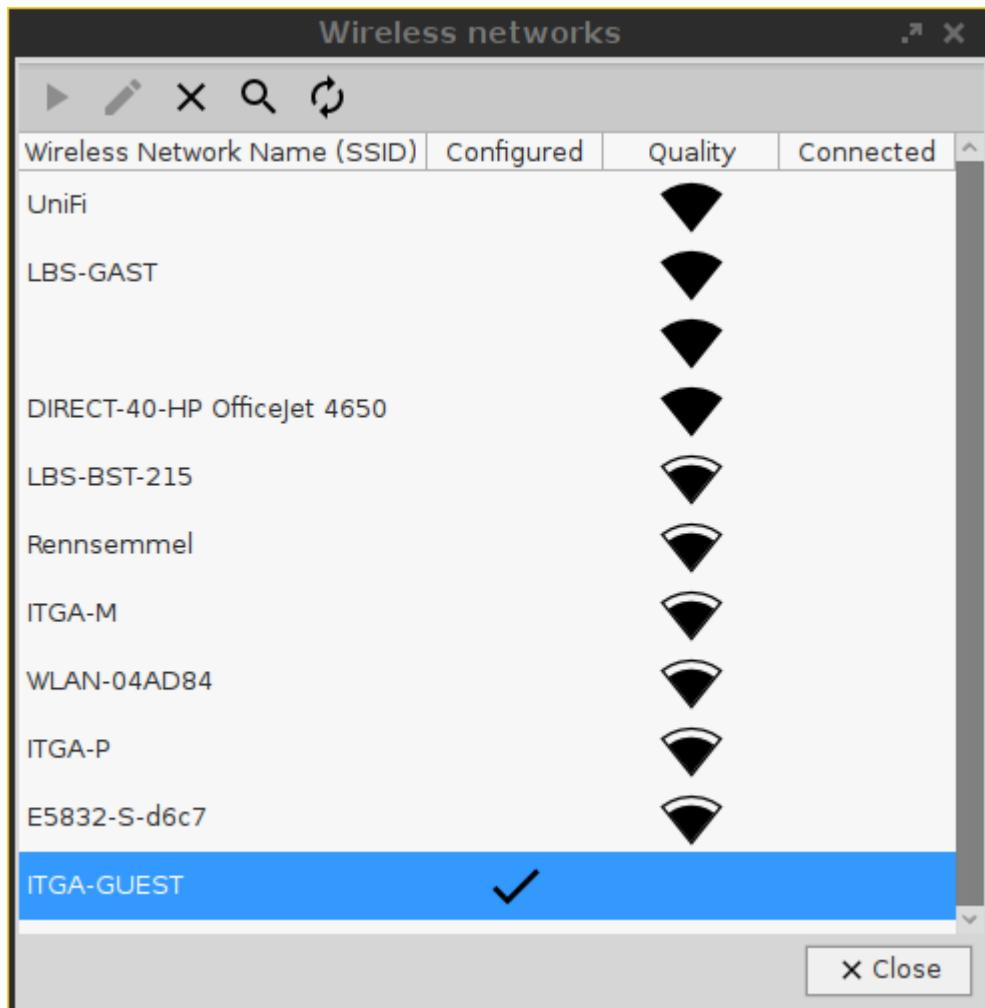

To configure a wireless network with the Wireless Manager:

1. Open **Network > LAN interfaces > Wireless** in the Setup.
2. Enable **Activate wireless interface**.
3. Activate **Enable Wireless Manager**.

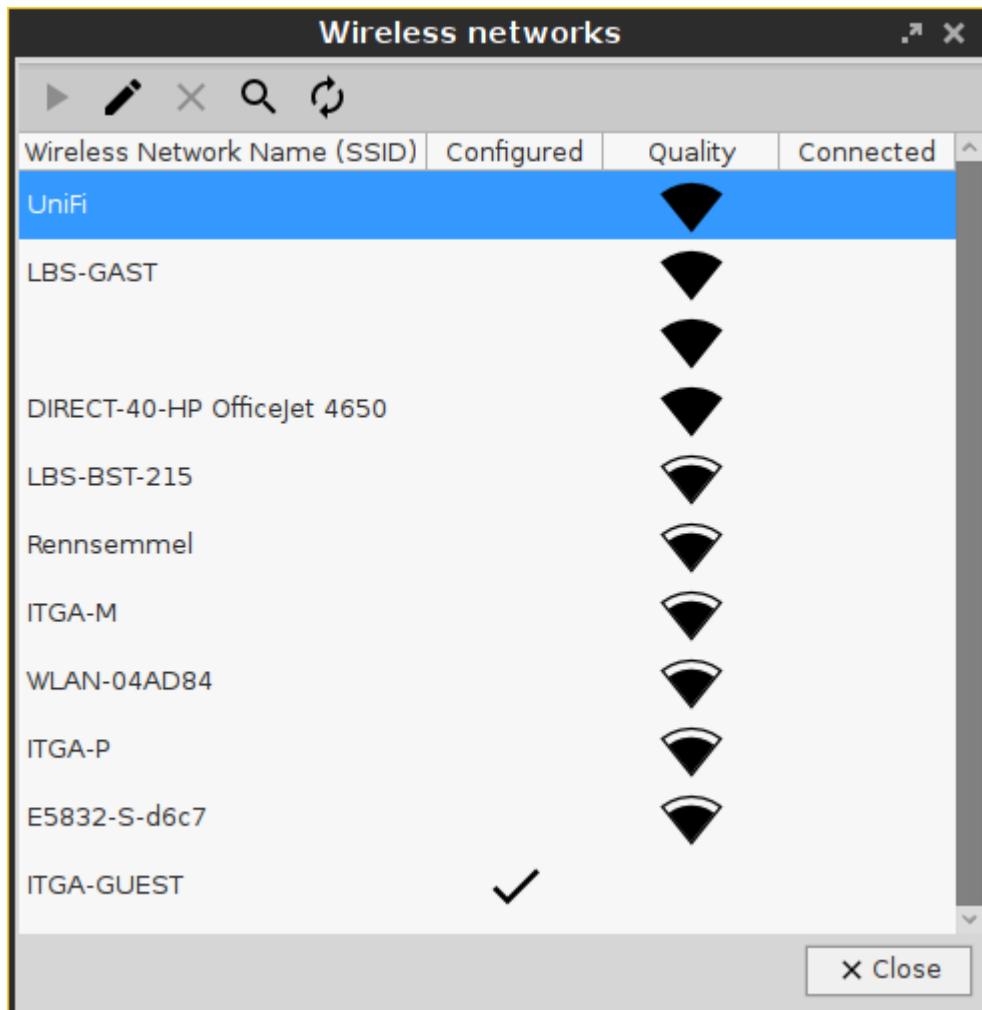

4. Click the tray icon  and select **Manage wireless networks**.

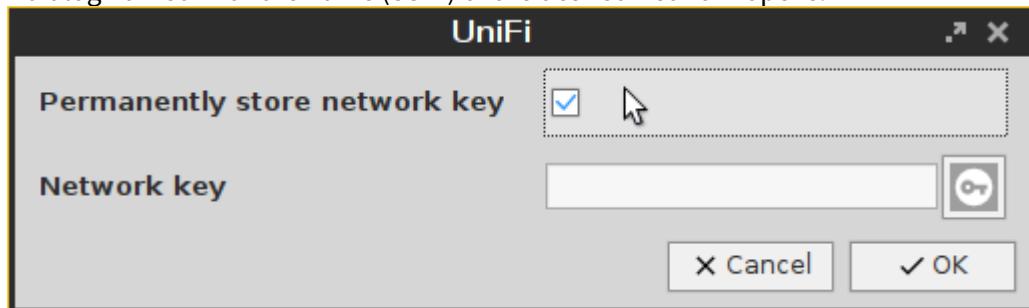

The **Wireless networks** dialog opens. After a few seconds, all wireless networks within reach are shown, sorted by signal strength. Previously configured connections are flagged with a tick in the **Configured** column. The connection currently active is flagged with a symbol under **Connected**.

5. Double-click the network to be configured.

A dialog named with the name (SSID) of the desired network opens.

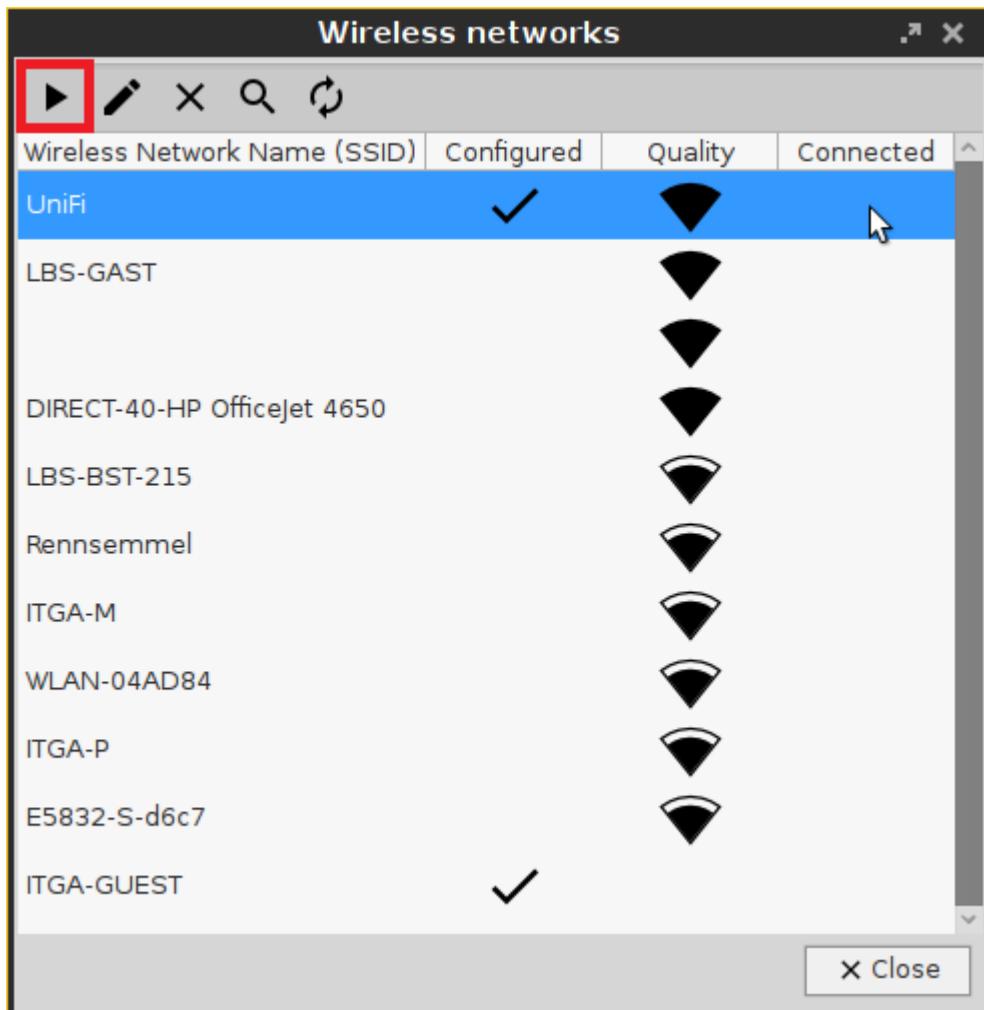

6. Activate **Permanently store network key** so that your mobile device remembers the network key.
7. Enter the **Network key**. To have the network key displayed while typing, click .
8. Click **OK**.
9. Repeat the steps described above for the remaining networks.

To connect to a configured network manually:

- ▶ Highlight the network and click on in the **Wireless networks** dialog.

Your mobile device is connected to the wireless network. The icon

shows the network's current signal strength.

## 5.2.2 Reduce CPU Power Consumption

### Reduce CPU Power Consumption

When you are using the *IGEL Universal Desktop Converter (UDC2)* on a mobile device in battery mode, you might want to reduce power consumption. One major power consumer is your CPU.

You can easily gain some control over the power consumption of your CPU using the tray icon (**CPU Power Plan**) on your taskbar.

- ▶ If the tray icon is not displayed, open the IGEL Setup, go to **System > Power Options > System** and activate **Tray Icon**.

To change the CPU power settings:

1. Click on .
2. Select the appropriate option. **High Performance** gives you the highest performance, but also the highest CPU power consumption, **Power Saver** results in lowest performance and lowest CPU power consumption. The other options are in between.
- For further information about the power plan settings, see the [system\(see page 1332\)](#) chapter in the manual.

### 5.2.3 Installing UDC3 on Secunet SINA Workstation

To install IGEL Universal Desktop Converter 3 on a SINA workstation, proceed as follows:

1. Download the UDC3 zip file under [IGEL Software Download](#)<sup>364</sup> and unzip the file.
2. Copy the ISO image to an USB stick.
3. Start the SINA workstation
4. Click **Administration > Volumes** in the navigation bar.
5. Click **+ Add item** at the bottom of the screen to add a new item.
6. Enter a distinct name for the volume in the **Name** field top right.  
The target drive is already specified.
7. Click **New CFS** under **Select volume type**.  
The form expands.
8. Choose the preconfigured **Security domain**, **Cipher algorithm** and **Hash algorithm**.
9. Click **Define Guest system** under **CFS content**.  
The form expands.
10. Enter a distinct name for the system under **Guest system name**.
11. Choose **2 GiB** as minimum for the **Guest system size**.
12. Select **Disabled** under **Quarantine**.
13. Click **Create**.

The system will now create the volume. This may take a while - depending on the size of the guest system.

1. Go to **Administration > Volumes** and click the new volume.  
Next to it a little form opens.
2. Open **Guest systems**.  
You will see the volume you've created.
3. Click **Local** under **Add guest system from...** to add the ISO image to this volume.  
The form expands.
4. Plug the USB Stick with the ISO image into the workstation.
5. Choose the stick as **Device** and the ISO image as **Guest system image**.
6. Click **Add** at the bottom of the form.

The system now adds the ISO image to your new volume. This will take a while.

---

<sup>364</sup> <https://www.igel.com/software-downloads/>

1. Switch to the **Workplaces** menu.
2. Click **+ Add item** at the bottom of the screen.
3. Enter a distinct name for the workplace in the **Name** field top right.
4. Choose the **Guest system** you've created. It has a small hard disk icon.
5. Choose the ISO image under **Secondary guest system**. It should have a small CD icon.
6. Select **Secured networking** under **Network mode**.
7. Choose your preferred settings under **Display layout**, **Workplace hotkey** and **Audio mode**.
8. Select **CD/DVD** under **Boot order**.
9. Select **Automatic reservation** under **IP to claim** and **MAC to claim**.
10. Select **Ubuntu** as **OS type**.
11. It is not necessary to activate the **Detailed settings**.
12. Click **Create**.

The system now creates the workplace.

1. Klick on the new workplace.  
Next to it a little form opens.
2. Click **Launch** to start the workplace.  
The IGEL Universal Desktop Converter starts.
3. After a few second you will see this screen:

4. Keep the first selected item **Boot IGEL UD Converter**.  
The conversion process starts.  
Next you will see the blue IGEL Linux background.  
A little popup appears.
5. Choose your desired **language**.
6. Agree the **license agreement**.
7. Install the IGEL Linux OS to the workspace.

Be aware, that all data of the volume will be deleted. That's why you should always create a new volume for the IGEL Linux OS.

## 5.2.4 Setting up UDC3 on Mobile Devices

- [Multi Monitor Environment](#)(see page 1335)
- [Presentation Mode](#)(see page 1335)
- [Display Brightness](#)(see page 1336)
- [Power Management](#)(see page 1337)
- [Wireless Manager \(Café Wireless\)](#)(see page 1338)
- [Shortening Network Timeouts in Mobile Scenarios](#)(see page 1339)
- [Battery Level Control](#)(see page 1340)

### Multi Monitor Environment

If you use your notebook in an office workstation, you can use a multi monitor environment.

To configure the display for multiple screens, use the **Display Switch**.

Respective Tray Icon:

| Tray Icon Name | Icon | Where to configure                                           |
|----------------|------|--------------------------------------------------------------|
| Display Switch |      | Menu path: <b>Setup &gt; Accessories &gt; Display Switch</b> |

Activating the Display Switch:

1. Enable the **Display Switch** in the **IGEL Setup** under **Accessories > Display Switch**.
2. Select **Quick Start Panel** as a starting method.  
The **Display Switch** icon is shown in the quick start panel.
3. Click the icon to open the display configuration dialogue.
4. Switch between simple and advanced settings.

For a detailed description, see the manual, chapter [Display Switch](#)(see page 1055).

Here you can find additional instructions concerning monitor settings:

- [How-To Dual Screen](#)(see page 517)
- [Manual topic RDP Global > Window](#)(see page 813)

### Presentation Mode

You are using your mobile device for a presentation. You neither want the monitor to enter power saving mode nor to start the screensaver during the presentation.

For this situation, use the **Presentation Mode** which disables the DPMS and the screen saver.

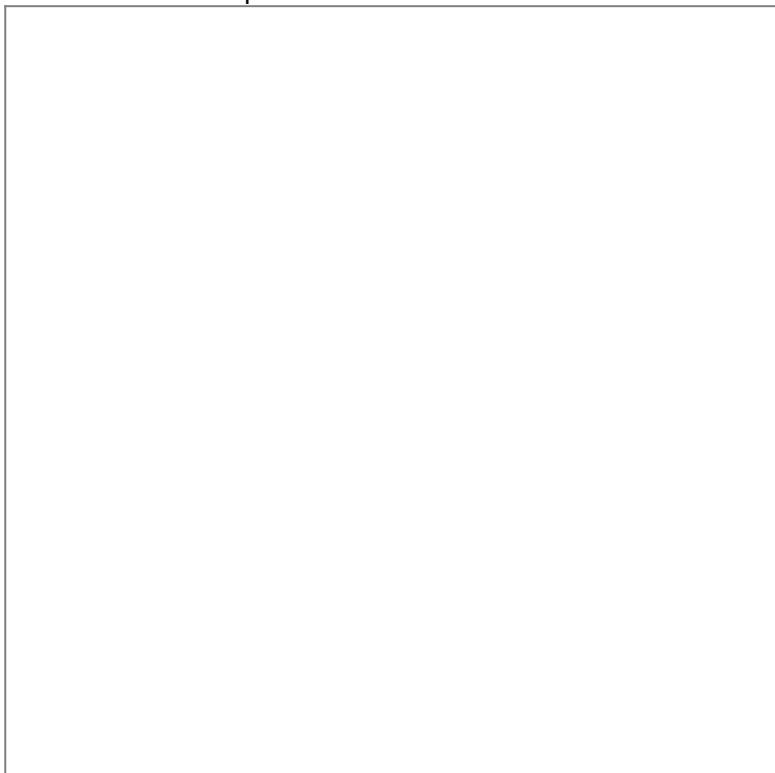

Respective Tray Icon:

| Tray Icon Name | Icon | Where to configure                                                  |
|----------------|------|---------------------------------------------------------------------|
| Notebook BAT   |      | Menu path: <b>Setup &gt; System &gt; Power Options &gt; Battery</b> |

**Activating the Presentation Mode:**

1. Right-click the battery symbol in the system tray.  
The context menu opens:

2. Click **Presentation Mode** to enable/disable it.

**Display Brightness**

In order to preserve the battery you want to reduce the display brightness.

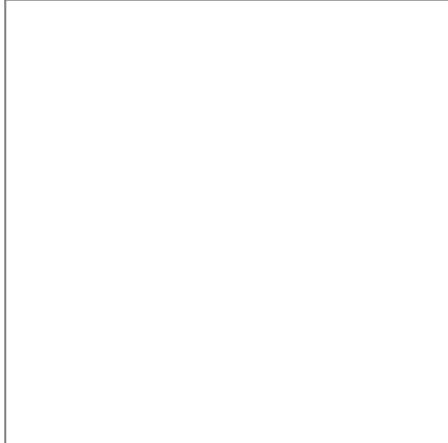

Respective Tray Icon:

| Tray Icon Name | Icon | Where to configure |
|----------------|------|--------------------|
|                |      |                    |

|              |                          |                                                                     |
|--------------|--------------------------|---------------------------------------------------------------------|
| Notebook BAT | <input type="checkbox"/> | Menu path: <b>Setup &gt; System &gt; Power Options &gt; Battery</b> |
|--------------|--------------------------|---------------------------------------------------------------------|

1. Right-click the battery symbol in the system tray.  
The context menu opens.
2. Click the slider of the brightness display to reduce the **Display Brightness**.

## Power Management

You are using your mobile device in battery mode and need to reduce power consumption to preserve the battery.

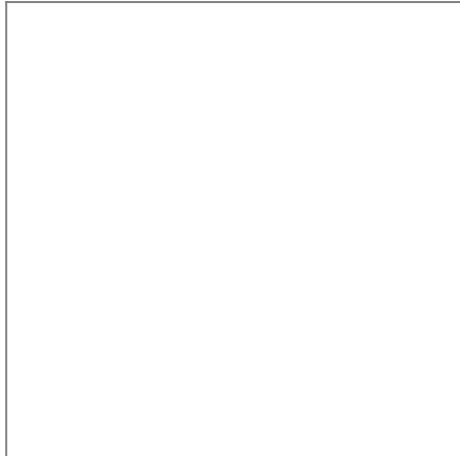

To save power, set CPU power options to scale the CPU frequency down.

Respective Tray Icon:

| Tray Icon Name | Icon                     | Where to configure                                                 |
|----------------|--------------------------|--------------------------------------------------------------------|
| CPU Power Plan | <input type="checkbox"/> | Menu path: <b>Setup &gt; System &gt; Power Options &gt; System</b> |

Setting CPU power options:

1. Click the CPU Power Plan icon in the system tray.  
The context menu opens.

2. Select the appropriate mode.

Here you can find additional instructions concerning the power management:

- Define the **CPU Power Plan, Critical Battery Level, Standby Time or Suspend Time, Brightness reduction, and Shut-down Options**. See the manual, chapter [System > Power Option > System](#)(see page 1261).

## Wireless Manager (Café Wireless)

If you are traveling with your notebook, you need to handle different WiFi connections.

You can use **Café wireless** to configure different wireless network connections.

Respective Tray Icon:

| Tray Icon Name              | Icon | Where to configure                                                     |
|-----------------------------|------|------------------------------------------------------------------------|
| Wireless Network Connection |      | Menu path: <b>Setup &gt; Network &gt; LAN Interfaces &gt; Wireless</b> |

Defining **Café wireless**:

1. Enable the **Wireless Manager** under **Network > LAN Interface > Wireless**.  
Set all options:

2. Click the WiFi tray icon in the right corner of the panel.
3. Open the **Wireless Manager** dialog.

You can find the complete instruction in the manual, chapter [Wireless Manager](#)(see page 1180).

## Shortening Network Timeouts in Mobile Scenarios

When on the road with their UDC2 mobile device, users often experience slow system startup. This is due to the system waiting for network connections or the UMS which are not available in the mobile scenario. This document describes how to minimize waiting by shortening various timeouts.

### Don't Wait for Wired Network

When an Ethernet interface is configured but not physically connected, startup is delayed by default. The goal is to give the user an opportunity to plug in the network cable. If this is not desired, as of IGEL Linux version 5.10.100 waiting can be turned off.

1. In Setup, go to **System > Registry**.
2. Go to the `network.interfaces.ethernet.device[number].nolink_nowait` registry key.  
Replace [number] with:
  - 0 for eth0, the first Ethernet interface
  - 1 for eth1, the second Ethernet interface
3. Enable **No waiting without physical link**. By default, this option is disabled.

### Don't Contact UMS Unless Specific Network Devices Are Up

Startup is also delayed because the system tries to contact UMS by default, which may not be available in a mobile scenario. You can configure IGEL Linux version 5.10.100 to contact UMS only if one of the network devices in a whitelist is up.

1. In Setup, go to **System > Registry**.
2. Go to the `system.remotemanager.device_whitelist` registry key.
3. Put a space-separated device list into the **Network device whitelist** field. Only if at least one of these devices is up, the system will try to contact UMS. Device names:
  - First Ethernet adapter: eth0

- Second Ethernet adapter: eth1
- Wireless: wlan0
- Mobile broadband: ppp10
- OpenVPN: tun0

#### Don't Contact UMS Unless Specific Networks Are Available

You can configure IGEL Linux version 5.10.100 to contact UMS only if one of the networks in a whitelist is reachable.

1. In Setup, go to **System > Registry**.
2. Go to the `system.remotemanager.network_whitelist` registry key.
3. Enter a space-separated list of networks in CIDR notation into the **Network whitelist** input field, e.g. `172.30.0.0/16 192.168.100.0/24`. If there are entries in this field, the system will only try to contact UMS if one of the device's current IP addresses happens to be in one of these ranges.

#### Shorten the UMS Timeout

When different environments cannot be distinguished by the previous two mechanisms, as of IGEL Linux version 5.10.100 the startup delay can be reduced by setting a shorter timeout for connections to the UMS.

1. In Setup, go to **System > Registry**.
2. Go to the `system.remotemanager.rmagent_timeout` registry key.
3. Enter an integer number of seconds into **IGEL Remote Management Timeout**. The default is 90.

#### Don't Wait for All Network Interfaces

You can configure IGEL Linux to wait only for one of the network interfaces to be up instead of all. This also means that error messages concerning Ethernet devices will only be displayed shortly.

1. In Setup, go to **System > Registry**.
2. Go to the `network.global.waitfor_interfaces` registry key.
3. Disable **Wait for interfaces to come up**. By default, this option is enabled.

#### Battery Level Control

Since Linux version 10.03.100 it is possible to display the battery level of a mobile device via UMS. The frequency of the battery level reports sent by the device to the UMS can be adjusted: A report is triggered when the battery status has changed at a specified percentage compared to the previously reported status. The percentage is specified by the **Battery status update frequency** parameter.

Example use case: The IT administrator in a hospital has to take care of battery-powered medical devices. Using the new feature, he can easily keep track of all these devices via the UMS, without any need of physical access or mirroring VNC.

To adjust the report frequency:

1. In Setup, go to **System > Registry**.
2. Go to the `system.remotemanager.battery_report_frequency` registry key.
3. Select the **Battery status update frequency**:
  - Often
  - Normal
  - Rarely
  - Very Rarely

- Never
4. Click **Apply** or **Ok**.

## 6 IGEL OS Creator for Windows (OSCW)

The IGEL OS Creator for Windows (OSCW) is able to convert Windows machines to IGEL OS 11, provided that they fulfill the [hardware requirements](#)(see page 1343).

Choose the instructions according to your needs:

- [IGEL OS Creator for Windows \(OSCW\) on Windows 7/10 Workstations](#)(see page 1342)
- [IGEL OS Creator for Windows \(OSCW\) on IGEL Windows Embedded 7/7+](#) (see page 1382)
- [IGEL OS Creator for Windows \(OSCW\) on IGEL Windows 10 IoT](#)(see page 1401)
- [IGEL OS SCCM Add-On](#)(see page 1408)

### 6.1 IGEL OS Creator for Windows (OSCW) on Windows 7/10 Workstations

#### 6.1.1 Introduction

The IGEL OS Creator (OSC) for Windows is able to convert any Windows 10 or Windows 7 machine to IGEL OS 11, provided that it fulfills the [hardware requirements](#)(see page 1343).

Read all the following chapters and follow the instructions in the order given.

- [Prerequisites](#)(see page 1343)
- [Getting the Required Software](#)(see page 1343)
- [Transferring the IGEL OSC File to the UMS](#)(see page 1344)
- [Deploying the OSCW Installer on the Target Machines](#)(see page 1345)
- [Installing the OSCW Installer](#)(see page 1345)
- [Registering the Target Machines to the UMS](#)(see page 1348)
- [Configuring the OSCW Installer](#)(see page 1351)
- [Starting the Conversion](#)(see page 1381)

#### 6.1.2 Video

A video is available to illustrate the procedure.

#### Part I

Sorry, the widget is not supported in this export.  
But you can reach it using the following URL:

<https://www.youtube.com/watch?v=NGA0FNLBd0&feature=youtu.be>

## Part II

Sorry, the widget is not supported in this export.  
But you can reach it using the following URL:

<https://www.youtube.com/watch?v=uXDdQ6aGrZs&feature=youtu.be>

### 6.1.3 Prerequisites

#### Hardware

- Memory: ≥ 4 GB RAM
- Storage: ≥ 3 GB free storage to store the ISO file containing IGEL OS Creator
- For supported hardware, see [Third-Party Devices Supported by IGEL OS 11<sup>365</sup>](#).

#### Software

The following software must be present on the target machines:

- Windows 10 or Windows 7
- Microsoft Hotfix KB3140245 (Windows 7 x86/x64)

#### Network

- All machines are in a network that can be reached by the UMS.
- For buddy mode: All machines must be joined to a Microsoft Active Directory (AD) and be accessible by the same AD user with reading permissions.

#### Next Step

>> When all requirements are met, continue with [Getting the Required Software](#)(see page 1343).

### 6.1.4 Getting the Required Software

The following software must be downloaded resp. installed:

---

<sup>365</sup> <https://kb.igel.com/display/hardware/Third-Party+Devices+Supported+by+IGEL+OS+11>

## IGEL Universal Management Suite (UMS) 6.04.120 or Higher

1. Download UMS 6.04.120 or higher from <https://www.igel.com/software-downloads/workspace-edition/> > **Universal Management Suite**.
2. Update your UMS to version 6.04.120 or later resp. install UMS 6.04.120. For update instructions, see [Updating UMS<sup>366</sup>](#); for installation instructions, see [Installation<sup>367</sup>](#).

## OSCW Files

1. Download OSC for Windows 1.01.100 or higher (EXE or MSI installer)
  - EXE file: <https://www.igel.com/software-downloads/workspace-edition/> > **OSC for Windows** > setup-igel-osc-for-windows\_1.01.100.exe
  - MSI file: <https://www.igel.com/software-downloads/workspace-edition/> > **OSC for Windows** > setup-igel-osc-for-windows\_1.01.100.msi
2. Download IGEL OS 11.03.560 or higher (ISO): <https://www.igel.com/software-downloads/workspace-edition/> > **OSC for Windows** > OSC\_11.03.560.zip

## Check List

- The UMS is updated to version 6.04.120 or higher.
- OSC for Windows 1.01.100 or higher is available.
- IGEL OS 11.03.560 or higher (ISO file) is available.

## Next Step

>> [Transferring the IGEL OS Creator File to the UMS\(see page 1344\)](#)

### 6.1.5 Transferring the IGEL OSC File to the UMS

In this step, we will transfer the IGEL OS firmware file (ISO) to the UMS so that the UMS can deploy it to the target machines.

Do not register the file as a file object. This might lead to various issues, particularly in ICG and HA environments.

1. Get access to the file system of the machine on which your UMS Server is running.
2. Copy osc.iso to <UMS Installation directory>\rmuiserver\webapps\ums\_filetransfer

<sup>366</sup> <https://kb.igel.com/display/endpointmgmt604/Updating+UMS>

<sup>367</sup> <https://kb.igel.com/display/endpointmgmt604/UMS+Installation+and+Update>

## Next Step

>> [Deploying the OSCW Installer on the Target Machines\(see page 1345\)](#)

### 6.1.6 Deploying the OSCW Installer on the Target Machines

In this step, we will deploy the OSCW installer on the target machines.

► Deploy the installer on all devices that are to be converted. The following methods are available for deployment:

- SCCM (System Center Configuration Manager): Use the MSI installer (`setup-igel-osc-for-windows_1.01.100.msi`) and deploy it just like any software. The OSCW installer is installed silently.
- Group policy: Use the MSI installer (`setup-igel-osc-for-windows_1.01.100.msi`) and deploy it just like any software. The OSCW installer is installed silently.
- File-based methods: Use the EXE file (`setup-igel-osc-for-windows_1.01.100.exe`). You can use file sources such as:
  - USB memory stick
  - Network drive
  - DVD

## Check List

The OSCW installer is deployed on all target machines. When SCCM or group policy was used, the installation has been executed silently.

## Next Step

If the OSCW installer has been deployed via SCCM or group policy and has been installed silently:

>> Continue with [Registering the Target Machines to the UMS\(see page 1348\)](#).

If the OSCW installer has been deployed via a file-based method:

>> Continue with [Installing the OSCW Installer\(see page 1345\)](#).

### 6.1.7 Installing the OSCW Installer

In this step, we will install the OSCW installer on the target machines. The method depends on how the OSCW installer has been deployed on the target machines.

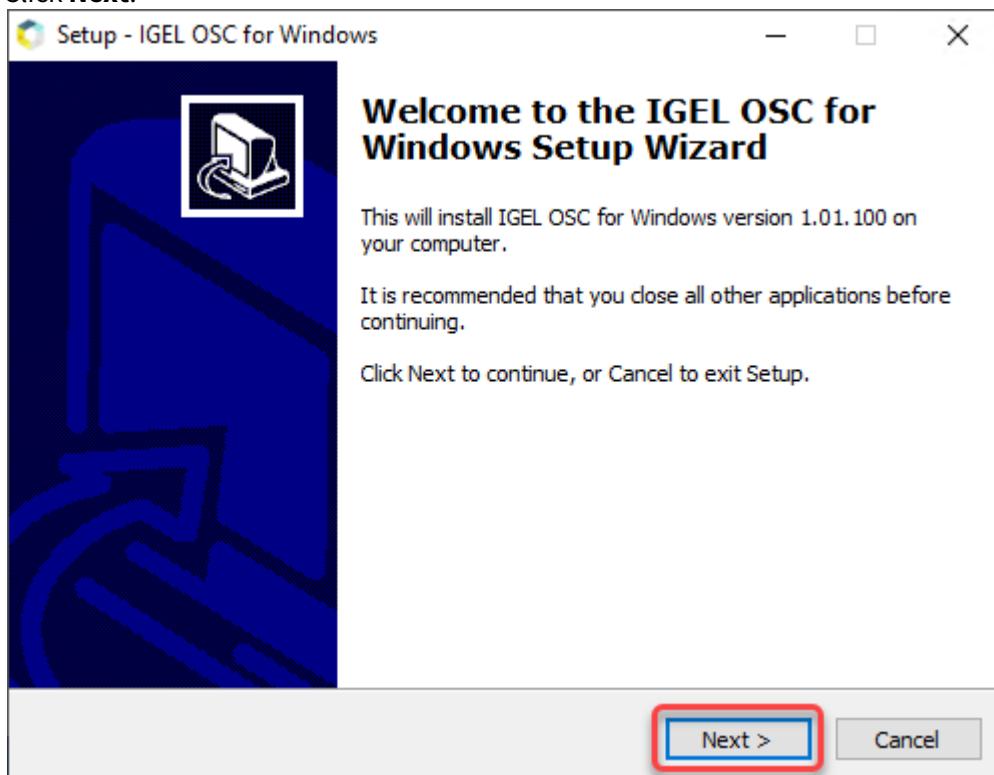

#### OSCW Installer Has Been Deployed via SCCM or Group Policy

If you have used SCCM or group policy to deploy the OSCW installer, the installation has been executed silently; continue with [Registering the Target Machines to the UMS\(see page 1348\)](#).

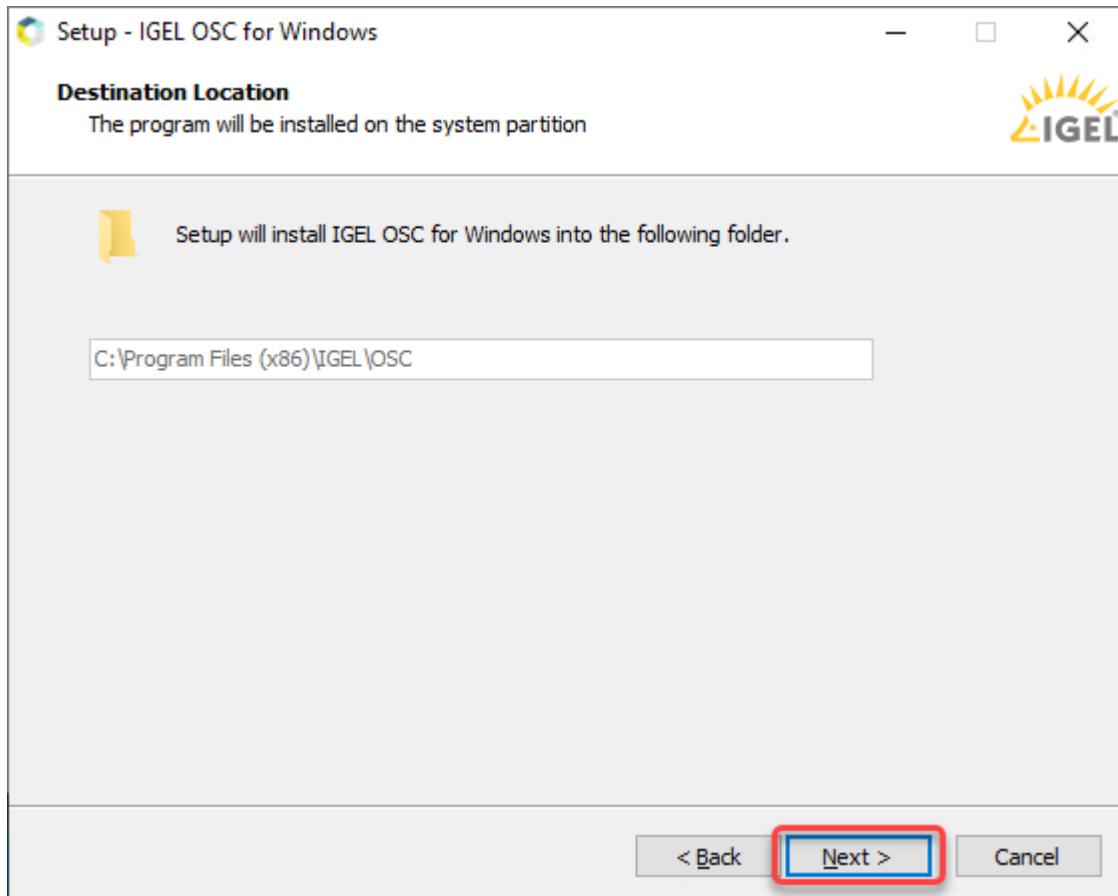

## OSCW Installer Has Been Deployed from a File

1. On the target machine, double-click setup-igel-osc-for-windows\_1.01.100.exe and confirm the Windows UAC (user account control). The OSCW installer is digitally signed by "IGEL Technology GmbH".  
The setup wizard opens.
2. Click **Next**.

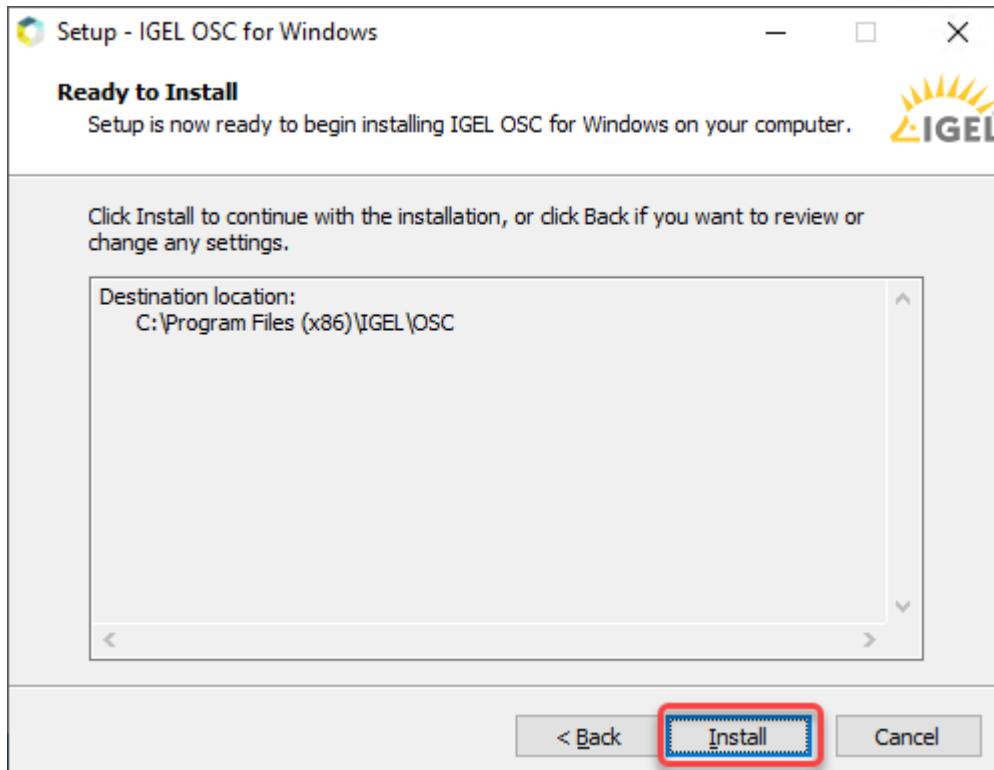

3. Review the installation folder and click **Next**.

4. Review the confirmed installation folder and click **Install**.

IGEL OSC for Windows is installed on the target machine.

5. The installer window is closed.

#### Check List

- The OSCW installer is installed on each target machine.

#### Next Step

>> [Registering the Target Machines to the UMS\(see page 1348\)](#)

### 6.1.8 Registering the Target Machines to the UMS

In this step, we will register all target machines to the UMS. This is necessary because the conversion to IGEL OS will be triggered by the UMS.

Two registration methods are available: a scan by the UMS and automatic registration.

- [Registering by a UMS Scan\(see page 1349\)](#)
- [Registering by Automatic Registration\(see page 1350\)](#)

## Registering by a UMS Scan

1. Open the UMS Console and click to scan for devices.
2. Select the scope in which the devices are located; for details, see [Searching for Devices](#)<sup>368</sup>.
3. Click **Scan**.  
The dialog **Found devices** opens.
4. In the **Filter** field, enter "IGEL Unified Management Agent OSCW".

**Found devices**

82 Devices were found. Filter **IGEL Unified Management Agent OSCW**

| Certificate stor... | Unit ID      | MAC Address       | Name            | IP address    | Product                            | Incl...                  |
|---------------------|--------------|-------------------|-----------------|---------------|------------------------------------|--------------------------|

Put in directory:

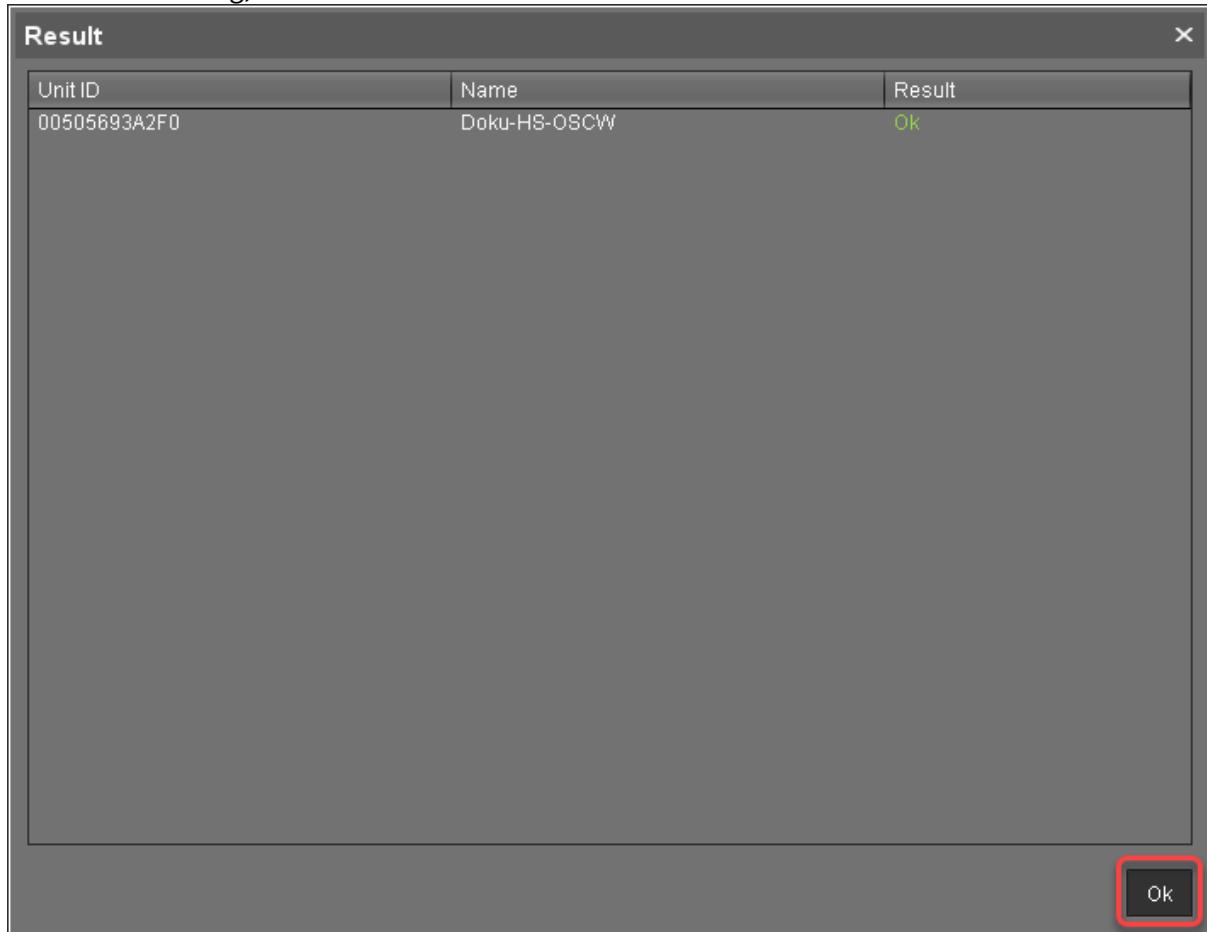

**Ok** **Cancel**

The target machines are registered with the UMS.

<sup>368</sup> <https://kb.igel.com/display/endpointmgmt604/Searching+for+Devices>

6. In the **Result** dialog, click **Ok**.

## Registering by Automatic Registration

For this method, a DNS entry or DHCP option must be set.

- ▶ Follow the instructions in [Registering Devices Automatically](#)<sup>369</sup>.

## Check List

- All target machines are registered with the UMS.

## Next Step

>> [Configuring the Installer](#)(see page 1351)

---

<sup>369</sup> <https://kb.igel.com/display/endpointmgmt604/Registering+devices+automatically>

### 6.1.9 Configuring the OSCW Installer

In this step, we will provide the OSCW installer with the download source for the ISO file that contains the IGEL OS Creator.

Two methods are available:

- [Configuring the OSCW Installer in Normal Mode](#)(see page 1351): Each target machine downloads the ISO file from the server (UMS) individually. This increases the amount of outgoing traffic from the UMS.
- [Configuring the OSCW Installer in Buddy Mode](#)(see page 1364): This method is recommended if the connection bandwidth of the download source is limited; it ensures a more balanced use of network bandwidth during the distribution of the ISO file to the target machines. First, a group of target machines downloads the ISO file. Then, these machines serve as the download source ("update buddies") for the remaining target machines. As a requirement, all devices must be joined to a Microsoft Active Directory (AD) and be accessible by the same AD user with reading permissions.

#### Configuring the OSCW Installer in Normal Mode

To provide the OSCW installer with the download source for the IGEL OS Creator file (ISO), we will create a profile that provides the path to that file. To assign the profile to the target machines, we will use a view that recognizes the target machines by their product ID.

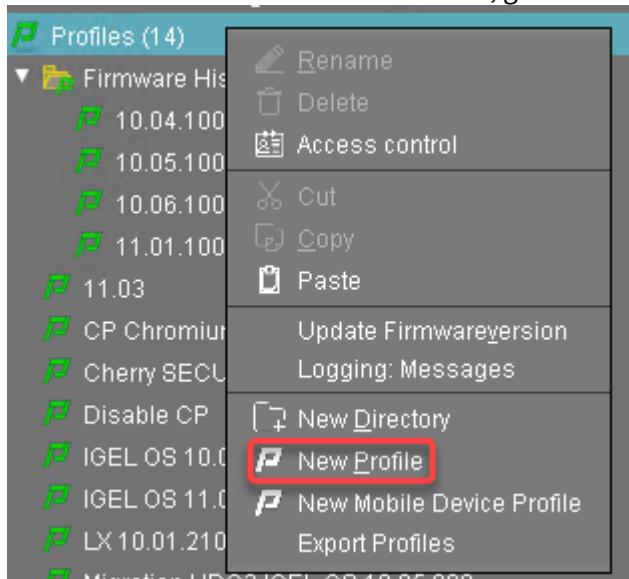

The configuration comprises the following steps:

- [Creating a Profile](#)(see page 1352)
- [Creating a View to Select All Target Machines](#)(see page 1354)
- [Assigning the Profile to the Target Machines](#)(see page 1359)
- [Monitoring the Process](#)(see page 1361)

## Creating a Profile

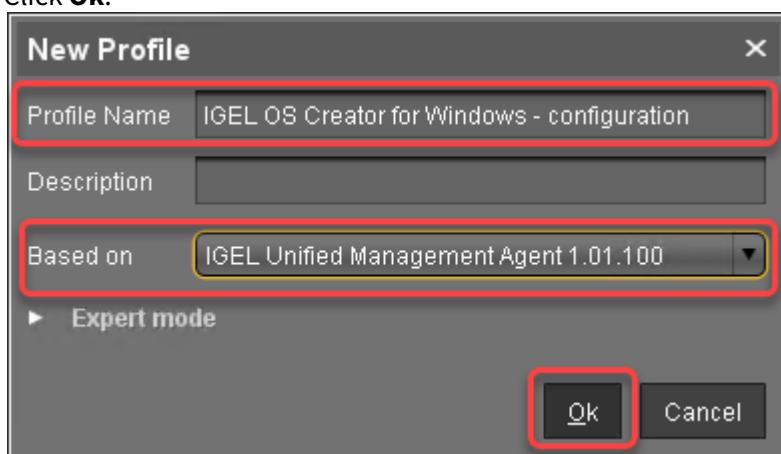

1. In the structure tree of the UMS Console, go to **Profiles** and open **New Profile** in the context menu.

2. In the **New Profile** dialog, change the settings as follows:

- **Profile Name:** A name for the profile, e. g. "IGEL OS Creator for Windows - configuration"
- **Based on:** Select "IGEL Unified Management Agent 1.01.100".

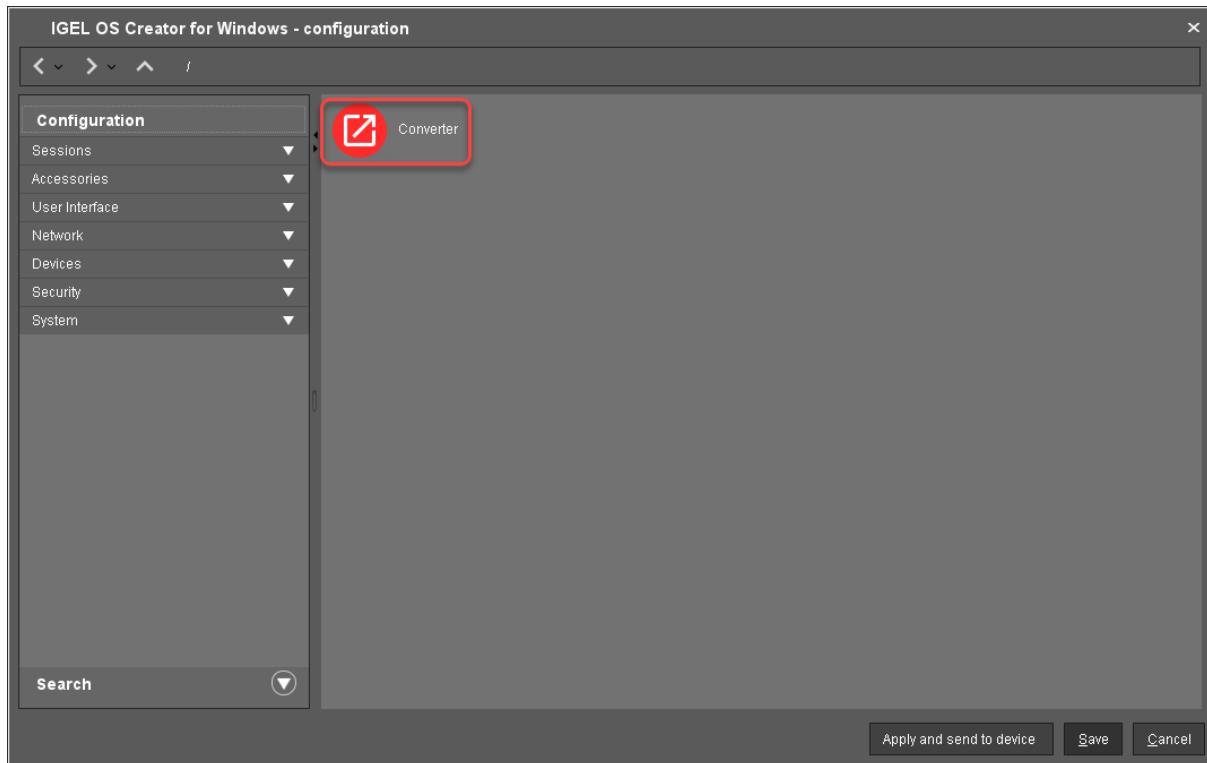

3. Click **Ok**.

The configuration dialog opens.

4. Click **Converter**.

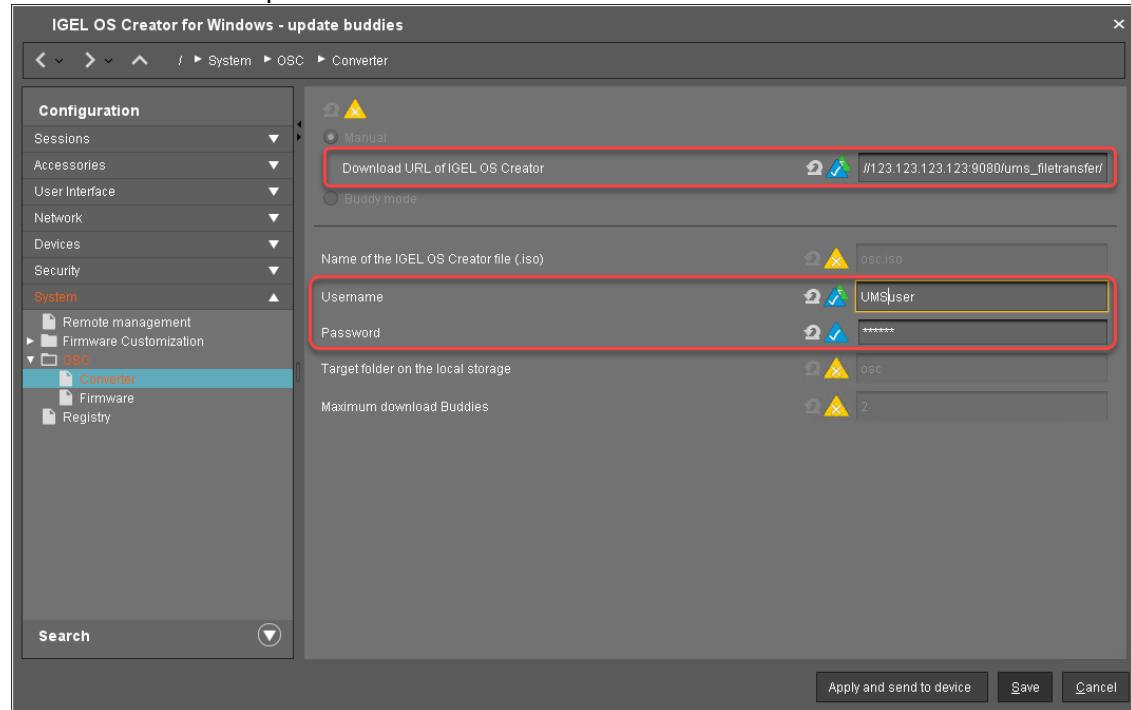

You are taken to **System > OSC > Converter** where you can set all relevant parameters.

5. Change the settings as follows (click the icon to enable the configuration; the icon will change to ):
- **Download URL of IGEL OS Creator:** Enter `https://[IP address of your UMS Server]:8443/ums_filetransfer/` or `http://[IP address of your UMS Server]:9080/ums_filetransfer/`  
Example: `https://192.168.178.100:8443/ums_filetransfer/` or `http://192.168.178.100:9080/ums_filetransfer/`
  - **Username:** Enter the username for the UMS.

- **Password:** Enter the password for the UMS user.

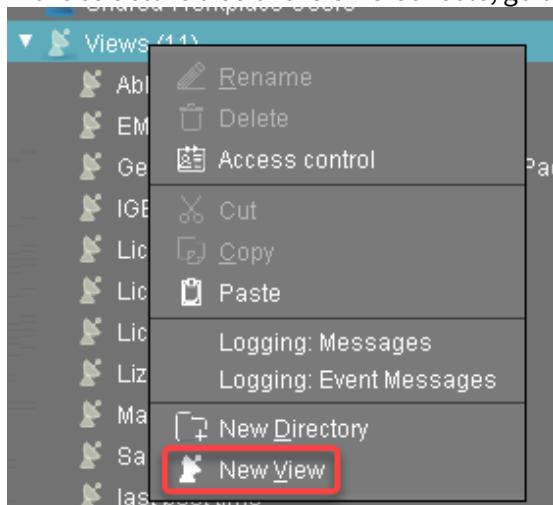

6. Click **Save**.

#### Creating a View to Select All Target Machines

The target machines must be selected in order to assign the profile to them. For the selection, a view will be used.

1. In the structure tree of the UMS Console, go to **Views** and select **New View** in the context menu.

2. Enter a name for the view, e. g. "IGEL OS Creator for Windows - target machines" and click **Next**.

**Create new view**

**View name**

Name   

Description

Expert mode

< Back > Next Finish Cancel

3. On the **Select criterion** page, select **Product ID** and click **Next**.

**Create new view**

**Select criterion**

CPU Speed       CPU Type       Device Type  
 Duplex Mode       Firmware Description       Firmware Update (Relative)  
 Firmware Version       Flash Player       Flash Player Version  
 Flash Size       Graphics Chipset 1       Graphics Chipset 2  
 Graphics Memory Size 1       Graphics Memory Size 2       Last Boot Time (Absolute)  
 Last Boot Time (Relative)       Memory Size       Network Name

Result list was last updated at 1:02 PM. **Load devices** Refresh Settings

One matching device found.

7. The target machines are shown.

Name: IGEL OS Creator for Windows - target machines

Description:

Rule: Product ID is like (?i).\*OSCW.\*

Result list was last updated at 1:03 PM. Refresh Settings

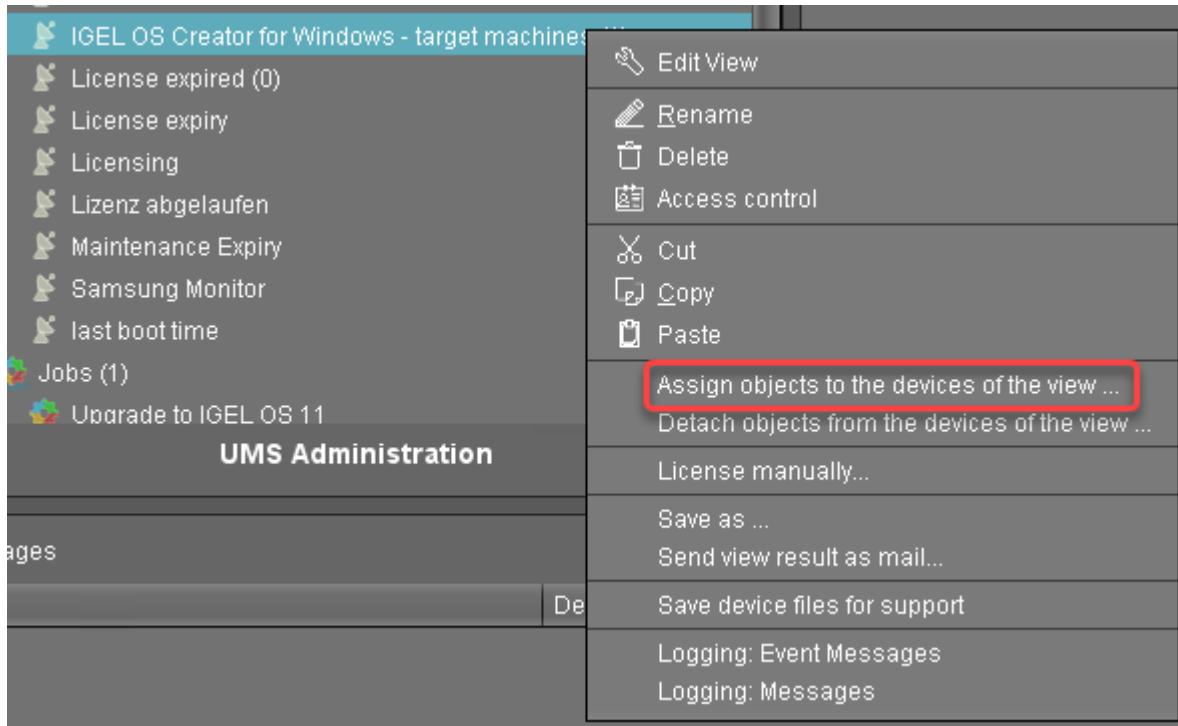

Matching devices (1 device)

| Name         | Last known IP address | MAC Address  | Product                       | Version  |
|--------------|-----------------------|--------------|-------------------------------|----------|
| Doku-HS-OSCW | 172.30.91.118         | 00505693A2F0 | IGEL Unified Management Agent | 1.01.100 |

## Assigning the Profile to the Target Machines

1. Select the view you have created beforehand and select **Assign objects to the devices of the view ....**

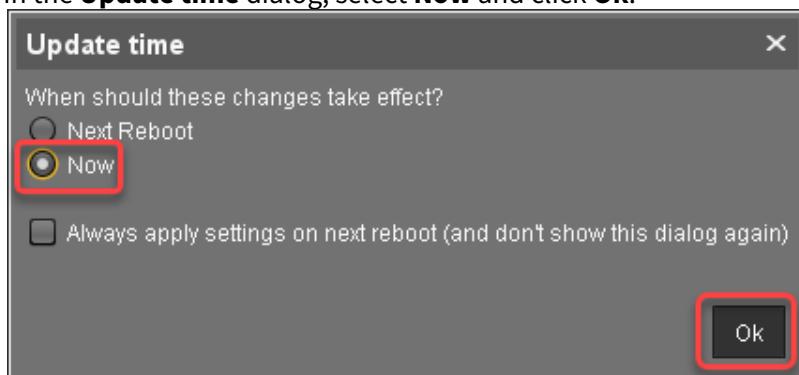

2. In the **Assign objects** dialog, select the profile you have created beforehand, click to assign it and then click **Ok**.

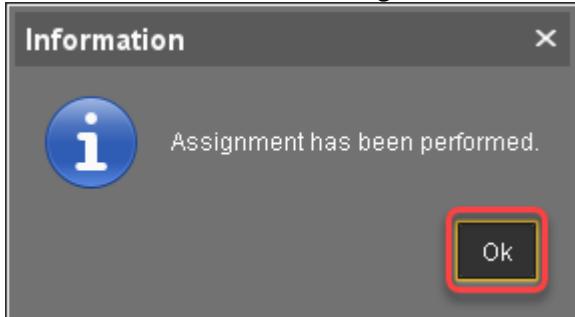

3. In the **Update time** dialog, select **Now** and click **Ok**.

4. Confirm the **Information** dialog.

The target machines download the ISO file. This may take a few minutes.

#### Monitoring the Process

1. In the structure tree of the UMS, open the context menu of one of the target machines and select **Other commands > Refresh system information**.
2. In the dialog, click **Refresh system information** and then from time to time. In the **Attribute** area, under **Firmware Description**, the current status of the OSC installation is shown.

- When **Firmware Description** reads "IGEL OSC Ready for Conversion", continue with [Starting the Conversion](#)(see page 1381).

#### Check List

- The conversion profile is assigned to all target machines.
- All target machines have downloaded the IGEL OS 11 Creator (ISO), which is indicated by the **Firmware Description** "IGEL OS Ready for Conversion".

#### Next Step

>> [Starting the Conversion](#)(see page 1381)

## Configuring the OSCW Installer in Buddy Mode

The target machines that are designated as update buddies download the ISO file containing the IGEL OS firmware from the UMS. When they have downloaded the file, the remaining target machines download it from the update buddies.

Make sure that all devices are joined to a Microsoft Active Directory and are accessible by the same AD user with reading permissions.

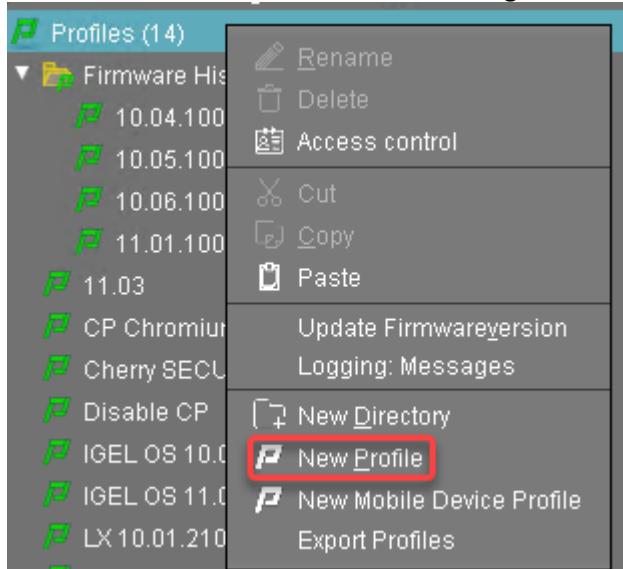

First, we create a profile for the update buddies that provides the OSCW installer with the download source for the ISO file. Then, we will assign this profile to the update buddies; the assignment of the profile triggers the update buddies to download the file. After that, we create a profile for the remaining target machines which configures them to use the update buddies. When the update buddies have downloaded the file, we can assign the profile to the remaining target machines. On assignment, each target machine selects an update buddy automatically and starts downloading the file from it.

The configuration comprises the following steps:

- [Creating a Profile for the Update Buddies](#)(see page 1364)
- [Assigning the Profile to the Update Buddies](#)(see page 1366)
- [Checking if the Update Buddies are ready](#)(see page 1367)
- [Creating a Profile for the Remaining Target Machines](#)(see page 1369)
- [Creating a View to Select the Target Machines](#)(see page 1371)
- [Assigning the Profile to the Target Machines](#)(see page 1376)
- [Monitoring the Process](#)(see page 1378)

### Creating a Profile for the Update Buddies

1. In the structure tree of the UMS Console, go to **Profiles** and open **New Profile** in the context menu.

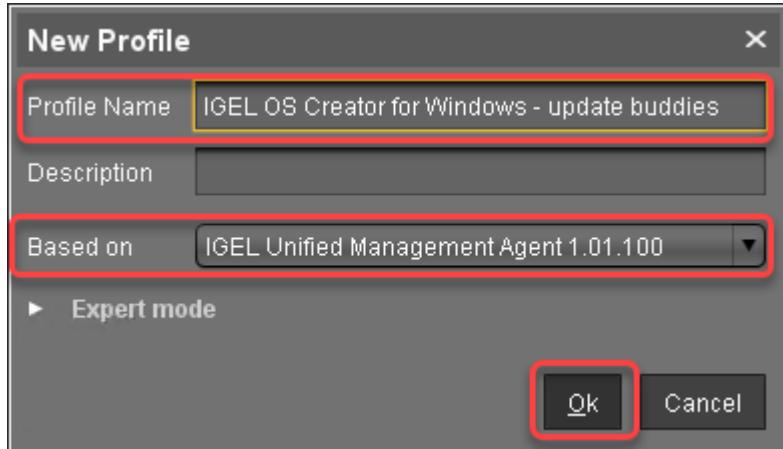

2. In the **New Profile** dialog, change the settings as follows:

- **Profile Name:** A name for the profile, e. g. "IGEL OS Creator for Windows - update buddies"

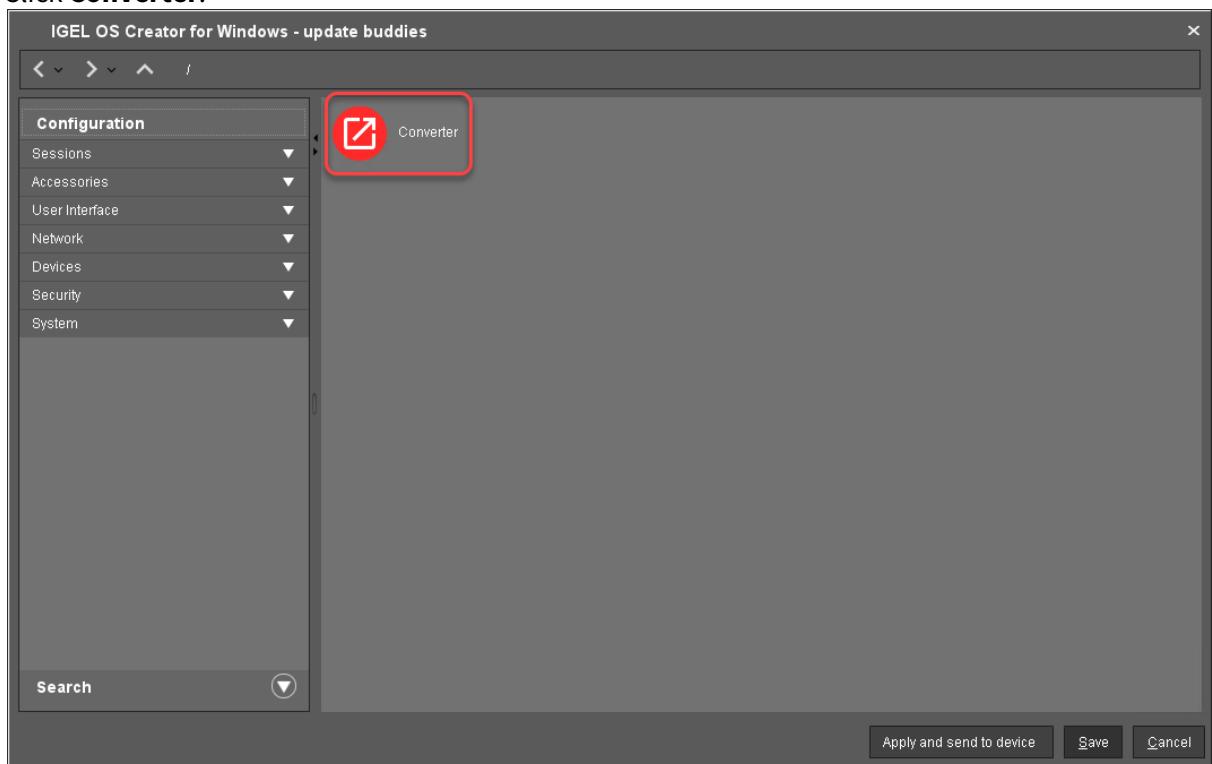

- **Based on:** Select "IGEL Unified Management Agent 1.01.100".

3. Click **Ok**.

The configuration dialog opens.

4. Click **Converter**.

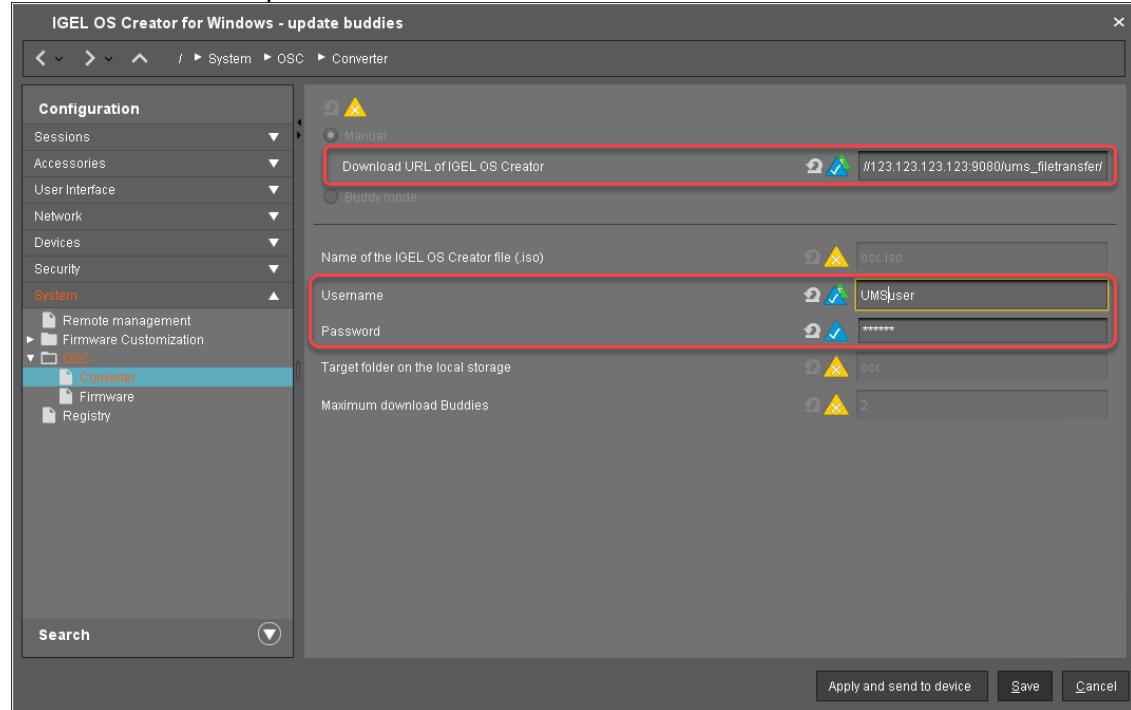

You are taken to **System > OSC > Converter** where you can set all relevant parameters.

5. Change the settings as follows (click the icon to enable the configuration; the icon will change to ):
- **Download URL of IGEL OS Creator:** Enter `https://[IP address of your UMS Server]:8443/ums_filetransfer/` or `http://[IP address of your UMS Server]:9080/ums_filetransfer/`  
Example: `https://192.168.178.100:8443/ums_filetransfer/` or `http://`

192.168.178.100:9080/ums\_filetransfer/

- **Username:** Enter the username for the UMS.
- **Password:** Enter the password for the UMS user.

## 6. Click **Save**.

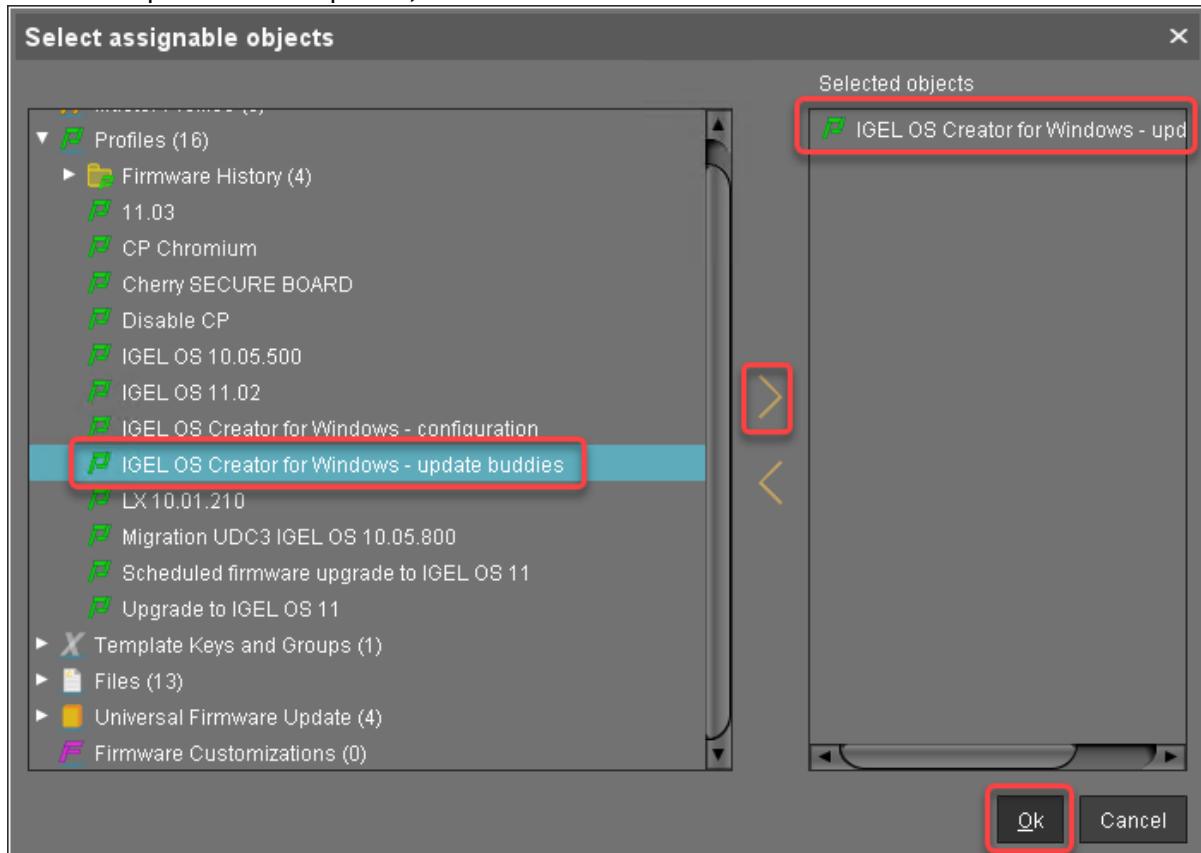

### Assigning the Profile to the Update Buddies

1. In the structure tree of the UMS console, select the machines that will serve as update buddies and click in the **Assigned objects** area.

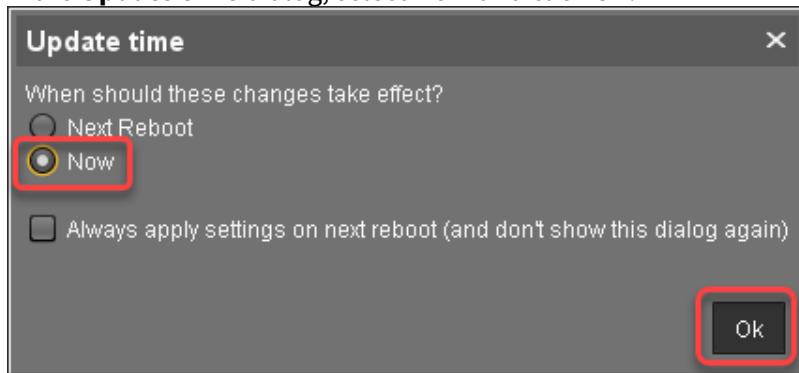

2. Select the update buddies profile, click and then **Ok**.

3. In the **Update time** dialog, select **Now** and click **Ok**.

#### Checking If the Update Buddies Are Ready

Perform the following check for each update buddy:

1. In the structure tree of the UMS, open the context menu of the update buddy and select **Other commands > Refresh system information**.

2. In the dialog, click **Refresh system information** and then every few seconds. In the **Attribute** area, under **Firmware Description**, the current status of the download is shown. When it reads "IGEL OSC Ready for Conversion", the update buddy is ready for use.

## Creating a Profile for the Remaining Target Machines

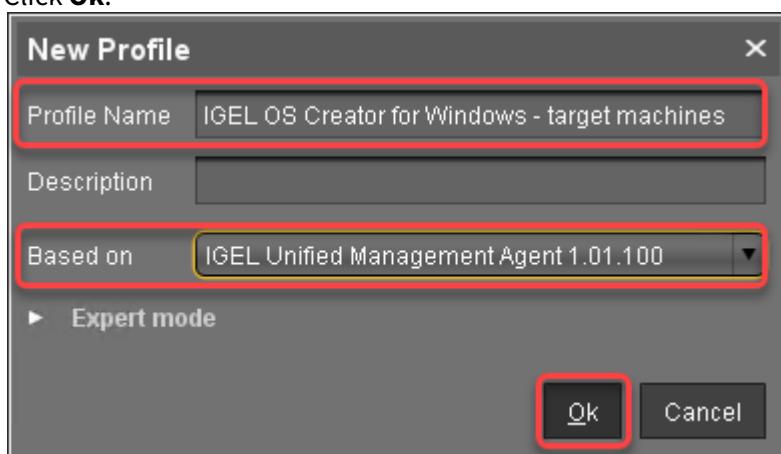

1. In the structure tree of the UMS Console, go to **Profiles** and open **New Profile** in the context menu.

2. In the **New Profile** dialog, change the settings as follows:

- **Profile Name:** A name for the profile, e. g. "IGEL OS Creator for Windows - target machines"
- **Based on:** Select "IGEL Unified Management Agent 1.01.100".

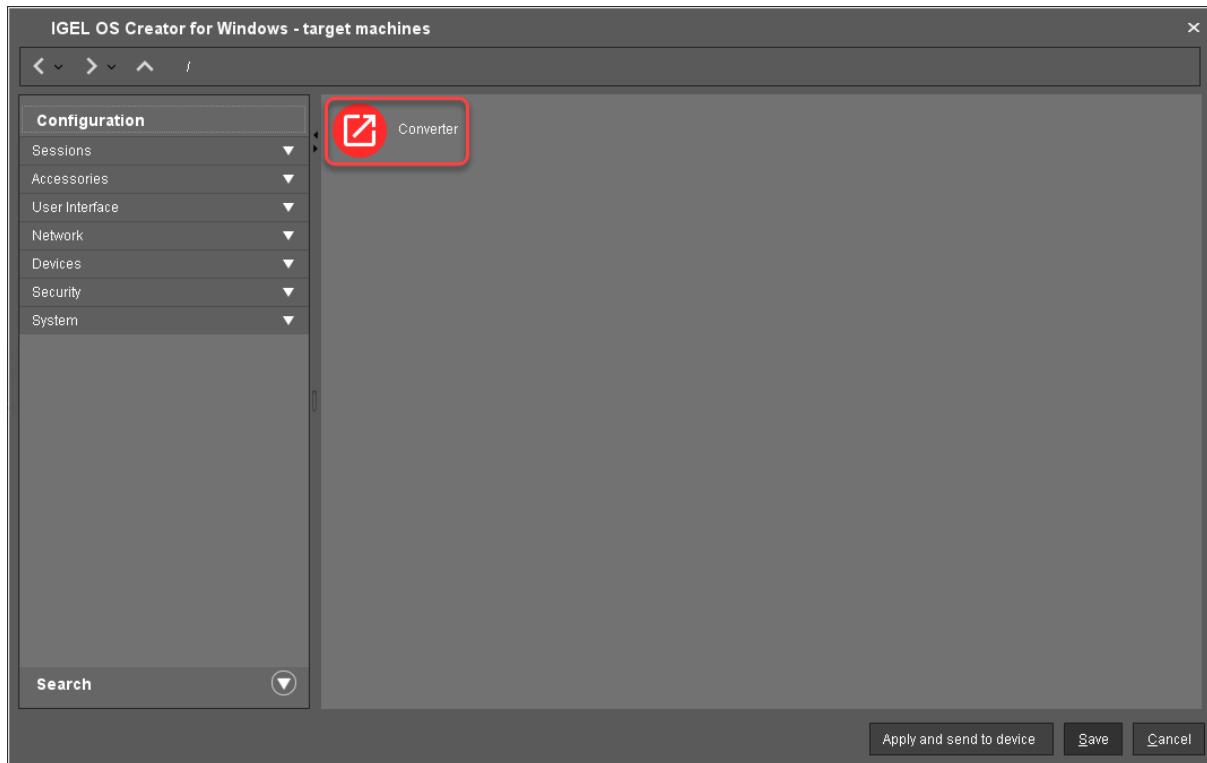

3. Click **Ok**.

The configuration dialog opens.

4. Click **Converter**.

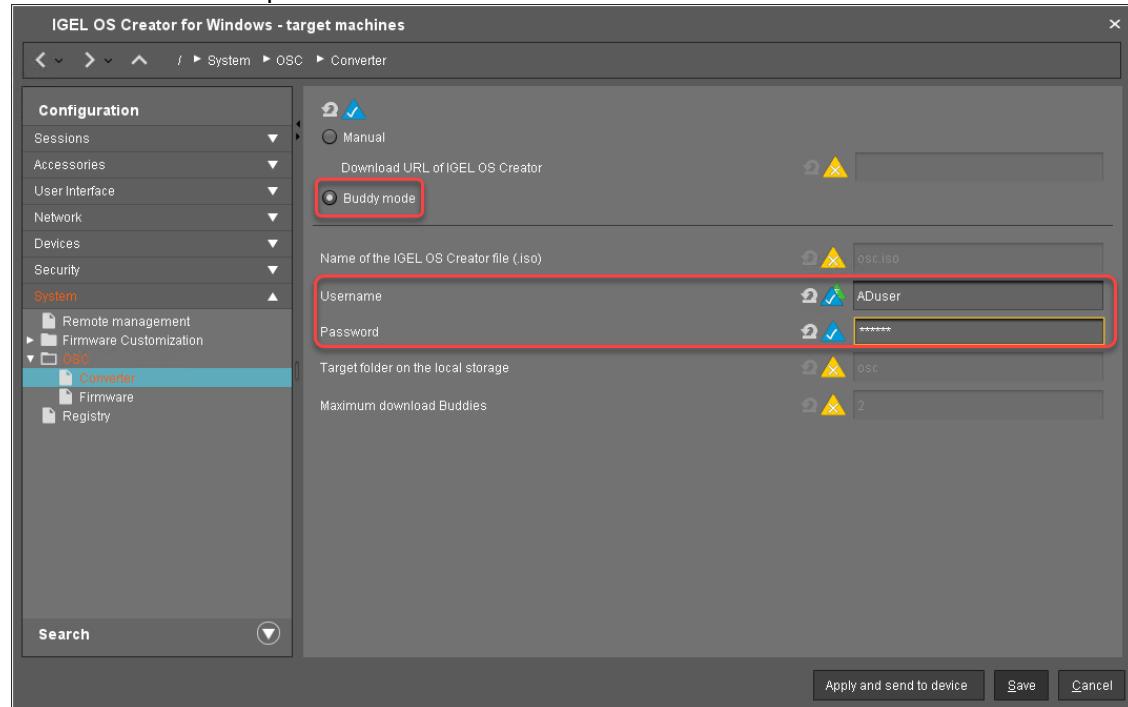

You are taken to **System > OSC > Converter** where you can set all relevant parameters.

5. Change the settings as follows (click the icon to enable the configuration; the icon will change to ):
- Select **Buddy Mode**.
  - **Username:** Common username in Microsoft Active Directory for all target machines, including the update buddies.

- **Password:** Common password associated with the **Username**.

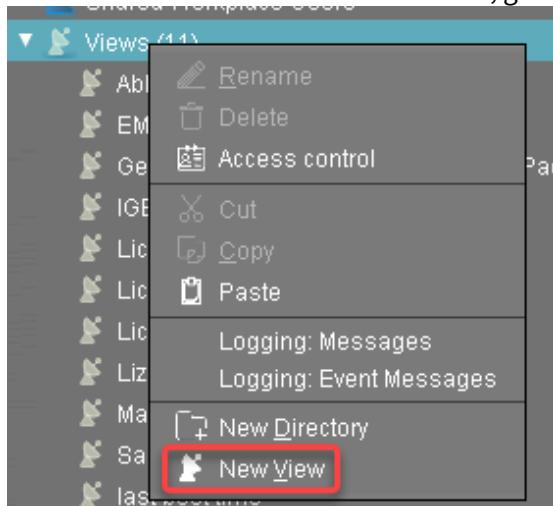

6. Click **Save**.

#### Creating a View to Select the Target Machines

The target machines must be selected in order to assign the profile to them. For the selection, a view will be used.

1. In the structure tree of the UMS Console, go to **Views** and select **New View** in the context menu.

2. Enter a name for the view, e. g. "IGEL OS Creator for Windows - target machines" and click **Next**.

**Create new view**

**View name**

Name

Description

Expert mode

The "Next" button is highlighted with a red rectangular border.

3. On the **Select criterion** page, select **Product ID** and click **Next**.

**Create new view**

**Select criterion**

CPU Speed       CPU Type       Device Type  
 Duplex Mode       Firmware Description       Firmware Update (Relative)  
 Firmware Version       Flash Player       Flash Player Version  
 Flash Size       Graphics Chipset 1       Graphics Chipset 2  
 Graphics Memory Size 1       Graphics Memory Size 2       Last Boot Time (Absolute)  
 Last Boot Time (Relative)       Memory Size       Network Name  
 Network Speed       OS Type       Partial Update (Name)  
 Partial Update (Relative)       Partial Update (Version)       Product  
 Product ID       Total Operating Time

**▼ Monitor Information**

Monitor Date of Production       Monitor Model       Monitor Native Resolution

**Back** **Next** **Finish** **Cancel**

A screenshot of a software window titled 'Create new view' with a sub-section 'Select criterion'. A list of various system parameters is shown as radio buttons. The 'Product ID' option is selected and has a red rectangular highlight around it. At the bottom of the window, there are four buttons: 'Back', 'Next', 'Finish', and 'Cancel', with the 'Next' button also having a red highlight around it.

4. On the **Text search** page, enter "OSCW" and click **Next**.

The screenshot shows the 'Create new view' dialog with the 'Text search' tab selected. In the search input field, the text 'OSCW' is entered and highlighted with a red box. Below the input field are four optional checkboxes: 'Consider case', 'Compare whole text', 'Use regular expression', and 'Not like'. At the bottom of the dialog are four buttons: '< Back', 'Next >', 'Finish', and 'Cancel'. The 'Next >' button is also highlighted with a red box.

5. On the **Create new view** page, click **Finish**.

**Create new view**

**Finish view creation**

Name: IGEL OS Creator for Windows - target machines

Description:

View criteria:  
Product ID is like (?i).\*OSCW.\*

Create view  
 Narrow search criterion (AND)  
 Create additional search criterion (OR)

**Back** **Next** **Finish** **Cancel**

The number of matches is shown.

6. Click **Load devices** to view the target machines.

Name: IGEL OS Creator for Windows - target machines

Description:

Rule: Product ID is like (?i).\*OSCW.\*

Result list was last updated at 1:02 PM. **Load devices** Refresh Settings

One matching device found.

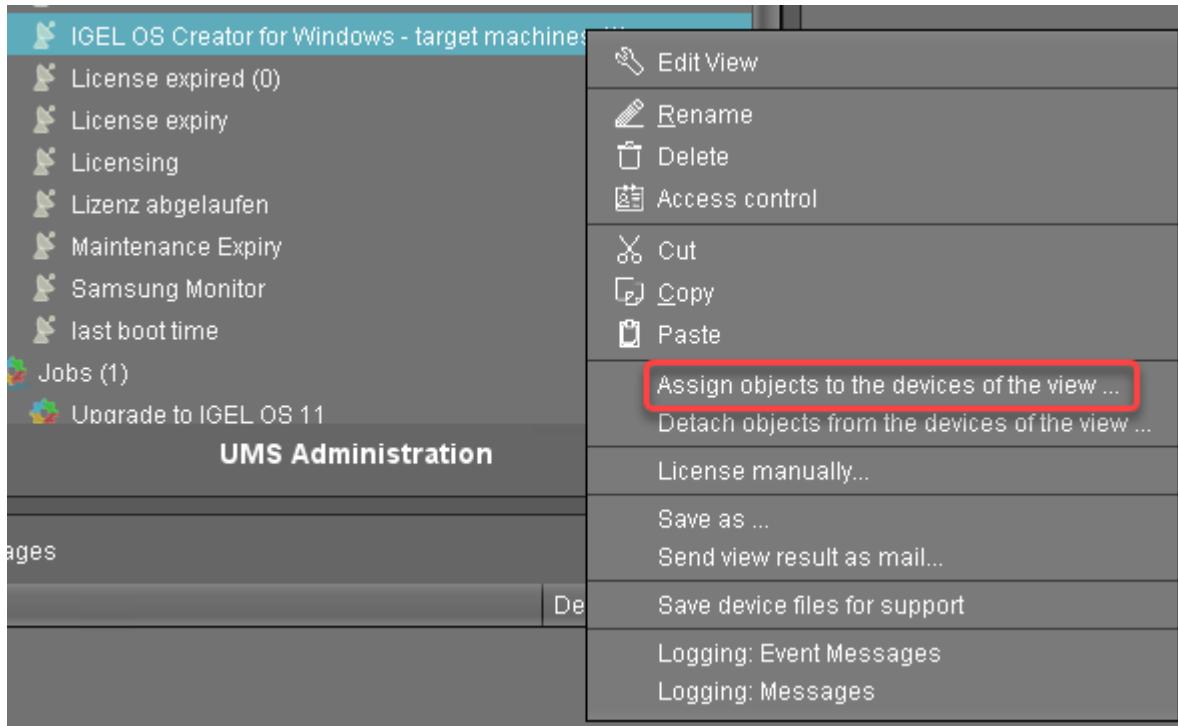

7. The target machines are shown.

| Name                                                             | IGEL OS Creator for Windows - target machines |              |                               |          |

## Assigning the Profile to the Target Machines

1. Select the view you have created beforehand and select **Assign objects to the devices of the view ....**

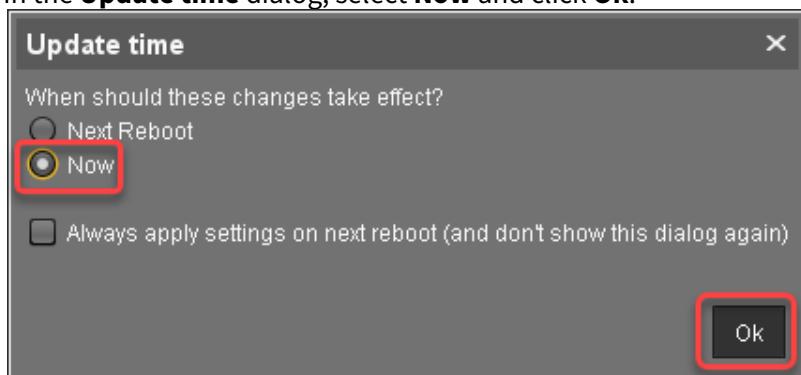

2. In the **Assign objects** dialog, select the profile for the target machines, click to assign it and then click **Ok**.

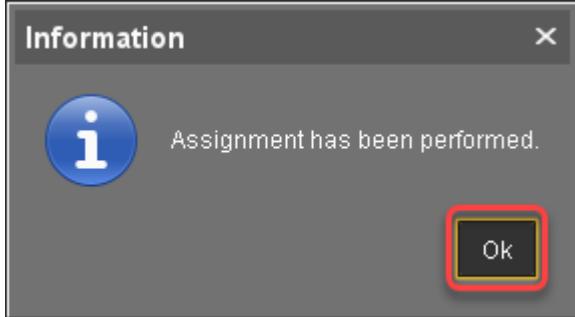

3. In the **Update time** dialog, select **Now** and click **Ok**.

4. Confirm the **Information** dialog.

The target machines download the ISO file.

#### Monitoring the Process

1. In the structure tree of the UMS, open the context menu of one of the target machines and select **Other commands > Refresh system information**.
2. In the dialog, click **Refresh system information** and then every few seconds. In the **Attribute** area, under **Firmware Description**, the current status of the download is shown.

| Memory Size (MB)                                 |                               |
| Network Speed                                    |                               |
| Duplex Mode                                      |                               |
| Graphics Chipset 1                               |                               |

- When **Firmware Description** reads "IGEL OSC Ready for Conversion", continue with [Starting the Conversion](#)(see page 1381).

#### Check List

- The conversion profile is assigned to all target machines.
- All target machines have downloaded the OSCW ISO file, which is indicated by the **Firmware Description** "IGEL OS Ready for Conversion".

#### Next Step

>> [Starting the Conversion](#)(see page 1381)

### 6.1.10 Starting the Conversion

1. In the UMS structure tree, select the view you have created for selecting the target machines, and click **Load devices**.

The screenshot shows a configuration dialog box. At the top, there are fields for 'Name' (set to 'IGEL OS Creator for Windows - target machines'), 'Description', and 'Rule' (set to 'Product ID is like (?i).\*OSCW.\*'). Below these are buttons for 'Result list was last updated at 2:18 PM.', 'Load devices' (which is highlighted with a red box), 'Refresh', and 'Settings'. A message at the bottom states 'One matching device found.'

2. Select all machines and in the context menu, select **Specific Device Command**.

The screenshot shows a list of devices in a table format. The first row, 'Doku-HS-OSCW', is selected and highlighted with a cyan background. A context menu is open over this row, listing various options: Edit Configuration, Rename, Delete, Clear 'Configuration Change Status' flag, Access control, Cut, Copy, Paste, Shadow, Secure Terminal, Suspend, Shutdown, Wake up, Reboot, Update & snapshot commands, Other commands, Specific Device Command (which is highlighted with a red box), Take over settings from ..., Export Device Settings, Save device files for support, Release IGEL Cloud Gateway license, Logging, License manually..., and Scan for devices.

3. In the **Specific Device Command** dialog, select **Convert to IGEL OS** and click **Execute**.

On the devices, a dialog is displayed. When the dialog is confirmed, the conversion starts immediately. If the dialog is not confirmed, the conversion starts after 20 seconds.

When the conversion is complete, the **Product** information in the UMS is changed to "IGEL OS 11".

## 6.2 IGEL OS Creator for Windows (OSCW) on IGEL Windows Embedded 7/7+

The IGEL OS Creator (OSC) for Windows is able to convert any device that is running IGEL Windows Embedded 7/7+ to IGEL OS 11. The IGEL OS Creator (OSC) for Windows is integrated into version 3.13.150 of IGEL Windows Embedded 7 and into version 3.14.110 of IGEL Windows Embedded 7+.

Read all the following chapters and follow the instructions in the order given.

1. [Prerequisites](#)(see page 1383)
2. [Getting the Required Software](#)(see page 1383)
3. [Updating the IGEL WES7/7+ Devices](#)(see page 1384)
4. [Transferring the IGEL OS 11 Firmware to the UMS](#)(see page 1389)
5. [Configuring the OSCW Installer](#)(see page 1389)
6. [Starting the Conversion](#)(see page 1400)

## 6.2.1 Prerequisites

### Network

- All machines are registered with the UMS.

### Next Step

>> When all requirements are met, continue with [Getting the Required Software](#)(see page 1383).

## 6.2.2 Getting the Required Software

The following software must be downloaded resp. installed:

### IGEL Universal Management Suite (UMS) 6.04.120 or Higher

1. Download UMS 6.04.120 or higher from <https://www.igel.com/software-downloads/workspace-edition/> > **Universal Management Suite**.
2. Update your UMS to version 6.04.120 or later. For update instructions, see [Updating UMS](#)<sup>370</sup>.

### IGEL OS 11

- Download IGEL OS 11.03.500 or higher from <https://www.igel.com/software-downloads/workspace-edition/> > **OS 11** > **FIRMWARE UPDATES**.

### IGEL WES 7/7+

- For IGEL WES 7 devices, download version 3.13.150.
- For IGEL WES 7+ devices, download version 3.14.110\_W7+.

### Check List

- ✓ The UMS is updated to version 6.04.120 or higher.
- ✓ The required firmware versions for IGEL WES7/7+ devices are available.
- ✓ The firmware files for IGEL OS 11.03.500 or higher are available.

### Next Step

>> [Updating the IGEL WES7/7+ Devices](#)(see page 1384)

---

<sup>370</sup> <https://kb.igel.com/display/endpointmgmt604/Updating+UMS>

### 6.2.3 Updating the IGEL WES7/7+ Devices

In this step, we will update the devices to the IGEL WES 7/7+ version that is capable of converting the device to IGEL OS 11.

For IGEL WES 7 devices, you use `UniversalDesktopWES-3.13.150.snp`; for IGEL WES 7+ devices, you use `UniversalDesktopWES7+-3.14.110.snp` as the snapshot file. If you have both device types, perform the steps described below for each device type separately.

After the update, you can update to another firmware only via IGEL rescue shell!

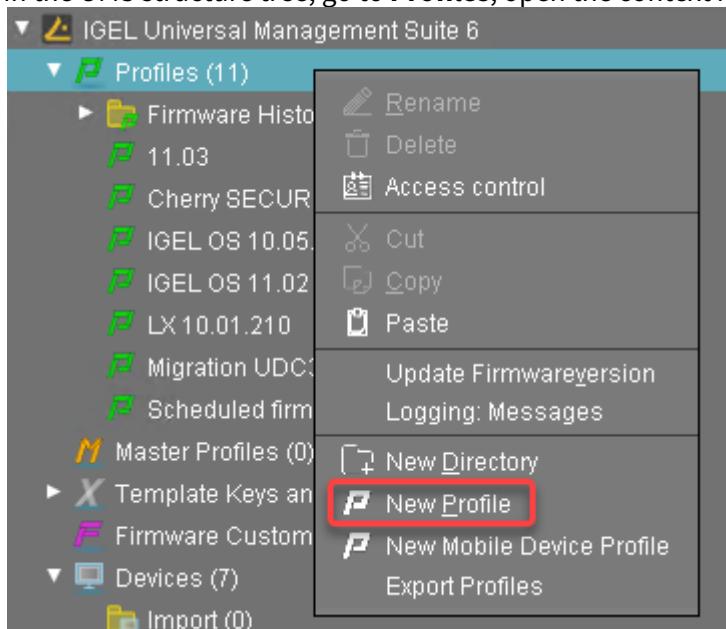

#### Transferring the Snapshot File to the UMS

The snapshot file must be placed in the file system of the UMS Server.

1. Get access to the file system of the machine on which your UMS Server is running.
2. Unzip the snapshot file to <UMS Installation directory>\rmguiserver\webapps\ums\_filetransfer

#### Creating an Update Profile

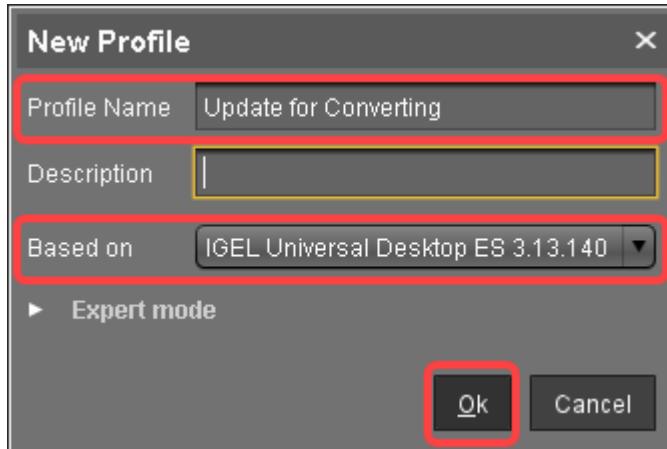

1. In the UMS structure tree, go to **Profiles**, open the context menu, and select **New Profile**.

2. Enter the following data:
  - Profile Name:** Name for the profile, e. g. "Update for Converting".
  - Description:** Optional description for the profile.
  - Based on:** Firmware version for the profile; select the current firmware of your devices.

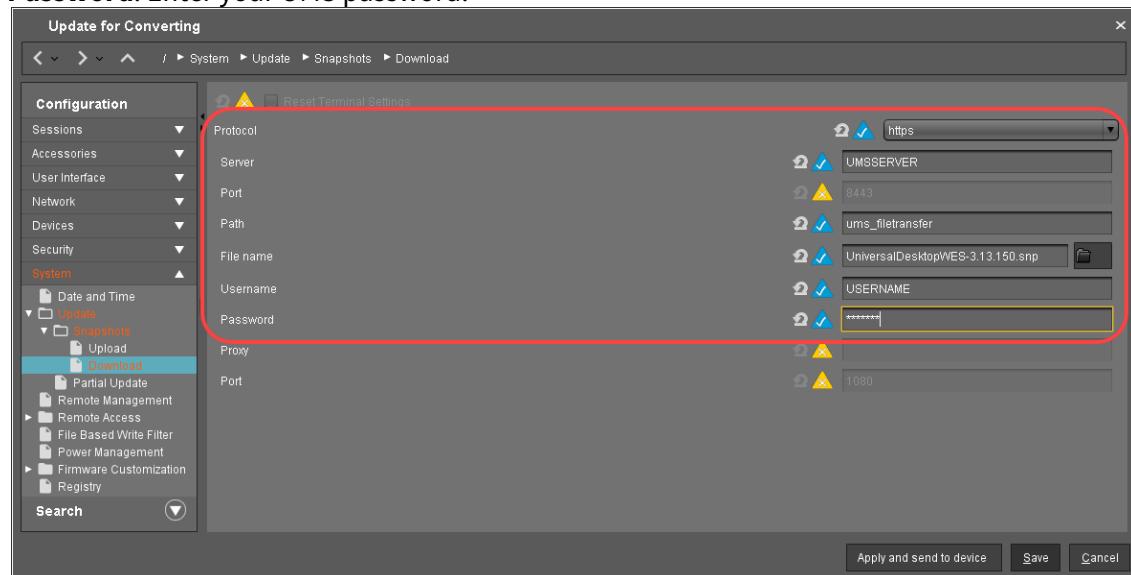

3. Click **Ok**.

4. Go to **System > Update > Snapshots > Download** and change the settings as follows:

- **Protocol:** Select "https".
- **Server:** Enter the IP address or hostname of the UMS.
- **Path:** Enter "ums\_filetransfer".
- **File name:** Enter the file name of the snapshot file.
- **Username:** Enter your UMS user name.
- **Password:** Enter your UMS password.

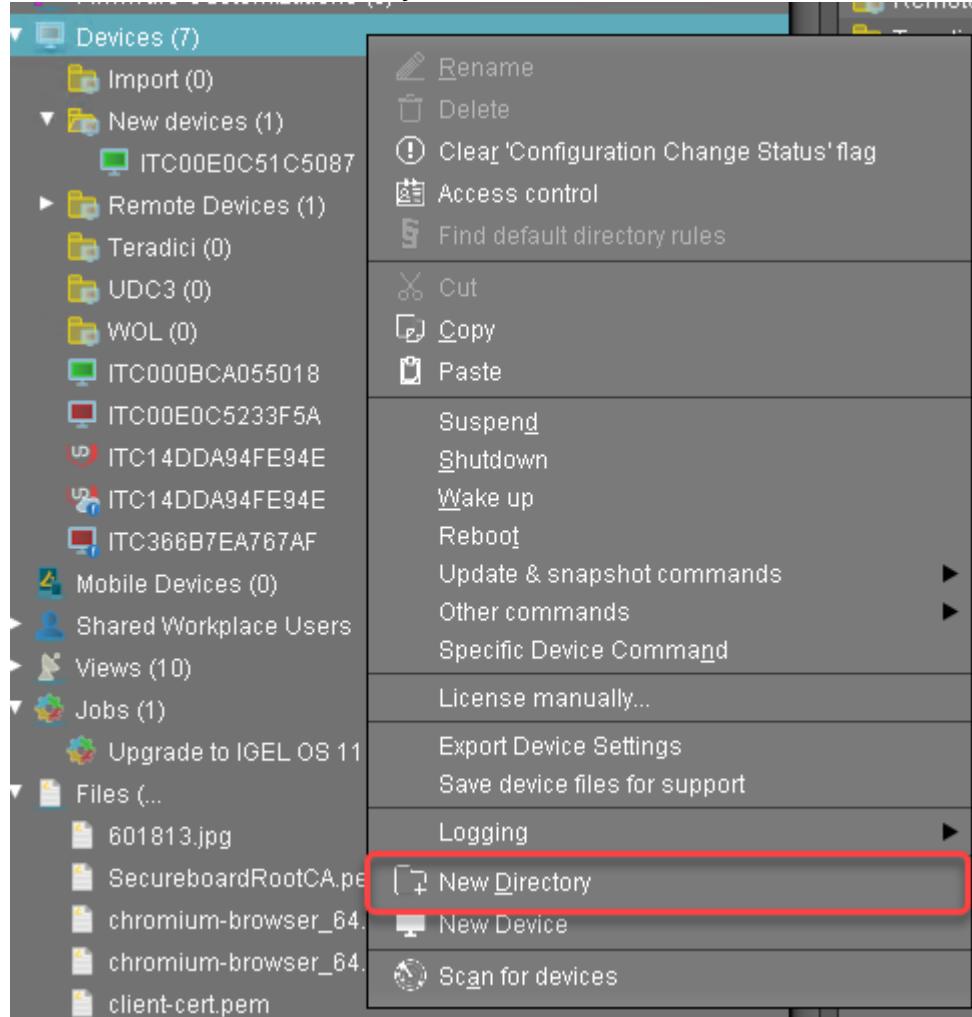

5. Click **Save** to save the profile.

## Starting the Update

1. Under **Devices**, create a directory and name it "Convert to IGEL OS 11", for instance.

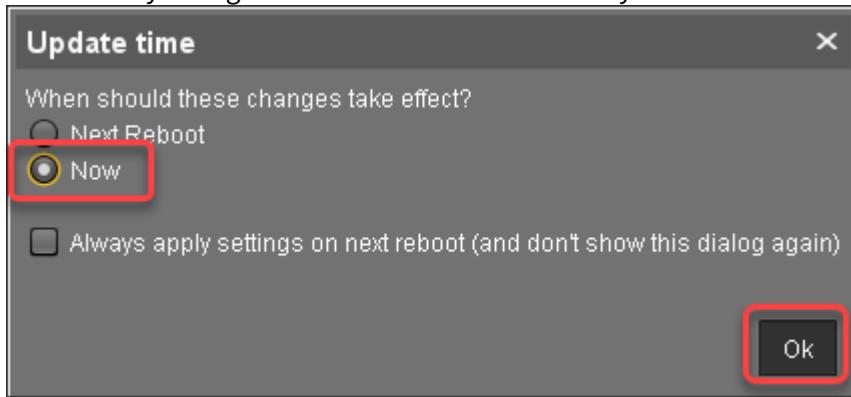

2. Put the devices that are to be updated into the new directory. You can use drag & drop.

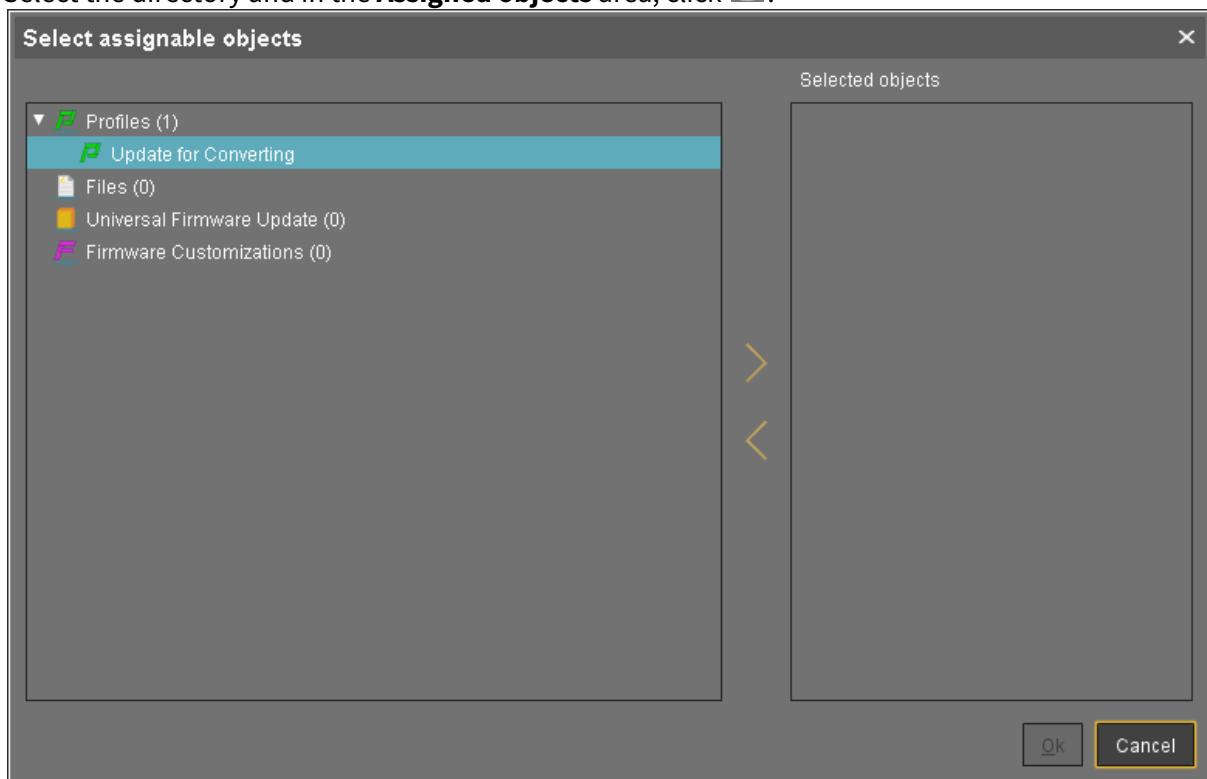

3. In the **Update time** dialog, select **Now** and click **Ok**.

The directory change is communicated immediately to the device.

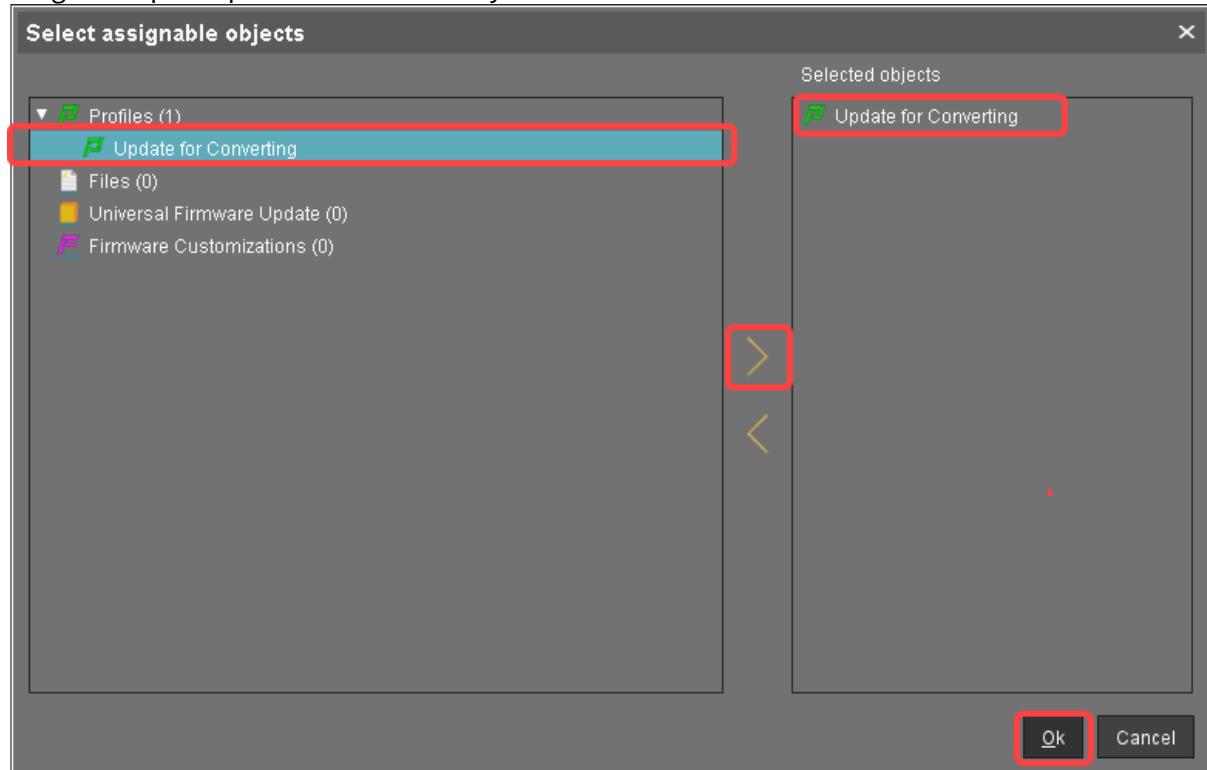

4. Select the directory and in the **Assigned objects** area, click **+**.

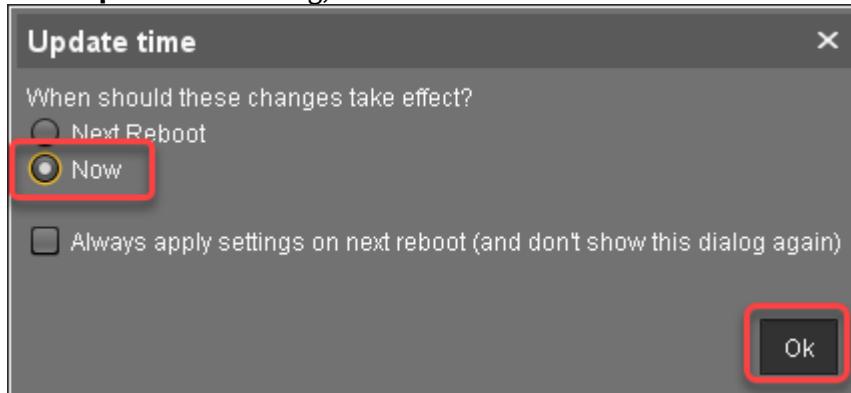

5. Assign the update profile to the directory and click **Ok**.

6. In the **Update time** dialog, select **Now** and click **Ok**.

The changes are sent to the devices immediately.

7. Go to the directory that contains the devices that are to be updated, open the context menu, and select **Update & snapshot commands > Update**.  
The update process is started.

8. When the update process is finished, go to one of the devices and click to refresh the screen.  
In the **Advanced System Information** area, **Product** is set to "IGEL Unified Management Agent",

and **Product ID** is set to "OSCW".

| Attribute       | Value           |
|-----------------|-----------------|
| Name            | IGEL-CXQY1D374I |
| Site            |                 |
| Comment         |                 |
| Department      |                 |
| Cost Center     |                 |
| Asset ID        |                 |
| In-Service Date |                 |
| Serial Number   |                 |

| Attribute                                        | Value                         |
|--------------------------------------------------|-------------------------------|
| Unit ID                                          | 00505693842A                  |
| MAC Address                                      | 00:50:56:93:84:2A             |
| Last IP                                          | 172.30.0.121                  |
| <b>Product</b>                                   | IGEL Unified Management Agent |
| <b>Product ID</b>                                | OSCW                          |
| Version                                          | 1.0.1.120                     |
| Firmware Description                             | IGEL Cloud Gateway            |
| Expiration Date of OS10-Maintenance Subscription | Jun 2, 2020 6:54 AM           |
| Last Boot Time                                   |                               |
| Network Name (at Boot Time)                      | (IGEL-CXQY1D374I)             |
| Runtime since last Boot                          |                               |

## Check List

- ✓ The devices are updated to version 3.13.150 (WES 7) or 3.14.110 (WES 7+).

## Next Step

>> [Transferring the IGEL OS 11 Firmware to the UMS](#)(see page 1389)

### 6.2.4 Transferring the IGEL OS 11 Firmware to the UMS

In this step, we will transfer the IGEL OS 11 firmware files to the UMS so that the target machines can fetch it from there.

1. Get access to the file system of the machine on which your UMS Server is running.
2. Unzip the firmware files to <UMS Installation directory>\rmguiserver\webapps\ums\_filetransfer

## Check List

- ✓ The IGEL OS firmware files are located in the /ums\_filetransfer/ directory of the UMS.

## Next Step

>> [Configuring the OSCW Installer](#)(see page 1389)

### 6.2.5 Configuring the OSCW Installer

In this step, we will provide the OSCW installer with the download source for the IGEL OS firmware.

Two methods are available:

- **Configuring the OSCW Installer in Normal Mode**([see page 1390](#)): Each target machine downloads the firmware files from the UMS individually. This increases the amount of outgoing traffic from the UMS.
- **Configuring the OSCW Installer in Buddy Mode**([see page 1394](#)): This method is recommended if the connection bandwidth of the download source is limited; it ensures a more balanced use of network bandwidth during the distribution of the firmware files to the target machines. First, a group of target machines is converted to IGEL OS 11. Then, these machines are configured to serve as buddy update servers for the remaining target machines.

## Configuring the OSCW Installer in Normal Mode

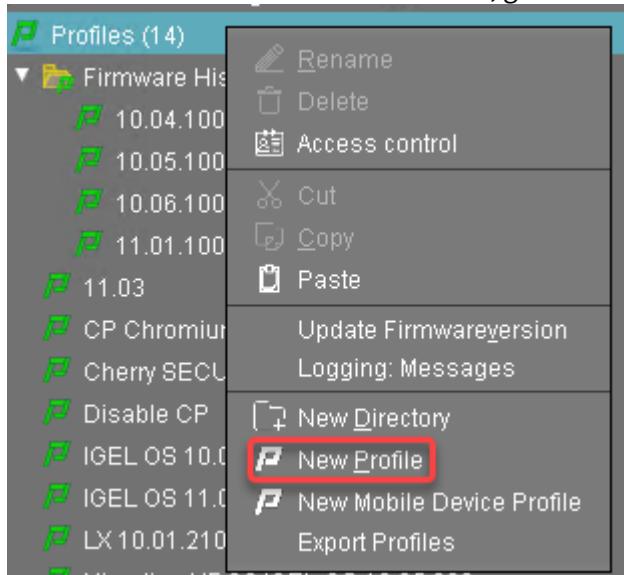

To provide the OSCW installer with the download source for the IGEL OS firmware files, we will create a profile that provides the path to those files.

The configuration comprises the following steps:

- [Creating a Profile](#)([see page 1390](#))
- [Assigning the Profile to the Target Machines](#)([see page 1392](#))

### Creating a Profile

1. In the structure tree of the UMS Console, go to **Profiles** and open **New Profile** in the context menu.

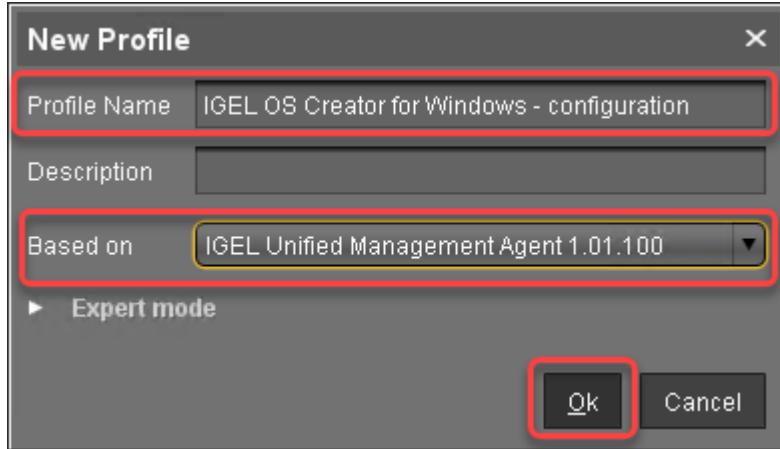

2. In the **New Profile** dialog, change the settings as follows:

- **Profile Name:** A name for the profile, e. g. "IGEL OS Creator for Windows - configuration"
- **Based on:** Select "IGEL Unified Management Agent 1.xx.xxx", e. g. "IGEL Unified Management Agent 1.01.100".

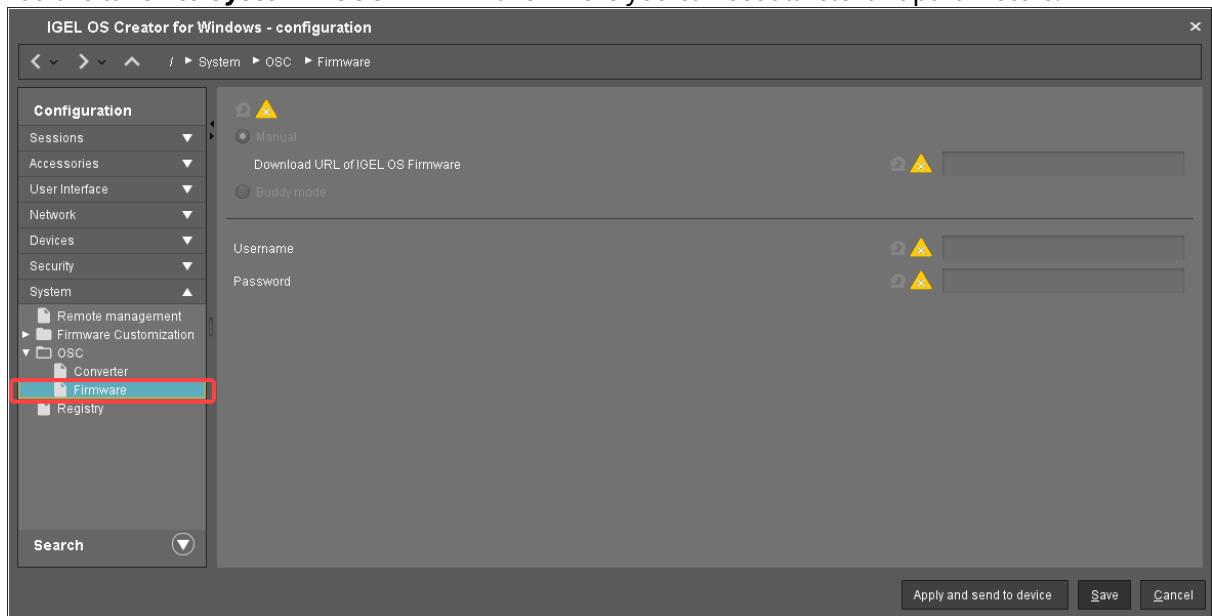

3. Click **Ok**.

The configuration dialog opens.

4. Click **Firmware**.

You are taken to **System > OSC > Firmware** where you can set all relevant parameters.

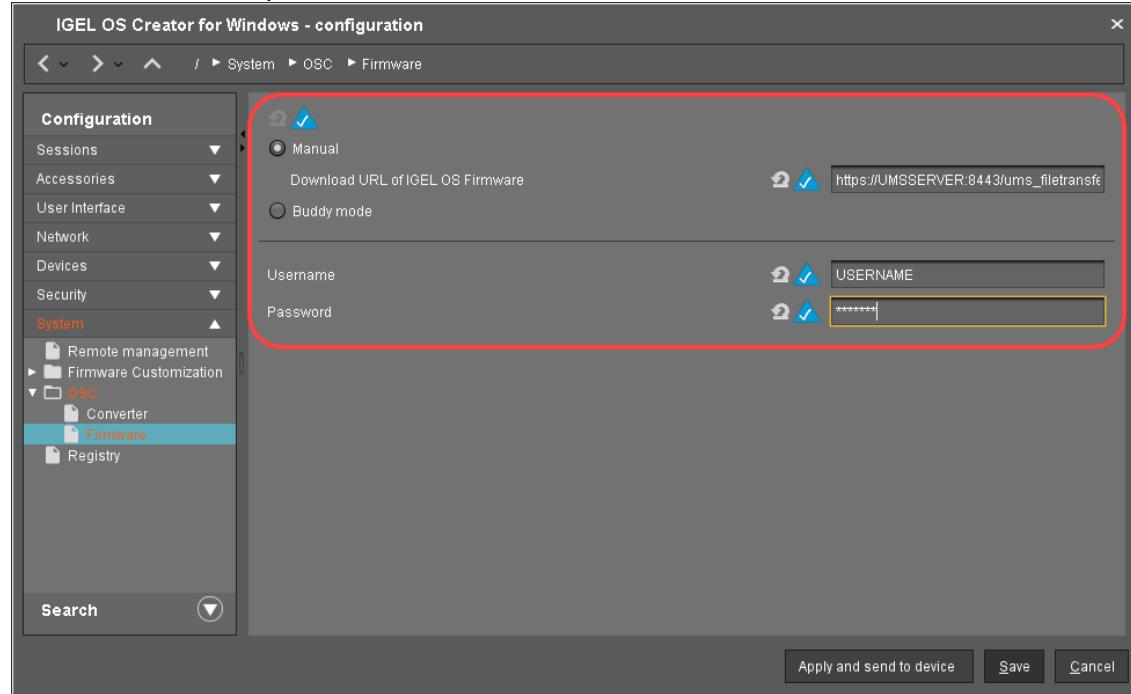

5. Change the settings as follows (click the icon to enable the configuration; the icon will change to ):

- **Download URL of IGEL OS Firmware:** Enter `https://[IP address of your UMS Server]:8443/ums_filetransfer/` or `http://[IP address of your UMS Server]:9080/ums_filetransfer/`  
Example: `https://192.168.178.100:8443/ums_filetransfer/` or `http://192.168.178.100:9080/ums_filetransfer/`
- **Username:** Enter the username for the UMS.

- **Password:** Enter the password for the UMS user.

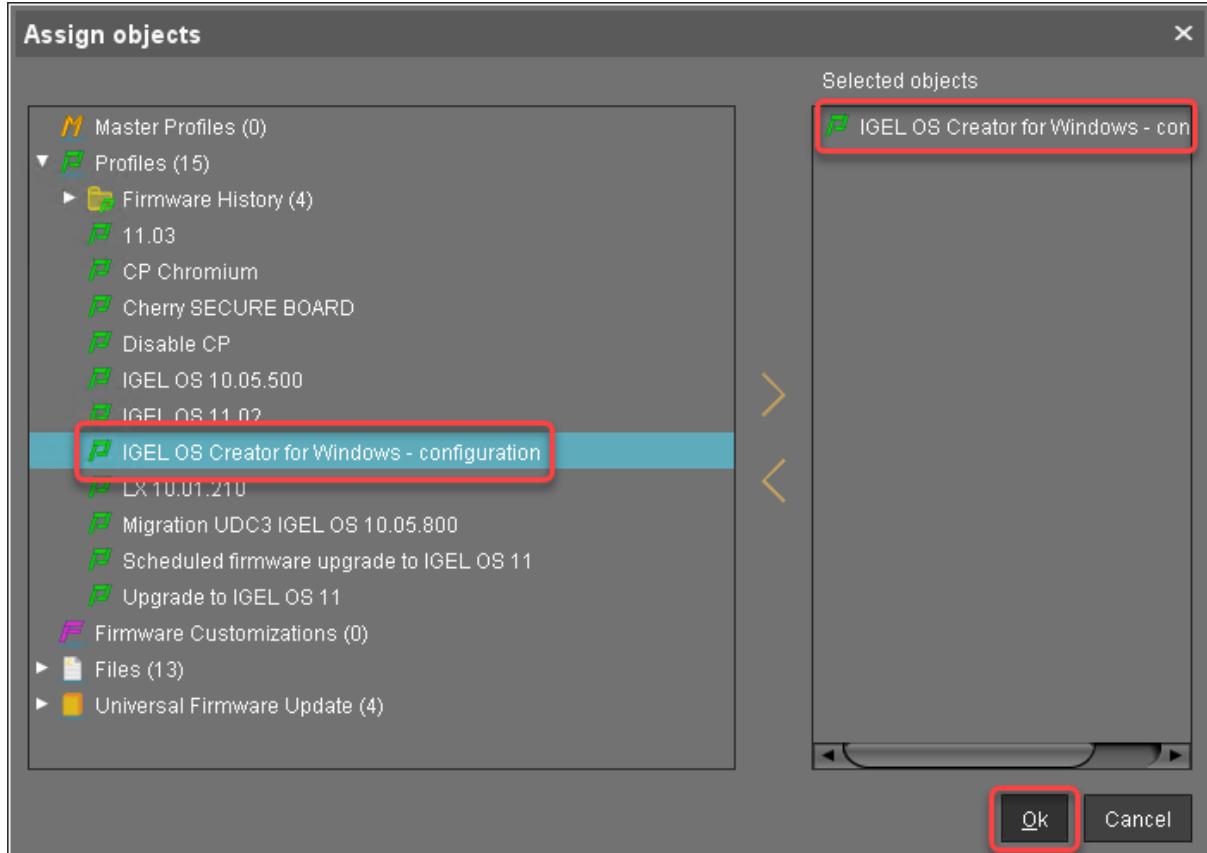

## 6. Click **Save**.

### Assigning the Profile to the Target Machines

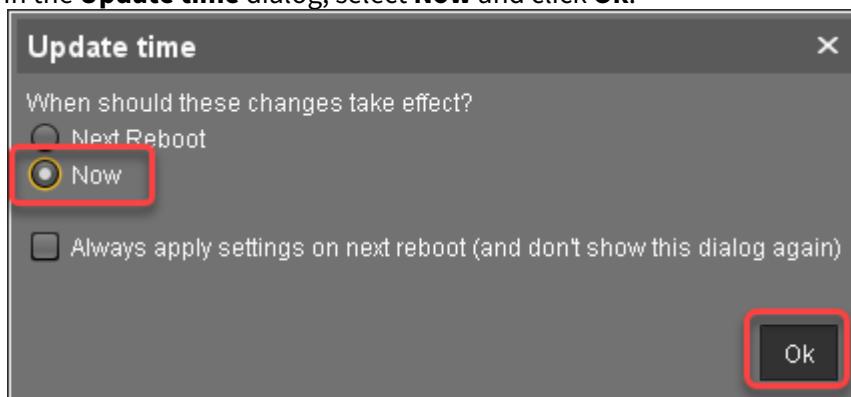

1. Select the directory that contains your target machines and in the **Assigned objects** area, click

2. In the **Assign objects** dialog, select the profile you have created beforehand, click to assign it and then click **Ok**.

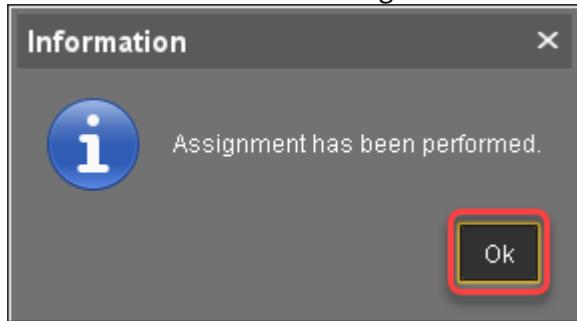

3. In the **Update time** dialog, select **Now** and click **Ok**.

4. Confirm the **Information** dialog.

Check List

- The conversion profile is assigned to all target machines.

Next Step

>> [Starting the Conversion\(see page 1400\)](#)

### Configuring the OSCW Installer in Buddy Mode

When buddy update is used, one or more machines convert to IGEL OS first and then serve as buddy update servers.

The configuration comprises the following steps:

- [Setting up the Buddy Update Servers\(see page 1394\)](#)
- [Creating a Profile for the Buddy Update Clients\(see page 1395\)](#)
- [Assigning the Profile to the Target Machines\(see page 1397\)](#)

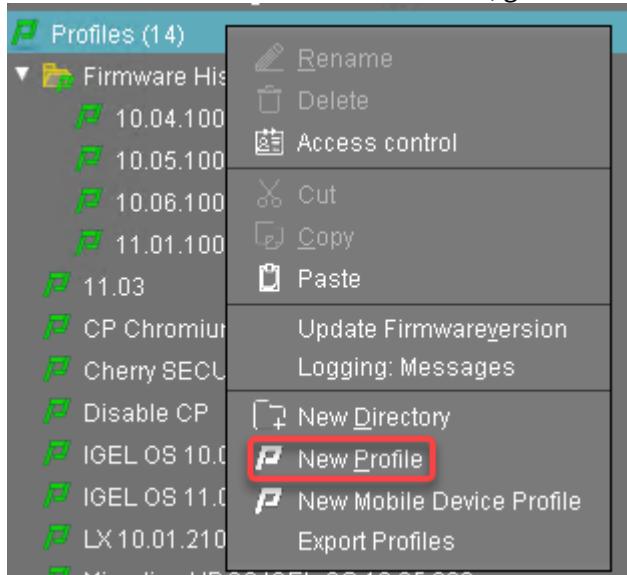

#### Setting Up the Buddy Update Servers

1. Convert the machines that are to be used as buddy update servers as described under [Configuring the OSCW Installer in Normal Mode\(see page 1390\)](#) and [Starting the Conversion\(see page 1400\)](#).
2. Configure the converted machines as buddy update servers as described under [Configuring the Buddy Update Server\(see page 223\)](#), "Basic Configuration".

## Creating a Profile for the Buddy Update Clients

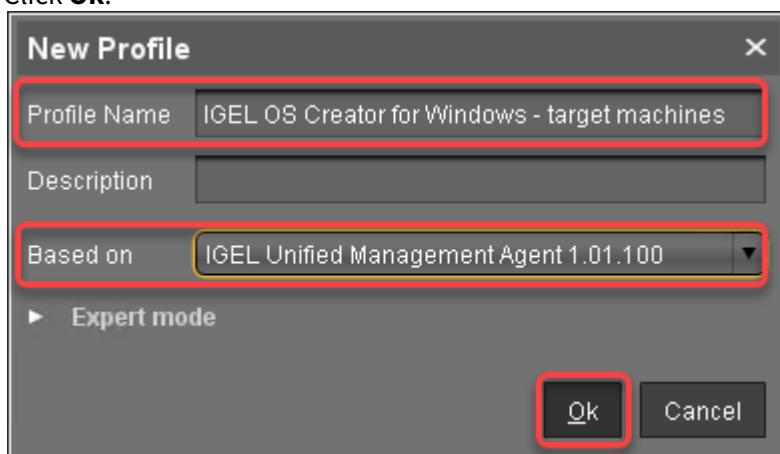

1. In the structure tree of the UMS Console, go to **Profiles** and open **New Profile** in the context menu.

2. In the **New Profile** dialog, change the settings as follows:

- **Profile Name:** A name for the profile, e. g. "IGEL OS Creator for Windows - target machines"
- **Based on:** Select "IGEL Unified Management Agent 1.xx.xxx", e. g. "IGEL Unified Management Agent 1.01.100".

3. Click **Ok**.

The configuration dialog opens.

#### 4. Click **Firmware**.

You are taken to **System > OSC > Firmware** where you can set all relevant parameters.

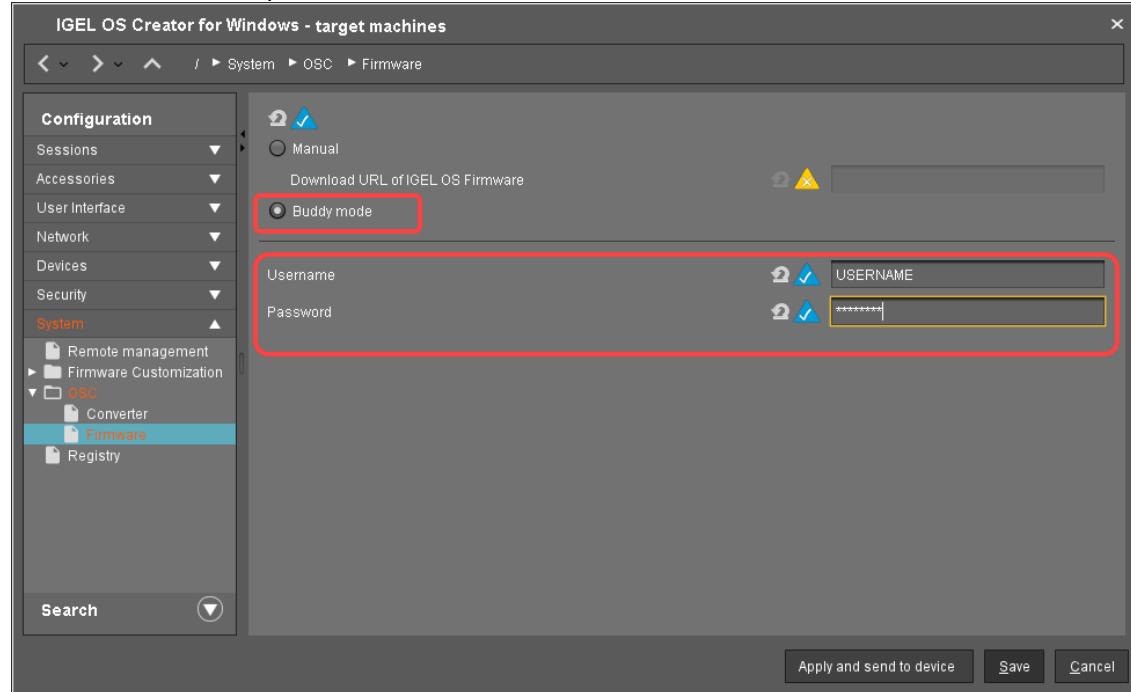

A screenshot of the "IGEL OS Creator for Windows - target machines" software window. The left sidebar shows a navigation tree with sections like Configuration, Sessions, Accessories, User Interface, Network, Devices, Security, System, OSC, Converter, Registry, and a search bar. The "Firmware" item under the OSC section is highlighted with a red border. The main right panel displays configuration settings for Firmware. It includes a "Manual" tab selected, a "Download URL of IGEL OS Firmware" input field, a "Buddy mode" tab, and fields for "Username" and "Password". Each setting has a yellow triangle icon with an 'X' to its left, indicating it's not yet configured. At the bottom right are "Apply and send to device", "Save", and "Cancel" buttons.

#### 5. Change the settings as follows (click the icon to enable the configuration; the icon will change to ):

- Select **Buddy mode**.
- **Username:** Username that is configured on the buddy update servers.

- **Password:** Common password associated with the **Username**.

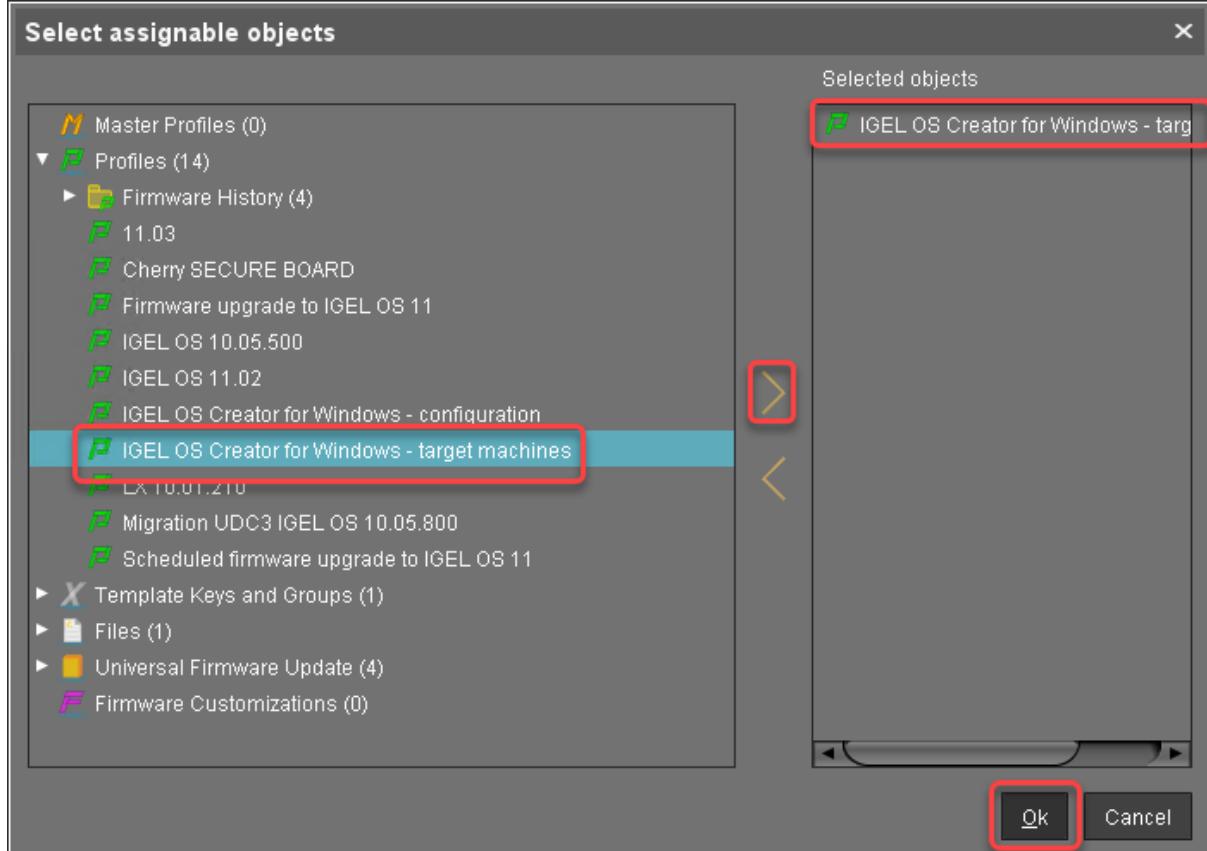

## 6. Click **Save**.

Assigning the Profile to the Buddy Update Clients

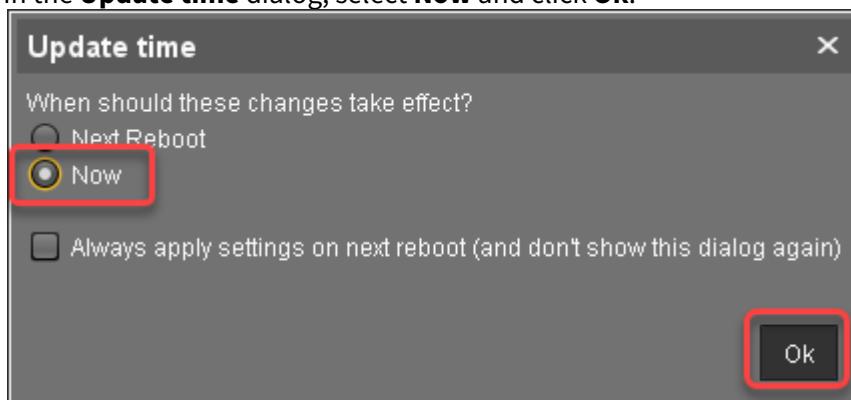

1. Select the directory that contains your target machines and in the **Assigned objects** area, click **(+)**

2. In the **Assign objects** dialog, select the profile you have created beforehand, click to assign it and then click **Ok**.

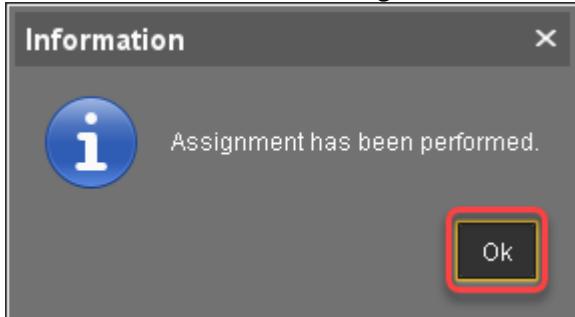

3. In the **Update time** dialog, select **Now** and click **Ok**.

4. Confirm the **Information** dialog.

The target machines download the firmware files. This may take a few minutes.

Check List

- The conversion profile is assigned to all target machines.
- All target machines have found a buddy update server, which is indicated by the **Firmware Description** "IGEL OSC Ready for Conversion".

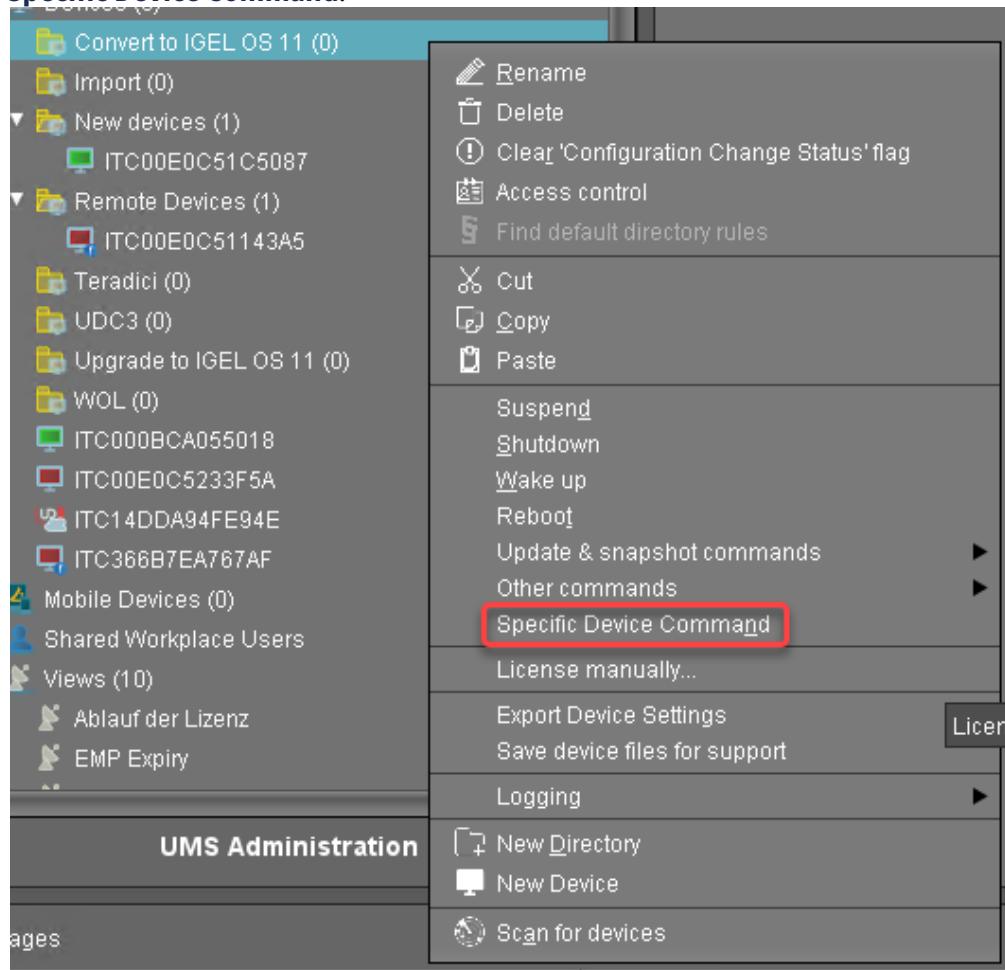

Next Step

>> [Starting the Conversion](#)(see page 1400)

## 6.2.6 Starting the Conversion

1. Select the directory that contains your target machines, open the context menu, and select **Specific Device Command**.

2. In the **Specific Device Command** dialog, select **Convert to IGEL OS** and click **Execute**.

On the devices, a dialog is displayed. When the dialog is confirmed, the conversion starts immediately. If the dialog is not confirmed, the conversion starts after 20 seconds.

When the conversion is complete, the **Product** information in the UMS is changed to "IGEL OS 11".

## 6.3 IGEL OS Creator for Windows (OSCW) on IGEL Windows 10 IoT

The IGEL OS Creator (OSC) for Windows is able to convert any device that is running IGEL Windows 10 IoT to IGEL OS 11. The IGEL OS Creator (OSC) for Windows is integrated into version 4.04.150 of IGEL Windows 10 IoT.

The devices will be converted to IGEL OS 11 automatically when the update is executed. The devices cannot be converted back to IGEL Windows 10 IoT.

Read all the following chapters and follow the instructions in the order given.

1. [Prerequisites](#)(see page 1402)
2. [Getting the Required Software](#)(see page 1402)
3. [Starting the Conversion by Updating the Devices](#)(see page 1402)

### 6.3.1 Prerequisites

#### Network

- All machines are registered with the UMS.

#### Next Step

>> When all requirements are met, continue with [Getting the Required Software](#)(see page 1402).

### 6.3.2 Getting the Required Software

The following software must be downloaded resp. installed:

#### IGEL Universal Management Suite (UMS)

- ▶ Ensure that you have UMS version 6.04 or higher. For update instructions, see [Updating UMS<sup>371</sup>](#).

#### IGEL Windows 10 IoT

- ▶ Download version 10-4.04.150 from <https://www.igel.com/software-downloads/workspace-edition/> > **OSC for Windows > UniversalDesktopW10-4.04.150.zip**.

#### Check List

- ✓ The UMS is available in the correct version.
- ✓ The required firmware version for IGEL Windows IoT devices is available.

#### Next Step

>> [Starting the Conversion by Updating the Devices](#)(see page 1402)

### 6.3.3 Starting the Conversion by Updating the Devices

In this step, we will update the devices, which includes the conversion to IGEL OS 11.

The devices will be converted to IGEL OS 11 automatically when the update is executed. The devices cannot be converted back to IGEL Windows 10 IoT.

<sup>371</sup> <https://kb.igel.com/display/endpointmgmt604/Updating+UMS>

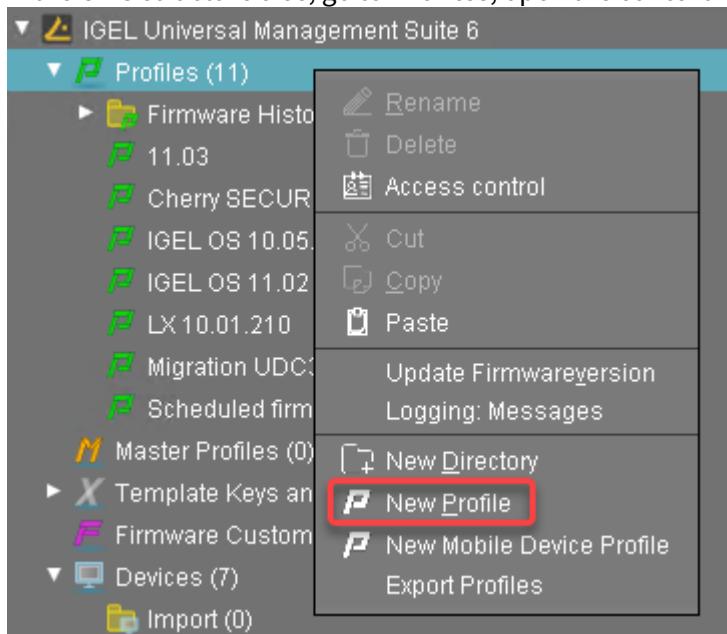

## Transferring the Snapshot File to the UMS

The snapshot file must be placed in the file system of the UMS Server.

1. Get access to the file system of the machine on which your UMS Server is running.
2. Unzip the snapshot file to <UMS Installation directory>\rmguiserver\webapps\ums\_filetransfer

## Creating an Update Profile

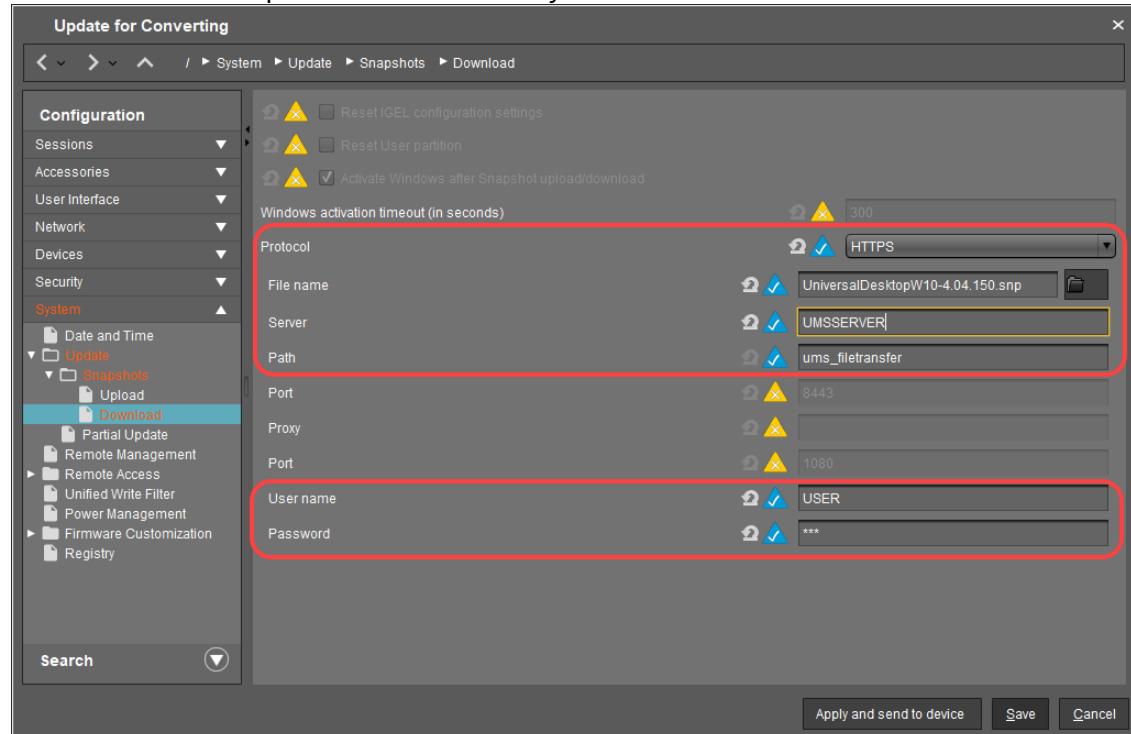

1. In the UMS structure tree, go to **Profiles**, open the context menu, and select **New Profile**.

2. Enter the following data:
  - **Profile Name:** Name for the profile, e. g. "Update for Converting".
  - **Description:** Optional description for the profile.
  - **Based on:** Firmware version for the profile; select the current firmware of your devices.
3. Click **Ok**.
4. Go to **System > Update > Snapshots > Download** and change the settings as follows:
  - Select "https" as the **Protocol**.
  - **File name:** Enter the file name of the snapshot file.
  - **Server:** Enter the IP address or hostname of the UMS.
  - **Path:** Enter "ums\_filetransfer".
  - **Username:** Enter the user name under which you have access to the UMS.

- **Password:** Enter the password under which you have access to the UMS.

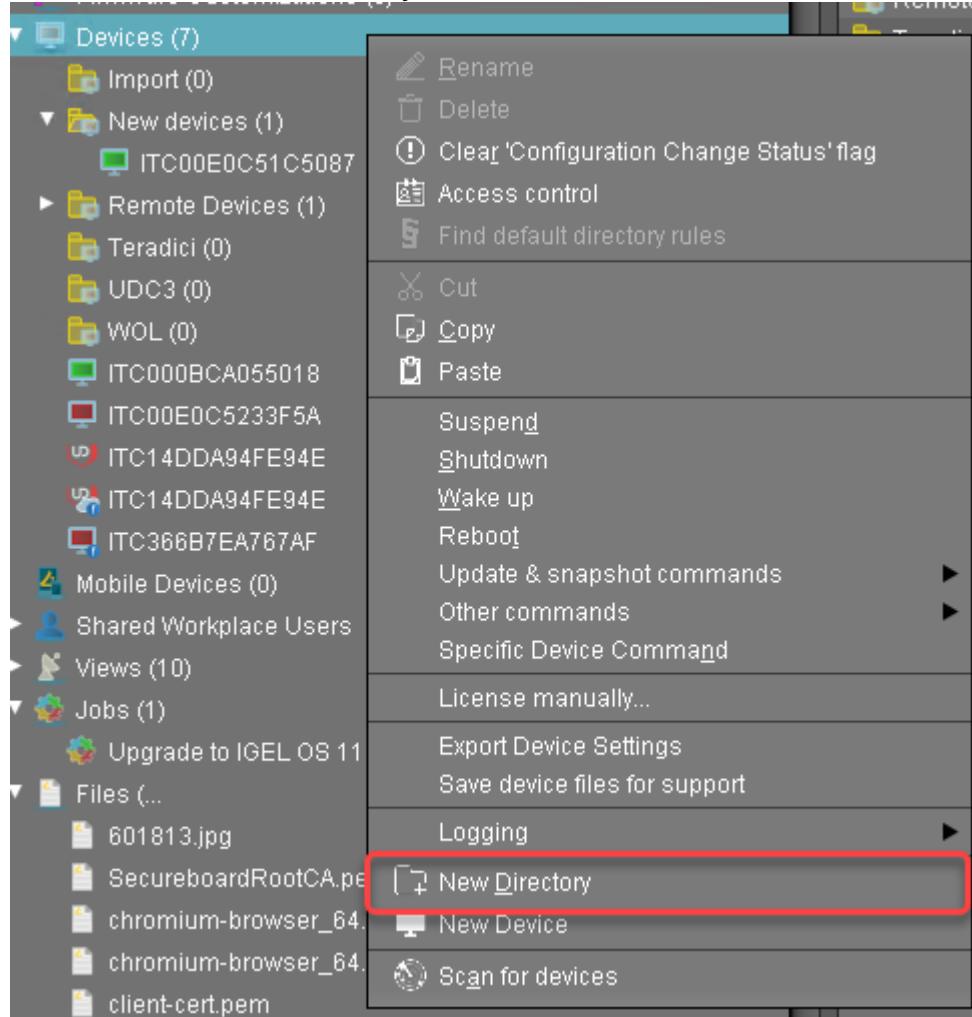

5. Click **Save** to save the profile.

## Starting the Update

1. Under **Devices**, create a directory and name it "Convert to IGEL OS 11", for instance.

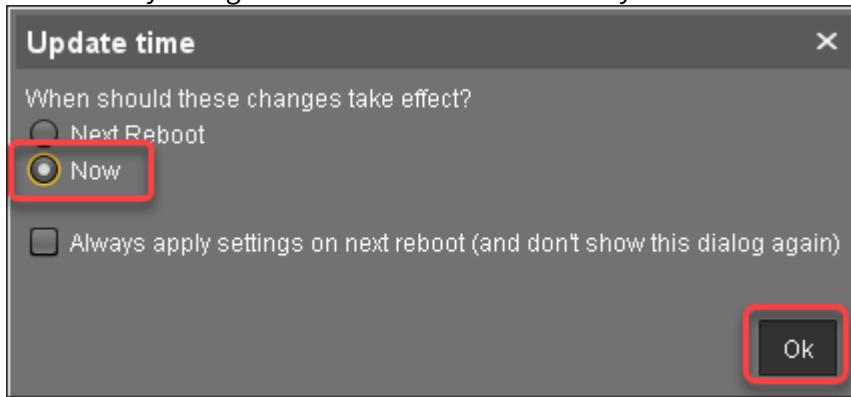

2. Put the devices that are to be updated into the new directory. You can use drag & drop.

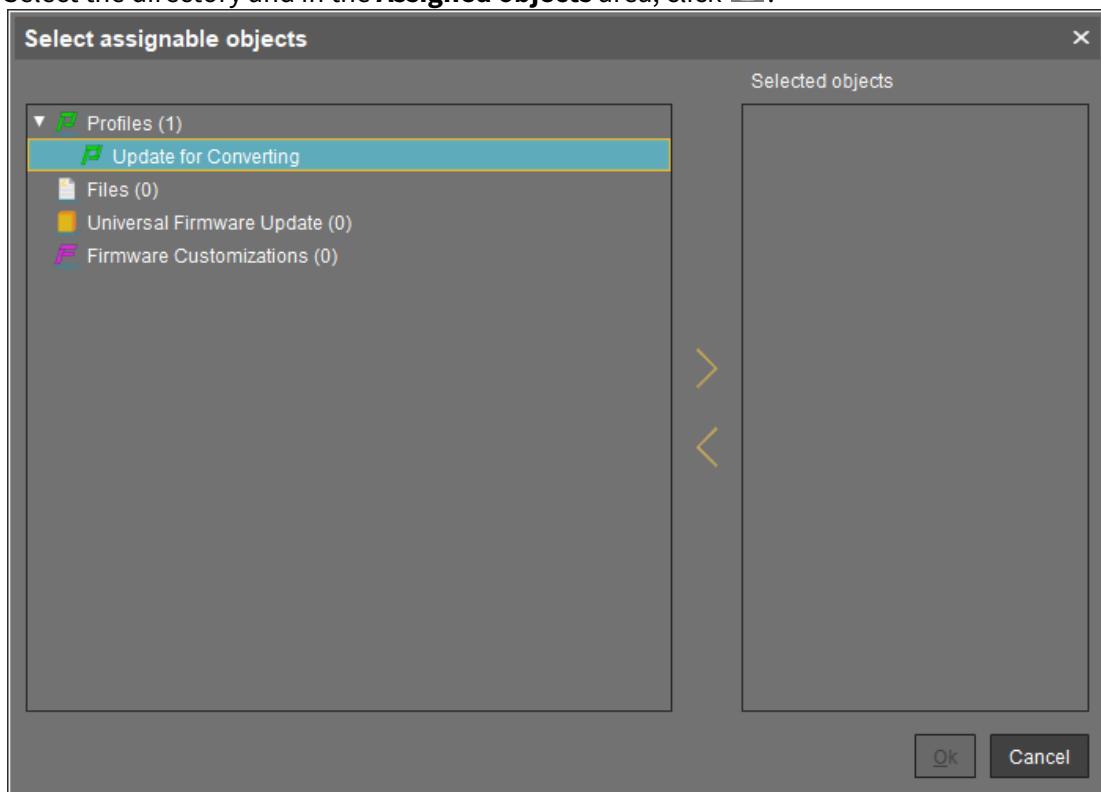

3. In the **Update time** dialog, select **Now** and click **Ok**.

The directory change is communicated immediately to the device.

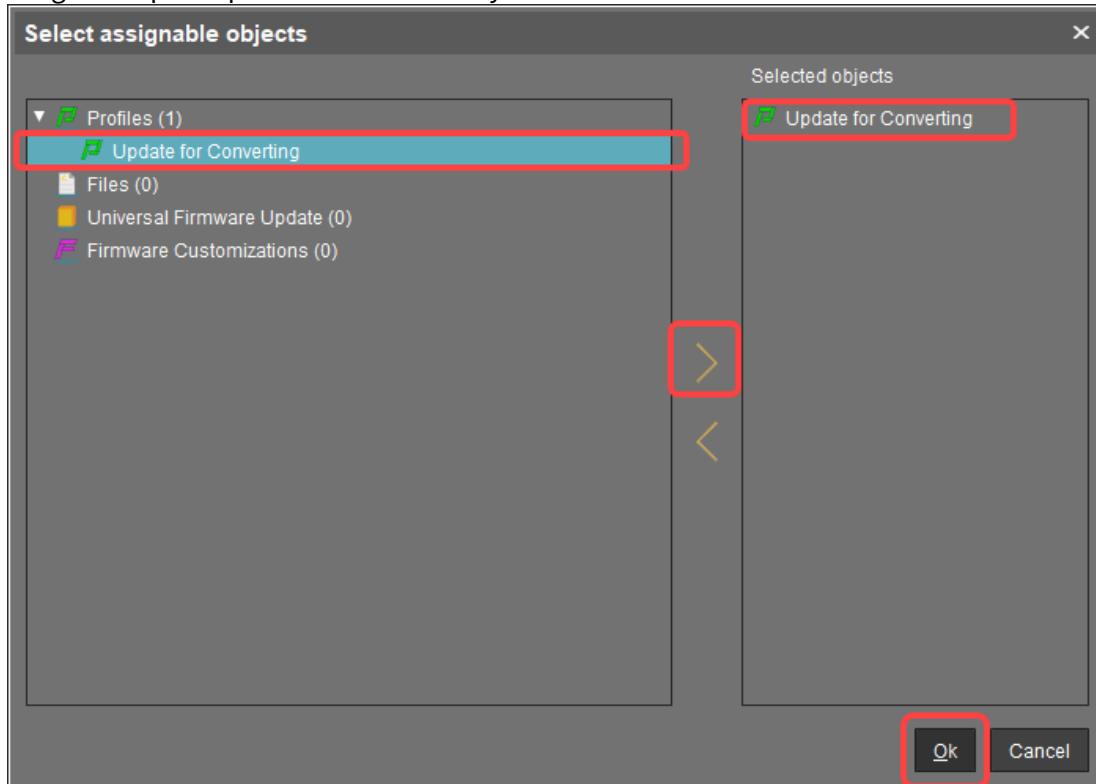

4. Select the directory and in the **Assigned objects** area, click **+**.

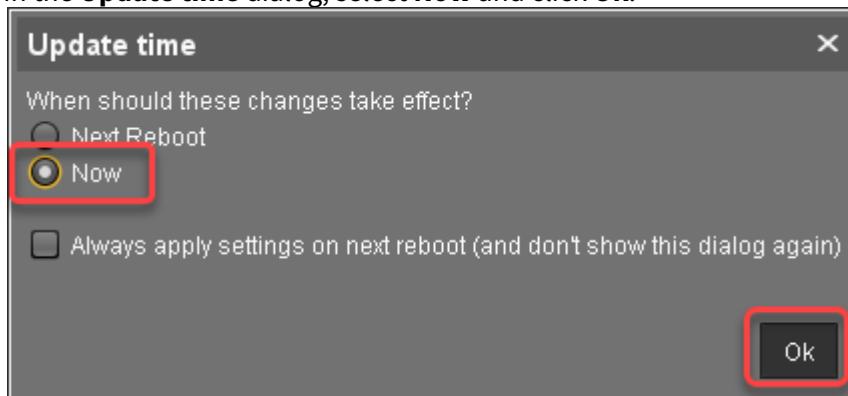

5. Assign the update profile to the directory and click **Ok**.

6. In the **Update time** dialog, select **Now** and click **Ok**.

The changes are sent to the devices immediately.

7. Go to the directory that contains the devices that are to be updated and select **Update & snapshot commands** > **Download Firmware Snapshot**.

The update and conversion process is started.

8. When the update process is finished, go to one of the devices and click to refresh the screen. In the **Advanced System Information** area, **Product** is set to "IGEL OS 11", and **Product ID** is set

according to the device.

| Attribute                                  | Value                          |
|--------------------------------------------|--------------------------------|
| Unit ID                                    | 0050569300FC                   |
| MAC Address                                | 00:50:56:93:00:FC              |
| Last IP                                    | 100.100.12.100                 |
| <b>Product</b>                             | <b>IGEL OS 11</b>              |
| <b>Product ID</b>                          | <b>UC1-LX No valid license</b> |
| Version                                    | 11.03.560.01                   |
| Firmware Description                       | IGEL Cloud Gateway             |
| Expiration Date of OS10-Maintenance Sub... |                                |
| Last Boot Time                             |                                |
| Network Name (at Boot Time)                | ITC0050569300FC                |
| Runtime since last Boot                    | 00:01:23                       |

## 6.4 IGEL OS SCCM Add-On

### 6.4.1 Overview

The IGEL OS SCCM add-on facilitates deploying IGEL OS via Microsoft SCCM. The package contains a minimized IGEL OS image that will be booted initially. If the target devices have enough RAM, a full-featured IGEL OS can be used as an alternative; see [Deploying an Alternative IGEL OS Image](#)(see page 1419).

With the installation of the package, a customized Windows PE image and a task sequence for deploying IGEL OS are created, and the IGEL OS Image Manager is installed.

### 6.4.2 Short Video Summary

Sorry, the widget is not supported in this export.  
But you can reach it using the following URL:

<https://www.youtube.com/watch?v=6nrTmW0ECyk&feature=youtu.be>

### 6.4.3 Prerequisites

- Microsoft Endpoint Configuration Manager (see <https://docs.microsoft.com/en-us/mem/configmgr/>)

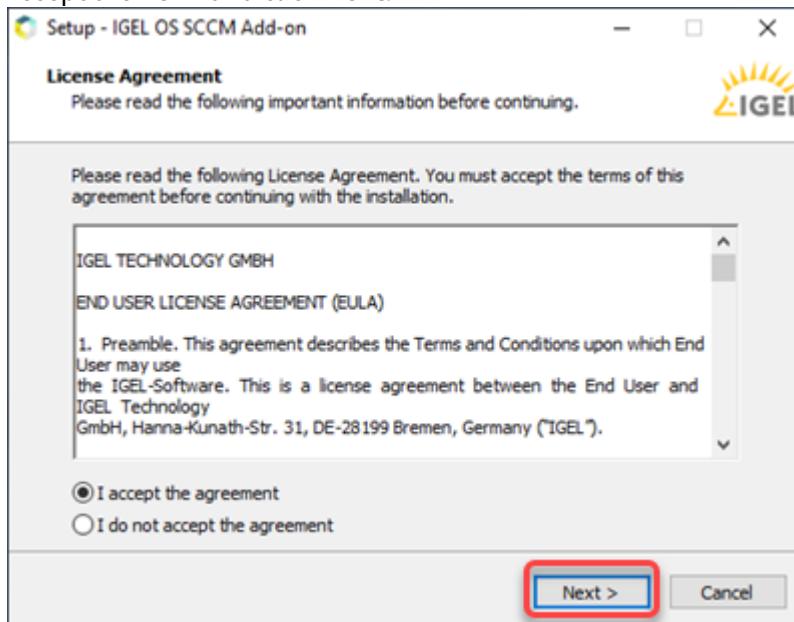

The solution presented here has been developed and tested with version 1902 of Microsoft Endpoint Configuration Manager. For details on the versioning of Microsoft Endpoint Configuration Manager, see <https://docs.microsoft.com/en-us/mem/configmgr/core/plan-design/changes/whats-new-incremental-versions>.

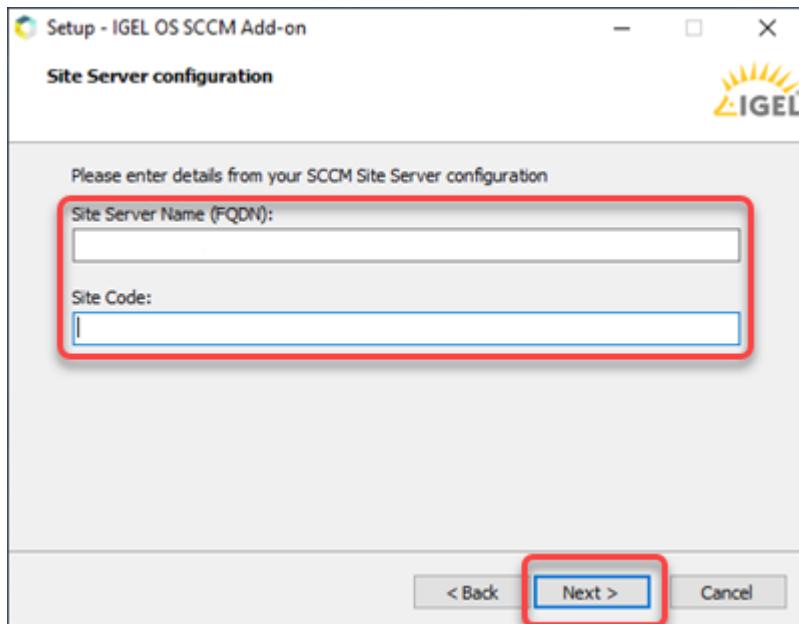

- Configured PXE environment for OS deployment; all target devices must be in a network where they are available either from the main site server or a distribution point. (For further information, see <https://docs.microsoft.com/en-us/mem/configmgr/osd/plan-design/infrastructure-requirements-for-operating-system-deployment>)
- All target devices have a minimum of 2 GB RAM.
- On the host on which Microsoft Endpoint Configuration Manager is running, Microsoft Power Shell Script execution must be allowed, at least for signed scripts (the Powershell scripts that come with the IGEL OS SCCM add-on are signed by IGEL).

#### 6.4.4 Installing the IGEL OS SCCM Add-On

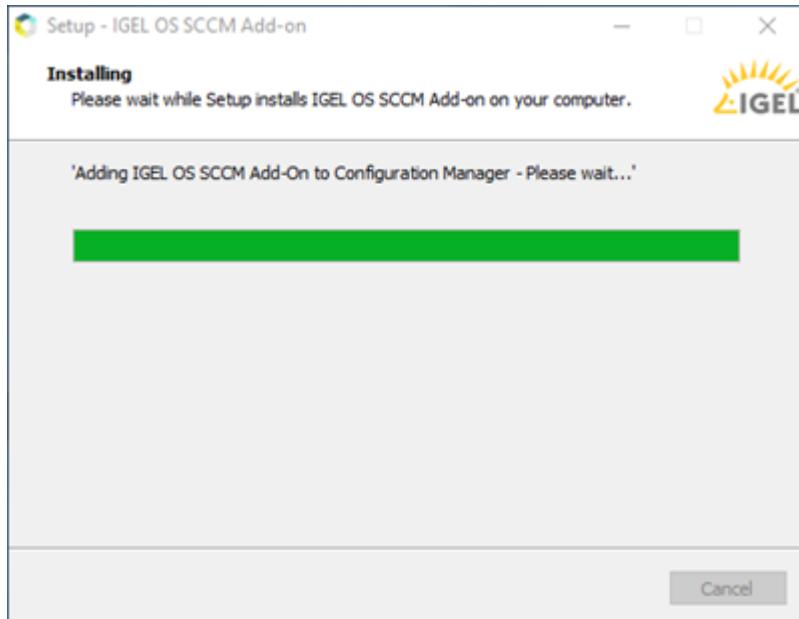

- Go to <https://www.igel.com/software-downloads/workspace-edition/> > **OS DEPLOYMENT TOOL FOR SCCM** and download the executable file (setup-igel\_os-sccm\_add\_on\_[version].exe) to the host on which Microsoft Endpoint Configuration Manager is running.
- Start the executable file.
- Accept the EULA and click **Next**.

- On the **Site Server configuration** page, review the field **Site Server Name (FQDN)**, which should be prefilled, and enter the **Site Code** of this Endpoint Configuration Manager site. Then, click **Next**.

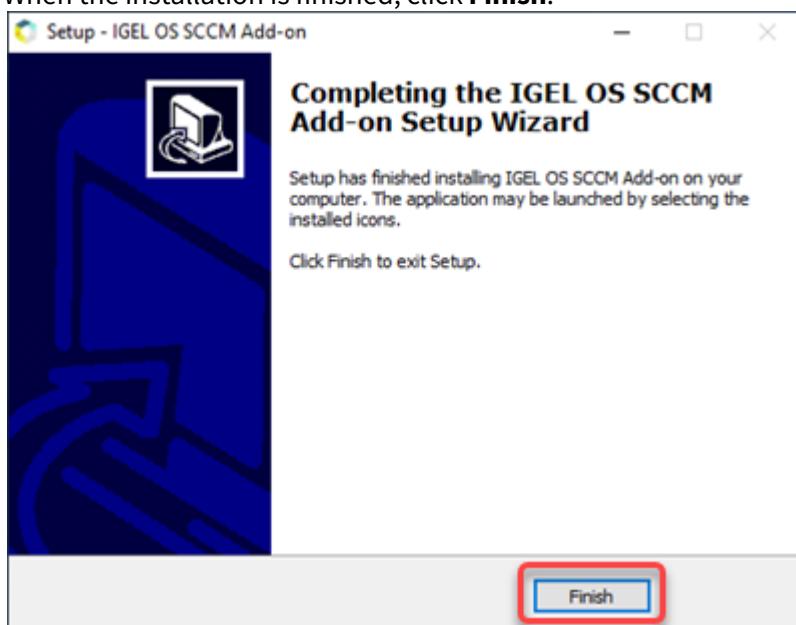

The installation of the IGEL OS SCCM add-on starts.

- When the installation is finished, click **Finish**.

## 6.4.5 Verifying the Installation

1. In the **Home** tab of the Endpoint Configuration Manager, go to **Boot Images** and check if the **IGEL Boot Image (WIM)** is available.

A screenshot of the System Center Configuration Manager interface. The title bar reads "System Center Configuration Manager (Connected to POU - windows site)". The ribbon tabs are "Home" and "Folder Tools". The main navigation pane on the left shows "Software Library" expanded, with "Operating Systems" selected. Under "Operating Systems", "Boot Images" is highlighted with a red box. The central pane displays a table titled "Boot Images 3 items".

| Icon   | Name             | V. | Comment                                  | Image ID | OS Version   | Client... | Date Modified    |
|--------|------------------|----|------------------------------------------|----------|--------------|-----------|------------------|
| [x64]  | Boot image (x64) |    | This boot image is created during setup. | P0100005 | 10.0.18362.1 | 5.00.8... | 12.05.2020 14:26 |
| [x86]  | Boot image (x86) |    | This boot image is created during setup. | P0100002 | 10.0.18362.1 | 5.00.8... | 12.05.2020 14:25 |
| [IGEL] | IGEL Boot Image  | 1  | WinPE Boot Image for deploying IGEL OS   | P010005A | 10.0.18362.1 | 5.00.8... | 22.06.2020 11:36 |

2. Go to **Task Sequences** and check if **IGEL Create** and **IGEL Inplace Upgrade** are available. These task sequences will drive and control the deployment process.

The screenshot shows the System Center Configuration Manager interface. The left navigation pane is expanded to show 'Operating Systems' and its sub-options: Drivers, Driver Packages, Operating System Images, Operating System Upgrade Packages, Boot Images, and Task Sequences. The 'Task Sequences' option is highlighted with a red box. The main content area displays a table titled 'Task Sequences 2 items' with two entries:

| Icon | Name                 | Description | Package ID | Date Created     |
|------|----------------------|-------------|------------|------------------|
|      | IGEL Create          |             | P010005B   | 22.06.2020 11:35 |
|      | IGEL Inplace Upgrade |             | P010005C   | 22.06.2020 11:35 |

Below the table, a detailed view for 'IGEL Create' is shown under the 'IGEL Create' section. The 'Summary' tab is selected, displaying the following information:

- Name: IGEL Create
- Description:
- Package ID: P010005B
- Package Type: 4
- Boot Image ID: P010005A

At the bottom of the summary view, there are tabs for 'Summary', 'References', 'Deployments', and 'Phased Deployments'. The 'Summary' tab is currently active.

#### 6.4.6 Provisioning IGEL OS via a PXE Boot Environment

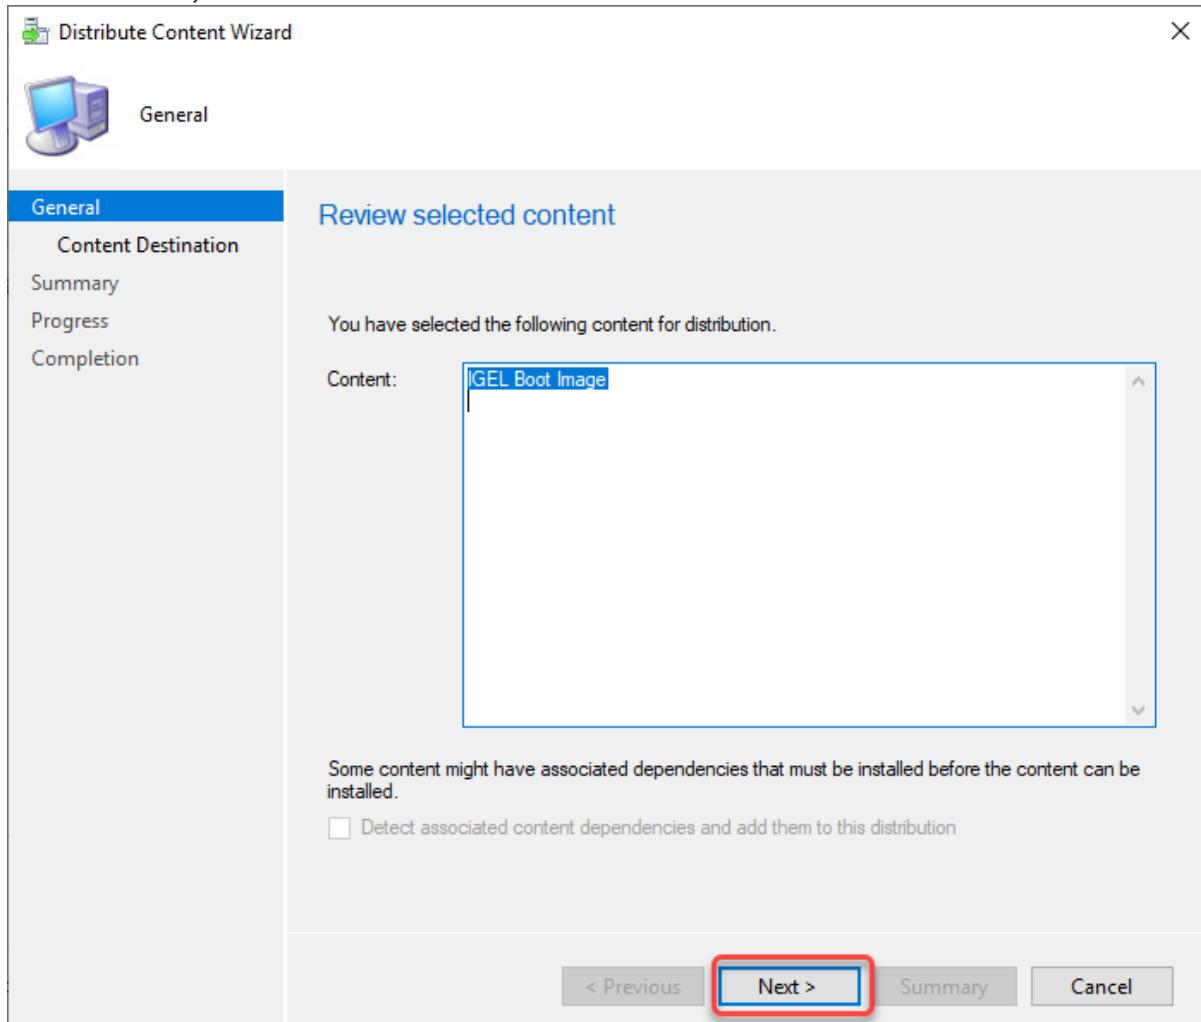

The task sequence "IGEL Create" will deploy IGEL OS to a device collection via a PXE boot environment. The task sequence will be executed after the device has booted into the IGEL OS Boot Image (WIM).

To deploy the PXE boot environment:

1. Check if you need to define your own custom device collection to allocate your target devices or if you can use one of the preconfigured collections.
2. In the **Home** tab of the Endpoint Configuration Manager, select **Boot Images**, open the context menu for **IGEL Boot Image**, and select **Distribute content**.

3. Open the **Distribute Content Wizard** and check if "IGEL Boot Image" is shown in the **Content** area. Afterward, continue with the wizard.

4. If your device requires a specific network driver: In the **Home** tab of the Endpoint Configuration Manager, select **Boot Images**, open the context menu for **IGEL Boot Image**, and select **Properties**. Then,

select the **Drivers** tab and add the driver.

A screenshot of the "IGEL Boot Image Properties" dialog box. The title bar shows the window name. Below it is a tab bar with "Content Locations", "Optional Components", and "Security" on the left, and "General", "Images", "Drivers", "Customization", "Data Source", "Data Access", and "Distribution Settings" on the right. The "Drivers" tab is selected and highlighted with a blue border. In the main area, there is a section titled "Drivers:" with a "Filter..." input field and a search icon. Below this is a table with columns: "Driver name", "Version", "Class", "Signed", "Architecture", and "INF File". A message "There are no items to show in this view." is displayed. At the bottom of the dialog are three buttons: "OK", "Cancel", and "Apply".

IGEL Boot Image Properties

Content Locations Optional Components Security

General Images Drivers Customization Data Source Data Access Distribution Settings

Drivers:

Filter...

| Driver name                              | Version | Class | Signed | Architecture | INF File |
|------------------------------------------|---------|-------|--------|--------------|----------|
| There are no items to show in this view. |         |       |        |              |          |

OK Cancel Apply

5. In the **Home** tab of the Endpoint Configuration Manager, select **Task Sequences**, open the context menu for **IGEL Create**, and select **Update distribution points**. Then, continue with the wizard.

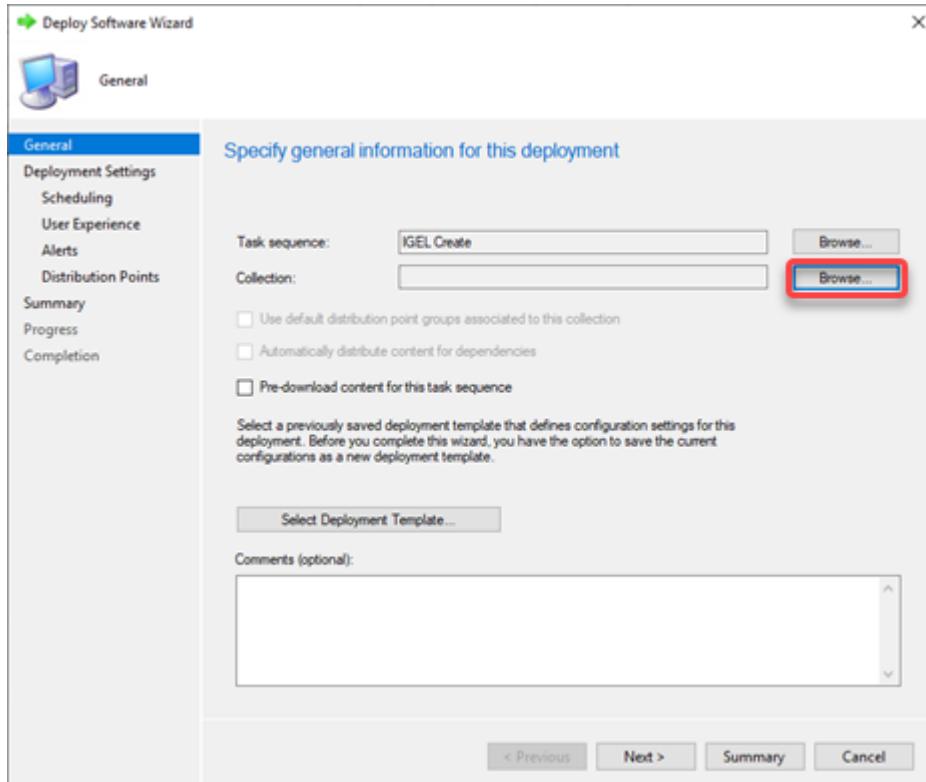

A screenshot of the "Update Distribution Points Wizard" window. The title bar says "Update Distribution Points Wizard". The left sidebar has tabs: General (selected), Summary, Progress, and Completion. The main area has a heading "Update distribution points with this boot image". It contains descriptive text about the wizard's function, a note about the boot image being updated, and current version information (Windows ADK 10.0.18362.0, Client Version 5.00.8790.1007). There is a checkbox for "Reload this boot image with the current Windows PE version from the Windows ADK". Below it is a table showing one boot image entry. At the bottom are buttons for "Previous", "Next >" (highlighted in blue), "Summary", and "Cancel".

| Version | Comment                   | OS Version   | Client Version | Package ID |
|---------|---------------------------|--------------|----------------|------------|
| 1       | WinPE Boot Image for d... | 10.0.18362.1 | 5.00.8790.1007 | P010005A   |

6. In the **Home** tab of the Endpoint Configuration Manager, select **Task Sequences**, open the context menu for **IGEL Create**, and select **Deploy**.  
The **Deploy Software Wizard** opens.

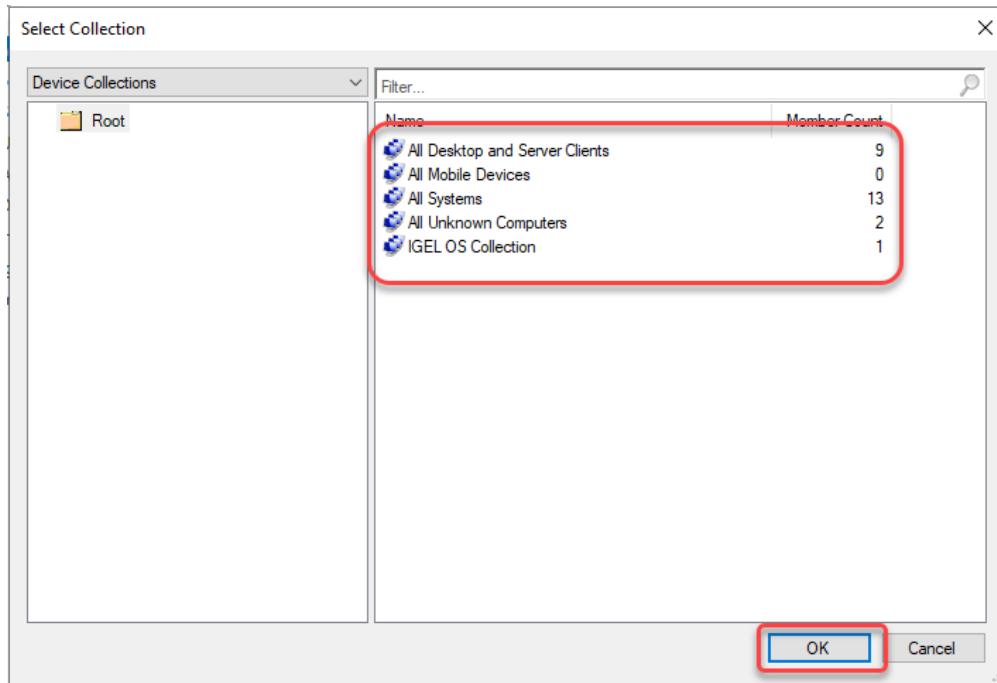

7. Click the **Browse** button next to **Collection**:

The **Select Collection** dialog opens.

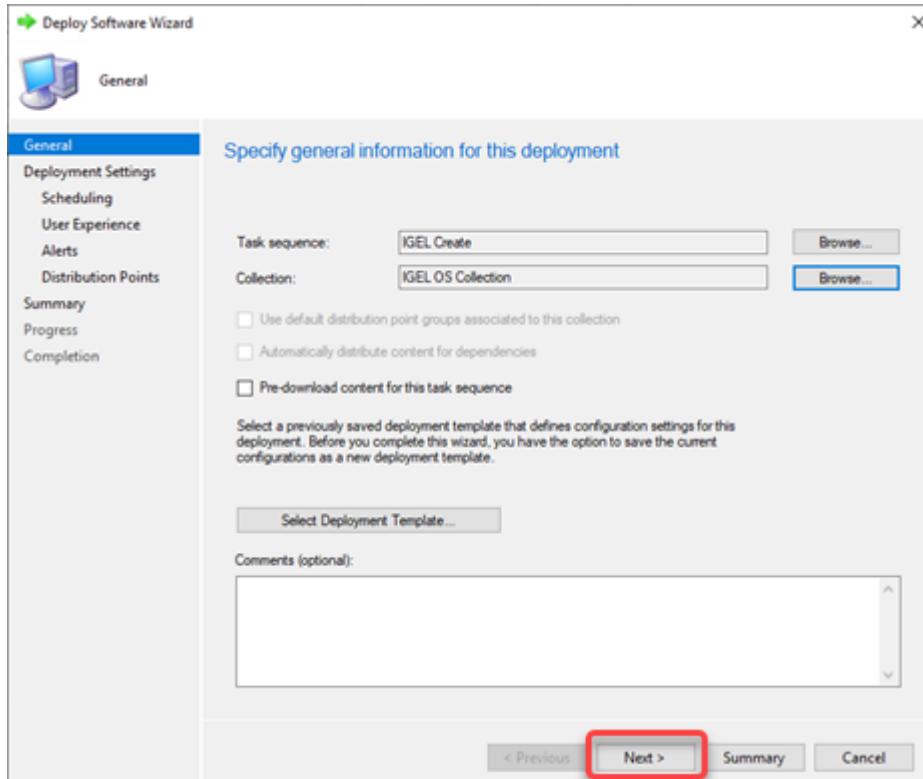

8. From the list of collections, select the collection that contains your target devices and click **OK**.

If you want to deploy IGEL OS to all new devices on the network and any existing third-party devices running IoT, use the pre-existing collection "All Unknown Computers".

In the following example, a user-created collection named "IGEL OS Collection" has been selected:

9. Click **Next** to continue with the wizard.

All target devices receive the PXE boot request that triggers them to boot the IGEL OS Boot Image (WIM).

A screenshot of a terminal window titled "Player". The window displays various system logs and configuration details. It includes information about the client's MAC address, GUID, IP addresses, and network settings. It also shows a message from an administrator regarding a pending request and instructions to press F12 for network service boot.

TFTP Download: smsboot\PB100005A\x64\pxeboot.com

Press F12 for network service boot
```

The target devices load the IGEL OS Boot Image (WIM).

#### 6.4.7 Deploying an Alternative IGEL OS Image

As an alternative to the minimized IGEL OS image that comes with the IGEL OS SCCM add-on, you can deploy a full-featured IGEL OS image. The current main version is available from [igel.com](http://igel.com). Optionally, you can add pre-configured settings and certificates to the image.

The RAM size of the target device must be equal to or greater than the storage size required by the IGEL OS image plus the initial size of the IGEL OS Boot Image (WIM), which is between 300 and 400 MB. For deploying an alternative IGEL OS Image, at least 4 GB RAM is needed.

1. Open a web browser, go to <https://www.igel.com/software-downloads/workspace-edition/> > **OS DEPLOYMENT TOOL FOR SCCM**, download the current IGEL OS file, and unzip it.

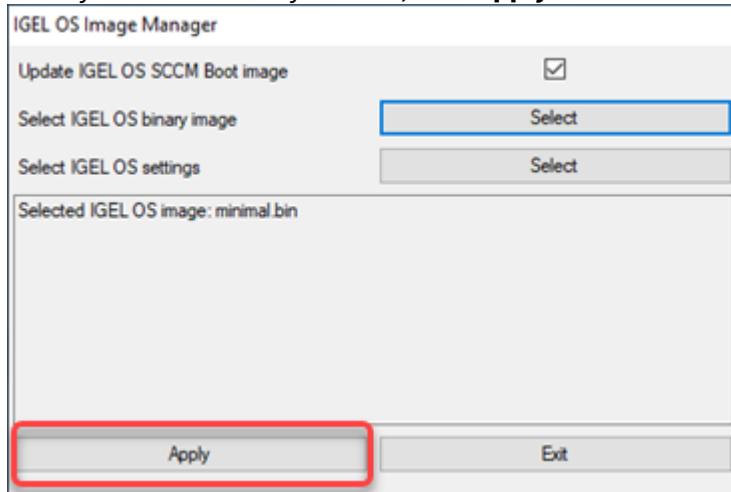

|                                                                                                                                                                    |                                    |                                                                                                                       |

The IGEL OS image is ready for deployment (example: **11.05.100.bin**).

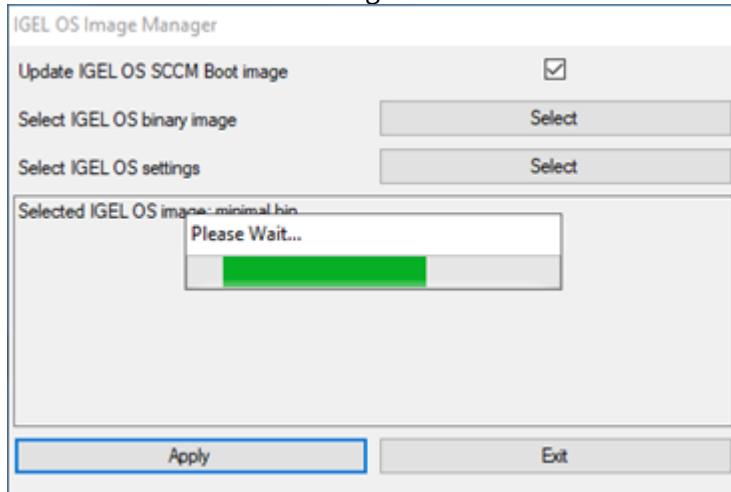

2. Start the IGEL OS Image Manager by clicking on the desktop icon.
3. Click **Select** next to **Select IGEL OS binary image** and choose your image file.
4. If you want to add settings or certificates, click **Select** next to **Select IGEL OS settings** and choose the relevant files. You can add the following files:
  - **setup.ini**: The settings for IGEL OS; these are the settings that can be configured via IGEL Setup, the UMS configuration dialog, or a UMS profile.
  - **Certificate files**

- When you have chosen your files, click **Apply**.

The files are added to the image.

| VirtualBox (Limited support)               | 64.0 M  | Not included |

## General Information 11.06.100

To be beneficial to all new features and implementations, it is recommended to use UMS 6.08.110 or higher and update the corresponding profiles.

Firmware downgrade to older versions (11.01 or 11.02) is not possible, due to the unsigned firmware update files.

The following clients and features are not supported anymore:

- Caradigm
- Citrix Legacy Sessions
- Citrix Web Interface
- Citrix StoreFront Legacy
- Citrix HDX Flash Redirection
- Citrix XenDesktop Appliance Mode
- Flash Player Download
- JAVA Web Start
- Leostream Java Connect
- VIA graphics driver

## Known Issues 11.06.100

### Citrix

- To launch **multiple desktop sessions** with Citrix HDX RTME and Citrix H.264 acceleration plugin, the following registry key must be enabled.

### More...

|           |                                                                  |
|-----------|------------------------------------------------------------------|
| Parameter | Activate workaround for dual RTME sessions and H264 acceleration |
| Registry  | ica.workaround-dual-rtme                                         |
| Value     | <u>enabled</u> / <u>disabled</u>                                 |

- This workaround is not applicable when **Enable Secure ICA** is active for the specific delivery group.
- Adding **smartcard readers** while the session is ongoing does not work. The reader is visible, but **cannot be used due to permanently unknown reader status**.
- Citrix has known issues with **GStreamer1.0** which describe problems with **multimedia redirection of H.264, MPEG1, and MPEG2**. GStreamer1.0 is used if browser content redirection is active.
- **Browser content redirection** does not work with activated DRI3 and hardware-accelerated H.264 deep compression codec.
- With activated DRI3 and an AMD GPU, **Citrix H.264 acceleration plugin could freeze**. Selective H.264 mode (API v2) is not affected by this issue.
- **Citrix H.264 acceleration plugin** does not work with **enabled** server policy **Optimize for 3D graphics workload** in combination with server policy **Use video codec compression > For the entire screen**.
- With **Citrix Workspace** app versions **21.04.0 and 21.06.0**, **smartcard authentication fails to forward the PIN** correctly into the session for login. Instead, the user has to input the PIN a second time within the session. The problem does not occur with Citrix Workspace App 20.10.0.

### VMware Horizon

- **Client drive mapping** and **USB redirection** for storage devices **should not be enabled both at the same time**.
  - On the one hand, when using USB redirection for storage devices:  
The USB on-insertion feature is only working when the client drive mapping is switched off.  
In the IGEL Setup client drive mapping can be found in:  
**Sessions > Horizon Client > Horizon Client Global > Drive Mapping > Enable Drive Mapping**.  
It is also recommended to disable local **Storage Hotplug** on setup page **Devices > Storage Devices > Storage Hotplug**.
  - On the other hand, when using drive mapping instead, it is recommended to either switch off USB redirection entirely or at least deny storage devices by adding a filter to the USB class rules.  
Furthermore, Horizon Client relies on the OS to mount the storage devices themselves.  
Enable local `Storage Hotplug` on setup page **Devices > Storage Devices > Storage Hotplug**.
- **External drives** mounted already before connection do not appear in the remote desktop.  
**Workaround: map the directory /media as a drive**. Then the external devices will show up inside the media drive.
- After disconnect of an RDP-based session, the **Horizon main window** which contains the server or sessions overview, **cannot be resized anymore**.
- **Copying Text from Horizon Blast sessions** isn't possible.

- The **on-screen keyboard in Horizon appliance mode** does not work correctly with the local logon.  
It is necessary to switch off the local logon and enable these two keys in the IGEL registry:  
`userinterface.softkeyboard.autoshow`  
`userinterface.softkeyboard.autohide`
- Zoom VDI Media Plugin makes Horizon Client crash** upon connection to the remote desktop in cases when TCSetup is running at the same time.
- When using the PCoIP protocol the virtual channel provided by VMware used for serial port and scanner redirection can make Horizon client hang** on logout from the remote session.  
This **happens when enabling scanner or serial port redirection**. The freeze does not occur if both redirection methods are enabled or none of them. The Blast Protocol isn't affected by this bug.  
The respective settings can be found here in the IGEL Registry:  
`vmware.view.enable-serial-port-redir`  
`vmware.view.enable-scanner-redir`
- Keyboard Input Source Language Synchronization** works only when using a local layout which has **deadkeys** enabled.  
If a keyboard layout is used which has deadkeys disabled (which is the default on IGEL OS), Horizon client falls back to en-US layout.

#### Parallels Client

- Native USB redirection** does not work with Parallels Client.

#### Firefox

- Certain modern **web portals used for cloud login** may fail to display because of **incompatibility with the current Firefox 78 ESR browser**.

#### Network

- Wakeup** from system suspend **fails on DELL Latitude 5510**.

#### Wi-Fi

- TP-Link Archer T2UH WiFi adapters** do not work after system suspend/resume.  
**Workaround:** Disable system suspend at **IGEL Setup > System > Power Options > Shutdown**.

#### Cisco JVDI Client

- There may be a **segfault** shown in the logs (during log out of Citrix Desktop session). Occurs only when using **Citrix Workspace app 20.10** and **Cisco JVDI**.

#### Base system

- Hyper-V (Generation 2) needs a lot of memory (RAM)**. The machine needs a sufficient amount of memory allocated.
- Update from memory stick requires network online state** (at least when multiple update stages are involved)
- Unreliable messages** in user dialog for applying settings during boot. Could occur when new settings were fetched from the UMS.

#### deskMate

- Some **stability issues** may remain.

#### Conky

- The **right screen when using multiscreen environment** may not be shown correctly.  
**Workaround:** The horizontal offset should be set to the width of the monitor (e.g. if the monitor has a width of 1920, the offset should be set to 1920)

#### Firmware update

- On **devices with 2 GB of flash** storage, it could happen that there is **not enough space for updating all features**. In this case, a corresponding error message occurs. Please visit [Error: "Not enough space on local drive" when Updating to IGEL OS 11.04 or Higher<sup>373</sup>](#) for a possible solution and additional information.

#### OSC Installer

- OSC **not deployable with IGEL Deployment Appliance**: **New version 11.3 is required** for 11.06.100 deployment.

#### Appliance Mode

- When ending a **Citrix session in browser appliance mode**, the browser is restarted twice instead of once.
- Appliance mode RHEV/Spice: **spice-xpi firefox plugin** is no longer supported. The **Console Invocation** has to allow **Native** client (auto is also possible) and should be started in fullscreen to prevent any opening windows.
- **Browser Appliance mode** can fail when the **Web URL contains special control characters** like ampersands (& character).  
**Workaround:** Add quotes at the beginning and the end of an affected URL. E.g.: '<https://www.google.com/search?q=aSearchTerm&source=lnms&tbo=isch>'

#### Audio

- **IGEL UD2 (D220)** fails to restore the **volume level** of the speaker when the device used firmware version 11.01.110 before.
- **Audio jack detection** on **Advantec POC-W243L** does not work. Therefore, sound output goes through a possibly connected headset and also the internal speakers.
- **UD3 M340C**: Sound preferences are **showing Headphone & Microphone, although not connected**.

#### Multimedia

- Multimedia redirection with **GStreamer** could fail with the **Nouveau GPU** driver.

#### Hardware

- Some newer **Delock 62599 active DisplayPort to DVI (4k)** adapters only work on INTEL-based devices.

#### Remote Management

- **AIT feature with IGEL Starter License** is only supported by UMS version 6.05.100 or newer.

---

<sup>373</sup><https://kb.igel.com/igelos-11.04/en/error-not-enough-%C2%A0space-on-local-drive-when-updating-to-igel-os-11-04-or-higher-32870765.html>

- If a parameter value is stored in a **template parameter**, the "**Apply changes**" dialog is displayed on each boot while receiving remote settings.

A possible **workaround**: Deactivate the "Apply changes" dialog with parameter:

|            |                                                  |
|------------|--------------------------------------------------|
| IGEL Setup | <b>System &gt; Remote management</b>             |
| Parameter  | Display 'Apply changes' dialog on boot           |
| Registry   | userinterface.rmagent.enable_usermessage_on_boot |
| Value      | <u>enabled</u> / disabled                        |

## Security Fixes 11.06.100

### Firefox

- Updated Mozilla Firefox to **78.12.0esr**
  - aka mfsa2021-29:
    - CVE-2021-29970: **Use-after-free** in accessibility features of a document
    - CVE-2021-30547: **Out of bounds write in ANGLE**
    - CVE-2021-29976: **Memory safety** bugs fixed in Firefox 90 and Firefox ESR 78.12  
For details, see <https://www.mozilla.org/en-US/security/advisories/mfsa2021-29/>
  - aka mfsa2021-24:
    - CVE-2021-29964: **Out of bounds-read** when parsing a 'WM\_COPYDATA' message
    - CVE-2021-29967: **Memory safety** bugs fixed in Firefox 89 and Firefox ESR 78.11  
For details, see <https://www.mozilla.org/en-US/security/advisories/mfsa2021-24/>
  - aka mfsa2021-15:
    - CVE-2021-29951: **Mozilla Maintenance Service** could have been **started or stopped by domain users**
      - CVE-2021-23994: **Out of bound write** due to lazy initialization
      - CVE-2021-23995: **Use-after-free** in Responsive Design Mode
      - CVE-2021-23998: **Secure Lock icon** could have been spoofed
      - CVE-2021-23961: More **internal network hosts** could have been **probed by a malicious webpage**
      - CVE-2021-23999: **Blob URLs** may have been granted additional privileges
      - CVE-2021-24002: **Arbitrary FTP command execution** on FTP servers using an encoded URL
      - CVE-2021-29945: **Incorrect size computation in WebAssembly JIT** could lead to **null-reads**
      - CVE-2021-29946: **Port blocking** could be bypassed
    - For details, see <https://www.mozilla.org/en-US/security/advisories/mfsa2021-15/>

### Network

- Sensitive **SCEP settings** cannot be accessed by the **non-root user** anymore.

### Base system

- Fixed **chromium browser** security issues:

CVE-2020-22033, CVE-2020-22021, CVE-2020-22019,  
 CVE-2020-22015, and CVE-2020-21041

- Fixed **systemd** security issues CVE-2021-33910 and CVE-2020-13529.
- **Update of ntfs-3g** to solve some security issues.

## Audio

- Fixed **libsndfile** security issue CVE-2021-3246.

## Remote Management

- Added **timeout for Secure VNC** and **Secure Terminal** connections, by default the timeout is 180 seconds. The **timeout can be changed by** the environment variable **IGEL\_TLS\_TUNNEL\_TIMEOUT** (in seconds, 0 for infinite).
- Fixed a possible **privilege escalation while sending user logoff** event to the UMS.

## VNC

- Fixed a **Secure Terminal** and **Secure VNC Shadowing remote code execution** vulnerability.

## Java

- Updated Zulu-8 JRE** to version **8u292**.

## New Features 11.06.100

## Citrix

- Added **Citrix Workspace App 2106**  
Available Citrix Workspace Apps in this release: **2106** (default), **2104**, and **2010**
- New registry keys:
  - The **battery status** of the device (notebooks/mobile devices) is now shown within the notification area of the Citrix Windows Desktop session.  
[More...](#)

|           |                                               |
|-----------|-----------------------------------------------|
| Parameter | Battery status indicator                      |
| Registry  | ica.module.virtualdriver.mobilerceiver.enable |
| Type      | bool                                          |
| Value     | <u>enabled</u> / disabled                     |

- Added registry key for enabling **screen pinning or multi-monitor support with native Workspace app**.  
[More...](#)

|           |                                                |
|-----------|------------------------------------------------|
| Parameter | Enhanced experience for Multi-monitor scenario |
| Registry  | ica.authman.screenpinenabled                   |
| Value     | on / off                                       |

- Added registry key to enable **DNS cache**.  
[More...](#)

|           |                             |
|-----------|-----------------------------|
| Parameter | Enable DNS Cache            |
| Registry  | ica.authman.dnscacheenabled |
| Value     | on / off                    |

- Implemented "**Synchronize Citrix password with screensaver**" for **SelfService**. Parameter for StoreFront was (re-) used for that purpose.
- Updated **Citrix HDX RTME 2.9.400**
- Updated **Grundig Dictation driver** to version **20-09-16**.
- Added **passthrough authentication** for Citrix **SelfService**. Activate via parameter:

[More...](#)

|           |                                                                      |
|-----------|----------------------------------------------------------------------|
| Setup     | <b>Sessions &gt; Citrix &gt; Citrix Global &gt; StoreFront Login</b> |
| Parameter | Use passthrough authentication                                       |
| Registry  | sessions.pnlogin0.settings.passthrough                               |
| Value     | true / <u>false</u>                                                  |

- Added: All parameters of the **Citrix setlog program** are now available in IGEL Setup via `ica.logging.setlog`. **Logging** can be **set permanently** now.
- Optimized structure of parameters for showing the inheritance more clearly.

- Added **automatic configuration of the Citrix webcam redirection** in ICA sessions.

| Parameter | HDX Webcam H264 native                        |
| Registry  | <code>ica.wfclient.hdxh264enablenative</code> |
| Value     | <u>enabled</u> / <u>disabled</u>              |

## OSC Installer

- Enhanced OSC Installer for **creation of 'Factory preload images (master images)'**
  - Added possibility to **add initial settings to OSC Installer ISO**.
  - Added **support for 'Reset after first boot' for OSC Factory Image function**.
- Further information at <https://kb.igel.com/igelos-11.05/en/installation-42011487.html>

## RDP/IGEL RDP Client 2

- Added **multitouch** support for RDP Sessions.

[More...](#)

|          |                                               |
|----------|-----------------------------------------------|
| Registry | sessions.winconnect%.option.enable-multitouch |
| Value    | <a href="#">enabled / disabled</a>            |

- Added parameter to enable **server-side audio** for RDP sessions

[More...](#)

|          |                                                     |
|----------|-----------------------------------------------------|
| Registry | sessions.winconnect%.option.enable-serverside-audio |
| Value    | <a href="#">enabled / disabled</a>                  |

- Added option to enable/disable **automatic reconnect** for RDP session.

[More...](#)

|          |                                              |
|----------|----------------------------------------------|
| Registry | sessions.winconnect%.option.enable-reconnect |
| Type     | bool                                         |
| Value    | <a href="#">enabled / disabled</a>           |

## RD Web Access

- Added option to **save username** and **domain** for RD WebAccess login. In **legacy** mode, RD Web Access login uses the settings from **Sessions > RDP > RDP Global > Local Logon**.

[More...](#)

|           |                                                                             |
|-----------|-----------------------------------------------------------------------------|
| Setup     | <b>Sessions &gt; RDP &gt; Remote Desktop Web Access &gt; Authentication</b> |
| Parameter | Save username and domain from last login                                    |
| Registry  | rdp.rd_web_access.options.save_user_and_domain                              |
| Type      | string                                                                      |
| Value     | <a href="#">[Legacy] [Yes] [No]</a>                                         |

- Added option to enable/disable **automatic reconnect** for RD Web Access Apps.

[More...](#)

|          |                                    |
|----------|------------------------------------|
| Registry | rdp.rd_web_access.enable-reconnect |
| Type     | bool                               |
| Value    | <a href="#">enabled / disabled</a> |

## AVD / WVD

- Renamed WVD** (Windows Virtual Desktop) **to AVD** (Azure Virtual Desktop)
- Added **timezone redirection** support.
- Added **AVD printer redirection** support.

[More...](#)

|           |                                                                                                         |

| Setup     | <b>Devices &gt; Printer &gt; CUPS &gt; Printers &gt; Add Printer &gt; Mapping in sessions</b>                                                                                                                                                                           |
| Parameter | Printer driver                                                                                                                                                                                                                                                          |
| Registry  | print.cups.printer%.wvd_printer_driver                                                                                                                                                                                                                                  |
| Note      | The default Windows driver name is "Microsoft PS Class Driver", which is installed by default and should work in general. For usage of a custom printer driver, the exact printer name must be set and the corresponding driver must be installed on AVD (server-)side. |

## UD Pocket

- Added official support for '**Secured Kobra Stick**' from **Digittrade**.

## VMware Horizon

- Allow wildcard symbol in Horizon client USB redirection rules:
  - Product ID can contain asterisks (\*\*\*) - \* represents one hexadecimal digit.
  - Product ID can be left empty which is equivalent to \*\*\*\* - for any Product ID.
- Added param to enable **MS Teams** support.

**Changed default of html5 multimedia redirection** to "enabled".

- Added entry in IGEL Setup regarding Unified Communication: In **Sessions > Horizon Client > Horizon Client Global > Unified Communications > Cisco** for enabling **VDI support for Cisco**

**Webex Meetings** and in **Sessions > Horizon Client > Horizon Client Global > Unified Communications > VDI Solutions** for enabling **Zoom VDI Media Plugin**.

#### Parallels Client

- Updated **Parallels client** to version **18.1.0**

#### IBM\_5250

- Updated **IBM iAccess Client Solutions** to version **1.1.8.6**

#### NX client

- Updated **NoMachine client** to version **7.1.3**

#### Amazon WorkSpaces Client

- Updated **AWSC** to **3.1.9**

#### Chromium

- Updated **Chromium** browser to version **91.0.4472.164**
- Added "Block third party cookies" as parameter in the registry.
- Added **h.264 and AAC A/V playback support**. A/V playback support is only possible either in Chromium or in Firefox browser depending on these conditions:
  1. If Chromium feature is disabled, codecs are used in Firefox.
  2. If Firefox feature is disabled, codecs are used in Chromium.
  3. Number of sessions of each browser type are compared, codecs are used for browser with more sessions.
  4. Usage of codecs as configured via set of "default" browser, by registry key `system.default_apps.browser`.
- Added "Default web browser" configuration:

## Network

- **Changed names of Ethernet and Wi-Fi interfaces.** Apart from some symbolic occurrences, "**eth0**", "**eth1**", and "**wlan0**" have been **replaced by** so-called **predictable network interface names**.

Improved reliability of associating configurations with interfaces.

More than two Ethernet interfaces can be configured by creating further instances of `network.interfaces.ethernet.device%`. The following registry key may be used to explicitly assign a configuration instance to an interface:

[More...](#)

|           |                                                         |
|-----------|---------------------------------------------------------|
| Parameter | Fixed interface                                         |
| Registry  | <code>network.interfaces.ethernet.device%.ifname</code> |
| Type      | string                                                  |
| Value     | <u>empty</u>                                            |

- Added **r8152 third-party network driver**

- Added new registry key to enable the use of **r8152 third-party driver**:

[More...](#)

|           |                                                      |
|-----------|------------------------------------------------------|
| Parameter | Use thirdparty r8152 kernel module                   |
| Registry  | <code>network.drivers.r8152.prefer_thirdparty</code> |
| Range     | [Auto] [Yes] [No]                                    |

- In the **tcpdump** configuration, `eth0`, `eth1`, and `wlan0` are treated as symbolic names. These remain functional even if the true interface names are different.
- "**urkill**" tool has been removed from the firmware.
- Following **scripts provided by "urkill"** tool are **not available** anymore:
  - `/usr/share/urkill/scripts/block`
  - `/usr/share/urkill/scripts/flight-mode`
- In the case of using above mentioned commands via custom scripts: For turning radio devices on/off, usage of '**rfkill**' tool **may be needed** to enable custom scripts.  
`rfkill \<block`  
`|unblock> \<wlan|bluetooth|uwb|wimax|wwan|`  
`gps>`  
`rfkill \<block|unblock> all`

- Added registry key for specifying the **anonymous identity in authentication methods**.

| Registry  | network.interfaces.wirelesslan.device0.wpa.anonymous_identity            |
| Type      | string                                                                   |
| Value     | <u>empty</u>                                                             |
| Parameter | Anonymous Identity                                                       |
| Registry  | network.interfaces.wirelesslan.device0.alt_ss_id%.wpa.anonymous_identity |
| Type      | string                                                                   |
| Value     | <u>empty</u>                                                             |

- Added support for **EAP FAST with inner method MSCHAPV2**. PAC files are stored persistently in /wfs/eap\_fast\_pacs/. File names can be determined with the script /bin/gen\_pac\_filename.sh.

In internal tests with hostapd, it was **necessary to disable TLS1.2** (registry key **phase1\_direct:tls\_disable\_tls1v1\_2=1**). The following registry keys have been added and "FAST" has been added to the range of the corresponding eap\_type registry keys:

|-----------|------------------------------------------------------------------------|
| Parameter | Automatic PAC Provisioning                                             |
| Registry  | network.interfaces.ethernet.device%.ieee8021x.pac_provisioning         |
| Range     | [disabled] [unauthenticated] [authenticated] <b>[unrestricted]</b>     |
| Parameter | Automatic PAC Provisioning                                             |
| Registry  | network.interfaces.wirelesslan.device0.wpa.pac_provisioning            |
| Range     | [disabled] [unauthenticated] [authenticated] <b>[unrestricted]</b>     |
| Parameter | Automatic PAC Provisioning                                             |
| Registry  | network.interfaces.wirelesslan.device0.alt_ss_id%.wpa.pac_provisioning |
| Range     | [disabled] [unauthenticated] [authenticated] <b>[unrestricted]</b>     |

- Added **Realtek RTL8125 2.5Gigabit Ethernet driver**.

Wi-Fi

- Added new feature **Wi-Fi automatic switch on/off**. The following registry key has been added:  
[More...](#)

|           |                                                 |
|-----------|-------------------------------------------------|
| Parameter | Enable Wi-Fi automatic switch                   |
| Registry  | network.applet.wireless.enable_wifi_auto_switch |
| Value     | <u>enabled</u> / <u>disabled</u>                |

- Enabling this feature in combination with the following registry key will add a menu to the Wi-Fi manager applet which enables the user to switch Wi-Fi on, off, or select the automatic mode.  
[More...](#)

|           |                                            |
|-----------|--------------------------------------------|
| Parameter | Enable Wi-Fi switch                        |
| Registry  | network.applet.wireless.enable_wifi_switch |
| Type      | bool                                       |
| Value     | <u>enabled</u> / <u>disabled</u>           |

- When **automatic mode** is selected, **Wi-Fi will automatically switch to "off" if a LAN connection is available or switch to "on" if a LAN connection gets disconnected.**
- If "**Enable Wi-Fi switch**" is disabled and "**Enable Wi-Fi automatic switch**" is enabled, Wi-Fi automatic switch functionality will work in background and the user cannot see the menu entry in the Wi-Fi manager applet for changing the Wi-Fi mode.

NOTE: Any workaround for switching Wi-Fi on/off automatically using custom scripts should be eliminated.

- Added support for **Realtek RTW8852AE** Wi-Fi device.

#### AppliDis

- Integrated **Systancia AppliDis 6.0.0-4**

#### Imprivata

- Added registry key to **overcome the window overlap** that complicates the use of the local Setup or hotkeyed applications like the display switch.

[More...](#)

|          |                                  |
|----------|----------------------------------|
| Setup    | Registry                         |
| Registry | imprivata.avoid_focus_ownership  |
| Type     | bool                             |
| Value    | <u>enabled</u> / <u>disabled</u> |

- Added parameter to **ignore the VMware protocol selection** done by the appliance, local selection.

[More...](#)

|           |                                     |
|-----------|-------------------------------------|
| Parameter | Ignore the demanded VMWare protocol |
| Registry  | imprivata.ignore_horizon_protocol   |

|       |               |
|-------|---------------|
| Value | <u>false</u>  |
| Note: | Registry only |

## Smartcard

- Added support for **certgate AirID Bluetooth smartcard reader**. Enable with the registry parameter `scard.pcscd.certgate.airid_enable`. In addition, Bluetooth must be enabled in the Setup under **Devices > Bluetooth**.

[More...](#)

|           |                                                        |
|-----------|--------------------------------------------------------|
| Parameter | certgate AirID driver for Bluetooth smart card readers |
| Registry  | <code>scard.pcscd.certgate.airid_enable</code>         |
| Value     | <u>enabled / disabled</u>                              |

- Added **smartcard reader driver** for '**Kobra stick**' from **Digittrade**.

## Cisco Webex

- Added **version selection for Cisco Webex Meetings VDI** plugins. Available Cisco Webex Meetings VDI plugins in this release: **41.8.4.11** (default), **41.7.8.5** and **41.6.7.16**
- Added a registry key for **enabling the "active version"** of Cisco Webex Meetings client.

[More...](#)

|           |                                                                                     |
|-----------|-------------------------------------------------------------------------------------|
| Setup     | <b>Sessions &gt; Unified Communications &gt; Cisco WebEx Meetings VDI Selection</b> |
| Parameter | Cisco webex Meetings client version                                                 |
| Registry  | <code>multimedia.ciscomeetings.activeversion</code>                                 |
| Value     | <u>41.8.4.11, 41.7.8.5, and 41.6.7.16</u>                                           |

NOTE: Webex meetings plugin and application versions must match. Otherwise, it may fail to launch Webex VDI optimized meeting.  
With the integration of this selection, the necessary partition size was increased.

- Updated **Cisco Webex VDI** to version **41.8.0.19732**

## Cisco JVDI Client

- Updated **Cisco JVDI** to version **14.0.1**

## Base system

- Updated **IGEL EULA** to version April 2021.
- Removed permission to start **mousepad editor for non-root users**.
- Added new registry key to **toggle the executable rights** via the parameter:

[More...](#)

- Added **automatic proxy detection and PAC file support** for proxy authentication pass through with cntlm.
- Updated **French translation**
- Added support for **multiple batteries** in the taskbar. If enabled, the taskbar shows a battery indicator for each device battery.

- Hide "Other user" label on login screen** when not needed.
- Add **TLS** options for **rsyslog**

[More...](#)

|           |                                     |
|-----------|-------------------------------------|
| Parameter | TLS enabled                         |
| Registry  | system.syslog.output%.tls           |
| Type      | bool                                |
| Value     | enabled / <u>disabled</u>           |
| Parameter | CA Certificate                      |
| Registry  | system.syslog.output%.cacertificate |
| Type      | string                              |
| Value     | <u>empty</u>                        |

- Added support to **monitor multiple sessions** and **have a post-session command triggered** if all sessions exited successfully.

Configurable at Setup page: **System > Firmware Customization > Custom Commands > Post Session**

- Added configuration for **EMP license notification**:

|           |                                                                              |
|-----------|------------------------------------------------------------------------------|
| Parameter | Enable Enterprise Management Pack license notification                       |
| Registry  | userinterface.license_notification.enable_enterprise_management_notification |
| Type      | bool                                                                         |
| Value     | <u>enabled</u> / disabled                                                    |

- Added further configuration of **logon with local user password**. In Setup on page **Security > Logon > Local User** and also within IGEL Setup Assistant. The used password parameter is the former screenlock password.

[More...](#)

|           |                                            |
|-----------|--------------------------------------------|
| Setup     | <b>Security &gt; Logon &gt; Local User</b> |
| Parameter | Login with local user password             |
| Registry  | auth.login.xlock                           |

|           |                                            |
|-----------|--------------------------------------------|
| Value     | true / false                               |
| Setup     | <b>Security &gt; Logon &gt; Local User</b> |
| Parameter | Password                                   |
| Registry  | sessions.xlock0.options.password           |
| Value     | empty                                      |

- Added **passthrough NTLM authentication** for Firefox. If enabled, the user name and password from the local logon mask will be used for automatic NTLM authentication to websites and proxies.

[More...](#)

|           |                                     |
|-----------|-------------------------------------|
| Parameter | Passthrough for NTLM authentication |
| Registry  | auth.login.ntlm.passthrough         |
| Value     | true / false                        |

- Added **Single Sign on NTLM authentication to Firefox after Kerberos smartcard authentication**. If enabled, NTLM credentials are retrieved at smartcard logon. These credentials are then used for automatic NTLM authentication to websites and proxies. For this functionality, an appropriate Kerberos keytab has to be specified in parameter auth.krb5.keytab.crypt\_password.

[More...](#)

|           |                                             |
|-----------|---------------------------------------------|
| Parameter | Store supplemental credentials              |
| Registry  | auth.krb5.appdefaults.pam.store_nt_owf_pass |
| Value     | true / false                                |

- Added **client-side NTLM authenticating proxy**. If it is enabled, applications which use the system proxy settings will connect via this local proxy. It will transparently do NTLM authentication.

[More...](#)

|           |                                              |
|-----------|----------------------------------------------|
| Parameter | Enable client side NTLM authenticating proxy |
| Registry  | network.proxy.cntlm.enable                   |
| Value     | true / false                                 |
| Parameter | Listening Port                               |
| Registry  | network.proxy.cntlm.port                     |
| Value     | 3128                                         |

- Added **Kerberos login verification**. If this is enabled, login will fail unless a service ticket sent from the KDC/domain controller can be verified. For this, the configuration of an appropriate Kerberos keytab is necessary. The keytab must be encoded in base64.

| Value     | <u>ITC</u>                                   |

#### Lakeside SysTrack

- Updated **Lakeside SysTrack client plugin** for Citrix, RDP, and VMware Horizon Client to **version 9.0**. New support for Microsoft AVD Client:

[More...](#)

|           |                                     |
|-----------|-------------------------------------|
| Parameter | Lakeside SysTrack                   |
| Registry  | sessions.wvd<inst>.plugins.lakeside |
| Value     | <u>true</u> / <u>false</u>          |

#### Conky

- Added **support for Conky system monitor**:

[More...](#)

| IGEL Setup | Accessories > Conky System Monitor > Options        |
|------------|-----------------------------------------------------|
| Parameter  | Use IGEL Setup for configuration                    |
| Registry   | userinterface.system_monitor.conky.igelsetup.config |
| Type       | bool                                                |
| Value      | <u>enabled</u> / <u>disabled</u>                    |
| IGEL Setup | Accessories > Conky System Monitor > Options        |

|                   |                                                                                                                       |
|-------------------|-----------------------------------------------------------------------------------------------------------------------|
| Parameter         | Monitor                                                                                                               |
| Registry          | userinterface.system_monitor.conky.display                                                                            |
| Range             | [Automatic][1st monitor][2nd monitor][3rd monitor][4th monitor][5th monitor][6th monitor][7th monitor][8th monitor]   |
| Value             | <u>1st monitor</u>                                                                                                    |
| <b>IGEL Setup</b> | <b>Accessories &gt; Conky System Monitor &gt; Options</b>                                                             |
| Parameter         | Window type                                                                                                           |
| Registry          | userinterface.system_monitor.conky.window_type                                                                        |

| Value             | <u>empty</u>                                                                |

## Driver

- Updated **Grundig Dictation driver** to version **20-09-16**. This **fixes termination of Citrix sessions** when USB devices are plugged or unplugged with Citrix Workspace App newer than 2009.
- Added **basic HyperV DRM driver** to support resolution changes during runtime in HyperV VM.

## Firmware update

- Added support for IGEL's **automatic update service**; supposed to be used **for devices during evaluation**.

## X11 system

- Added: **Inhibit screensaver while a Zoom, Teams, or Skype for Business meeting is active.**  
Works for native clients and Citrix optimization plugins.
  - Added: **Inhibit screensaver while a Cisco Webex Meetings session is active in Citrix Workspace App.**
- More...**

|          |                                             |
|----------|---------------------------------------------|
| Registry | debug.tools.igel-screensaver-monitor.enable |
| Value    | <u>enabled / disabled</u>                   |

## Window manager

- Allow user to define rules which inhibit the screensaver. Audio and USB rules can be configured.** Audio rules are applied if a matched audio stream is played back and USB rules are applied if a matched USB device is connected.

|           |                                                      |
|-----------|------------------------------------------------------|
| Parameter | Regular expression to match audio stream name        |
| Registry  | userinterface.screenlock.inhibit.audio%.name         |
| Value     | .*                                                   |
| Parameter | Regular expression to match audio stream application |
| Registry  | userinterface.screenlock.inhibit.audio%.application  |

| Registry  | userinterface.screenlock.inhibit.usb%.vid            |
| Value     | .*                                                   |

## VNC Viewer

- Added: **Exit VNC client silently** without prompting an error message.

[More...](#)

|           |                              |
|-----------|------------------------------|
| Parameter | Alert on fatal error         |
| Registry  | network.vncserver.promptuser |
| Value     | <u>enabled</u> / disabled    |

## Audio

- Added possibility to **disable webcam audio**.

[More...](#)

|          |                                 |
|----------|---------------------------------|
| Registry | multimedia.webcam.disable_audio |
| Value    | true / <u>false</u>             |

## Zoom Media Plugin

- Added **selection for Zoom VDI Clients**.

Available Zoom Media Plugins in this release: **5.5.12716**, **5.4.59458** and **5.5.8.20606** (default)

[More...](#)

|           |                                                                        |
|-----------|------------------------------------------------------------------------|
| Setup     | <b>Sessions &gt; Unified Communications &gt; Zoom Client Selection</b> |
| Parameter | Zoom client version                                                    |
| Registry  | multimedia.zoomvdi.activeversion                                       |
| Value     | 5.5.8.20606, 5.5.12716, 5.4.59458                                      |

With the integration of this selection, the necessary partition size was increased.

## Evidian

- Updated **Evidians rsUserAuth** to version **1.5.7789**, with that the "**Ignore Smartcard Removal**" feature was **fixed**.

[More...](#)

|           |                                                           |
|-----------|-----------------------------------------------------------|
| Setup     | <b>Sessions &gt; Evidian AuthMgr Session &gt; Options</b> |
| Parameter | Ignore Smartcard Removal on this Reader                   |
| Type      | string                                                    |

## HID

- Added **touchscreen support for Microsoft Surface Pro 4**.

## Hardware

- Added new registry keys for **configuring new i915 parameter**. New registry keys:

|           |                                                          |
|-----------|----------------------------------------------------------|
| Parameter | Disable the use of limited color range for DisplayPort 1 |
| Registry  | x.drivers.intel.dp1_no_limited_color_range               |

|       |                                                                                     |
|-------|-------------------------------------------------------------------------------------|
| Range | [Default] [No] [Yes]                                                                |
| Value | <u>Default</u> (only for M250C, the use of limited color range for DP1 is disabled) |

- Added hardware **support for HP t540**.
- Updated **DisplayLink driver** to version **5.4**.
- Note: The IGEL device **UD3-LX50** reached **End of Maintenance**.

#### TC Setup (Java)

- Updated **TC Setup** to version **6.8.8**

#### Fabulatech

- Updated **FabulaTech USB for Remote Desktop** to version **6.0.28**
- Updated **FabulaTech Scanner for Remote Desktop** to version **2.7.0.1**
- Fixed **FabulaTech scanner redirection** not working for **Citrix**

#### Remote Management

- Changed the **default behavior of the user dialog about applying remote settings received during boot**. The dialog now has a **timeout of 20 seconds by default**. If the **timeout is exceeded**, the received **settings will be automatically applied**. The behavior is configurable at Setup page **System > Remote management**.

#### Resolved Issues 11.06.100

##### Citrix

- Improved **startup of Citrix USB daemon**.
  - Updated **Grundig Dictation** driver to version **20-09-16**. This **fixes termination of Citrix sessions when USB devices are plugged / unplugged** with Citrix Workspace App newer than 20.09.
  - Fixed: The **NSAP virtual channel** is loaded correctly and works as expected.
  - Improved dialog for **Citrix farm selection**.
  - Changed the default value of** the parameter '**HDX Adaptive Transport over EDT**' to '**TCP only**'.
- With the previous default value 'UDP with fallback to TCP' performance problems occurred.

| IGEL Setup | <b>Sessions &gt; Citrix XenDesktop/XenApp &gt; HDX/ICA Global &gt; Options</b>           |
| Parameter  | HDX Adaptive Transport over EDT                                                          |
| Registry   | ica.wfclient.hdxoverudp                                                                  |
| Range      | [UDP without fallback to TCP]<br>[TCP Only - UDP disabled]<br>[UDP with fallback to TCP] |

- Fixed problems with **Citrix multimedia redirection**
- Fixed Browser Appliance mode a **white screen is shown when the browser was not closed correctly** but the process got terminated.
- Fixed **Citrix login with certain passwords and PINs**.

- Improved start of Citrix **logging** daemon **ctxlogd with CWA 2104**
- Fixed **Citrix SelfService passthrough login** in case the user interface is set to German.
- Fixed **post-session commands for Citrix sessions**, an exception for return code 2 and process **wfica** was added to the registry under **pcom**.
- Updated **HDX Realtime Optimization Pack** to version **2.9.300**

#### OSC Installer

- OSC **not deployable with IGEL Deployment Appliance: New version 11.3 is required for 11.06.100 deployment.**
- Enhanced the **boot cmdline** options for OSC

#### AVD / WVD

- Fixed access **bearer token re-authentication** (see also "sign-in frequency" setting in Azure).
- Fixed issue with **AVD workspace names that contain slashes**.
- Fixed **timezone redirection** for MS-Teams chat/calendar and for Edge browser.  
Note: **Page reload or MS-Teams application restart might be needed** when the timezone actually changes.
- Fixed **sporadic appearance of claims token dialog** while in a running session.
- Fixed **claims token dialog** being shown **when session reconnects happen too fast** (within 60s).
- Added: Set the **HttpAcceptLanguage property in browser instance** to the currently selected language for showing the Azure login page in the correct language.

#### VMware Horizon

- Fixed the broken session handling when using **Webex Teams where the Horizon session could only be started once**.
- Fixed '**Remember last user**' functionality in **Appliance Mode**.
- Fixed Horizon session **bouncing back to login**
- Fixed setting regarding **Blast HEVC decoding**: `vmware.view.blast-hevc`
- Fixed setting regarding **synchronization of lock modifiers** (num lock, shift lock, and scroll lock): `vmware.view.enable-sync-numlock`

#### Parallels Client

- Fixed an issue where the **post-session command got triggered too early**

#### IBM\_5250

- Fixed error in **iAccess configuration**.

#### Chromium

- Fixed **browser certificates were lost after reboot** if UMS was not reachable
- Fixed **too small chromium profile partition**.
- Removed parameter "**On startup->Continue where you left off**" for Chromium sessions
- Added "**Autostart requires network**" to Chromium Browser Session settings
- Modified: '**Automatic browser restart on exit**' no longer needs a reboot to be deactivated
- Removed option "**On Startup->Continue where you left off**" for Chromium sessions, this feature only works globally
- Fixed **reboot was required to toggle the splash screen**
- Modified: '**Automatic browser restart on exit**' does now restart every time the browser is closed

- Fixed '**Language**' and '**Chromium translation**' was not working as expected
- Changed: Replaced **download location prompt** by download confirmation popup
- Added warning **popup if downloads are blocked**
- Fixed: **Auto-opened files will not be blocked** (e.g. ica connection files)
- Added: **RDP now works with Chromium** Browser

#### Network

- The currently used parameter **tls-remote is deprecated** and was **removed in openVPN 2.4**. It was **changed to verify-x509-name**.
- **Certificate keys without passwords** can be used.
- Improved network device order for **LG Electronics CL60**.
- Improved **WWAN device connection activation**.
- Fixed **handling 802.1X** registry keys phase1\_direct, phase2\_direct
- Improved network interface order for **LG Electronics 27CN650W** (dmi product\_name CN65)

#### Wi-Fi

- Added registry key for **tweaking the WPA supplicant**. In general, the value is a comma-separated list of names. If it contains LATESUCCESS, a late EAP-Success message will be ignored. When such a message arrives, it had been dropped. This might cause WPA Enterprise authentication to restart.

|           |                                                        |
|-----------|--------------------------------------------------------|
| Parameter | IGEL Tweaks                                            |
| Registry  | network.interfaces.wirelesslan.device0.wpa.igel_tweaks |
| Type      | string                                                 |
| Value     | empty                                                  |

- Added registry key to **activate usage of broadcom sta driver** (needed for older broadcom Wi-Fi devices)

**More...**

|           |                                                 |
|-----------|-------------------------------------------------|
| Parameter | Use broadcom sta driver instead of b43 for WLAN |
| Registry  | network.drivers.broadcom.use_broadcom_sta       |
| Type      | bool                                            |
| Value     | enabled / disabled                              |

- Updated **wireless regulatory database** to version from **July 2021**.

#### Open VPN

- Added: **Certificate keys without passwords** can be used.
- Added new **config parameter in dropdown menu to use tls-crypt**

#### Imprivata

- Fixed **Horizon session bouncing back to login**
- Fixed **missing vendor logo**
- Fixed: **Horizon failed to launch**
- **Removed** outdated parameter: imprivata.xen\_new\_session

## Smartcard

- Fixed problem with **Nexus Personal smartcard in Gemalto IDBridge CT30 reader** via Citrix and RDP
- Fixed **smartcard resource manager**: if an eject of a card fails, perform a reset of card.

## Base system

- Fixed: Options **dialog keeps the settings** that were previously set
- Fixed **boot problems** due to 2 partitions are marked active (legacy boot with GPT partition table).
- Fixed support for **Datalogic barcode scanner**.
- Fixed **keyboard layout switcher**: show popup menu for selecting layouts also in screen lock and logon screen; show correct keyboard layout after switching from or to lock screen.
- Fixed an issue where the **post-session command was not triggering Media Player and Chromium** Browser sessions.
- Added: **Windows-key can be used as modifier for all hotkeys. AltGR does not work as a modifier.**
- Fixed a **graphics distortion in IGEL Setup Assistant**
- Fixed an issue with **VMware Horizon not triggering the post-session command**.
- Fixed an issue with **RDP not triggering the post-session command** on session disconnect.
- Fixed **ntlm\_auth helper** to terminate gracefully if no password is given.
- Minimized **periodic write access to flash drive**.
- Fixed: **Bootcode update** is done on each reboot on some EFI devices.
- Added: **Setup** parameter are also **checked after suspend**.
- Fixed an issue with **powerplan switching via the systray icon** on systems with specific Intel CPUs.
- Fixed an issue where the **post-session command was not triggered at sessions with long binary names**, for example, VMware Horizon.
- Fixed system **proxy** handling for **Chromium and Firefox**
- Added: An **improved implementation of the post-session command** mechanism has been integrated.
- Fixed **system messages where lines were cut off**
- Fixed **usable space issues with self-extracting factory preload images**

## X11 system

- Fixed **screen sorting order** to be **independent from screen startup time** (GTK-3)
- Fixed **panel on wrong screen** when original one takes longer to start
- Fixed **start menu** (whiskermenu) **restart** due to crash
- Fixed **taskbar hide/show delay** has no effect
- Fixed **Turkish (Q) and Turkish (F) keyboard layout** configuration.
- Fixed **panel keyboard layout indicator** for **French (Switzerland), Turkish (Q) and Turkish (F)** keyboard layouts.
- Fixed **screen configuration** done with **monitor defaults on the 2nd graphic card**.
- Fixed **touchscreen** screen configuration when **screen is connected on the 2nd graphic card**.

## X server

- Fixed issue with **the screen staying black** if master monitor in a **DisplayPort Daisy Chaining** environment is turned off and on again.

## Window manager

- Fixed an issue where **disabling the local window manager caused a significant boot delay.**
- **Desktop Icon Font Color** will now be previewed correctly in the setup.

#### VirtualBox

- Fixed **screen** remains **black after start in VirtualBox multi-monitor configurations.**
- Fixed **second screen in VirtualBox environment only is configured with 1024x768.**
- Fixed issue with getting **screen resolution from special VirtualBox version.**

#### Audio

- Fixed non-working audio on **Intel Tiger Lake-based devices.**
- Added handling for **microphone mute multimedia key.**
- Added possibility to **disable pci audio**, this **includes internal speaker and HDMI/DP audio.**  
[More...](#)

|          |                              |
|----------|------------------------------|
| Registry | multimedia.disable_audio.pci |
| Value    | true / false                 |

- To be more consistent, **moved** parameter `multimedia.webcam.disable_audio` to `multimedia.disable_audio.webcam`:

[More...](#)

|          |                                 |
|----------|---------------------------------|
| Registry | multimedia.disable_audio.webcam |
| Value    | true / false                    |

- Improved **playback function in the ALSA Pulse PCM** involved by applications using ALSA API (Citrix ICA Receiver).
- Fixed **automatic start of output audio stream in ALSA Pulse PCM**. The bug **caused a complete freeze of a Parallels session** while playback audio.
- Fixed **autostart of ALSA Pulse PCM**.

#### Multimedia

- Fixed **playback of Zoom recordings if hardware-accelerated decoder** is used.
- Fixed **hardware-accelerated decoding of Zoom** recordings **on VA-API platforms.**

#### Hardware

- Fixed issue with **limited colors on the DisplayPort 1 of UD2 LX50.**
- Fixed **touchpad** issues for some **Dynabook laptops** (for devices with and without fingerprint reader within touchpad).
- Added possibility to use **Touchpad toggle FN key.**
- Added new registry keys to possible solve some **touchpad** issues:

| Registry  | system.module_params.psmouse.resync_time                         |
| Type      | integer                                                          |
| Value     | <u>0</u>                                                         |

## Remote Management

- Modified AssetInfo:  
Recurring **ADD/REMOVE commands for the same device are suppressed within 30 seconds.**
- Fixed the **indefinite time point of applying remote settings during boot**. The received remote settings are now merged and applied at the same time (at end of the boot process).
- Fixed handling of **UMS scheduled jobs during boot process**.
- Fixed **WOL proxy** command.
- Fixed execution of **generic commands** (Deploy Jabra Xpress package) **when invoked as UMS scheduled job**.
- Fixed **online check mechanism** if the client has more than one active network interface.
- Fixed broken **UMS Registering dialog**.

## IGEL Cloud Gateway

- Fixed **unreliable ICG status shown by ICG tray icon.**
- Fixed **security issue in remote management** - validate the UMS server certificate for incoming UMS requests if the endpoint has an established connection to ICG.

## CA Certificates Contained in IGEL OS 11.06

IGEL OS 11.06 contains the following CA certificates:

| Certificate name                                             | Expiry date                 | File in /etc/ssl/certs                                                |
|--------------------------------------------------------------|-----------------------------|-----------------------------------------------------------------------|
| ACCVRAIZ1                                                    | Dec 31 09:37:37 2030<br>GMT | ACCVRAIZ1.crt                                                         |

#### VM Guest Support Components

|                            |                         |
|----------------------------|-------------------------|
| Virtualbox Guest Utils     | 6.1.22-dfsg-1igel55     |
| Virtualbox X11 Guest Utils | 6.1.22-dfsg-1igel55     |
| Open VM Tools              | 11.0.5-4ubuntu0.18.04.1 |
| Open VM Desktop Tools      | 11.0.5-4ubuntu0.18.04.1 |
| Xen Guest Utilities        | 7.10.0-0ubuntu1         |
| Spice Vdagent              | 0.20.0-2igel104         |
| Qemu Guest Agent           | 5.2+dfsg-3igel17        |

#### Services

| Service                     | Size    | Reduced Firmware |
|-----------------------------|---------|------------------|
| Java SE Runtime Environment | 36.2 M  | Included         |
| NVIDIA graphics driver      | 161.2 M | Included         |

#### New Features 11.06.100

##### OSC Installer

- **Enhanced** OSC Installer for **creation of 'Factory preload images (master images)'**
- Added possibility to **add initial settings to OSC Installer ISO**.
- Added **support for 'Reset after first boot'** for OSC Factory Image function.  
Further information / details at <https://kb.igel.com/igelos-11.05/en/installation-42011487.html>

##### Base system

- Updated IGEL **EULA** to version April 2021.
- Updated **kernel** to version **5.12.x**

##### Hardware

- Added hardware **support for HP t540**.
- Note: The IGEL device **UD3-LX50** reached **End of Maintenance**.

#### Resolved Issues 11.06.100

##### OSC Installer

- OSC **not deployable with IGEL Deployment Appliance: New version 11.3 is required** for 11.06.100 deployment.
- Enhanced the boot **cmdline** options for OSC

## 7.2 Notes for Release 11.05.133

| VirtualBox                         | 6.1.18-dfsg-3igel52 |

### Services

| Service                                    | Size    | Reduced Firmware |
|--------------------------------------------|---------|------------------|
| Asian Language Support                     | 22.5 M  | Included         |
| Java SE Runtime Environment                | 36.0 M  | Included         |
| Citrix Appliance                           | 329.0M  | Included         |
| Citrix Workspace app                       |         |                  |
| Citrix StoreFront                          |         |                  |
| Ericom PowerTerm InterConnect              | 15.5 M  | Included         |
| Media Player                               | 512.0 K | Included         |
| Local Browser (Firefox)                    | 76.5 M  | Included         |
| Citrix Appliance                           |         |                  |
| VMware Horizon                             | 4.5 M   | Included         |
| RDP                                        |         |                  |
| Cendio ThinLinc                            | 10.0 M  | Included         |
| Printing (Internet printing protocol CUPS) | 22.2 M  | Included         |
| NoMachine NX                               | 26.8 M  | Included         |

|                                   |         |              |
|-----------------------------------|---------|--------------|
| VMware Horizon                    | 131.2 M | Included     |
| Voice over IP (Ekiga)             | 6.5 M   | Included     |
| Citrix Appliance                  | 768.0 K | Included     |
| NCP Enterprise VPN Client         | 27.0 M  | Not included |
| Fluendo GStreamer Codec Plugins   | 6.5 M   | Included     |
| IBM i Access Client Solutions     | 72.5 M  | Not included |
| Red Hat Enterprise Virtualization | 3.0 M   | Included     |
| Parallels Client                  | 5.5 M   | Included     |
| NVIDIA graphics driver            | 126.8 M | Not included |
| Imprivata Appliance               | 10.8 M  | Included     |
| Evidian AuthMgr                   | 2.5 M   | Included     |
| Hardware Video Acceleration       | 13.5 M  | Included     |
| Extra Font Package                | 1.0 M   | Included     |
| Fluendo GStreamer AAC Decoder     | 1.2 M   | Included     |
| x32 Compatibility Support         | 3.5 M   | Included     |
| Cisco JVDI client                 | 61.8 M  | Included     |
| PrinterLogic                      | 40.8 M  | Not included |
| Biosec BS Login                   | 10.0 M  | Not included |
| Login VSI Login Enterprise        | 28.8 M  | Not included |
| Stratusphere UX CID Key software  | 2.8 M   | Not included |
| Elastic Filebeat                  | 15.8 M  | Not included |
| WVD                               | 89.2 M  | Included     |
| Local Browser (Chromium)          | 87.8 M  | Not included |
| deskMate client                   | 5.8 M   | Included     |
| Cisco Webex Teams VDI             | 43.8 M  | Not included |
| Cisco Webex Meetings VDI          | 32.8 M  | Not included |
| Zoom VDI Media Plugin             | 47.2 M  | Not included |
| DriveLock                         | 13.2 M  | Included     |
| SpeechWrite Client                | 256.0 K | Included     |
| Teradici PCoIP Client             | 16.0 M  | Included     |
| 90meter Smart Card Support        | 256.0 K | Included     |

|                                            |         |              |
|--------------------------------------------|---------|--------------|
| Virtualbox (Limited support)               | 256.0K  | Not included |
| Mobile Device Access USB (Limited support) |         |              |
| VPN OpenConnect (Limited support)          |         |              |
| Scanner support / SANE (Limited support)   |         |              |
| Limited Support Features                   |         |              |
| Mobile Device Access USB (Limited support) | 256.0 K | Not included |
| VPN OpenConnect (Limited support)          | 1.0 M   | Not included |
| Scanner support / SANE (Limited support)   | 2.5 M   | Not included |
| VirtualBox (Limited support)               | 63.8 M  | Not included |

### 7.2.3 General Information 11.05.133

To be beneficial to all new features and implementations, it is recommended to use UMS 6.07.100 or higher and update the corresponding profiles.

Firmware downgrade to older versions (11.01 or 11.02) is not possible, due to the unsigned firmware update files.

The following clients and features are not supported anymore:

- Caradigm
- Citrix Legacy Sessions
- Citrix Web Interface
- Citrix StoreFront Legacy
- Citrix HDX Flash Redirection
- Citrix XenDesktop Appliance Mode
- Flash Player Download
- JAVA Web Start
- Leostream Java Connect
- Systancia AppliDis
- VIA graphics driver

### 7.2.4 Known Issues 11.05.133

Citrix

- To launch **multiple desktop sessions** with Citrix HDX RTME and Citrix H.264 acceleration plugin, the following registry key must be enabled.

[More...](#)

|           |                                                                  |
|-----------|------------------------------------------------------------------|
| Parameter | Activate workaround for dual RTME sessions and H264 acceleration |
| Registry  | ica.workaround-dual-rtme                                         |
| Value     | enabled / <u>disabled</u>                                        |

- This workaround is not applicable when **Enable Secure ICA** is active for the specific delivery group.
- Adding **smartcard readers** while the session is ongoing does not work. The reader is visible, but **cannot be used due to permanently unknown reader status**.
- Citrix has known issues with **GStreamer1.0** which describe problems with **multimedia redirection of H.264, MPEG1, and MPEG2**. GStreamer1.0 is used if browser content redirection is active.
- Browser content redirection** does not work with activated DRI3 and hardware-accelerated H.264 deep compression codec.
- With activated DRI3 and an AMD GPU, **Citrix H.264 acceleration plugin could freeze**. Selective H.264 mode (API v2) is not affected by this issue.
- Citrix H.264 acceleration plugin** does not work with **enabled** server policy **Optimize for 3D graphics workload** in combination with server policy **Use video codec compression > For the entire screen**.

#### VMware Horizon

- Client drive mapping** and **USB redirection** for storage devices **should not be enabled both at the same time**.
  - On the one hand, when using USB redirection for storage devices:  
The USB on-insertion feature is only working when the client drive mapping is switched off.  
In the IGEL Setup client drive mapping can be found in:  
**Sessions > Horizon Client > Horizon Client Global > Drive Mapping > Enable Drive Mapping**.  
It is also recommended to disable local **Storage Hotplug** on setup page **Devices > Storage Devices > Storage Hotplug**.
  - On the other hand, when using drive mapping instead, it is recommended to either switch off USB redirection entirely or at least deny storage devices by adding a filter to the USB class rules.  
Furthermore, Horizon Client relies on the OS to mount the storage devices themselves.  
Enable local `Storage Hotplug` on setup page **Devices > Storage Devices > Storage Hotplug**.
- External drives** mounted already before connection do not appear in the remote desktop.  
Workaround: **map the directory /media as a drive**. Then the external devices will show up inside the media drive.
- After disconnect of an RDP-based session, the **Horizon main window** which contains the server or sessions overview, **cannot be resized anymore**.
- Copying Text from Horizon Blast sessions** isn't possible.

- The **on-screen keyboard in Horizon appliance mode** does not work correctly with the local logon.  
You have to switch off the local logon and switch on these two keys in the IGEL registry:  
`userinterface.softkeyboard.autoshow`  
`userinterface.softkeyboard.autohide`
- **Zoom VDI Media Plugin makes Horizon Client crash** upon connection to the remote desktop in cases when TCSetup is running at the same time.
- **When using the PCoIP protocol the virtual channel provided by VMware used for serial port and scanner redirection can make Horizon client hang** on logout from the remote session.  
This happens if you enable only one of scanner or serial port redirection. The freeze does not occur if both redirection methods are enabled or none of them. The Blast Protocol isn't affected by this bug.  
The respective settings can be found here in the IGEL Registry:  
`vmware.view.enable-serial-port-redir`  
`vmware.view.enable-scanner-redir`

#### Parallels Client

- **Native USB redirection** does not work with Parallels Client.

#### Chromium

- **H.264 decoding is not supported** anymore.

#### WiFi

- **TP-Link Archer T2UH WiFi adapters** do not work after system suspend/resume.  
Workaround: Disable system suspend at **IGEL Setup > System > Power Options > Shutdown**.

#### Cisco JVDI Client

- There may be a **segfault** shown in the logs (during log out of Citrix Desktop session). Occurs only when using **Citrix Workspace app 20.10** and **Cisco JVDI**.

#### Base system

- **Hyper-V (Generation 2) needs a lot of memory (RAM)**. The machine needs a sufficient amount of memory allocated.
- **Update from memory stick requires network online state** (at least when multiple update stages are involved)
- **Unreliable messages** in user dialog for applying settings during boot. Could occur when new settings were fetched from the UMS.

#### deskMate

- Some **stability issues** may remain.

#### Firmware update

- On **devices with 2 GB of flash** storage, it could happen that there is **not enough space for updating all features**. In this case, a corresponding error message occurs. Please visit [Error: "Not](#)

"enough space on local drive" when Updating to **IGEL OS 11.04 or Higher**<sup>383</sup> for a possible solution and additional information.

#### Appliance Mode

- When ending a **Citrix session in browser appliance mode**, the browser is restarted twice instead of once.
- Appliance mode RHEV/Spice: **spice-xpi firefox plugin** is no longer supported.  
The **Console Invocation** has to allow **Native** client (auto is also possible) and should be started in fullscreen to prevent any opening windows.

#### VirtualBox

- The current **VirtualBox Guest Tools/Drivers will not work with VirtualBox 5.2.x or older hosts**.  
This results in a black screen and non-working graphic.  
Possible workaround: Installation with **Failsafe Installation + Recovery** and set of `x.drivers.force_vesa` registry key to "true".

#### Audio

- **IGEL UDD (D220)** fails to restore the **volume level** of the speaker when the device used firmware version 11.01.110 before.
- **Audio jack detection** on **Advantec POC-W243L** does not work. Therefore, sound output goes through a possibly connected headset and also the internal speakers.

#### Multimedia

- Multimedia redirection with **GStreamer** could fail with the **Nouveau GPU** driver.

#### Hardware

- Some newer **Delock 62599 active DisplayPort to DVI (4k)** adapters only work on INTEL-based devices.

#### Remote Management

- **AIT feature** with **IGEL Starter License** is only supported by UMS version 6.05.100 or newer.

### 7.2.5 Security Fixes 11.05.133

#### Remote Management

- Fixed a **possible privilege escalation** while sending **user logoff event to the UMS**.

### 7.2.6 New Features 11.05.133

#### Citrix

- Integrated **Zoom Media Plugin 5.5.12716.0227**
- Added: In **StoreFront** sessions, **HTTP can now be selected for the URL** in addition to HTTPS.

---

<sup>383</sup><https://kb.igel.com/igelos-11.04/en/error-not-enough-%C2%A0space-on-local-drive-when-updating-to-igel-os-11-04-or-higher-32870765.html>

- Implement "**Synchronize Citrix password with screensaver**" for **SelfService**. The parameter for StoreFront was reused.

## UD Pocket

- Added official support for **Secured Kobra Stick from DIGITTRADE**.

## VMware Horizon

- Added **switch for enabling Cisco Webex Meetings** within VMware Horizon.  
**More...**

|           |                                    |
|-----------|------------------------------------|
| Parameter | Cisco Webex Meetings VDI           |
| Registry  | vmware.view.vdciscomeetings.enable |
| Type      | bool                               |
| Value     | <u>enabled</u> / <u>disabled</u>   |

- **Removed** deprecated **ThinPrint virtual channel (tprpdः.so)** from Horizon sessions used for virtual printing. It is **replaced by Horizon's integrated printing mechanism**.

## Imprivata

- Added registry key to overcome the **window overlap**. That occurred when using local setup or hotkeyed applications like the 'Display switch'.

**More...**

|            |                                  |
|------------|----------------------------------|
| IGEL Setup | <b>Registry</b>                  |
| Registry   | imprivata.avoid_focus_ownership  |
| Type       | bool                             |
| Value      | <u>enabled</u> / <u>disabled</u> |

## Smartcard

- Added smartcard reader driver for **DIGITTRADE "Secured Kobra Stick"**.

## WVD

- Added **WVD printer redirection**.

**More...**

|          |                                        |
|----------|----------------------------------------|
| Registry | sessions.wvd%.printing.cups            |
| Value    | <u>enabled</u> / <u>disabled</u>       |
| Registry | print.cups.printer%.map_wvd            |
| Value    | <u>enabled</u> / <u>disabled</u>       |
| Registry | print.cups.printer%.wvd_printer_driver |
| Value    | ""                                     |

- The **default Windows driver name is "Microsoft PS Class Driver"**, which should be installed by default and work generically.  
To install a **custom printer driver**, the exact name must be set and the driver must be installed on the WVD side.

## Base system

- **Post-session commands:** Added support to monitor multiple sessions and have a post-session command triggered if all sessions exited successfully.

## 7.2.7 Resolved Issues 11.05.133

Citrix

- Integrated **HDX Realtime Optimization Pack 2.9.300**
- Updated **Grundig Dictation driver** to version **20-09-16**. This **fixes termination of Citrix sessions when USB devices are plugged or unplugged** - happens with Citrix Workspace App versions newer than 20.09.
- **Citrix Hardware Decoder doesn't crash** anymore **when using 12 CPU cores** (or even more) at the server.

WVD

- Fixed **forced Azure re-authentication** (every 30 minutes)

Parallels Client

- Updated **Parallels client** to version **17.1.3**

Teradici PCoIP Client

- **Teradici client update 21.03**

Imprivata

- Fixed **missing vendor logo**

Firefox

- Fixed **apparmor** rule for allowing Firefox to use **widevine DRM plugin**.

Smartcard

- Fixed **smartcard resource manager**: Reset is triggered when eject of smartcard fails.

Cisco Webex

- Updated **Cisco Webex Teams VDI** to **41.4.0.18516**
- Updated **Cisco Webex Meetings VDI** to **41.4.0.162**
- Please **make sure your Webex meetings client version is WBS 41.4.0 or later**, otherwise it will fail to launch Webex VDI optimized meeting.

Cisco JVDI Client

- Updated **Cisco JVDI** to **14.0.0**

IBM\_5250

- Fixed **error in iAccess configuration**.

Base system

- Fixed **bootcode update is done on each reboot** on some **EFI** devices.
- Changed: Minimized **periodic write access to permanent storage**.

Firmware update

- Added: **sftp** protocol supports now the following **key exchange methods**:
  - ecdh-sha2-nistp256 (BSI)
  - ecdh-sha2-nistp384 (BSI)
  - ecdh-sha2-nistp521 (BSI)
  - curve25519-sha256 (BSI)
  - curve25519-sha256@libssh.org (BSI)
  - diffie-hellman-group-exchange-sha256
  - diffie-hellman-group-exchange-sha1
  - diffie-hellman-group14-sha1
  - diffie-hellman-group1-sha1

#### X11 system

- Fixed **monitor sorting order** to be independent from monitor startup time (GTK-3)
- Fixed **panel on wrong monitor**, when original monitor takes longer to come online
- Fixed **Turkish (Q) and Turkish (F) keyboard layout** configuration.
- Fixed **panel keyboard layout** indicator for **French (Switzerland), Turkish (Q) and Turkish (F)** keyboard layouts.
- Added **inhibit screensaver** while a **Cisco Webex Meetings** session is active in Citrix Workspace App.

#### Audio

- Fixed **not working** audio on **Intel Tiger Lake-based** devices.
- Fixed **automatic start of output audio** stream in **ALSA Pulse PCM**. The bug caused a complete **freeze of a Parallels session** while playback audio data.
- Bugfix for USB audio **default device switch** and update of **igel-sound-control**

#### Hardware

- Fixed **touchpad** issues for some **Dynabook laptops**.

#### Remote Management

- Fixed **execution of generic commands (Deploy Jabra Xpress package)** if they invoked as a UMS scheduled job.
- Fixed **handling of UMS scheduled jobs during boot** process.

#### Network

- Improved **network device order** for **LG CL600N, LG CN650N**
- The currently used parameter **tls-remote** is **deprecated** and was **removed in openVPN 2.4**. It was be **changed to** **verify-x509-name**.

#### H264

- Citrix Hardware Decoder doesn't crash** anymore **when using 12 CPU cores** (or even more) at the server.

## 7.3 Notes for Release 11.05.120

| Software: | Version | 11.05.120 |
|-----------|---------|-----------|
|           |         |           |

|                       |            |              |

| VirtualBox (Limited support)               | 63.8 M  | Not included |

## General Information 11.05.120

To be beneficial to all new features and implementations, it is recommended to use UMS 6.07.100 or higher and update the corresponding profiles.

Firmware downgrade to older versions (11.01 or 11.02) is not possible, due to the unsigned firmware update files.

The following clients and features are not supported anymore:

- Caradigm
- Citrix Legacy Sessions
- Citrix Web Interface
- Citrix StoreFront Legacy
- Citrix HDX Flash Redirection
- Citrix XenDesktop Appliance Mode
- Flash Player Download
- JAVA Web Start
- Leostream Java Connect
- Systancia AppliDis
- VIA graphics driver

## Known Issues 11.05.120

### Citrix

- For using **multiple desktop sessions** with Citrix HDX RTME and Citrix H.264 acceleration plugin, the following registry key must be enabled.

[More...](#)

|           |                                                                  |
|-----------|------------------------------------------------------------------|
| Parameter | Activate workaround for dual RTME sessions and H264 acceleration |
| Registry  | ica.workaround-dual-rtme                                         |
| Value     | enabled / <u>disabled</u>                                        |

- This workaround is not applicable when **Enable Secure ICA** is active for the specific delivery group.
- Adding **smartcard readers** while the session is ongoing does not work. The reader is visible, but **cannot be used due to permanently unknown reader status**.

- Citrix has known issues with **GStreamer1.0** which describe problems with **multimedia redirection of H.264, MPEG1, and MPEG2**. GStreamer1.0 is used if browser content redirection is active.
- **Browser content redirection** does not work with activated DRI3 and hardware-accelerated H.264 deep compression codec.
- With activated DRI3 and an AMD GPU, **Citrix H.264 acceleration plugin could freeze**. Selective H.264 mode (API v2) is not affected by this issue.
- **Citrix H.264 acceleration plugin** does not work with **enabled** server policy **Optimize for 3D graphics workload** in combination with server policy **Use video codec compression > For the entire screen**.

#### VMware Horizon

- **Client drive mapping** and **USB redirection** for storage devices **should not be enabled both at the same time**.
  - On the one hand, when using USB redirection for storage devices:  
The USB on-insertion feature is only working when the client drive mapping is switched off.  
In the IGEL Setup client drive mapping can be found in:  
**Sessions > Horizon Client > Horizon Client Global > Drive Mapping > Enable Drive Mapping**.  
It is also recommended to disable local **Storage Hotplug** on setup page **Devices > Storage Devices > Storage Hotplug**.
  - On the other hand, when using drive mapping instead, it is recommended to either switch off USB redirection entirely or at least deny storage devices by adding a filter to the USB class rules.  
Furthermore, Horizon Client relies on the OS to mount the storage devices themselves.  
Enable local `Storage Hotplug` on setup page **Devices > Storage Devices > Storage Hotplug**.
- **External drives** mounted already before connection do not appear in the remote desktop.  
Workaround: **map the directory /media as a drive**. Then the external devices will show up inside the media drive.
- After disconnect of an RDP-based session, the **Horizon main window** which contains the server or sessions overview, **cannot be resized anymore**.
- **Copying Text from Horizon Blast sessions** isn't possible.
- The **on-screen keyboard in Horizon appliance mode** does not work correctly with the local logon.  
You have to switch off the local logon and switch on these two keys in the IGEL registry:  
`userinterface.softkeyboard.autoshow`  
`userinterface.softkeyboard.autohide`
- **Zoom VDI Media Plugin makes Horizon Client crash** upon connection to the remote desktop in cases when TCSetup is running at the same time.
- **When using the PCoIP protocol the virtual channel provided by VMware used for serial port and scanner redirection can make Horizon client hang** on logout from the remote session.  
This happens if you enable only one of scanner or serial port redirection. The freeze does not occur if both redirection methods are enabled or none of them. The Blast Protocol isn't affected by this bug  
The respective settings can be found here in the IGEL Registry:

`vmware.view.enable-serial-port-redir`  
`vmware.view.enable-scanner-redir`

#### Parallels Client

- **Native USB redirection** does not work with Parallels Client.

#### Chromium

- **H.264 decoding is not supported anymore / in this release.**

#### WiFi

- **TP-Link Archer T2UH WiFi adapters** do not work after system suspend/resume.  
 Workaround: Disable system suspend at **IGEL Setup > System > Power Options > Shutdown**.

#### Cisco JVDI Client

- There may be a **segfault** shown in the logs (during log out of Citrix Desktop session). Occurs only when using **Citrix Workspace app 20.10** and **Cisco JVDI**.

#### Base system

- **Hyper-V (Generation 2) needs a lot of memory (RAM)**. The machine needs a sufficient amount of memory allocated.
- **Update from memory stick requires network online state** (at least when multiple update stages are involved)
- **Unreliable messages** in user dialog for applying settings during boot. Could occur when new settings were fetched from the UMS.

#### deskMate

- Some **stability issues** may remain.

#### Firmware update

- On **devices with 2 GB of flash** storage, it could happen that there is **not enough space for updating all features**. In this case, a corresponding error message occurs. Please visit [Error: "Not enough space on local drive" when Updating to IGEL OS 11.04 or Higher<sup>385</sup>](#) for a possible solution and additional information.

#### Appliance Mode

- When ending a **Citrix session in browser appliance mode**, the browser is restarted twice instead of once.
- Appliance mode RHEV/Spice: **spice-xpi firefox plugin** is no longer supported.  
 The **Console Invocation** has to allow **Native** client (auto is also possible) and should be started in fullscreen to prevent any opening windows.

#### VirtualBox

- The current **VirtualBox Guest Tools/Drivers will not work with VirtualBox 5.2.x or older hosts**.  
 This results in a black screen and non-working graphic.

---

<sup>385</sup><https://kb.igel.com/igelos-11.04/en/error-not-enough-%C2%A0space-on-local-drive-when-updating-to-igel-os-11-04-or-higher-32870765.html>

Possible workaround: Installation with **Failsafe Installation + Recovery** and set of `x.drivers.force_vesa` registry key to true.

#### Audio

- **IGEL UD2 (D220)** fails to restore the **volume level** of the speaker when the device used firmware version 11.01.110 before.
- **Audio jack detection** on **Advantec POC-W243L** does not work. Therefore, sound output goes through a possibly connected headset and also the internal speakers.

#### Multimedia

- Multimedia redirection with **GStreamer** could fail with the Nouveau GPU driver.

#### Hardware

- Some newer **Delock 62599 active DisplayPort to DVI (4k)** adapters only work on INTEL-based devices.

#### Remote Management

- **AIT feature** with **IGEL Starter License** is only supported by UMS version 6.05.100 or newer.

### New Features 11.05.120

#### OSC Installer

- Enhanced OSC Installer for **creating so-called factory preload images** (master images)
- Added possibility to **add initial settings** to OSC Installer ISO.

#### Citrix

- Added **automatic configuration of the Citrix webcam redirection** in ICA sessions.

| Registry   | <code>ica.igel_hdxwebcam.framerate</code>                          |

|       |    |
|-------|----|
| Value | 15 |
|-------|----|

- Added **configuration for h264 encoding** in the Citrix webcam redirection.

[More...](#)

|           |                                  |
|-----------|----------------------------------|
| Parameter | HDX Webcam H264 encoding         |
| Registry  | ica.wfclient.hdxh264inputenabled |
| Value     | enabled / <u>disabled</u>        |

- Added configuration for **native h264 encoding** provided by webcam and used in the Citrix webcam redirection. This parameter requires the `ica.wfclient.hdxh264inputenabled` to be set to true.

[More...](#)

|           |                                  |
|-----------|----------------------------------|
| Parameter | HDX Webcam H264 native           |
| Registry  | ica.wfclient.hdxh264enablenative |
| Value     | enabled / <u>disabled</u>        |

- Available **Citrix Workspace apps** in this release: **21.03(default), 20.12 and 19.12**
- Added new Citrix feature for an enhanced experience of **multi-monitor scenarios**. You can save the selection for a multi-monitor screen layout. Pinning helps to relaunch a session with the selected layout, resulting in an optimized user experience.

Note: Works only with Self Service.

[More...](#)

|           |                                                |
|-----------|------------------------------------------------|
| Parameter | Enhanced Experience of Multi-Monitor scenarios |
| Registry  | ica.authman.screenpinenabled                   |
| Value     | enabled / <u>disabled</u>                      |

- All parameters of the **Citrix set log program** are now available via setup under `ica.logging.setlog`. Logging can be set easier and permanent. Therefore, changed the structure of parameters to show the inheritance.

#### VMware Horizon

- Fixed **broken session handling** when using Webex Teams, Horizon session could only be started once.

#### WVD

- New **WVD icon**.

#### Network

- Added **Realtek RTL8125 2.5Gigabit Ethernet** driver.

#### WiFi

- Added support for **Realtek RTW8852AE WiFi** device.

#### Hardware

- Added hardware support for **LG 34CN650N AiO**.

#### Resolved Issues 11.05.120

##### OSC Installer

- Fixed OSC 11.05.xxx **not deployable with Deployment Appliance (ODA)**.

##### Citrix

- Fixed link to icacontrol
- Fixed: **Several audio device problems** through an enabled registry key `ica.module.vdcamversion4support`. The default was changed to disabled. This ensures that Citrix CWA behaves as before.

**More...**

|           |                                              |
|-----------|----------------------------------------------|
| Parameter | Multiple Audio Device support                |
| Registry  | <code>ica.module.vdcamversion4support</code> |
| Value     | <u>enabled</u> / <u>disabled</u>             |

- Fixed **Citrix logging**, the log file is written as expected.

##### RDP/IGEL RDP Client 2

- Added parameter to enable **serverside audio for RDP sessions**.

**More...**

|           |                                                                  |
|-----------|------------------------------------------------------------------|
| Parameter | Enable serverside audio                                          |
| Registry  | <code>sessions.winconnect%.option.enable-serverside-audio</code> |
| Value     | <u>enabled</u> / <u>disabled</u>                                 |

##### Parallels Client

- Fixed an issue where the **post-session command** got triggered too early when using the Parallels Client.

##### Network

- Fixed network device order for **LG 34CN650W** and **CL600W** devices.
- Fixed a **graphics distortion in Setup Assistant**

##### WiFi

- Added registry key for **tweaking the WPA supplicant**. In general, the value is a comma-separated list of names. If it contains LATESUCCESS, a late EAP-Success message will be ignored.

**More...**

|           |             |
|-----------|-------------|
| Parameter | IGEL Tweaks |
|-----------|-------------|

|          |                                                            |
|----------|------------------------------------------------------------|
| Registry | network.interfaces.wirelesslan.device0.wpa.<br>igel_tweaks |
| Value    | " "                                                        |

- Added registry key to **activate the use of Broadcom sta driver** (needed for older Broadcom WiFi devices).

**More...**

|           |                                                 |
|-----------|-------------------------------------------------|
| Parameter | Use Broadcom sta driver instead of b43 for WLAN |
| Registry  | network.drivers.broadcom.use_broadcom_sta       |
| Value     | enabled / <u>disabled</u>                       |

#### NCP VPN

- Fixed **NCP session start**.

#### Smartcard

- Fixed: Usage of **Nexus Personal** smartcard in combination with **Gemalto IDBridge CT30** reader, in Citrix and RDP

#### Base system

- Fixed **custom environment variables** when an administrator password is set.
- Fixed **boot problems** due to 2 partitions are marked active (legacy boot with GPT partition table).
- Fixed **RDP not triggering the post-session command** on session disconnect.
- Fixed **grub boot code and boot error message**: Unknown TPM error.
- Fixed **Demo License browser crashes after EULA**.

#### X11 system

- Fixed **taskbar hide/show delay** has no effect

#### VirtualBox

- Fixed **screen resolution issues with SINA OS 3.5.1 version**.
- Fixed **screen remains black after started multi-monitor configuration in VirtualBox**.
- Fixed **second screen in VirtualBox environment only is configured with 1024x768**.
- Fixed issue when getting **screen resolution from special VirtualBox version**.

#### Audio

- Improved **playback function** in the **ALSA Pulse PCM** - for applications using ALSA API (e.g. Citrix Workspace App).

#### Hardware

- Fixed **microphone detection on Dell Optiplex devices**.

#### Remote Management

- Fixed WOL proxy command.

### 7.3.2 IGEL OS Creator (OSC)

#### Services

| Service                     | Size    | Reduced Firmware |
|-----------------------------|---------|------------------|
| Java SE Runtime Environment | 36.0 M  | Included         |
| NVIDIA graphics driver      | 122.5 M | Included         |

#### New Features 11.05.120

##### OSC Installer

- Enhanced OSC Installer for **creating so-called factory preload images** (master images)
- Added possibility to **add initial settings to OSC Installer ISO**.

#### Resolved Issues 11.05.120

##### OSC Installer

- Fixed OSC 11.05.xxx **not deployable with Deployment Appliance (ODA)**.

## 7.4 Notes for Release 11.05.100

| Ericom PowerTerm InterConnect              | 15.5 M  | Included         |
| Media Player                               | 512.0 K | Included         |
| Local Browser (Firefox)                    | 76.5 M  | Included         |
| Citrix Appliance                           |         |                  |
| VMware Horizon                             | 4.5 M   | Included         |
| RDP                                        |         |                  |
| Cendio ThinLinc                            | 10.0 M  | Included         |
| Printing (Internet printing protocol CUPS) | 22.2 M  | Included         |
| NoMachine NX                               | 26.8 M  | Included         |
| VMware Horizon                             | 131.2 M | Included         |
| Voice over IP (Ekiga)                      | 6.5 M   | Included         |

|                                            |         |              |
|--------------------------------------------|---------|--------------|
| Citrix Appliance                           | 768.0 K | Included     |
| NCP Enterprise VPN Client                  | 27.0 M  | Not included |
| Fluendo GStreamer Codec Plugins            | 6.5 M   | Included     |
| IBM i Access Client Solutions              | 72.5 M  | Not included |
| Red Hat Enterprise Virtualization          | 3.0 M   | Included     |
| Parallels Client                           | 5.5 M   | Included     |
| NVIDIA graphics driver                     | 126.8 M | Not included |
| Imprivata Appliance                        | 10.8 M  | Included     |
| Evidian AuthMgr                            | 2.5 M   | Included     |
| Hardware Video Acceleration                | 13.5 M  | Included     |
| Extra Font Package                         | 1.0 M   | Included     |
| Fluendo GStreamer AAC Decoder              | 1.2 M   | Included     |
| x32 Compatibility Support                  | 3.5 M   | Included     |
| Cisco JVDI client                          | 45.8 M  | Included     |
| PrinterLogic                               | 40.8 M  | Not included |
| Biosec BS Login                            | 10.0 M  | Not included |
| Login VSI Login Enterprise                 | 28.8 M  | Not included |
| Stratusphere UX CID Key software           | 2.8 M   | Not included |
| Elastic Filebeat                           | 15.8 M  | Not included |
| WVD                                        | 88.2 M  | Included     |
| Local Browser (Chromium)                   | 87.8 M  | Not included |
| deskMate client                            | 5.8 M   | Included     |
| Cisco Webex Teams VDI                      | 36.8 M  | Not included |
| Cisco Webex Meetings VDI                   | 32.2 M  | Not included |
| Zoom VDI Media Plugin                      | 42.2 M  | Not included |
| DriveLock                                  | 13.2 M  | Included     |
| SpeechWrite Client                         | 256.0 K | Included     |
| Teradici PCoIP Client                      | 14.5 M  | Included     |
| 90meter Smart Card Support                 | 256.0 K | Included     |
| Mobile Device Access USB (Limited support) | 256.0 K | Not included |
| VPN OpenConnect (Limited support)          | 1.0 M   | Not included |
| Scanner support / SANE (Limited support)   | 2.5 M   | Not included |
| VirtualBox (Limited support)               | 63.8 M  | Not included |

## General Information 11.05.100

To be beneficial to all new features and implementations, it is recommended to use UMS 6.07.100 or higher and update the corresponding profiles.

Firmware downgrade to older versions (11.01 or 11.02) is not possible, due to the unsigned firmware update files.

The following clients and features are not supported anymore:

- Caradigm
- Citrix Legacy Sessions
- Citrix Web Interface
- Citrix StoreFront Legacy
- Citrix HDX Flash Redirection
- Citrix XenDesktop Appliance Mode
- Flash Player Download
- JAVA Web Start
- Leostream Java Connect
- Systancia AppliDis
- VIA graphics driver

## Known Issues 11.05.100

### Firmware Update

- On **devices with 2 GB of flash storage**, it could happen that there is **not enough space for updating all features**. In this case, a corresponding error message occurs. Check [Error: "Not enough space on local drive" when Updating to IGEL OS 11.04 or Higher<sup>388</sup>](#) for a solution.

### Citrix

- With activated **DRI3** and an **AMD GPU Citrix H.264 acceleration plugin** could freeze. Selective H.264 mode (API v2) is not affected from this issue.
- Citrix has known issues with **GStreamer1.0** which describe problems with **multimedia redirection of H.264, MPEG1 and MPEG2**. GStreamer1.0 is used if browser content redirection is active.
- **Browser content redirection** does not work with activated **DRI3** and **hardware accelerated H.264 deep compression codec**.
- **Citrix H.264 acceleration plugin** does not work with **enabled** server policy **Optimize for 3D graphics workload** in combination with server policy **Use video codec compression > For the entire screen**.
- To launch **multiple desktop sessions** with **Citrix HDX RTME** and **Citrix H.264** acceleration plugin, the following registry key must be enabled.

[More...](#)

|           |                                                                  |
|-----------|------------------------------------------------------------------|
| Parameter | Activate workaround for dual RTME sessions and H264 acceleration |
| Registry  | ica.workaround-dual-rtme                                         |
| Value     | <u>enabled</u> / <u>disabled</u>                                 |

<sup>388</sup> <https://kb.igel.com/display/igelos1105/Updating+to+IGEL+OS+11.04+or+Higher+on+a+Device+with+Small+Storage>

This workaround is not applicable when "Enable Secure ICA" is active for the specific delivery group.

- **Adding smartcard readers** while the **session is ongoing** does not work. The **reader is visible, but cannot be used** due to permanently unknown reader status.

#### VMware Horizon

- **Client drive mapping** and **USB redirection** for storage devices should not be enabled both at the same time.
  - On the one hand, when using USB redirection for storage devices: The USB on-insertion feature is only working when the client drive mapping is switched off. In the IGEL Setup client drive mapping can be found in: **Sessions > Horizon Client > Horizon Client Global > Drive Mapping > Enable Drive Mapping**. It is also recommended to disable local **Storage Hotplug** on setup page **Devices > Storage Devices > Storage Hotplug**.
  - On the other hand, when using drive mapping instead, it is recommended to either switch off USB redirection entirely or at least deny storage devices by adding a filter to the USB class rules. Furthermore, Horizon Client relies on the OS to mount the storage devices itself. Enable local **Storage Hotplug** on Setup page **Devices > Storage Devices > Storage Hotplug**.
- **External drives** mounted already before connection do not appear in the **remote desktop**.  
Workaround: map the directory /media as a drive. Then the external devices will show up inside the media drive.
- **After the disconnect of an RDP-based session**, the Horizon main **window** which contains the server or sessions overview **cannot be resized anymore**.
- **Copying a text from Horizon Blast sessions** is not possible.
- The **on-screen keyboard** in **Horizon appliance mode** does not work correctly with local logon.  
Workaround: **Switch off local logon** and switch on the corresponding two keys via IGEL registry:
  - userinterface.softkeyboard.autoshow
  - userinterface.softkeyboard.autohide
- **Zoom VDI Media Plugin makes Horizon Client crash** upon connection to the remote desktop in cases **when TC Setup is running at the same time**.

#### Chromium

- **H.264 decoding is not supported** anymore.

#### Wi-Fi

- **TP-Link Archer T2UH Wi-Fi adapters** do not work after system suspend/resume. Workaround: Disable system suspend at **IGEL Setup > System > Power Options > Shutdown**.

#### Parallels Client

- **Native USB redirection** does not work with Parallels Client.

#### Cisco JVDI Client

- There may be a **segfault shown in the logs** (during logout of Citrix Desktop session). This occurs only when using **Citrix Workspace app 20.10 and Cisco JVDI**.

#### Multimedia

- Multimedia redirection with **GStreamer** could fail with the **Nouveau GPU driver**.

## Hyper-V

- **Hyper-V (Generation 2)** needs **a lot of memory (RAM)**. The machine needs a sufficient amount of memory allocated.

## VirtualBox

- The current **VirtualBox Guest Tools/Drivers** will not work with **VirtualBox 5.2.x or older** hosts which leads to a black screen and non-working graphics.  
**Possible workaround:** Install with 'Failsafe Installation + Recovery' and set the registry key `x.drivers.force_vesa` to 'true'.

## Audio

- **Audio jack detection on Advantech POC-W243L** doesn't work. Therefore, sound output goes through a possibly connected headset and the internal speakers.
- **IGEL UD2 (D220)** fails to restore the volume level of the speaker when the device used **firmware version 11.01.110** before.

## Hardware

- Some newer **Delock 62599 active DisplayPort-to-DVI (4k)** adapters only work with INTEL devices.

## Remote Management

- **AIT feature with IGEL Starter License** is only **supported** by **UMS version 6.05.100 or newer**.

## Base system

- **Update from memory stick** requires network online state (at least when multiple update stages are involved).
- **Unreliable messages in user dialog for applying settings during boot**. Could occur when new settings were fetched from the UMS.

## deskMate

- Some stability issues may remain.

## Appliance Mode

- When **ending a Citrix session** in browser appliance mode, the **browser is restarted twice** instead of once.
- Appliance mode **RHEV/Spice: spice-xpi firefox plugin** is no longer supported. The **Console Invocation** has to allow 'Native' client (auto is also possible) and should be started in fullscreen to prevent any opening windows.

## Security Fixes 11.05.100

### Citrix

- Fixed file properties for `/var/log/.ctxlogconf` adjusted, **so no code can be executed by the user**.

### Firefox

- **Added** `view-source:file:///` **to the blocklist** in case the browser should not have random access to the local file system.

#### Base system

- Fixed **bluez** security issue CVE-2020-0556.
- Fixed **librsvg** security issue CVE-2019-20446.
- Fixed **ppp** security issue CVE-2020-15704.
- Fixed **chromium-browser** security issues:

CVE-2020-25687, CVE-2020-25686, CVE-2020-25685, CVE-2020-25684, CVE-2020-25683, CVE-2020-25682, CVE-2020-25681 and CVE-2019-14834.

- Fixed **sudo** security issues CVE-2021-3156 and CVE-2021-23239.
- Fixed **privilege escalation via** environment variable PATH in /bin/usershell binary.
- Fixed **privilege escalation via** environment variables in the /bin/update binary.
- Fixed **BleedingTooth** security issue which means CVE-2020-12351, CVE-2020-12352 and CVE-2020-24490.
- Fixed **kernel** security issues named **Platypus** (CVE-2020-8694 and CVE-2020-8695).
- Fixed possible security issue
- Fixed a **local command injection with SSH** session.

## Remote Management

- Added **secure channel** for following commands  
show\_message, get\_file\_from\_url, write\_file\_to\_url  
and upload\_tc\_support\_information  
sends all relevant data in a secured way.

## VNC

- Fixed a **secure terminal** and **secure VNC shadowing** remote code execution vulnerability.

## New Features 11.05.100

### Citrix

- The new "**screen pinning**" feature **for Citrix desktop sessions** has been integrated. With this feature, it is possible to **start multiple Citrix desktop sessions on different screens**.  
The following parameters have been added for this purpose:

- This parameter **defines** the **session name** on which the settings are to be used. Also the known **wildcards like \* and ? are possible** here.

| Value      | ""                                                         |

- Integrated **HDX RTME 2.9.200** for the usage of SfB (Skype for Business).
- Available **Citrix Workspace apps** in this release: **20.12 (default)**, **20.10** and **19.12**.
- Added new feature, where **multiple audio devices could be mapped inside the sessions**. This will display audio devices with their device name and not only HDX audio.

| Registry  | ica.allregions.cefenablemediadevices         |
| Value     | [Factory default is "***"] [False][True]     |

- Added new parameter **Readers Status Poll Period** to **specify the delay**, in milliseconds, **for reading information from a smartcard** after the card is inserted or removed, or a reader is disconnected, etc.  
[More...](#)

|           |                                      |
|-----------|--------------------------------------|
| Parameter | Readers Status Poll Period           |
| Registry  | ica.wfclient.ReadersStatusPollPeriod |
| Type      | Integer                              |
| Value     | <u>250</u> /Range 100..5000          |

- Integrated **Zoom Media Plugin 5.4.59458.0109**
- The **default** value of the parameter `ica.module.vdcamversion4support` was **set to "true"**.

## WVD

- Added option to **always prompt for password upon session host connection**.  
[More...](#)

|           |                                                          |
|-----------|----------------------------------------------------------|
| Parameter | Always prompt for password upon session host connection  |
| Registry  | sessions.wvd%.options.always-prompt-for-session-password |
| Type      | bool                                                     |
| Value     | <u>enabled</u> / <u>disabled</u>                         |

|       |                                                                                                                              |
|-------|------------------------------------------------------------------------------------------------------------------------------|
| Note: | The same can be achieved on the server side by setting the RDP group policy of "Always prompt for password upon connection". |
|-------|------------------------------------------------------------------------------------------------------------------------------|

- Added options to configure **Fabulatech for WVD**. This includes **Webcam redirection**, **Scanner redirection**, and **USB redirection**.
- The **USB redirection** configuration is **still to be done** via **Sessions > RDP > RDP Global > Fabulatech USB Redirection**. Later releases should mirror that under WVD as well.
- There are **global WVD settings** to select which redirections (Webcam, Scanner, USB) should be enabled for WVD.
- There is a **switch per WVD session** that allows **to enable/disable Fabulatech for that sessions** respectively.
- Note: Technically, the **Fabulatech redirections** are **selected system-wide**. That means, when **Scanner redirection** is enabled for Citrix and **Webcam redirection** is enabled for WVD, both these redirections are visible in Citrix and in WVD sessions. Only disabling Fabulatech support in general for a WVD session is possible.

| Value     | <u>100</u>                                       |

- Added option to **select specific monitors in a multimonitor session.**

**Only monitors matching this mask** are used.

- Monitors start with zero (0).
- If empty all monitors are enabled, which is the default.
- Can be one or a comma-separated list of the following specifiers without the quotes:
  - "1-2": An inclusive range of monitor indexes.
  - "-2": An inclusive range beginning from 0 to the given monitor index.
  - "2-": An inclusive range beginning with the specified monitor up to index 63, which is the maximum monitor index supported.
  - "2,3,5": A comma-separated list of monitor indexes.

- If the **username** is **preset with a string that starts with "@"**, the **rest of the string is taken as a preset domain** name. The user then only needs to enter her/his username and the domain name is automatically appended for AAD login.
- Additionally, the following parameter has been added to **allow/disallow the preset domain being overwritten when the username enters a name that contains an @ symbol itself**. If this

option is enabled, the entered domain is accepted. Otherwise, the entered domain is replaced by the preset domain.

## VMware Horizon

- Updated **Horizon Client** to version **2012-8.1.0-17349998**
- Integrated **Zoom Media Plugin 5.4.59458.0109**
- Fixed failure to **start Horizon serial port redirection service at boot time**

## Chromium

---

<sup>389</sup> <http://options.no>

<sup>390</sup> <http://options.no>

- Updated **Chromium** browser to version **88.0.4324.150**.
- **H.264 decoding** is **not supported** anymore.
- **Custom preferences** setup is **not supported** anymore.
- Reworked **custom commandline** setup: Enter **all commandline parameters in a single entry field**.

## Wi-Fi

- Added support for **WPS push button connect method**

## Imprivata

- Added: The **FUS Username** is an **editable combobox with prefilled values** now. Set of an **own string** is also **possible**.

- Hostname of the endpoint
- MAC address of the endpoint
- Serial number of the endpoint

| Parameter | Smartcard PIN caching            |
| Registry  | scard.pkcs11.pin_cache.enable    |
| Value     | <u>enabled</u> / <u>disabled</u> |

- Updated **SecMaker Net iD** to version **6.8.3**. New features are:

- Support for Thales IDPrime 940 SIS & IDPrime 3940 SIS
  - Support for FIPS level 3 versions of Thales IDPrime MD smart cards (based on MD830B and MD840)
  - Support for FINEID 3.0
  - Updated support for Yubico YubiKey serial numbers (version 5 and later)
  - Updated support for Feitian ePass FIDO serial numbers (version 99 and later)
- For detailed release information, see <https://docs.secmaker.com/net-id-enterprise/6.8/nie-release-notes/nie-683-release-notes.html>.

## ThinPrint

- Added **ezeep by ThinPrint** support for **WVD**

[More...](#)

#### Cisco Webex

- Integrated **Cisco Webex Meetings 41.2.0.142**
- Integrated **Cisco Webex Teams 41.1.0.17621**

#### Cisco JVDI Client

- Integrated **Cisco JVDI 12.9.3** client

#### Base system

- Added **post-session command** support **for WVD** sessions.
- Updated **OpenVPN** to version **2.5.0**.
- Updated **OpenSSH** to version **8.4p1-2**.
- Added **warning at boot time if Workspace Edition maintenance has expired**.
- Updated **Fluendo multimedia codecs**.
- Updated **Linux kernel** to version **5.9.16**.
- Added **inhibit screensaver** when **Zoom, Teams or Skype for Business** meeting is **active**. Possible for native clients and Citrix optimization plugins.

## CID Key Agent

- Update of **CID Key Agent** to version **6.5.0-2**

## Driver

- Updated **Olympus dictation driver** for **Citrix** and **RDP** to version **20201118**.

The changes are:

- Support motion events for Olympus RecMic devices
- Support integration with the Olympus AudioSDK for limited server-side device communication

- Updated **Crossmatch driver** to version **0125**.

The changes are:

- Improved USB encryption for the 4500 readers
- Support for the 5300-101 reader (the 5300-100 was already supported)

- Updated **deviceTRUST** client plugin for **Citrix** and **RDP** to version **20.1.200.0**. Detailed release notes can be found at <https://docs.devicetrust.com/docs/releases-igel-20.1.200/>.

## X11 system

- Enhanced `x.xserver%.mirror_mode` registry key with new **Scaling down mode** (Scales all monitors to the monitor with the lowest resolution)

[More...](#)

|           |                                                                                   |
|-----------|-----------------------------------------------------------------------------------|
| Parameter | Choose the mode which should be used for mirroring monitors if resolution differs |
| Registry  | <code>x.xserver%.mirror_mode</code>                                               |
| Range     | [Default] [Biggest common resolution] [Scaling] [Scaling down]                    |

## Audio

- Added **EPOS Connect 5.0.1.2795**

[More...](#)

|            |                                                                              |
|------------|------------------------------------------------------------------------------|
| IGEL Setup | <b>Devices &gt; Unified Communications &gt; EPOS Audio &gt; EPOS Connect</b> |
| Parameter  | Enable EPOS Connect                                                          |

| Registry   | devices.epos.connect.log_level                                                |
| Value      | Trace / Debug / <u>Information</u> / Warnings / Errors / Exceptions / No logs |

- **Pulseaudio** upgraded to the **13.99** version.
- Added parameter to **differentiate sound volume for applications**. If the parameter is set to true, each application can set its own volume level. Otherwise, the sound volume is set to the same value as the default volume for output and input device respectively.

## Evidian

- Added new session type **RD Web Access**.
- Updated **Evidian** to version **1.5.7617**.

## Hardware

- Added hardware support for new **IGEL UD7-LX 20 (H860C)**.
- Added hardware support for **LG 34CN650N AiO**.
- Added hardware support for **Dell Wyse Z Class thin client**.
- Added hardware support for **Lenovo ThinkCentre M70q**.
- Added hardware support for **Dell Wyse 5470**.
- Added hardware support for **Lenovo L14**.
- Added hardware support for **Lenovo ThinkCentre M75n**.
- Added hardware support for **Lenovo 14w**.
- Added hardware support for **LG CN65 All in one**.
- Added hardware support for **DELL LATITUDE 5510**.
- Added hardware support for **ELO i2 Touch all-in-one (15 and 22) inch**.
- Added detection of **UD Pocket UC5-LX 2**.
- Added support for headset **Jabra Evolve2 65**.

## Remote Management

- Added support for **Reportable Heartbeats to the UMS**.
- Added support for **exchanging ICG certificates**.
- The remote management of the endpoint device automatically installs TLS certificates provided by the UMS into the local trusted CA certificates storage. **The automatic deployment of TLS certificates to endpoint devices requires UMS 6.06.100 or higher**. This feature allows verifying certificates used in downloading files from the UMS, downloading of a firmware update and custom partition archives over HTTPS or FTPS protocols. **The verifying of certificates must be enabled by** the parameter `system.security.remote_management.tls_verify_peer`.

[More...](#)

|          |                                                                        |
|----------|------------------------------------------------------------------------|
| Registry | <code>system.security.remote_management.tls_verify_peer</code>         |
| Value    | <u>true</u> / <u>false</u>                                             |
| Registry | <code>system.security.remote_management.tls_hostname_validation</code> |
| Value    | <u>true</u> / <u>false</u>                                             |

- Added support for UMS commands to **store and remove ICG configuration**.
- Introduced parameters for **ICG WebSocket connections: debug log, network timeout** (in seconds) and **ping-pong interval** (in seconds). The parameters are applied on the next established ICG agent connection and ICG tunnel connections: VNC and Secure Terminal.

[More...](#)

|          |                                                        |
|----------|--------------------------------------------------------|
| Registry | <code>system.icg.websocket.debug</code>                |

|       |            |
|-------|------------|
| Value | <u>120</u> |
|-------|------------|

- IGEL Remote Management agent sends now **keep-alive packets to the ICG server to prevent the Websocket connection to the ICG server from being closed by networking infrastructure.** The Websocket's ping-pong mechanism is used for that purpose (see RFC6455). The **keep-alive interval** in seconds can be **configured by** the parameter `system.icg.websocket.pingpong_interval`, 0 disables the keep-alive mechanism.

#### Fabulatech

- Updated **FabulaTech USB for Remote Desktop** to version **6.0.28**
- Updated **FabulaTech Scanner for Remote Desktop** to version **2.7.0.1**
- Fixed **FabulaTech scanner redirection not working for Citrix** if it's exclusively enabled in IGEL Setup.

#### Resolved Issues 11.05.100

##### Citrix

- Fixed the problem with **apparmor** and the **Citrix MS Teams** workaround
- Following registry keys help to **edit horizontal and vertical window size** (works only for desktops not for applications).

**More...**

|           |                                              |
|-----------|----------------------------------------------|
| Parameter | Set desired horizontal window dimension      |
| Registry  | <code>ica.allregions.desiredhres</code>      |
| Value     | <u>[**] [640] [800] [1024] [1280] [1600]</u> |
| Parameter | Set desired vertical window dimension        |
| Registry  | <code>ica.allregions.desiredvres</code>      |
| Value     | <u>[**] [480] [600] [768] [1024] [1200]</u>  |

- Citrix **Desktop** sessions **have a sound device** again, when using **smartcard watch daemon**. `scard.swatchd.insert_action = su user -c /config/sessions/pnlogin0`
- Parameter `ica.module.virtualdrivers.vdwebrtc.keyboard_workaround` has been removed. This workaround is no longer needed because the problem is **solved as of CWA 20.10**.
- Added new parameters to **add config parameters** for **Citrix USB devices**: the parameter string is appended to the config line in `usb.conf`, when the **device is explicitly allowed**. Citrix introduced this to handle special behavior with single devices, e.g. to set "disableselectconfig=1".

| Type      | Integer                        |
| Value     | 150                            |

- Fixed: **ICA Connection Center** starts again as expected.
- Fixed **Citrix Kerberos Passthrough** authentication.
- Added: When the **password has expired** but the **password change is not allowed** on the Citrix server, the **Citrix error message** is displayed.
- Added: The parameter for mouseinput `ica.wfclient.mousesendcontrolv` is available with this release on the Setup page **Sessions > Citrix > Citrix Global > Keyboard**.
- Added: The parameter for the **Citrix Connection bar** `ica.allregions.connectionbar` is available on the Setup page **Sessions > Citrix > Citrix Global > Window**.
- Fixed **Citrix sessions with H.264 hardware acceleration on and DRI3 off** that crashed with error message: The X Request 130.1 caused error: 10 BadAccess.

#### OSC Installer

- Fixed **warning message after feature deselection for installations on 2 GB flashes**.
- Fixed a **display** issue with **Intel and Nvidia GPU**.

#### RDP/IGEL RDP Client 2

- Fixed **USB redirection** for RDP sessions.
- Added new parameter to enable/disable **dynamic drive mapping**.

[More...](#)

|          |                                                         |
|----------|---------------------------------------------------------|
| Registry | rdp.winconnect.enable-dynamic-drivemapping              |
| Value    | <u>enabled</u> / disabled                               |
| Registry | sessions.winconnect%.option.enable-dynamic-drivemapping |
| Range    | <u>Global Setting</u> / On / Off                        |

- Fixed **login information not being set after reboot**.
- Improved **error logging**.

#### WVD

- WVD now comes with **Qt 5.12.10** in order **to get fixes mainly for QWebEngine**. This should fix issues with **.htaccess protected login pages**.
- Fixed **proxy usage** for WVD feed download.

#### RD Web Access

- Fixed **RD Web Access Login** not working with **user@domain**.
- Fixed **RD Web Access username** not being set correctly **after reboot**.

#### VMware Horizon

- Fixed **remember last user** functionality in Horizon **local logon**
- Fixed **Local Logon Window** for visibility in **appliance mode**
- When using the **PCoIP** protocol, the **virtual channel** provided by VMware used **for both serial port and scanner redirection** may **hang on logout**.

The virtual channel is not used when both redirection methods are set to "false" which is the default.

For the usage of either one of these redirection methods, enable the corresponding parameter below **to prevent the logout freeze**.

These settings can be found here in the IGEL Registry:

`vmware.view.enable-serial-port-redir`

`vmware.view.enable-scanner-redir`

## Firefox

- Fixed **smartcard access** in Firefox. Before this fix, smartcards were not recognized in seldom cases.
- Fixed possibility to use the **pre-installed spellcheckers** in Firefox input fields.

## Chromium

- Fixed **browser** and **download history not being cleared**.
- Fixed Chromium browser was not clearing browsing history properly.
- Fixed: **Custom Chromium Policies** datatypes now written in the correct way to policies.json
- Fixed **resetting kiosk mode** would only work **after reboot**
- Fixed: Chromium settings were **parent settings did not influence the child settings**

## Network

- Added registry keys for enabling/disabling **sending of hostname in DHCPv4 and DHCPv6 requests**.

**More...**

|           |                                          |
|-----------|------------------------------------------|
| Parameter | Send hostname in DHCP requests           |
| Registry  | <code>network.dhcp.send_hostname</code>  |
| Range     | [Disabled][Network Manager default]      |
| Value     | <u>Network Manager default</u>           |
| Parameter | Send hostname in DHCPv6 requests         |
| Registry  | <code>network.dhcp6.send_hostname</code> |
| Range     | [Disabled][Network Manager default]      |
| Value     | <u>Network Manager default</u>           |

- Fixed: **SCEP** failed when scep\_getca received only a single certificate.
- Added registry key specifying **the number of 802.1X authentication attempts on Ethernet**.

**More...**

|          |                                                                          |
|----------|--------------------------------------------------------------------------|
| Registry | <code>network.interfaces.ethernet.device%.ieee8021x.auth_attempts</code> |
| Type     | Integer                                                                  |
| Value    | 1                                                                        |

- The **default** value of `network.interfaces.ethernet.device%.nm_disable_link_config` (forbidding Network Manager to modify Ethernet link settings) has been **changed to "true"**.
- Fixed handling of **DNS default domain**
- Added registry key for **disabling Ethernet link reconfiguration by Network Manager**.

[More...](#)

|           |                                                                         |
|-----------|-------------------------------------------------------------------------|
| Parameter | Disable NetworkManager link configuration                               |
| Registry  | <code>network.interfaces.ethernet.device%.nm_disable_link_config</code> |
| Type      | <code>bool</code>                                                       |
| Value     | <code>true / false</code>                                               |

- Setting this to "true"** can be **beneficial when 802.1X authentication is disturbed**. It is currently enforced automatically in the case of e1000e drivers.
- Changed default value of minimum size of a TCP packet** from 750 **to 500 bytes** as a result this would allow a **minimal MTU size of 576 bytes**.

## Wi-Fi

- Added missing **iwlwifi-6000-4 firmware file**.
- Fixed issues with **D-Link DWA-131 WLAN dongle**.
- Removed** `network.drivers.use_backport_drivers` IGEL registry key as this is not used anymore.
- Added some missing **iwlwifi firmware files** to IGEL OS.

## Open VPN

- Fixed **segmentation fault** when nameserver is used.  
Now it is allowed to use an empty password for the private key. **Important: Not enter a password** when the private key doesn't have one.
- OpenConnect VPN: Different protocols are selectable:

[More...](#)

|           |                                                                             |
|-----------|-----------------------------------------------------------------------------|
| Parameter | <code>protocol</code>                                                       |
| Registry  | <code>sessions.openconnect%.vpnopts.protocol</code>                         |
| Value     | <u>Cisco AnyConnect</u> / Juniper Network / Junos Pulse / PAN GlobalProtect |

## Imprivata

- Fixed: Usage the **Horizon Window Size** settings
- Fixed: Set **keyboard repeat rate** correctly on Horizon session end
- Added Imprivatas "**grid-theme**" feature

[More...](#)

|           |                                     |
|-----------|-------------------------------------|
| Parameter | PIE Application Launcher for Citrix |
| Registry  | <code>imprivata.grid_theme</code>   |
| Value     | <code>enabled / disabled</code>     |

## Smartcard

- Added parameter to **disable HID Global OMNIKEY smartcard reader driver**. If this driver is **disabled**, some of the readers are **handled by the MUSCLE CCID driver**. This can help when problems with OMNIKEY reader driver occur.

[More...](#)

|           |                                                  |
|-----------|--------------------------------------------------|
| Parameter | HID Global OMNIKEY driver for smart card readers |
| Registry  | scard.pcscd.omnikey_enable                       |
| Value     | <u>enabled</u> / disabled                        |

#### HID

- Fixing **double tapping of desktop icons** on **touchscreen** devices.

#### CUPS Printing

- Fixed **CUPS printer spooling configuration** where printjob files were preserved in the spooling directory too long and could fill up the file system.

#### Logging

- Fixed: **Filebeat** now **starts after the hostnames are set** so they will be shown in the logs.

#### Base system

- Fixed problems with **hostnames containing one or more "\_" characters**.
- Post-session command binaries and return codes are now customizable** via registry. Allows post-session commands if a binary doesn't return 0.
  - Name of the binary:

[More...](#)

|           |                                 |
|-----------|---------------------------------|
| Parameter | Binary                          |
| Registry  | pcom.valid_return_codes%.binary |
| Value     | binary name                     |

- Comma-separated return codes (e.g. 7,99) or/and return code ranges (e.g. 3..5 for 3,4,5) to be accepted:

[More...](#)

| Parameter | Return Codes                              |
|-----------|-------------------------------------------|
| Registry  | pcom.valid_return_codes%.return codes     |
| Value     | e.g. 3,5,10..15 for 3,5,10,11,12,13,14,15 |

- Improved **post-session** command parameter pcom.valid\_return\_codes%.returncodes to handle **ranges a la 1..255** (see tooltip).
- Fixed **remembering last user name with Active Directory/Kerberos** logon. Before this fix, the user name could not be stored in UMS to appear again after a reboot.
- Fixed possibility to **add certificates to Chromium and Firefox** which are given **in DER format**.
- Fixed **default browser** not being set properly **after reboot**.
- Fix **GtkMessage** dialog localization.
- Fixed: **Fluendo vadec codec** update closed a **memory leak** with AMD devices using VAAPI acceleration.
- Fixed possible USB issues with **suspend/resume on IGEL M350C** devices.

- Fixed: **Shutdown delay** when post-session command is enabled.
- Fixed **NetworkManager** could not create **ipv6 pid/lease file** while **apparmor** is active.
- Bugfix for missing **bluetooth tray icon** after suspend

#### Storage Devices

- Fixed display of **hotplug eject menu in appliance mode**

#### X11 system

- Fixed display **hotplug detection** not working in some situations.
- Fixed **Display Switch** sometimes **losing config** after reboot.
- Fixed missing **custom background image after migration** from OS 10.
- Fixed **sporadic hang in logoff session restart**.
- Updated **Display Switch rotate buttons** to have usable size.
- Added registry key to solve an issue with **buggy monitors connected over a DP-to-DVI adapter** (only works for Radeon devices like UD3 LX50).

[More...](#)

|           |                                                              |
|-----------|--------------------------------------------------------------|
| Parameter | Fix issues with buggy monitors connected over DP-DVI adapter |
| Registry  | x.drivers.ati.dp_dvi_probe_workaround                        |
| Type      | bool                                                         |
| Value     | enabled / disabled                                           |

- Fixed **touchpad** enable and disable **with hotkey**.
- Fixed issues if **2 DisplayPort MST Hubs** are connected behind each other.
- Fixed **notifications** not being hidden properly when **in do-not-disturb mode**.
- Fixed **monitor configuration** issues with **DisplayLink-based Dockingstations** with more than one independent monitor output.
- Fixed issue with non-correctly working **default mirror mode**.
- Fixed **screen** configuration issues with **Nvidia and Intel graphics cards in one device**.
- Added: Allowance of **up to 8** different **custom wallpapers** (was limited to 4 up to now).
- Added notification mute-all parameter in Setup to **mute all notifications including urgent ones**.

#### X server

- Fixed tearing issue of **UD7 with additional graphic card**.

#### Window manager

- Fixed **desktop icons not** being **restricted to one monitor**.
- Fixed a bug where **icons** were **missing or miss-aligned** in some multiscreen setups.
- Fixed **notify window width** not remaining constant.
- Fixed **crash of start menu** when it is not populated with any items.
- Fixed **start monitor mapping for Firefox**.
- Fixed **notification urgency for critical background color**.

#### VirtualBox

- Fixed **authentication window popup** if screen configuration is changed in Virtualbox.

#### Audio

- Fixed erroneous **closing of the Pulse PCM device** as well as a possible **deadlock in the ALSA Pulse PCM**.
- Fixed the ALSA Pulse PCM - a possible deadlock while writing audio data and closing Pulse PCM.
- Fixed audio for **HP Elitebook TRRS 840 G7**
- Fixed **internal microphone** in **Elitebook TRRS 840 G7**
- Fixed **headset not** properly **detected** if connected on boot in **UD2-LX50**.
- Fixed microphone issues with **UD3-LX60** device.
- Fixed a **sporadic aborting of an application** on closing **ALSA Pulse PCM**. The problem concerns only applications using ALSA API directly, like Citrix Receiver.
- Added **debug output to the ALSA Pulse PCM** which must be **enabled by** the environment variable `ALSA_PULSE_PCM_DEBUG=1`, the debug output is collected then by the system logging facility (`journald`).
- Fixed **missing audio tray icon** after suspend

#### Evidian

- Fixed **error on restart**.

#### Hardware

- Added script to fix issues with **DP MST KVM** and **connected DaisyChaining monitors**.
- Fixed: When KVM is used, **mishandling of connectors** can occur.  
Added **possible workaround** via adding `/etc/igel/kms/kvm-workaround.sh` to the `userinterface.rccustom.custom_cmd_x11_init` registry key.

#### TC Setup (Java)

- Fixed problems with **passwords** of a length **longer than 127 characters**.

#### Remote Management

- Fixed **automatic establishment of the configured ICG connection** if the UMS Server is unreachable.
- Fixed **sending the user logoff message** to the UMS.
- Fixed: Disabled **Nagle caching algorithm** on the underlying TCP socket used for SSL connection between IGEL rmagent and UMS.
- Fixed **sporadic failures while retrieving the Unit ID** by the IGEL Remote Management agent.
- Fixed **ICG HA functionality** broken in the **11.04.100 release**.

#### VNC

- Fixed handling of **CapsLock status in VNC server**. Keyboard input now appears correctly also when CapsLock is active on the client or server side. This especially fixes upper case "umlaut" characters with Swiss German keyboard layout.

#### CA Certificates Contained in IGEL OS 11.05

IGEL OS 11.05 contains the following CA certificates:

| <b>Certificate name</b> | <b>Expiry date</b>          | <b>File in /etc/ssl/certs</b> |
|-------------------------|-----------------------------|-------------------------------|
| ACCVRAIZ1               | Dec 31 09:37:37 2030<br>GMT | ACCVRAIZ1.crt                 |

| Certificate name                                             | Expiry date                 | File in /etc/ssl/certs                                                |
|--------------------------------------------------------------|-----------------------------|-----------------------------------------------------------------------|
| AC RAIZ FNMT-RCM                                             | Jan 1 00:00:00 2030 GMT     | AC_RAIZ_FNMT-RCM.crt                                                  |
| Actalis Authentication Root CA                               | Sep 22 11:22:02 2030<br>GMT | Actalis_Authentication_Ro<br>ot_CA.crt                                |

| Open VM Tools              | 11.0.5-4ubuntu0.18.04.1 |
| Open VM Desktop Tools      | 11.0.5-4ubuntu0.18.04.1 |
| Xen Guest Utilities        | 7.10.0-0ubuntu1         |
| Spice Vdagent              | 0.20.0-2igel104         |
| Qemu Guest Agent           | 5.2+dfsg-3igel17        |

## Services

| Service                     | Size    | Reduced Firmware |
|-----------------------------|---------|------------------|
| Java SE Runtime Environment | 36.0 M  | Included         |
| NVIDIA graphics driver      | 122.5 M | Included         |

## New Features 11.05.100

### Base system

- Updated **Linux kernel** to version **5.9.16**.

### Hardware

- Added hardware support for new **IGEL UD7-LX 20 (H860C)**.
- Added hardware support for **LG 34CN650N AiO**.
- Added hardware support for **Dell Wyse Z Class thin client**.
- Added hardware support for **Lenovo ThinkCentre M70q**.
- Added hardware support for **Dell Wyse 5470**.
- Added hardware support for **Lenovo L14**.
- Added hardware support for **Lenovo ThinkCentre M75n**.
- Added hardware support for **Lenovo 14w**.
- Added hardware support for **LG CN65 All in one**.
- Added hardware support for **DELL LATITUDE 5510**.
- Added hardware support for **ELO i2 Touch all-in-one (15 and 22) inch**.
- Added detection of **UD Pocket UC5-LX 2**.

## Resolved Issues 11.05.100

### OSC Installer

- Fixed **warning message after feature deselection for installations on 2 GB flashes**.
- Fixed a **display issue with Intel and Nvidia GPU**.

## 7.5 Notes for Release 11.04.270

| VirtualBox (Limited support)               | 62.5 M  | Not included |

### 7.5.3 General Information 11.04.270

To be beneficial to all new features and implementations, it is recommended to use UMS 6.06.100 or higher and update the corresponding profiles.

Firmware downgrade to older versions (11.01 or 11.02) is not possible, due to the unsigned firmware update files.

The following clients and features are not supported anymore:

- Caradigm
- Citrix Legacy Sessions
- Citrix Web Interface
- Citrix StoreFront Legacy
- Citrix HDX Flash Redirection
- Citrix XenDesktop Appliance Mode
- Flash Player Download
- JAVA Web Start
- Leostream Java Connect
- Systancia AppliDis
- VIA graphics driver

### 7.5.4 Known Issues 11.04.270

Firmware Update

- On **devices with 2 GB of flash storage**, it could happen that there is **not enough space for updating all features**. In this case, a corresponding error message occurs. Check [Error: "Not enough space on local drive" when Updating to IGEL OS 11.04 or Higher<sup>399</sup>](#) for a solution.

## Firefox

- Firefox IGEL extensions are not updated automatically** under some circumstances. After an update from 11.03.xxx to 11.04.100, the IGEL extensions will stay on the old version. In this case, the following settings concerning **kiosk mode** cannot be executed:
  - Switch off hotkey for new window/tab
  - Blocking of internal browser pages like preferences, file picker, specific local directories

As a workaround:

- a **reset to defaults** should be performed
- or the **browser's mimetype template** can be switched **from "Standard" to "Minimal"** by registry key `browserglobal.app.mimetypes_template`. There, the browser profile is renewed as well.

After the TC received the new setting, **reboot** and **set** the `mimetypes_template` registry key to **"Standard"** again.

## Citrix

- With activated **DRI3** and an **AMD GPU Citrix H.264 acceleration plugin** could freeze. Selective H.264 mode (API v2) is not affected from this issue.
- Citrix has known issues with **GStreamer1.0** which describe problems with **multimedia redirection of H.264, MPEG1 and MPEG2**. GStreamer1.0 is used if browser content redirection is active.
- Browser content redirection** does not work with activated **DRI3** and **hardware accelerated H.264 deep compression codec**.
- Citrix StoreFront login** with **Gemalto smartcard** middleware does not detect smartcard correctly if the card is inserted after start of login.  
Workaround: Insert the smartcard before starting the StoreFront login.
- Citrix H.264 acceleration plugin** does not work with **enabled** server policy **Optimize for 3D graphics workload** in combination with server policy **Use video codec compression > For the entire screen**.
- To launch **multiple desktop sessions** with **Citrix HDX RTME** and **Citrix H.264** acceleration plugin, the following registry key must be enabled.

[More...](#)

|           |                                                                  |
|-----------|------------------------------------------------------------------|
| Parameter | Activate workaround for dual RTME sessions and H264 acceleration |
| Registry  | <code>ica.workaround-dual-rtme</code>                            |
| Value     | <u>enabled</u> / <u>disabled</u>                                 |

This workaround is not applicable when "Enable Secure ICA" is active for the specific delivery group.

- During the running **Microsoft Teams Optimization of Citrix Workspace App 20.09, webcam redirection or screen sharing** may lead to **display errors** like black stripes or flickering.

<sup>399</sup> <https://kb.igel.com/display/igelos1104/Updating+to+IGEL+OS+11.04+or+Higher+on+a+Device+with+Small+Storage>

## VMware Horizon

- **Client drive mapping** and **USB redirection** for storage devices should not be enabled both at the same time.
  - On the one hand, when using USB redirection for storage devices: The USB on-insertion feature is only working when the client drive mapping is switched off. In the IGEL Setup client drive mapping can be found in: **Sessions > Horizon Client > Horizon Client Global > Drive Mapping > Enable Drive Mapping**. It is also recommended to disable local **Storage Hotplug** on setup page **Devices > Storage Devices > Storage Hotplug**.
  - On the other hand, when using drive mapping instead, it is recommended to either switch off USB redirection entirely or at least deny storage devices by adding a filter to the USB class rules. Furthermore, Horizon Client relies on the OS to mount the storage devices itself. Enable local `Storage Hotplug` on Setup page **Devices > Storage Devices > Storage Hotplug**.
- **External drives** mounted already before connection do not appear in the **remote desktop**.  
Workaround: map the directory /media as a drive. Then the external devices will show up inside the media drive.
- **After the disconnect of an RDP-based session**, the Horizon main **window** which contains the server or sessions overview **cannot be resized anymore**.
- **Seamless application windows in Horizon Client may not be displayed correctly**. When starting the first seamless app, a new iconified window appears in the taskbar, and only if you click on it, the application will show up.  
On some hardware (UD7-H850, UD2-M250, UD2-D220), however, the client aborts when this new window is de-iconified.
- When using the **RDP protocol**, the remote session has a fixed offset of approximately the height of the menu bar. That means you have a black bar on top of the window and as a result of that, the **Windows panel on the bottom is cut off**.
- **Modifier keys** (Shift/Ctrl/Win/Alt) in session windows using **RDP protocol** do not send the keyup event and **keep being pressed**, even when actually released. Only when closing the session with a mouse, the modifiers are reset.
- **Copying a text from Horizon Blast sessions** is not possible.
- The **on-screen keyboard** in **Horizon appliance mode** does not work correctly with local logon.  
Workaround: **Switch off local logon** and switch on the corresponding two keys via IGEL registry:
  - userinterface.softkeyboard.autoshow
  - userinterface.softkeyboard.autohide

## Wi-Fi

- TP-Link Archer T2UH Wi-Fi adapters does not work after system suspend/resume. Workaround: Disable system suspend at **IGEL Setup > System > Power Options > Shutdown**.

## Parallels Client

- **Native USB redirection** does not work with Parallels Client.

## Smartcard

- **Citrix Certificate Identity Declaration login** does not work with **SecMaker** smartcards.

## Cisco JVDI Client

- There may be a **segfault shown in the logs** (during logout of Citrix Desktop session). This occurs only when using **Citrix Workspace app 20.10 and Cisco JVDI**.

#### Multimedia

- Multimedia redirection with **GStreamer** could fail with the **Nouveau GPU driver**.

#### Hyper-V

- **Hyper-V** (Generation 2) needs **a lot of memory (RAM)**. The machine needs a sufficient amount of memory allocated.

#### VirtualBox

- The current **VirtualBox Guest Tools/Drivers** will not work with **VirtualBox 5.2.x or older** hosts which leads to a black screen and non-working graphics.  
**Possible workaround:** Install with 'Failsafe Installation + Recovery' and set the registry key `x.drivers.force_vesa` to 'true'.
- When running in VirtualBox virtualization, **resizing the window will not automatically change desktop resolution** of IGEL OS guest.

#### Audio

- **Audio jack detection on Advantech POC-W243L** doesn't work. Therefore, sound output goes through a possibly connected headset and the internal speakers.
- **IGEL UD2 (D220)** fails to restore the volume level of the speaker when the device used **firmware version 11.01.110** before.

#### Hardware

- **HP t730** could freeze when monitors with **different resolutions** are connected (1920x1200 + 2560x1440 + 3840x1600 for example). When this occurs, the registry key `x.drivers.kms.best_console_mode` has to be set to **disabled**.
- Some newer **Delock 62599 active DisplayPort-to-DVI (4k)** adapters only work with INTEL devices.

#### Remote Management

- **AIT feature with IGEL Starter License** is only **supported** by **UMS version 6.05.100 or newer**.

#### Base system

- **Update from memory stick** requires network online state (at least when multiple update stages are involved).

#### deskMate

- Some stability issues may remain.

#### Appliance Mode

- When **ending a Citrix session** in browser appliance mode, the **browser is restarted twice** instead of once.
- Appliance mode **RHEV/Spice: spice-xpi firefox plugin** is no longer supported. The **Console Invocation** has to allow 'Native' client (auto is also possible) and should be started in fullscreen to prevent any opening windows.

## 7.5.5 Security Fixes 11.04.270

### VNC

- Fixed **Secure Terminal** and **Secure VNC Shadowing** remote code execution vulnerability.

## 7.5.6 New Features 11.04.270

### Citrix

- Integrated **Zoom Media Plugin 5.4.53376.1029**
- Integrated **Citrix Workspace App 20.12**  
Available Citrix Workspace apps in this release: **20.12** (default), **20.10**, and 19.12.
- New Feature: **App Protection [Experimental]**. App Protection is an add-on feature that provides **enhanced security when using Citrix Virtual Apps and Desktops**. The feature **restricts the ability of clients to be compromised by keylogging and screen capturing malware**.

|-----------|-----------------------------------------------------------------------------------------------------|
| Parameter | Citrix App Protection                                                                               |
| Registry  | ica.appprotection                                                                                   |
| Value     | enabled / <u>disabled</u>                                                                           |
| Note:     | Experimental feature<br>This feature is <b>currently only available for Self-Service sessions</b> . |

- Fixed Issue: **mic** and **webcam** devices can be **redirected using Browser Content Redirection**.

[More...](#)

|           |                                              |
|-----------|----------------------------------------------|
| Parameter | Enables mic and webcam redirection using BCR |
| Registry  | ica.allregions.cefenablemediadevices         |
| Value     | [Factory default is "*"] [False][True]       |

### VMware Horizon

- Integrated **Zoom Media Plugin 5.4.53376.1029**
- Updated VMware Horizon Client to version **5.5.0-16946361**

### Smartcard

- Added **Smartcard PIN passthrough in Firefox and Chromium**. The PIN will be **cached while logging on via Active Directory/Kerberos** with a smartcard. In Firefox and Chromium, no further PIN input is necessary to use the smartcard.

[More...](#)

|           |                               |
|-----------|-------------------------------|
| Parameter | Smartcard PIN caching         |
| Registry  | scard.pkcs11.pin_cache.enable |
| Value     | enabled / <u>disabled</u>     |

### Cisco JVDI Client

- Integrated **Cisco JVDI 12.9.3** client

## Cisco Webex

- Integrated **Cisco Webex Meetings 41.2.0.142**
- Integrated **Cisco Webex Teams 41.1.0.17621**

## Evidian

- New session type **RD Web Access**.
- Updated Evidian to version **1.5.7617**.

## Audio

- Added parameter to **control applying of sound volume to application's streams**. If the parameter is set to "true", each application can set its own volume level. Otherwise, the sound volume is set to the same value as the default volume for output and input device respectively.

**More...**

|          |                                               |
|----------|-----------------------------------------------|
| Registry | <code>userinterface.sound.app_volume_c</code> |
|          | <code>trl</code>                              |
| Value    | <u>enabled</u> / disabled                     |

## 7.5.7 Resolved Issues 11.04.270

## Citrix

- Fixed Citrix **Kerberos Passthrough authentication**.
- The parameter `ica.module.virtualdrivers.vdwebrtc.keyboard_workaround` has been **removed**. This workaround is **no longer needed** because **the problem is solved as of CWA 20.10**.

## VMware Horizon

- Fixed failure to start Horizon **serial port redirection service at boot time**.
- Fixed **remember last user functionality in Horizon local logon**.
- Fixed **VMware integrated printing**.

## RDP/IGEL RDP Client 2

- Added **new parameter** to enable/disable **dynamic drive mapping**.

**More...**

|          |                                                                      |
|----------|----------------------------------------------------------------------|
| Registry | <code>rdp.winconnect.enable-dynamic-drivemapping</code>              |
| Value    | <u>enabled</u> / disabled                                            |
| Registry | <code>sessions.winconnect%.option.enable-dynamic-drivemapping</code> |
| Range    | <u>Global setting</u> / on / off                                     |

- Fixed **login information** not being set after reboot.

## RD Web Access

- Fixed RD Web Access **login not working with user@domain**.

## WVD

- Fixed **proxy usage for WVD feed download**.

## Parallels Client

- Fixed a bug with Parallels not working if the **Parallels RAS omits the machine name in the application list.**

## Evidian

- Fixed **error on restart.**

## Firefox

- Fixed usage of a **pre-installed spellchecker in Firefox** input fields.
- Added **TLS 1.3** to the range of "**Maximum supported encryption protocol**" from **Sessions > Firefox Browser > Firefox Browser Global > Encryption.**

[More...](#)

|           |                                                |
|-----------|------------------------------------------------|
| Parameter | Maximum supported encryption protocol          |
| Registry  | browserglobal.app.security_tls_version_max     |
| Range     | [SSL3] [TLS 1.0] [TLS 1.1] [TLS 1.2] [TLS 1.3] |

## Chromium

- Fixed: **Custom Chromium Policies** datatypes now **written** in the correct way to **policies.json**.
- Fixed **browser** and **download history not** being **cleared**.

## Audio

- Fixed a **sporadic aborting** of an application **on closing ALSA Pulse PCM**. The problem affects only applications using ALSA API directly like Citrix Workspace App.
- Added **debug output to the ALSA Pulse PCM** which **must be enabled by** the environment variable `ALSA_PULSE_PCM_DEBUG=1`, the debug output is collected by the system logging facility (`journaldctl`).
- Fixed **missing default setup device** after **reboot**.

## VNC

- Fixed handling of **CapsLock status in VNC server**. Keyboard input now appears correctly, also if CapsLock is active on the client or server side. **This especially fixes upper case 'umlaut' characters** with Swiss and German keyboard layouts.

## Network

- Fixed bug: **SCEP failed** when `scep_getca` **received only a single certificate**.

## Base system

- Fixed issue with early **IGEL UD3-LX 60** (M350C) revisions that can lead to **read error from MMC**.
- Fixed **crash of IGEL monitoring agent**.
- Fixed possibility to **add certificates to Chromium** and **Firefox** which are given in **DER format**.
- The **Options dialog** keeps the **settings** that were **previously set**.
- Fix **GtkMessage dialog localization**.
- Fixed: **Shutdown delay** when **Post-session command** is enabled.
- Fixed **remembering last user name with Active Directory/Kerberos logon**. Before this fix, the user name could not be stored in the UMS to appear again after a reboot.

## X11 system

- Added registry key to solve an issue with **buggy screens connected over a DP-to-DVI adapter** (only works for Radeon devices like IGEL UD3-LX 50).

**More...**

|           |                                                              |
|-----------|--------------------------------------------------------------|
| Parameter | Fix issues with buggy monitors connected over DP-DVI adapter |
| Registry  | x.drivers.ati.dp_dvi_probe_workaround                        |
| Value     | enabled / <u>disabled</u>                                    |

- Updated **Display Switch rotate buttons** to usable size.
- Fixed **notifications not being hidden properly** when in **do-not-disturb mode**.

#### Window manager

- Fixed notifyd window **width not remaining constant**.
- Fixed **notification urgency critical background color**.

#### OS Converter

- Fixed **language chooser** in installations via **Deployment Appliance**.

## 7.6 Notes for Release 11.04.240

| Extra Font Package                         | 1.0 M   | Included     |
| Fluendo GStreamer AAC Decoder              | 1.2 M   | Included     |
| x32 Compatibility Support                  | 48.0 M  | Included     |
| Cisco JVDI client                          | 45.8 M  | Included     |
| PrinterLogic                               | 40.8 M  | Not included |
| Biosec BS Login                            | 10.0 M  | Not included |
| Login VSI Login Enterprise                 | 28.8 M  | Not included |
| Stratusphere UX CID Key software           | 2.8 M   | Not included |
| Elastic Filebeat                           | 15.8 M  | Not included |
| WVD                                        | 14.0 M  | Included     |
| Local Browser (Chromium)                   | 81.2 M  | Not included |
| deskMate client                            | 5.8 M   | Included     |
| Cisco Webex Teams VDI                      | 33.2 M  | Not included |
| Cisco Webex Meetings VDI                   | 40.8 M  | Not included |
| Zoom Media Plugin                          | 40.5 M  | Not included |
| Teradici PCoIP Client                      | 14.5 M  | Included     |

|                                            |         |              |
|--------------------------------------------|---------|--------------|
| 90meter Smart Card Support                 | 256.0 K | Included     |
| Mobile Device Access USB (Limited support) | 256.0 K | Not included |
| VPN OpenConnect (Limited support)          | 1.5 M   | Not included |
| Scanner support / SANE (Limited support)   | 2.5 M   | Not included |
| VirtualBox (Limited support)               | 62.5 M  | Not included |

### 7.6.3 General Information 11.04.240

To be beneficial to all new features and implementations, it is recommended to use UMS 6.06.100 or higher and update the corresponding profiles.

Firmware downgrade to older versions (11.01 or 11.02) is not possible, due to the unsigned firmware update files.

The following clients and features are not supported anymore:

- Caradigm
- Citrix Legacy Sessions
- Citrix Web Interface
- Citrix StoreFront Legacy
- Citrix HDX Flash Redirection
- Citrix XenDesktop Appliance Mode
- Flash Player Download
- JAVA Web Start
- Leostream Java Connect
- Systancia AppliDis
- VIA graphics driver

### 7.6.4 Known Issues 11.04.240

#### Firmware Update

- On **devices with 2 GB of flash storage**, it could happen that there is **not enough space for updating all features**. In this case, a corresponding error message occurs. Check [Error: "Not enough space on local drive"](#) when [Updating to IGEL OS 11.04 or Higher](#)<sup>401</sup> for a solution.

#### Firefox

- **Firefox IGEL extensions are not updated automatically** under some circumstances. After an update from 11.03.xxx to 11.04.100, the IGEL extensions will stay on the old version. In this case, the following settings concerning **kiosk mode** cannot be executed:
  - Switch off hotkey for new window/tab
  - Blocking of internal browser pages like preferences, file picker, specific local directories

<sup>401</sup> <https://kb.igel.com/display/igelos1104/Updating+to+IGEL+OS+11.04+or+Higher+on+a+Device+with+Small+Storage>

As a workaround:

- a **reset to defaults** should be performed
- or the **browser's mimetype template** can be switched **from "Standard" to "Minimal"** by registry key `browserglobal.app.mimetypes_template`. There, the browser profile is renewed as well.

After the TC received the new setting, **reboot** and **set** the `mimetypes_template` registry key to **"Standard"** again.

## Citrix

- With activated **DRI3** and an **AMD GPU Citrix H.264 acceleration plugin** could freeze. Selective H.264 mode (API v2) is not affected from this issue.
- Citrix has known issues with **GStreamer1.0** which describe problems with **multimedia redirection of H.264, MPEG1 and MPEG2**. GStreamer1.0 is used if browser content redirection is active.
- **Browser content redirection** does not work with activated **DRI3** and **hardware accelerated H.264 deep compression codec**.
- **Citrix StoreFront login** with **Gemalto smartcard** middleware does not detect smartcard correctly if the card is inserted after start of login.  
Workaround: Insert the smartcard before starting the StoreFront login.
- **Citrix H.264 acceleration plugin** does not work with **enabled** server policy **Optimize for 3D graphics workload** in combination with server policy **Use video codec compression > For the entire screen**.
- To launch **multiple desktop sessions** with **Citrix HDX RTME** and **Citrix H.264** acceleration plugin, the following registry key must be enabled.

[More...](#)

|           |                                                                  |
|-----------|------------------------------------------------------------------|
| Parameter | Activate workaround for dual RTME sessions and H264 acceleration |
| Registry  | <code>ica.workaround-dual-rtme</code>                            |
| Value     | <code>enabled / disabled</code>                                  |

This workaround is not applicable when "Enable Secure ICA" is active for the specific delivery group.

- During the running **Microsoft Teams Optimization of Citrix Workspace App 20.09, webcam redirection or screen sharing** may lead to **display errors** like black stripes or flickering.
- The **performance** of Citrix sessions when using **Workspace App 20.06** may be lower on some devices.

A possible **workaround** is to **disable the virtual channels for Microsoft Teams** and **NSAP** or to set the **HDX transport protocol** to **TCP** only.

- `ica.module.virtualdriver.vdwebrtc.enable`
- `ica.module.virtualdriver.nsap.enable`

The protocol can be set via the Setup parameter **Sessions > Citrix > Citrix Global > Options > HDX Adaptive Transport over EDT** or via the **server policy** 'HDX Adaptive Transport'.

## VMware Horizon

- **Client drive mapping** and **USB redirection** for storage devices should not be enabled both at the same time.

- On the one hand, when using USB redirection for storage devices: The USB on-insertion feature is only working when the client drive mapping is switched off. In the IGEL Setup client drive mapping can be found in: **Sessions > Horizon Client > Horizon Client Global > Drive Mapping > Enable Drive Mapping**. It is also recommended to disable local **Storage Hotplug** on setup page **Devices > Storage Devices > Storage Hotplug**.
- On the other hand, when using drive mapping instead, it is recommended to either switch off USB redirection entirely or at least deny storage devices by adding a filter to the USB class rules. Furthermore, Horizon Client relies on the OS to mount the storage devices itself. Enable local `Storage Hotplug` on Setup page **Devices > Storage Devices > Storage Hotplug**.
- External drives** mounted already before connection do not appear in the **remote desktop**.  
Workaround: map the directory /media as a drive. Then the external devices will show up inside the media drive.
- After the disconnect of an RDP-based session**, the Horizon main **window** which contains the server or sessions overview **cannot be resized anymore**.
- Seamless application windows in Horizon Client may not be displayed correctly**. When starting the first seamless app, a new iconified window appears in the taskbar, and only if you click on it, the application will show up.  
On some hardware (UD7-H850, UD2-M250, UD2-D220), however, the client aborts when this new window is de-iconified.
- When using the **RDP protocol**, the remote session has a fixed offset of approximately the height of the menu bar. That means you have a black bar on top of the window and as a result of that, the **Windows panel on the bottom is cut off**.
- Modifier keys** (Shift/Ctrl/Win/Alt) in session windows using **RDP protocol** do not send the keyup event and **keep being pressed**, even when actually released. Only when closing the session with a mouse, the modifiers are reset.
- Copying a text from Horizon Blast sessions** is not possible.
- The **on-screen keyboard** in **Horizon appliance mode** does not work correctly with local logon.  
Workaround: **Switch off local logon** and switch on the corresponding two keys via IGEL registry:
  - userinterface.softkeyboard.autoshow
  - userinterface.softkeyboard.autohide

#### Wi-Fi

- TP-Link Archer T2UH Wi-Fi adapters does not work after system suspend/resume. Workaround: Disable system suspend at **IGEL Setup > System > Power Options > Shutdown**.

#### Parallels Client

- Native USB redirection** does not work with Parallels Client.

#### Smartcard

- Citrix Certificate Identity Declaration login** does not work with **SecMaker** smartcards.

#### Cisco JVDI Client

- There may be a **segfault shown in the logs** (during logout of Citrix Desktop session). This occurs only when using **Citrix Workspace app 20.10 and Cisco JVDI**.

#### Multimedia

- Multimedia redirection with **GStreamer** could fail with the **Nouveau GPU driver**.

#### Hyper-V

- **Hyper-V** (Generation 2) needs **a lot of memory (RAM)**. The machine needs a sufficient amount of memory allocated.

#### VirtualBox

- The current **VirtualBox Guest Tools/Drivers** will not work with **VirtualBox 5.2.x or older** hosts which leads to a black screen and non-working graphics.  
**Possible workaround:** Install with 'Failsafe Installation + Recovery' and set the registry key `x.drivers.force_vesa` to 'true'.
- When running in VirtualBox virtualization, **resizing the window will not automatically change desktop resolution** of IGEL OS guest.

#### Audio

- **Audio jack detection on Advantech POC-W243L** doesn't work. Therefore, sound output goes through a possibly connected headset and the internal speakers.
- **IGEL UD2 (D220)** fails to restore the volume level of the speaker when the device used **firmware version 11.01.110** before.

#### Hardware

- **HP t730** could freeze when monitors with **different resolutions** are connected (1920x1200 + 2560x1440 + 3840x1600 for example). When this occurs, the registry key `x.drivers.kms.best_console_mode` has to be set to **disabled**.
- Some newer **Delock 62599 active DisplayPort-to-DVI (4k)** adapters only work with INTEL devices.

#### Remote Management

- **AIT feature with IGEL Starter License** is only **supported** by **UMS version 6.05.100 or newer**.

#### Base system

- **Update from memory stick** requires network online state (at least when multiple update stages are involved).

#### deskMate

- Some stability issues may remain.

#### Appliance Mode

- When **ending a Citrix session** in browser appliance mode, the **browser is restarted twice** instead of once.
- Appliance mode **RHEV/Spice: spice-xpi firefox plugin** is no longer supported. The **Console Invocation** has to allow 'Native' client (auto is also possible) and should be started in fullscreen to prevent any opening windows.

## 7.6.5 Security Fixes 11.04.240

#### Base system

- Fixed **BleedingTooth** security issue which means CVE-2020-12351, CVE-2020-12352, and CVE-2020-24490.

## 7.6.6 New Features 11.04.240

Citrix

- Integrated **Citrix Workspace app 20.10**. Available Citrix Workspace apps in this release: **20.10 (default)**, **20.09**, and **19.12**
- Added: **Multiple audio devices can be mapped inside the sessions**. This will display audio devices with their device name and not only HDX audio anymore:  
[More...](#)

|           |                                 |
|-----------|---------------------------------|
| Parameter | Multiple Audio Device support   |
| Registry  | ica.module.vdcamversion4support |
| Type      | bool                            |
| Value     | enabled / <u>disabled</u>       |

**Note:** Bluetooth devices are currently not supported for device redirection.

- Updates **Zoom Media Plugin** to version **5.4.53376.1029**

VMware Horizon

- Updated **Zoom Media Plugin** to version **5.4.53376.1029**
- Added support for **VMware Integrated Printing**.  
[More...](#)

|           |                                 |
|-----------|---------------------------------|
| Parameter | Integrated Printing             |
| Registry  | vmware.view.integrated-printing |
| Type      | bool                            |
| Value     | enabled / <u>disabled</u>       |

WVD

- New parameter to set **HTTP user agent string for AAD login requests**.  
[More...](#)

|           |                                                                           |
|-----------|---------------------------------------------------------------------------|
| Parameter | HTTP user agent string                                                    |
| Registry  | sessions.wvd%.options.http-user-agent                                     |
| Type      | editable                                                                  |
| Value     | <u>System Default</u> / Windows / Android / iOS / macOS / <custom-string> |

Cisco Webex VDI

- Updated **Cisco Webex Teams VDI** to version **3.0.16605.0**
- Updated **Cisco Webex Meetings VDI** to version **40.10**

Cisco JVDI Client

- Updated **Cisco JVDI client** to version **12.9.1**

## Fabulatech

- Updated **FabulaTech USB for Remote Desktop** to version **6.0.28**
- Updated **FabulaTech Scanner for Remote Desktop** to version **2.5.0.7**

## Driver

- Updated **deviceTRUST** client plugin for Citrix and RDP to version **20.1.200.0**. Detailed release notes can be found at <https://docs.devicetrust.com/docs/releases-igel-20.1.200/>

## Remote Management

- Added **support for exchanging ICG certificates**.
  - The remote management of the endpoint device **automatically installs TLS certificates provided by the UMS into the local trusted CA certificates storage**. The **automatic deployment** of TLS certificates to endpoint devices **requires UMS 6.06.100 or higher**. This feature allows verifying certificates used when downloading files from the UMS, downloading a firmware update and custom partition archives over HTTPS or FTPS protocols. **The verifying of certificates must be enabled** by the parameter `system.security.remote_management.tls_verify_peer`.
- More...**

|          |                                                                        |
|----------|------------------------------------------------------------------------|
| Registry | <code>system.security.remote_management.tls_verify_peer</code>         |
| Value    | <u>enabled / disabled</u>                                              |
| Registry | <code>system.security.remote_management.tls_hostname_validation</code> |
| Value    | <u>enabled / disabled</u>                                              |

- Added support for **UMS commands to store and remove ICG configuration**.
- Introduced parameters for **ICG WebSocket connections**: debug log, network timeout (in seconds), and ping-pong interval (in seconds). The **parameters** are **applied on the next** established **ICG agent connection** and **ICG tunnel connections**: VNC and Secure Terminal. The **ping-pong** mechanism is supported **only for ICG tunnel connections**.

**More...**

|          |                                                     |
|----------|-----------------------------------------------------|
| Registry | <code>system.icg.websocket.debug</code>             |
| Value    | <u>off / all / tunnel / agent</u>                   |
| Registry | <code>system.icg.websocket.network_timeout</code>   |
| Value    | <u>30</u>                                           |
| Registry | <code>system.icg.websocket.pingpong_interval</code> |
| Value    | <u>120</u>                                          |

## 7.6.7 Resolved Issues 11.04.240

## Citrix

- Fixed issue with **Workspace app 2010: Screen flickering** while running a video call or sharing the screen in Microsoft Teams.
- Fixed Issue with **Workspace app 2010: Microsoft Teams** calls are now working with **different keyboard layouts**.

- Fixed: **Improved pcom** parameter pcom.valid\_return\_codes%.returncodes to handle ranges a la 1..255 (see tooltip).

#### Wi-Fi

- Fixed issues with **D-Link DWA-131 WLAN dongle**.

#### X11 system

- Fixed a problem with **display hotplug detection** when the display switch is not used.
- Fixed issues if **2 DisplayPort MST Hubs** are connected behind each other.

#### WVD

- **WVD memory leak(s)** fixed.
- Switched back to **the local login mask when the AAD login fails** for whatever reason. At the moment, there is no error message shown. This will come in one of the next versions.

#### VMware Horizon

- Fixed **post-session behavior** for VMware Horizon sessions where some **exit codes of the client were discarded** and therefore did not trigger the post-session action.
- Fixed **Local Logon Window** in that now we prevent it to get iconified because it always needs to be visible, especially in appliance mode where there is no panel to de-iconify it.

#### CID Key Agent

- Update of **CID Key Agent** to version **6.5.0-1**

#### Teradici PCoIP Client

- Updated **Teradici PCoIP** client to version **20.10**

#### Network

- Changed: Usage of **r8168** as default network driver **on Lenovo M75 Nano**.
- Added support for some newer **Intel e1000e network cards**.
- Fixed **logon by 802.1X authentication**.
- Fixed: Failing **Ethernet connection does not delay online state** reached by other means anymore.
- Added registry keys for enabling/disabling **sending of hostname in DHCPv4 and DHCPv6** requests.

**More...**

|           |                                              |
|-----------|----------------------------------------------|
| Parameter | Send hostname in DHCP requests               |
| Registry  | network.dhcp.send_hostname                   |
| Range     | [Disabled][ <u>Network Manager default</u> ] |
| Parameter | Send hostname in DHCPv6 requests             |
| Registry  | network.dhcp6.send_hostname                  |
| Range     | [Disabled][ <u>Network Manager default</u> ] |

- Added registry key for **disabling Ethernet link reconfiguration by Network Manager**.

**More...**

|           |                                           |
|-----------|-------------------------------------------|
| Parameter | Disable NetworkManager link configuration |
|-----------|-------------------------------------------|

|          |                                                                                                                                                           |
|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------|
| Registry | <code>network.interfaces.ethernet.device%.nm_disable_link_config</code>                                                                                   |
| Type     | <code>bool</code>                                                                                                                                         |
| Value    | <code>true / false</code>                                                                                                                                 |
| Note     | Setting this to "true" can be beneficial when 802.1X authentication is disturbed by link. It is currently set automatically when e1000e drivers are used. |

#### Open VPN

- Fixed **segmentation fault** if the nameserver is used.  
Now it is allowed to use an empty password for the private key. Not needed to enter a password when the private key does not have one.

#### Base system

- Fixed: The **fluendo vadec** update closed a **memory leak with AMD devices** using VAAPI acceleration.
- **Updated Fluendo multimedia codecs** to the following versions:  
[More...](#)

|                                     |            |
|-------------------------------------|------------|
| <code>gst-fluendo-aacdec</code>     | 8/10/2020  |
| <code>gst-fluendo-asfdemux</code>   | 17/9/2020  |
| <code>gst-fluendo-h264dec</code>    | 22/9/2020  |
| <code>gst-fluendo-mp3</code>        | 17/9/2020  |
| <code>gst-fluendo-mpeg4video</code> | 18/9/2020  |
| <code>gst-fluendo-vadec</code>      | 02/11/2020 |
| <code>gst-fluendo-wmadec</code>     | 17/9/2020  |
| <code>gst-fluendo-wmvdec</code>     | 17/9/2020  |

- Fixed possible **USB issues with suspend/resume on IGEL M350C** devices.
- Fixed: **Custom applications** did not run **while being offline** even if they did not need network.

#### Audio

- Fixed the **ALSA Pulse PCM** - a possible **deadlock** while writing audio data and closing Pulse PCM.
- Fixed **microphone** issues with **UD3-LX60** device.

#### Remote Management

- Fixed sporadic **failures while retrieving the Unit ID** by the IGEL Remote Management agent.
- Fixed **sending the user logoff message to the UMS**.

#### HID

- Updated **eGTouch (eGalax) drivers and xorg** configuration.
- Fixing **double tapping of desktop icons on touchscreen** devices.

#### Window manager

- Fixed **desktop icons** not being restricted to one monitor at all.

## 7.7 Notes for Release 11.04.200

| VirtualBox (Limited support)               | 69.0 M  | Not included |

### 7.7.3 General Information 11.04.200

To be beneficial to all new features and implementations, it is recommended to use UMS 6.05.110 or higher and update the corresponding profiles.

Firmware downgrade to older versions (11.01 or 11.02) is not possible, due to the unsigned firmware update files.

The following clients and features are not supported anymore:

- Caradigm
- Citrix Legacy Sessions
- Citrix Web Interface
- Citrix StoreFront Legacy
- Citrix HDX Flash Redirection
- Citrix XenDesktop Appliance Mode
- Flash Player Download
- JAVA Web Start
- Leostream Java Connect
- Systancia AppliDis
- VIA graphics driver

### 7.7.4 Known Issues 11.04.200

Firmware Update

- On **devices with 2 GB of flash storage**, it could happen that there is **not enough space for updating all features**. In this case, a corresponding error message occurs. Check [Error: "Not enough space on local drive" when Updating to IGEL OS 11.04 or Higher\(see page 231\)](#) for a solution.

#### Firefox

- **Firefox IGEL extensions are not updated automatically** under some circumstances. After an update from 11.03.xxx to 11.04.100, the IGEL extensions will stay on the old version. In this case, the following settings concerning **kiosk mode** cannot be executed:
  - Switch off hotkey for new window/tab
  - Blocking of internal browser pages like preferences, file picker, specific local directories

As a workaround:

- a **reset to defaults** should be performed
  - or the **browser's mimetype template** can be switched **from "Standard" to "Minimal"** by registry key `browserglobal.app.mimetypes_template`. There, the browser profile is renewed as well.
- After the TC received the new setting, **reboot** and **set** the `mimetypes_template` registry key to **"Standard"** again.

#### Citrix

- With activated **DRI3** and an **AMD GPU Citrix H.264 acceleration plugin** could freeze. Selective H.264 mode (API v2) is not affected from this issue.
- Citrix has known issues with **GStreamer1.0** which describe problems with **multimedia redirection of H.264, MPEG1 and MPEG2**. GStreamer1.0 is used if browser content redirection is active.
- **Browser content redirection** does not work with activated **DRI3** and **hardware accelerated H.264 deep compression codec**.
- **Citrix StoreFront login** with **Gemalto smartcard** middleware does not detect smartcard correctly if the card is inserted after start of login.  
Workaround: Insert the smartcard before starting the StoreFront login.
- **Citrix H.264 acceleration plugin** does not work with **enabled** server policy **Optimize for 3D graphics workload** in combination with server policy **Use video codec compression > For the entire screen**.
- To launch **multiple desktop sessions** with **Citrix HDX RTME** and **Citrix H.264** acceleration plugin, the following registry key must be enabled.

[More...](#)

|                |                                                                           |
|----------------|---------------------------------------------------------------------------|
| Parameter      | Activate workaround for dual RTME sessions and H264 acceleration          |
| Registry Value | <code>ica.workaround-dual-rtme</code><br><u>enabled</u> / <u>disabled</u> |

This workaround is not applicable when "Enable Secure ICA" is active for the specific delivery group.

- During the running **Microsoft Teams Optimization of Citrix Workspace App 20.06/20.09, webcam redirection or screen sharing** may lead to **display errors** like black stripes or flickering.
- The **performance** of Citrix sessions when using **Workspace App 20.06** may be lower on some devices.

A possible **workaround** is to **disable** the **virtual channels for Microsoft Teams** and **NSAP** or to set the **HDX transport protocol** to **TCP** only.

- ica.module.virtualdriver.vdwebrtc.enable
- ica.module.virtualdriver.nsap.enable

The protocol can be set via the Setup parameter **Sessions > Citrix > Citrix Global > Options > HDX Adaptive Transport over EDT** or via the **server policy** 'HDX Adaptive Transport'.

#### VMware Horizon

- **Client drive mapping** and **USB redirection** for storage devices should not be enabled both at the same time.
  - On the one hand, when using USB redirection for storage devices: The USB on-insertion feature is only working when the client drive mapping is switched off. In the IGEL Setup client drive mapping can be found in: **Sessions > Horizon Client > Horizon Client Global > Drive Mapping > Enable Drive Mapping**. It is also recommended to disable local **Storage Hotplug** on setup page **Devices > Storage Devices > Storage Hotplug**.
  - On the other hand, when using drive mapping instead, it is recommended to either switch off USB redirection entirely or at least deny storage devices by adding a filter to the USB class rules. Furthermore, Horizon Client relies on the OS to mount the storage devices itself. Enable local `Storage Hotplug` on Setup page **Devices > Storage Devices > Storage Hotplug**.
- **External drives** mounted already before connection do not appear in the **remote desktop**.  
Workaround: map the directory /media as a drive. Then the external devices will show up inside the media drive.
- **After the disconnect of an RDP-based session**, the Horizon main **window** which contains the server or sessions overview **cannot be resized anymore**.
- **Seamless application windows in Horizon Client may not be displayed correctly**. When starting the first seamless app, a new iconified window appears in the taskbar, and only if you click on it, the application will show up.  
On some hardware (UD7-H850, UD2-M250, UD2-D220), however, the client aborts when this new window is de-iconified.
- When using the **RDP protocol**, the remote session has a fixed offset of approximately the height of the menu bar. That means you have a black bar on top of the window and as a result of that, the **Windows panel on the bottom is cut off**.
- **Modifier keys** (Shift/Ctrl/Win/Alt) in session windows using **RDP protocol** do not send the keyup event and thus **keep being pressed even when actually released**. Only when you leave the session with the mouse, the modifiers are reset.
- **Copying a text from Horizon Blast sessions** is not possible.
- The **on-screen keyboard** in **Horizon appliance mode** doesn't work correctly with local logon. You have to switch off the local logon and switch on these two keys in the IGEL registry:
  - userinterface.softkeyboard.autoshow
  - userinterface.softkeyboard.autohide

#### Wi-Fi

- TP-Link Archer T2UH Wi-Fi adapters does not work after system suspend/resume. Workaround: Disable system suspend at **IGEL Setup > System > Power Options > Shutdown**.

#### Parallels Client

- **Native USB redirection** does not work with Parallels Client.

#### Smartcard

- **Citrix Certificate Identity Declaration login** does not work with **SecMaker** smartcards.

#### Multimedia

- Multimedia redirection with **GStreamer** could fail with the **Nouveau GPU driver**.

#### Hyper-V

- **Hyper-V** (Generation 2) needs **a lot of memory (RAM)**. The machine needs a sufficient amount of memory allocated.

#### VirtualBox

- The current **VirtualBox Guest Tools/Drivers** will not work with **VirtualBox 5.2.x or older** hosts which leads to a black screen and non-working graphics.

**Possible workaround:** Install with 'Failsafe Installation + Recovery' and set the registry key `x.drivers.force_vesa` to 'true'.

- When running in VirtualBox virtualization, **resizing the window will not automatically change desktop resolution** of IGEL OS guest.

#### Audio

- **Audio jack detection on Advantech POC-W243L** doesn't work. Therefore, sound output goes through a possibly connected headset and the internal speakers.
- **IGEL UD2 (D220)** fails to restore the volume level of the speaker when the device used **firmware version 11.01.110** before.

#### Hardware

- **HP t730** could freeze when monitors with **different resolutions** are connected (1920x1200 + 2560x1440 + 3840x1600 for example). When this occurs, the registry key `x.drivers.kms.best_console_mode` has to be set to **disabled**.
- Some newer **Delock 62599 active DisplayPort-to-DVI (4k)** adapters only work with INTEL devices.

#### Remote Management

- **AIT feature with IGEL Starter License** is supported by the **UMS version 6.05.100**.

#### Base system

- **Update from memory stick** requires network online state (when multiple update stages are involved).

#### deskMate

- Some stability issues may remain.

#### Appliance Mode

- When **ending a Citrix session** in browser appliance mode, the **browser is restarted twice** instead of once.

- Appliance mode **RHEV/Spice: spice-xpi firefox plugin** is no longer supported. The **Console Invocation** has to allow 'Native' client (auto is also possible) and should be started in fullscreen to prevent any opening windows.

## 7.7.5 Security Fixes 11.04.200

### Firefox

- Updated Mozilla Firefox to **68.12.0esr**:
  - Fixes for **mfsa2020-11**, also known as CVE-2020-6819, CVE-2020-6820.
    - Fixes for **mfsa2020-13**, also known as  
[More...](#)

CVE-2020-6828, CVE-2020-6827, CVE-2020-6821,  
CVE-2020-6822, and CVE-2020-6825
    - Fixes for **mfsa2020-17** also known as:
      - [More...](#)

CVE-2020-12387, CVE-2020-12388, CVE-2020-12389,  
CVE-2020-6831, CVE-2020-12392, CVE-2020-12393,  
and CVE-2020-1239
    - Fixes for **mfsa2020-21** also known as:
      - [More...](#)

CVE-2020-12399, CVE-2020-12405,  
CVE-2020-12406, CVE-2020-12410
    - Fixes for **mfsa2020-25** also known as:
      - [More...](#)

CVE-2020-12417, CVE-2020-12418, CVE-2020-12419,  
CVE-2020-12420, CVE-2020-12421
    - Fixes for **mfsa2020-31** also known as:
      - [More...](#)

CVE-2020-15652, CVE-2020-6514, CVE-2020-6463,  
CVE-2020-15650, CVE-2020-15649, and CVE-2020-15659
    - Fixes for **mfsa2020-37** also known as: CVE-2020-15663, CVE-2020-15664, and  
CVE-2020-15669

### Base system

- Fixed privilege escalation via environment variables in the /bin/update binary.
- Fixed privilege escalation via environment variable PATH in /bin/usershell binary.
- Fixed privilege escalation via PATH environment variable in the /bin/update binary.

## 7.7.6 New Features 11.04.200

### Citrix

- Integrated **Citrix Workspace app 20.09. Removed** Citrix Workspace app **18.10**. Available Citrix Workspace apps in this release: **20.09 (default)**, **20.06** and **19.12**. The **performance** of the Citrix Workspace app **20.09** was **improved** and a **more detailed logging** was implemented.
- Citrix **logging** was **summarized**. Now, only **one parameter** is needed to **activate logging**.  
**More...**

|           |                                    |
|-----------|------------------------------------|
| Parameter | Enable logging for Citrix sessions |
| Registry  | ica.logging.debug                  |
| Value     | on / off                           |

- Since Workspace app 20.09, the tool **setlog** is used to **configure the logging**. For this purpose, parameters are provided in the registry `ica.logging.setlog`; usually, nothing needs to be changed.
- After **disabling logging**, the system must be **restarted** once.
- Integrated **Zoom Media Plugin 5.2.456413.0902**
- Added **PAC proxy auto configuration support** for Zoom Media Plugin (ZoomVDI). To configure, the following parameters need to be set:
  - `network.proxy.settings.sys_proxy_type="Automatic proxy configuration"`
  - `network.proxy.settings.sys_proxy_autoconfig_url="http://..."`

Alternatively, the **manual HTTP/HTTPS proxy setting** configured at **IGEL Setup > Network > Proxy** is now used for Zoom Media Plugin.

- **Improved** configuration of **ZoomVDI** client.

#### Cisco Webex

- Integrated **Cisco Webex Meetings 40.10**.

#### Parallels Client

- Updated **Parallels** Client to version **17.1.2.1**. Fixed security vulnerability issue disclosed in the Parallels KB article <https://kb.parallels.com/en/125112>.

#### Audio

- Added **EPOS Connect 5.0.1.2795**.

**More...**

|            |                                                                              |
|------------|------------------------------------------------------------------------------|
| IGEL Setup | <b>Devices &gt; Unified Communications &gt; EPOS Audio &gt; EPOS Connect</b> |
| Parameter  | Enable EPOS Connect                                                          |
| Registry   | <code>devices.epos.connect.enable</code>                                     |
| Type       | bool                                                                         |
| Value      | enabled / disabled                                                           |
| IGEL Setup | <b>Devices &gt; Unified Communications &gt; EPOS Audio &gt; EPOS Connect</b> |
| Parameter  | Tenant ID                                                                    |
| Registry   | <code>devices.epos.connect.tenant_id</code>                                  |

|            |                                                                               |
|------------|-------------------------------------------------------------------------------|
| Type       | string                                                                        |
| Value      | "                                                                             |
| IGEL Setup | <b>Devices &gt; Unified Communications &gt; EPOS Audio &gt; EPOS Connect</b>  |
| Parameter  | Backend Endpoint                                                              |
| Registry   | devices.epos.connect.tenant_url                                               |
| Type       | string                                                                        |
| Value      | "                                                                             |
| IGEL Setup | <b>Devices &gt; Unified Communications &gt; EPOS Audio &gt; EPOS Connect</b>  |
| Parameter  | Proxy                                                                         |
| Registry   | devices.epos.connect.proxy                                                    |
| Type       | string                                                                        |
| Value      | "                                                                             |
| Registry   | devices.epos.connect.log_level                                                |
| Value      | Trace / Debug / <u>Information</u> / Warnings / Errors / Exceptions / No logs |

#### Smartcard

- Updated **A.E.T. Europe SafeSign Identity Client** to version **3.6.0.0**.

#### Multimedia

- Added possibility to fetch **log files of the Zoom Media Plugin (ZoomVDI)** via **UMS support information**.

#### Hardware

- Added detection of **UD Pocket UC5-LX 2**.

#### Misc

- Updated **Login Enterprise** to version **4.2**.

### 7.7.7 Resolved Issues 11.04.200

#### Citrix

- Fixed the problem with **apparmor** and the **Citrix MS Teams workaround**.
- Fixed: In some Citrix sessions, there have been **sporadic appearances of black rectangles** when the feature "**Accelerated H.264 Deep Compression Codec**" is active.
- Integrated parameter to activate the workaround for the **keyboard language issue with MS Teams Optimization**.  
**More...**

|           |                                                           |
|-----------|-----------------------------------------------------------|
| Parameter | Microsoft Teams optimization keyboard language workaround |
|-----------|-----------------------------------------------------------|

|          |                                                                     |
|----------|---------------------------------------------------------------------|
| Registry | <code>ica.module.virtualdriver.vdwebrtc.keyboard_eworkaround</code> |
| Value    | <u>on</u> / <u>off</u>                                              |

## RDP/IGEL RDP Client 2

- Improved **error logging**.
- Fixed **USB redirection** for RDP sessions.

## Firefox

- Fixed **smartcard access in Firefox**. Before this fix, **smartcards** were **not recognized occasionally**.

## Network

- Fixed handling of **DNS default domain**.
- Added **registry** key specifying the **number of 802.1X authentication attempts on Ethernet**.  
[More...](#)

|          |                                                                          |
|----------|--------------------------------------------------------------------------|
| Registry | <code>network.interfaces.ethernet.device%.ieee8021x.auth_attempts</code> |
| Type     | integer                                                                  |
| Value    | <u>1</u>                                                                 |

- **SCEP**: Fixed derivation of **802.1X identity** from client certificate.

## Window manager

- Fixed **crash of start menu**, where it was not populated with any items.
- Fixed **start monitor mapping for Firefox**.

## Wi-Fi

- **Added** missing **iwlwifi-6000-4 firmware file**.

## Open VPN

- Fixed **segmentation fault** when **nameserver was used**.
- Added: **Different protocols** are now **selectable**:  
[More...](#)

|           |                                                                             |
|-----------|-----------------------------------------------------------------------------|
| Parameter | protocol                                                                    |
| Registry  | <code>sessions.openconnect%.vpnopts.protocol</code>                         |
| Value     | <u>Cisco AnyConnect</u> / Juniper Network / Junos Pulse / PAN GlobalProtect |

## Base system

- Fixed **panels clock format** via registry key `windowmanager.wm%.variables.clock_time`.
- **Post-session command binaries** and **return codes** are **now customizable** via registry. Allows post-session commands if a binary doesn't return 0.

Name of the binary:

| Registry  | pcom.valid_return_codes<NR>.binary |
| Value     | binary name                        |

**Comma seperated** return codes (e.g. **7,99**) or/and **return code ranges** (e.g. **3..5** for 3,4,5) to be accepted:

**More...**

|           |                                           |
|-----------|-------------------------------------------|
| Parameter | Return Codes                              |
| Registry  | pcom.valid_return_codes<NR>.returncodes   |
| Value     | e.g. 3,5,10..15 for 3,5,10,11,12,13,14,15 |

- Fixed problems with **hostnames containing one or more "\_" characters.**
- Added: Show **AMD Memory Guard in Boot Mode**, when enabled.

#### Storage Devices

- Fixed **display of hotplug eject menu** in appliance mode.

#### Remote Management

- Fixed **ICG HA functionality broken in 11.04.100.**
- Fixed **automatic establishment of the configured ICG connection** if the UMS Server is unreachable.

## 7.8 Notes for Release 11.04.100

| VirtualBox                         | 6.1.10-dfsg-1igel41                 |

## Services

| Service                                    | Size    | Reduced Firmware |
|--------------------------------------------|---------|------------------|
| Asian Language Support                     | 22.5 M  | Included         |
| Java SE Runtime Environment                | 36.0 M  | Included         |
| Citrix Workspace app                       | 219.5 M | Included         |
| Citrix Appliance                           |         |                  |
| Citrix StoreFront                          |         |                  |
| Ericom PowerTerm InterConnect              | 15.5 M  | Included         |
| Media Player                               | 512.0 K | Included         |
| Citrix Appliance                           | 70.2 M  | Included         |
| Local Browser (Firefox)                    |         |                  |
| RDP                                        | 4.2 M   | Included         |
| VMware Horizon                             |         |                  |
| Cendio ThinLinc                            | 10.0 M  | Included         |
| Printing (Internet printing protocol CUPS) | 22.2 M  | Included         |
| NoMachine NX                               | 26.8 M  | Included         |
| VMware Horizon                             | 114.5 M | Included         |

|                                            |         |              |
|--------------------------------------------|---------|--------------|
| Voice over IP (Ekiga)                      | 6.5 M   | Included     |
| Citrix Appliance                           | 768.0 K | Included     |
| NCP Enterprise VPN Client                  | 27.0 M  | Not included |
| Fluendo GStreamer Codec Plugins            | 6.8 M   | Included     |
| IBM i Access Client Solutions              | 72.5 M  | Not included |
| Red Hat Enterprise Virtualization          | 3.0 M   | Included     |
| Parallels Client                           | 5.5 M   | Included     |
| NVIDIA graphics driver                     | 115.0 M | Not included |
| Imprivata Appliance                        | 10.8 M  | Included     |
| Evidian AuthMgr                            | 2.8 M   | Included     |
| Hardware Video Acceleration                | 13.0 M  | Included     |
| Extra Font Package                         | 1.0 M   | Included     |
| Fluendo GStreamer AAC Decoder              | 1.2 M   | Included     |
| x32 Compatibility Support                  | 48.0 M  | Included     |
| Cisco JVDI client                          | 45.8 M  | Included     |
| PrinterLogic                               | 40.8 M  | Not included |
| Biosec BS Login                            | 10.0 M  | Not included |
| Login VSI Login Enterprise                 | 28.8 M  | Not included |
| Stratusphere UX CID Key software           | 2.8 M   | Not included |
| Elastic Filebeat                           | 15.8 M  | Not included |
| WVD                                        | 13.8 M  | Included     |
| Local Browser (Chromium)                   | 81.2 M  | Not included |
| deskMate client                            | 5.8 M   | Included     |
| Cisco Webex Teams VDI                      | 32.0 M  | Not included |
| Cisco Webex Meetings VDI                   | 36.8 M  | Not included |
| Zoom Media Plugin                          | 39.8 M  | Not included |
| Teradici PCoIP Client                      | 7.8 M   | Included     |
| 90meter Smart Card Support                 | 256.0 K | Included     |
| Mobile Device Access USB (Limited support) | 256.0 K | Not included |
| VPN OpenConnect (Limited support)          | 1.5 M   | Not included |
| Scanner support / SANE (Limited support)   | 2.5 M   | Not included |
| VirtualBox (Limited support)               | 62.5 M  | Not included |

## General Information 11.04.100

To be beneficial to all new features and implementations, it is recommended to use UMS 6.05.100 or higher and update the corresponding profiles.

Firmware downgrade to older versions (11.01 or 11.02) is not possible, due to the unsigned firmware update files.

The following clients and features are not supported anymore:

- Caradigm
- Citrix Legacy Sessions
- Citrix Web Interface
- Citrix StoreFront Legacy
- Citrix HDX Flash Redirection
- Citrix XenDesktop Appliance Mode
- Flash Player Download
- JAVA Web Start
- Leostream Java Connect
- Systancia AppliDis
- VIA graphics driver

## Known Issues 11.04.100

### Firmware Update

- On **devices with 2 GB of flash storage**, it could happen that there is **not enough space for updating all features**. In this case, a corresponding error message occurs and unused features must be disabled in IGEL Setup under **System > Firmware Customization > Features** to perform the firmware update. For instructions on how to prevent issues with updating, see [Adapting IGEL OS 11.04 or Higher for Devices with Small Storage](#)(see page 69).

### Firefox

- **Firefox IGEL extensions are not updated automatically** under some circumstances. After an update from 11.03.xxx to 11.04.100, the IGEL extensions will stay on the old version.  
In this case, the following settings concerning **kiosk mode** cannot be executed:
  - Switch off hotkey for new window/tab
  - Blocking of internal browser pages like preferences, file picker, specific local directories

As a workaround:

- a **reset to defaults** should be performed
- or the **browser's mimetype template** can be switched **from "Standard" to "Minimal"** by registry key `browserglobal.app.mimetypes_template`. There, the browser profile is renewed as well.  
After the TC received the new setting, **reboot** and **set** the `mimetypes_template` registry key to **"Standard"** again.

### Citrix

- With activated **DRI3** and an **AMD GPU Citrix H.264 acceleration plugin** could freeze. Selective H.264 mode (API v2) is not affected from this issue.

- Citrix has known issues with **GStreamer1.0** which describe problems with **multimedia redirection of H.264, MPEG1 and MPEG2**. GStreamer1.0 is used if browser content redirection is active.
- **Browser content redirection** does not work with activated **DRI3** and **hardware accelerated H.264 deep compression codec**.
- **Citrix StoreFront login** with **Gemalto smartcard** middleware does not detect smartcard correctly if the card is inserted after start of login.  
Workaround: Insert the smartcard before starting the StoreFront login.
- **Citrix H.264 acceleration plugin** does not work with **enabled** server policy **Optimize for 3D graphics workload** in combination with server policy **Use video codec compression > For the entire screen**.
- To launch **multiple desktop sessions** with **Citrix HDX RTME** and **Citrix H.264** acceleration plugin, the following registry key must be enabled.

[More...](#)

|           |                                                                  |
|-----------|------------------------------------------------------------------|
| Parameter | Activate workaround for dual RTME sessions and H264 acceleration |
| Registry  | ica.workaround-dual-rtme                                         |
| Value     | enabled / <u>disabled</u>                                        |

This workaround is not applicable when "Enable Secure ICA" is active for the specific delivery group.

- Using **CWA 19.x** sometimes **freezes the session** while session logoff from a published desktop.  
Workaround: **Use CWA 18.10.0**.
- During the running **Microsoft Teams Optimization of Citrix Workspace App 20.06, webcam redirection or screen sharing** may lead to **display errors** like black stripes or flickering.
- The **performance** of Citrix sessions when using **Workspace App 20.06** may be lower on some devices.  
A possible **workaround** is to **disable the virtual channels for Microsoft Teams** and **NSAP** or to set the **HDX transport protocol** to **TCP** only.
  - ica.module.virtualdriver.vdwebrtc.enable
  - ica.module.virtualdriver.nsap.enable
  - The protocol can be set via the Setup parameter **Sessions > Citrix > Citrix Global > Options > HDX Adaptive Transport over EDT** or via the **server policy** 'HDX Adaptive Transport'.

#### VMware Horizon

- **Client drive mapping** and **USB redirection** for storage devices should not be enabled both at the same time.
  - On the one hand, when using USB redirection for storage devices: The USB on-insertion feature is only working when the client drive mapping is switched off. In the IGEL Setup client drive mapping can be found in: **Sessions > Horizon Client > Horizon Client Global > Drive Mapping > Enable Drive Mapping**. It is also recommended to disable local **Storage Hotplug** on setup page **Devices > Storage Devices > Storage Hotplug**.
  - On the other hand, when using drive mapping instead, it is recommended to either switch off USB redirection entirely or at least deny storage devices by adding a filter to the USB class rules. Furthermore, Horizon Client relies on the OS to mount the storage devices itself.

Enable local `Storage Hotplug` on Setup page **Devices > Storage Devices > Storage Hotplug**.

- **External drives** mounted already before connection do not appear in the **remote desktop**.  
Workaround: map the directory /media as a drive. Then the external devices will show up inside the media drive.
- **After the disconnect of an RDP-based session**, the Horizon main **window** which contains the server or sessions overview **cannot be resized anymore**.
- **Seamless application windows in Horizon Client may not be displayed correctly**. When starting the first seamless app, a new iconified window appears in the taskbar, and only if you click on it, the application will show up.  
On some hardware (UD7-H850, UD2-M250, UD2-D220), however, the client aborts when this new window is de-iconified.

#### Imprivata

- On **devices with 2 GB of flash storage**, it could happen that there is not enough space to enable the **Imprivata partition after the update to 11.04.100**. In this case, a corresponding error message occurs and **unused features must be disabled** (in IGEL Setup under **System > Firmware Customization > Features**). Imprivata has to be (re-)enabled after a reboot then.

#### Wi-Fi

- TP-Link Archer T2UH Wi-Fi adapters does not work after system suspend/resume. Workaround: Disable system suspend at **IGEL Setup > System > Power Options > Shutdown**.

#### Parallels Client

- **Native USB redirection** does not work with Parallels Client.

#### Smartcard

- **Citrix Certificate Identity Declaration login** does not work with **SecMaker** smartcards.
- In seldom cases, the **authentication** hung when using **A.E.T. SafeSign smartcards**.

#### Appliance Mode

- Appliance mode **RHEV/Spice: spice-xpi firefox plugin** is no longer supported. The **Console Invocation** has to allow 'Native' client (auto is also possible) and should be started in fullscreen to prevent any opening windows.

#### Multimedia

- Multimedia redirection with **GStreamer** could fail with the **Nouveau GPU driver**.

#### Hyper-V

- **Hyper-V** (Generation 2) needs **a lot of memory (RAM)**. The machine needs a sufficient amount of memory allocated.

#### VirtualBox

- The current **VirtualBox Guest Tools/Drivers** will not work with **VirtualBox 5.2.x or older** hosts which leads to a black screen and non-working graphics.

Possible workaround: Install with 'Failsafe Installation + Recovery' and set the registry key `x.drivers.force_vesa` to 'true'.

- When running in VirtualBox virtualization, **resizing the window will not automatically change desktop resolution** of IGEL OS guest.

#### Audio

- **Audio jack detection on Advantech POC-W243L** doesn't work. Therefore, sound output goes through a possibly connected headset and the internal speakers.
- **IGEL UD2 (D220)** fails to restore the volume level of the speaker when the device used **firmware version 11.01.110** before.

#### Hardware

- **HP t730** could freeze when monitors with **different resolutions** are connected (1920x1200 + 2560x1440 + 3840x1600 for example). When this occurs, the registry key `x.drivers.kms.best_console_mode` has to be set to **disabled**.
- Some newer **Delock 62599 active DisplayPort-to-DVI (4k)** adapters only work with INTEL devices.

#### Remote Management

- **AIT feature with IGEL Starter License is supported** by the **UMS version 6.05.100**.

#### Base system

- **Update from memory stick** requires network online state (when multiple update stages are involved).

#### deskMate

- Integrated deskMate solution. Some stability issues may remain.

## Security Fixes 11.04.100

#### Firefox

- Updated Mozilla **Firefox** to **68.10.0esr**:
  - Fixes for **mfsa2020-11**, also known as CVE-2020-6819 and CVE-2020-6820
  - Fixes for **mfsa2020-13**, also known as:  
[More...](#)  
CVE-2020-6828, CVE-2020-6827, CVE-2020-6821, CVE-2020-6822, and CVE-2020-6825
  - Fixes for **mfsa2020-17** also known as:  
[More...](#)  
CVE-2020-12387, CVE-2020-12388, CVE-2020-12389, CVE-2020-6831, CVE-2020-12392, CVE-2020-12393, and CVE-2020-1239
  - Fixes for **mfsa2020-21** also known as:  
[More...](#)  
CVE-2020-12399, CVE-2020-12405, CVE-2020-12406, and CVE-2020-12410
  - Fixes for **mfsa2020-25** also known as:

[More...](#)

CVE-2020-12417, CVE-2020-12418, CVE-2020-12419,  
CVE-2020-12420, and CVE-2020-12421

- Changed option to **deny local file browsing** via file:// URI per default now.

[More...](#)

|            |                                                                |
|------------|----------------------------------------------------------------|
| IGEL Setup | <b>Firefox Browser &gt; Firefox Browser Global &gt; Window</b> |
| Parameter  | Hide local filesystem                                          |
| Registry   | browserglobal.app.filepicker_dialog_hidden                     |
| Value      | <u>enabled</u> / disabled                                      |

Base system

- SSH protocol version 1 is now disabled.** All remote connections via SSH must use SSHv2.

Driver

- Updated **Nvidia driver** to version **440.100**.

New Features 11.04.100

Citrix

- Integrated **Citrix Workspace App 20.06**. Available Citrix Workspace Apps in this release: **20.06** (default), **19.12**, and **18.10**
- Added a registry key to enable optimization for **Microsoft Teams**.

[More...](#)

|            |                                                                                               |
|------------|-----------------------------------------------------------------------------------------------|
| IGEL Setup | <b>Sessions &gt; Citrix &gt; Citrix Global &gt; Unified Communications &gt; VDI Solutions</b> |
| Parameter  | Microsoft Teams optimization                                                                  |
| Registry   | ica.module.virtualdriver.vdwebrtc.enable                                                      |
| Value      | <u>on</u> / off                                                                               |

- Added a registry key to enable support for **NetScaler App Experience (NSAP)** virtual channel.

[More...](#)

|           |                                      |

|------------|-----------------------------------------------------------------------------------------------|
| IGEL Setup | <b>Sessions &gt; Citrix &gt; Citrix Global &gt; Unified Communications &gt; VDI Solutions</b> |
| Parameter  | Zoom Media Plugin                                                                             |
| Registry   | ica.module.virtualdriver.vdzoom.enable                                                        |
| Value      | <u>enabled</u> / <u>disabled</u>                                                              |

- Updated **signotec Virtual Channel** to version **8.0.9**.

The corresponding changes are:

- Logging has been improved.
- A problem with the communication with the signature pads was fixed.
- USB communication via bulk transfer is model-independent (improved speed).
- Removed parameter **Content redirection** / ica.wfclient.crenabled from TC Setup (**Sessions > Citrix > Citrix Global > HDX Multimedia**).

#### OSC Installer

- Added **dialog "Feature Selection"** in **IGEL OS Creator** for the selection of features to be installed on the target device. It interactively shows if the current selection of features fits onto the device. The selection of features is saved on the OSC installer medium (when allowed) and set as the default selection for the next installation. If "**Migrate Old Settings**" is selected, the set of features of the old installation is set as the default selection.
- Reduced memory requirements** of OSC installer for **machines without Nvidia graphic card**.

#### WVD

- Added **AAC Codec support** to Audio Output redirection.

## VMware Horizon

- Updated **VMware Horizon** to version **5.4.1**.

For usage with **Blast protocol**, it is recommended to enable **DRI3 graphics mode**:  
[More...](#)

|           |                                  |
|-----------|----------------------------------|
| Parameter | Use DRI3                         |
| Registry  | x.driver.use_dri3                |
| Value     | <u>enabled</u> / <u>disabled</u> |

- Fixed **handling of RDP's fullscreen mode span**, which means to combine all local monitors for one big remote session.

## PowerTerm

- Updated **Ericom PowerTerm** LTC to version **14.0.0.45623**.

## Parallels Client

- Updated **Parallels Client** to version **17.1.1**.

## Teradici PCoIP Client

- Updated **Teradici PCoIP** Client to version **20.04.2-18.04**. The new version supports **hardware-accelerated H.264 decoding with Ultra PCoIP**.
- New parameters:  
[More...](#)

|           |                                                      |
|-----------|------------------------------------------------------|
| Parameter | Log level                                            |
| Registry  | pcoip.log-level                                      |
| Value     | <u>0</u> / <u>1</u> / <u>2</u> / <u>3</u> / <u>4</u> |

PCoIP sessions **can now use the global setting**.

| Info      | Show a small dot in the bottom left corner during the session to indicate which codec is being used. Green indicates simple codec; blue indicates tic2 codec. This setting is only available globally. |

## XEN

- Added support to run as **XEN guest system**.

## NX client

- Updated **NoMachine NX Client** to version **6.11.2**.

## ThinLinc

- Updated **ThinLinc** to version **4.12**.

## Network

- **DHCP changes:**

The system now sends a **vendor-class-identifier(option 60)** "igel-dhcp-1". Furthermore, it requests **vendor-encapsulated-options (43)**. Those can be used to transfer IGEL-specific options **igelrmserver(224)** and **umsstructuretag(226)** in the vendor namespace (with the same option numbers and types) instead of in the global namespace.

The former way is also still functional, but values transferred in the new way override those which were transferred the old way.

Apart from 224 and 226 one more option is defined in the vendor space: "**exclusive**", **option 1, type byte**. Its presence means that global options 224 and 226 shall not be interpreted in the traditional way and only settings in the vendor space apply.

IPv6 is not involved.

- Added support for **LTE module HP lt4132**.
- Updated **Network Manager** to version **1.20.4**.
  - The range of **network.interfaces.wirelesslan.device0.bgscan.module** now includes "**default**" for using original upstream Network Manager settings.
- Added some **additional Ethernet network drivers**.

  - Added a registry key for specifying a **space-separated list of DNS resolver options**. See "**man resolv.conf**".
- More...**

| Parameter | Option list         |
|-----------|---------------------|
| Registry  | network.dns.options |
| Type      | string              |
| Value     | <u>empty</u>        |

## Wi-Fi

- Added support for **WPA3 Personal network authentication**.
  - Added a registry key for **preferring WPA3 Personal** (i.e. SAE) or **WPA2 Personal** at the time a connection is created with Wireless Manager when the access point offers both:
- More...**

|           |                                       |
|-----------|---------------------------------------|
| Parameter | Prefer WPA3 Personal to WPA2 Personal |
| Registry  | network.applet.wireless.prefer_sae    |
| Range     | [default] [yes] [no]                  |
| Info      | "default" currently means "no"        |

- Added **captive portal support for Wi-Fi**. Passing through a captive portal (which is basically a web application) is sometimes **necessary to achieve full network connectivity** (here also referred to as online state).

- The **feature is disabled when** the following **registry key** is **empty**. Otherwise, it should be a **URI** that is **suitable for NetworkManager connectivity check**.

[More...](#)

|           |                                              |
|-----------|----------------------------------------------|
| Parameter | Online check URI                             |
| Registry  | network.global.onlinecheck.uri               |
| Range     | [] [http://connectivity-check.ubuntu.com/]   |
| Value     | <u>http://connectivity-check.ubuntu.com/</u> |

- The following key specifies the **conditions of the online check**. It is also required that **no Ethernet cable is plugged in** and **DHCP is not set** in the UMS.

[More...](#)

|           |                                                                      |
|-----------|----------------------------------------------------------------------|
| Parameter | Condition for online check                                           |
| Registry  | network.global.onlinecheck.condition                                 |
| Range     | [None] [ <u>Network is user-defined</u> ] [ <u>Network is open</u> ] |

- This key determines **how many seconds to wait for full network connectivity** before the network connection is considered complete with incomplete connectivity. The timeout should allow a user to do what is necessary for passing through the captive portal.

[More...](#)

|           |                                    |
|-----------|------------------------------------|
| Parameter | Online check timeout               |
| Registry  | network.global.onlinecheck.timeout |
| Type      | integer                            |
| Value     | <u>120</u>                         |

- Enabled **use of 802.11r**, also known as **fast BSS transition** or FT. This is confirmed to work at least in the **mode "over the air"**.

## Smartcard

- Updated **OpenSC** to version **0.20.0**. See <https://github.com/OpenSC/OpenSC/releases/tag/0.20.0> for detailed release notes.

## Cisco JVDI Client

- Updated **Cisco JVDI** client to version **12.9.0**.

## Cisco Webex VDI

- Integrated the new feature **Cisco Webex Teams VDI for Citrix** and **Horizon** sessions.  
**Cisco Webex Teams** version: **3.0.15711.0**
- Added a parameter to activate the feature within **Citrix**:

Base system

- Updated base system to **Ubuntu LTS** version **18.04**.
- Updated **kernel** to version **5.4.48**.
- Added **notification for critical system out-of-memory state** when the available **system memory is lower than 40 MB** and **processes were killed** to prevent the system from freezing.
- Display **AMD Memory Guard in Boot Mode** when it's active.
- Added **notification option for Session Autostart** when a autostart delay is configured. It is possible to cancel the session autostart or to start immediately.

|            |                                                                  |
|------------|------------------------------------------------------------------|
| IGEL Setup | <b>Security &gt; Active Directory/Kerberos &gt; Domain 1 - 4</b> |
| Parameter  | Fully qualified domain name                                      |
| Registry   | auth.krb5.realms.realm0.realm                                    |
| Registry   | auth.krb5.realms.realm1.realm                                    |
| Registry   | auth.krb5.realms.realm2.realm                                    |
| Registry   | auth.krb5.realms.realm3.realm                                    |

- There are keys to **add more domain names:**

[More...](#)

|           |                                           |
|-----------|-------------------------------------------|
| Parameter | Domain                                    |
| Registry  | auth.krb5.extended_domain%.name           |
| Info      | Add a new instance for each domain entry. |

- In the Kerberos login window, it's now possible to turn on or off **numlock** and/or **capslock for password input.**

Registry keys:

| Info  | Background color in the format #rrggb<br>Example: #7700ff |

- Added **new local logon method "Login with Smart Card Certificate"**. It implements the **pam\_pkcs11 smartcard authentication module**. For a successful configuration, the following has to be provided via **UMS file transfer**:
  - **root and intermediate CA certificates** for verification of the client certificates in folder /etc/pam\_pkcs11/cacerts
  - file /etc/pam\_pkcs11/cn\_map which contains **mappings of Common Names to UPN names**.
    - Each line is in the format \<common name> -> \<logon name>  
where
    - \<common name> is the common name part of the subject of the certificate
    - \<logon name> is
    - in case of **Kerberos Enterprise** (auth.login.krb5\_enterprise) **disabled**: the UPN name of the SubjectAltName extension of the certificate, e.g. user@MY.DOMAIN
    - in case of **Kerberos Enterprise** (auth.login.krb5\_enterprise) **enabled**: the UPN name of the SubjectAltName extension of the certificate with Default Domain (auth.krb5.libdefaults.default\_realm) suffix, e.g. user@[DOMAIN.SUFFIX@DEFAULT.DOMAIN](mailto:DOMAIN.SUFFIX@DEFAULT.DOMAIN)<sup>404</sup>
- The logon method **can either be used standalone or together with Kerberos logon** as a fallback if Kerberos does not succeed.

X11 system

- Changed: Use **modesetting graphics driver** on **devices with newer intel GPUs**.
- Changed registry key:

[More...](#)

|           |                                                   |
|-----------|---------------------------------------------------|
| Parameter | Use generic modesetting driver for INTEL hardware |
| Registry  | x.drivers.intel.use_modesetting                   |
| Range     | [Auto] [True] [False]                             |

- Updated **DisplayLink driver** to version **5.3.1.34**.
- Added new registry key for **Nvidia cards** (use this **if you want to use PRIME**):

[More...](#)

|           |                                                  |
|-----------|--------------------------------------------------|
| Parameter | Enable/Disable NVIDIA Kernel Modesetting support |
| Registry  | x.drivers.nvidia.use_modeset                     |
| Range     | [Default] [Enabled] [Disabled]                   |
| Info      | "Default" is currently the same as "disabled"    |

- Updated **florence soft keyboard** to version **0.6.3**.
- **Removed 640x480** from possible **display resolution range**.
- Added possibility to **change the order of primary** and **secondary graphic card**.

New registry key:

[More...](#)

|           |                                                    |
|-----------|----------------------------------------------------|
| Parameter | Make the secondary graphic card to the primary one |
| Registry  | x.drivers.swap_card0_with_card1                    |
| Value     | true / <u>false</u>                                |

- Added possibility to **invert the order of all graphic cards**.

New registry key:

[More...](#)

|           |                                      |
|-----------|--------------------------------------|
| Parameter | Invert default graphic card ordering |
| Registry  | x.drivers.swap_all                   |
| Value     | true / <u>false</u>                  |

- Added possibility to **choose the driver** which should become **the primary graphic card**.

New registry key:

[More...](#)

|           |                                                                             |
|-----------|-----------------------------------------------------------------------------|
| Parameter | Choose which drivers should be preferred to become the primary graphic card |
| Registry  | x.drivers.preferred_driver                                                  |
| Value     |                                                                             |

## X server

- Added possibility to influence **mode used for mirroring screens with different resolutions.** (Notice: here scaling may not always work).

New registry key:

[More...](#)

|           |                                                                                   |
|-----------|-----------------------------------------------------------------------------------|
| Parameter | Choose the mode which should be used for mirroring monitors if resolution differs |
| Registry  | x.xserver0.mirror_mode                                                            |
| Range     | [Default] [Biggest common resolution] [Scaling]                                   |
| Value     | Default (use panning if needed)                                                   |

## Driver

- Updated **Grundig Dictation driver for Citrix and RDP** to version **0.10**.

The changes are:

- Support **third-party USB HID devices** in a more flexible way
- Fixed USB transfer overflow for **Philips LFH 9620**
- Remove **erroneous debug output** in release configuration
- Allow to **control** also "**Headphone**" **volume & switches**

- Updated **Olympus driver for dictation** to version **2020-03-23-143654**.

[Changelog](#):

New:

- DR-1200: PID 0225
- DR-2300: PID 0256

Changed:

- PID 0253 from DR-2100 to DR-1200

- Updated **Philips Speech driver** to version **G12.9**.

The changes are:

- Support for **Philips SpeechLive**
- Faster and more reliable remote session connection status check
- Shutdown of the PSPDispatcher.exe** on the server if it's not in use anymore.

- Updated **StepOver TCP client** and **Citrix plugin** to version **2.4.2**. Fixed **crash of Citrix** session while **using the signature pad**.

## Audio

- Integrated **new sound mixer**.
- New combo box for **audio device selection in TC Setup** available:
  - Accessories > Sound Preferences > Options > Default Sound Output**
  - Accessories > Sound Preferences > Options > Default Sound Input**

## Appliance Mode

- Integrated: The **new Browser Appliance mode** is the successor for the XenDesktop appliance mode. The Browser is configured as in XenDesktop appliance mode, but **does not use the upstream SAS window**.

| Registry   | xen.xenapp-morph.xendeliveryserverurl            |
| Type       | string                                           |

- A **hyperlink to the "On-screen Keyboard"** is available on the right side under "Related Configurations".

## Multimedia

- Added **ffmpeg support** for following codecs:
  - Added support for **new decoders:**
[More...](#)

flac, gif, libaom\_av1, mjpeg, mjpegb,  
mp1, mp1float, mp2, mp3, mp3adu,  
mp3adufloat, mp3float, opus, theora, vorbis,  
vp2, vp8, vp9, and wavepack
  - Added support for **new encoder:** libopus
  - Added support for **new hwaccels:**
[More...](#)

mjpeg\_vaapi, mpeg1\_vdpau, mpeg2\_vaapi,  
mpeg2\_vdpau, vp8\_vaapi, and vp9\_vaapi
  - Added support for **new parsers:** avi, flac, gif, matroska, mp3, ogg, and wav
  - Added support for **new demuxers:** avi, flac, gif, matroska, ogg, and wav
  - Added support for **new muxers:** ogg and opus

## Chromium Browser

- Integrated **Chromium** browser version **83.0.4103.61** as experimental feature.  
Configurable at **IGEL Setup > Sessions > Chromium Browser > Chromium Browser Global** and **IGEL Setup > Sessions > Chromium Browser > Chromium Browser Sessions**
- Main switch to enable and disable **IGEL configuration:**

| Parameter  | H.264 decoding                                                                                                                 |
| Registry   | chromiumglobal.app.h264_decoding                                                                                               |
| Value      | <u>enabled</u> / <u>disabled</u>                                                                                               |
| Info       | Enable Audio/Video playback of non-free codecs (H.264+AAC) - the support is in a beta state and therefore disabled by default. |

## Evidian

- Added the Evidian **built-in option 'Process To Spy'**.  
[More...](#)

|          |                                       |
|----------|---------------------------------------|
| Registry | evidian.processtospy                  |
| Value    | <u>YOUR-PROCESS</u> / <u>disabled</u> |

## ControlUp

- Integrated **ControlUp Monitoring Tool** for **Citrix** and **Horizon** sessions.

## Hardware

- Added hardware support for **Lenovo M625q**.
- Added hardware support for **LG CL600N**.
- Added hardware support for **HP Engage Go Mobile System**.
- Added hardware support for **Fujitsu FUTRO S740**.
- Added hardware support for **OnLogic CL210G-10**.
- Added hardware support for **OnLogic KARBON 300**.
- Added hardware support for **Rein Medical Clinio S 522TCT** and **S 524TCT**.
- Added hardware support for **HP t640 Thin Client**.
- Added basic support for **Macbook models 2018** and **newer**.
- Added support for **Sennheiser MB 660, SC 630, SC 45, SC 160 headsets**.
- Added support for **Plantronics Savi 8245 Office, Voyager 6200 UC, Savi 8220 headsets**.
- Added serial port driver for **Exar UART PCIe card**.
- Added driver for **GSPCA based webcams**.

## TC Setup (Java)

- Added Setup page **Sessions > Horizon Client > Horizon Client Global > Window**. Settings for "**Window size**" and "**Multimonitor full-screen mode**" can be set.

These settings are repeated and originate in RDP Global but are now presented in a more obvious place for Horizon sessions.

#### IGEL Cloud Gateway

- Added support for **Secure Terminal over ICG**.
- Changed default order of connecting to the IGEL Remote Management** - an available UMS Server is preferred now by default. The device establishes a configured ICG connection only if the UMS Server is not reachable. This behavior can be changed by the parameter:  
[More...](#)

|          |                                          |
|----------|------------------------------------------|
| Registry | system.remotemanager.icg_try_ums_connect |
| Value    | <u>true</u> / false                      |

#### Fabulatech

- Updated **FabulaTech Scanner for Remote Desktop** client to version **2.4.0.11**.
- Updated **FabulaTech plugins** to version **3.6.2**.
- Updated **Fabulatech USB for Remote Desktop plugins** to version **3.6.8**.

#### Jabra

- Jabra Xpress** (JDU) is upgraded to the **7.2.0-509** version. List of the newly introduced parameters:

| Registry | jabra.xpress.device_dashboard.autopost |
| Value    | <u>true</u> / false                    |

#### Resolved Issues 11.04.100

##### Citrix

- "**Green artifacts**" problem in Citrix sessions (most probably) fixed.
- Citrix **hardware video acceleration** supports the **latest Intel hardware**.

##### OSC Installer

- Fixed issue with **filesystems not** always get detected correctly in **initramfs OSC Installer** (needed for using iso file boot parameter).
- Fixed: **username and password in the error message** are not shown anymore when firmware file could not be downloaded.
- Get **URLs** with **username:password@** working.

##### RDP/IGEL RDP Client 2

- Fixed error when **renaming a non-empty shared folder**.

##### WVD

- Includes **WVD client with** fixed **RDcoreSDK** version.
- Clipboard redirection** has potential privacy and security risks and is therefore **disabled by default**.

- **IGEL WVD Client integrated**

#### VMware Horizon

- Fixed missing **support for ThinPrint** and **Skype for Business** when starting **Horizon from Firefox browser**.

#### Firefox

- Fixed Firefox **block extension missing tabs** created via command line argument.
- Fixed **rtsp media stream** with enabled apparmor.
- **Show "blocked" page instead of closing tab** when blocked page is viewed in Firefox.
- Fixed functionality in the local setup to start the **certificate manager of the Firefox browser**.
- Fixed functionality in the local setup to **start the Firefox browser with the internal page to show the installed plugins**.
- Fixed **restart mechanism in the Firefox** browser where the browser could not be closed on suspend resulting in a superfluous browser window on resume.

#### Network

- Improved **Wi-Fi DHCP lease handling**: Leases are discarded when the network changes. The former behavior caused problems with certain iPhone IOS versions.
- **802.1X failures** now generally **result in falling back to a connection without authentication**, e.g. also in the case of 802.1X settings that don't make sense at all. This only **applies if the fallback is allowed** of course.
- **wpa\_supplicant** now adds **timestamps to entries of its log file**.
- Use **e1000e driver** out of the kernel **as default** instead of the third-party driver.
- Added a registry key that determines whether **lldpd is in receive-only mode**.  
**More...**

|            |                                                                                      |
|------------|--------------------------------------------------------------------------------------|
| Parameter  | Disable sending LLDP packets                                                         |
| Registry   | network.lldp.rxonly                                                                  |
| Value      | <u>true</u>                                                                          |
| Attention: | If the behavior since 10.06.100 shall be preserved, this key must be set to "false". |

- Updated **scep** to version **0.7.0**.

#### Wi-Fi

- Fixed non-working **Marvell WLAN device 8997** (SDIO version).

#### NCP VPN

- Added fix for **NCP Secure Client**.

#### genucard VPN

- **genucard 3 is supported** now.

#### Imprivata

- **Control the visibility** of the **Horizon session control bar** via registry parameter:  
**More...**

|          |                                   |
|----------|-----------------------------------|
| Registry | <code>vmware.view.menu-bar</code> |
| Value    | <u>enabled</u> / disabled         |

- Honor the Citrix Window Configuration in **Imprivata Appliance Mode**.
- Fixed **Lock key** and **Tap out** behavior.
- Fixed **MS RDSH** session.
- Simplified the configuration of **Imprivata FUS**.
- **Enable the following** if you use **Imprivata** versions **above 6.3**:  
[More...](#)

|          |                                        |
|----------|----------------------------------------|
| Registry | <code>imprivata.gain_permission</code> |
| Value    | <u>enabled</u> / disabled              |

- Fixed **bug regarding Imprivata** and **On-Screen Keyboard**.
- **Restore the keyboard map** after Horizon sessions.

## Smartcard

- Fixed not working **90meter in Firefox** when **apparmor is active**.
- Fixed problem in **smartcard resource manager PC/SC-Lite** which caused **disconnects of VMware Horizon sessions** when using smartcards with certain applications.
- Added **driver for smartcard reader Elatec TWN4 CCID** (USB 0x09D8:0x0425).
- Updated **cryptovision scInterface** to version **7.3.1**.

The changes are:

[More...](#)

- Consolidated features of the last versions 7.2 and 7.1
  - Malta eID Release
  - Added Admin Card Gemalto V3
- Updated **PC/SC-Lite smartcard resource manager** to version **1.8.26**.

## HID

- Fixed: **Switching touchpad to other driver** via IGEL registry key.

## CUPS Printing

- Added new version **25.1.0.425 of Printerlogic Printer Installer Client**.
- Added **new printer models** into IGEL OS from the current CUPS drivers.

## Base System

- Fixed bug in **folder generation of the Application Launcher**.
- Fixed **TLS certificate verification** problem of **certificates signed by "USERTrust RSA CA" or "COMODO RSA CA"**. The problem could occur in clients like Citrix Workspace App and VMWare Horizon client.
- Fixed **password change with AD/Kerberos**. Before this fix, the password complexity rules were not enforced for users with the Reset Password permission for their account.
- You can now **connect to Bluetooth devices without pairing**. For this a new registry key is available.

[More...](#)

|           |                                             |
|-----------|---------------------------------------------|
| Parameter | connect devices without pairing             |
| Registry  | <code>devices.bluetooth.connect_only</code> |

| Value | enabled / disabled |
|-------|--------------------|
|-------|--------------------|

- **Some devices do not connect automatically after reboot.** To fix that, bluetoothctl connect \<device-ID> can be executed via script. If the **device is connected (0)** or **not (1)** can be seen in return value.  
**Known devices** that do not connect:
  - dialog semiconductor IoT Multi Sensor DK
- **SSHv1 support is now removed** due to newer openssh libraries.
- **Forcing protocol version 1 via SSH Session > Options is no longer possible.**
- The network.ssh\_server.server\_key\_bits registry key parameter is **removed** due to **deprecation of SSHv1**.
- Updates **systemd** to **Ubuntu Focal version**.
- Improved **stability of mounting network shares** when using a **static network configuration**.
- Fixed **apparmor cache** issue **after update with OSC installer**.
- Bug fix: **touchscreen calibration** on 1 or more normal screen with 1 touch screen environment.
- Fixed **syslog, kern.log, auth.log**, and **daemon.log** entries are **not shown in IGEL System Log Viewer**.
- Updated **Grub2** to current Debian SID/Bullseye version **2.04**.
- **Removed** deprecated registry keys system.idlecommand.
- New **Bluetooth pairing tool** and **Bluetooth tray icon** for Bionic.
- Updated **kernel** to mainline version **5.4.48**.
- If used as master image, the **image will expand itself to full size** (limited to 16 GiB) on flash. This is done only on first boot and never again.
- Possible **rollout of initial settings, certificates or licenses placed on first partition** for this you need to:
  - a. Write image to your USB/Flash medium.
  - b. Mount or simply access the **1. VFAT partition** which is present (should be empty).
  - c. Copy your **setup.ini** and/or **\*\*.lic files** to the 1st partition (no directories).
  - d. Create a ca-certs directory and copy your certificates into it. They will be copied to the /wfs/ca-certs directory on first boot.
  - e. You can now copy the USB/Flash medium several times if needed.
  - f. On first boot, the device will reboot out of the splash screen (reread changed partition table)
  - g. The settings, certificates and/or licenses will get rolled out and deleted from the 1st partition.
- Added initial support for **Thunderbolt devices** (only limited support here, may work but is not guaranteed).
- Updated **IGEL EULA**.
- Updated **AMD Microcode** to version **3.20191218.1**.
- Updated **Intel Microcode** to version **20200520** and a special update for **J1900 devices**.
- Updated **Intel Microcode** to **20200616** version.
- Added a **userspace oom killer** to the firmware.

#### Firmware Update

- An **ongoing firmware update can now be canceled by the user** when the network online status could not be reached after 10 seconds (since start of the firmware update).

- **Citrix hardware video acceleration** supports the latest Intel hardware.

#### Storage Devices

- Fixed mount issues with **Iphone XR/XE/11PRO**.
- **Mobile Device Access** feature respects USB Access Control now.
- Fixed unwanted **ownership change** of automounted Linux filesystem root directories.

#### X11 System

- Fixed **Display Switch not saving settings over reboot**.
  - **Default to settings from Setup** instead of mirror when no Display Switch profile is available.
- Prevent misconfiguration that **picks GPU without render capability as primary** (e.g. Displaylink).
- Improved **Nvidia** with **additional GPU handling**.
- Fixed error with **single-gpu Nvidia card support**.

#### X server

- Fixed a **Xorg crash** due to a **NULL pointer dereference in the Intel driver**.

#### Window Manager

- Fixed **random login** (greeter) **window focus** issues.

#### Shadowing/VNC

- Added the "**snapfb**" option for the VNC server.  
[More...](#)

|          |                                                                                            |
|----------|--------------------------------------------------------------------------------------------|
| Registry | <code>network.vncserver.snapfb</code>                                                      |
| Value    | <u>enabled</u> / <u>disabled</u>                                                           |
| Info     | This option should only be enabled with experienced delays in remote or shadowing session. |

- Improved **security of the password authentication method** - the VNC server does not require anymore a file holding the password. **During client authentication**, the **server retrieves** now the **password from the IGEL Setup**.

#### VNC Viewer

- Fixed **occasional freeze of shadowing session** e.g. when resizing a window. Now **the session gets unlocked again after about 20 seconds**.

|-----------|-----------------------------------------------------|
| Parameter | Unlock X server in case of shadowing session freeze |
| Registry  | <code>network.vncserver.grab_buster</code>          |
| Type      | bool                                                |
| Value     | <u>enabled</u> / <u>disabled</u>                    |

#### VirtualBox

- Fixed **no automatic resolution changes** as **virtualbox guest** issue.

#### Audio

- Fixed **headset microphone using 3.5mm audio jack** in **Dell Wyse 3040**.
  - Added possibility to **set** some **snd\_hda\_intel kernel module parameter** to overcome possible issues with sound devices.
- New registry keys:

- Old settings. **Command at startup removed.**

#### Jabra

- **Avoid deploying of the same Jabra Xpress package several times** on the same Jabra device.

#### Evidian

- Evidian now **triggers the regular Horizon session script**.

#### Hardware

- Fixed non-working **Prolific PL2303 USB-to-serial adapters**.

#### TC Setup (Java)

- **Removed "default" button** left of selection box IGEL Setup: **Sessions > Citrix > Citrix Global > Window > Multimonitor full-screen mode**.

#### Remote Management

- Fixed **repeated firmware registering over the ICG** which can occur after a new firmware was successfully registered in the UMS. The device invokes firmware registering again after every settings transfer from the device to the UMS. This behavior lasts until reboot.
- Fixed **syncing settings changed on the device if the UMS wasn't reachable**.
- Fixed handling of the **structure tag** if it was **configured in the system dialog "UMS Registering"**.

#### IGEL Cloud Gateway

- **Maximum waiting time for a response from the ICG server** can now be **configured by** the parameter **system.remotemanager.rmagent\_timeout** (default: 90 seconds).

#### VNC

- **Shadowing notification** is **restricted to primary monitor** and **cannot be moved outside of the monitor's visible range**.
- Fixed **sporadic connection failure** in VNC server.
- Fixed **occasional freeze of shadowing session** e.g. when resizing a window. Now the session gets unlocked again after about 20 seconds.

#### Features with Limited IGEL Support

|                                    |                                     |
|------------------------------------|-------------------------------------|
| Mobile Device Access USB (MTP)     | 1.1.17-3igel5                       |
| Mobile Device Access USB (imobile) | 1.2.1~git20191129.9f79242-1+b1igel8 |
| Mobile Device Access USB (gphoto)  | 2.5.25-2igel4                       |
| VPN OpenConnect                    | 8.10-1igel4                         |
| Scanner support                    | 1.0.27-1                            |
| VirtualBox                         | 6.1.10-dfsg-1igel41                 |

#### Services

| Service                     | Size   | Reduced Firmware |
|-----------------------------|--------|------------------|
| Asian Language Support      | 22.5 M | Included         |
| Java SE Runtime Environment | 36.0 M | Included         |

|                                            |         |              |
|--------------------------------------------|---------|--------------|
| Citrix Workspace app                       | 219.5 M | Included     |
| Citrix Appliance                           |         |              |
| Citrix StoreFront                          |         |              |
| Ericom PowerTerm InterConnect              | 15.5 M  | Included     |
| Media Player                               | 512.0 K | Included     |
| Citrix Appliance                           | 70.2 M  | Included     |
| Local Browser (Firefox)                    |         |              |
| RDP                                        | 4.2 M   | Included     |
| VMware Horizon                             |         |              |
| Cendio ThinLinc                            | 10.0 M  | Included     |
| Printing (Internet printing protocol CUPS) | 22.2 M  | Included     |
| NoMachine NX                               | 26.8 M  | Included     |
| VMware Horizon                             | 114.5 M | Included     |
| Voice over IP (Ekiga)                      | 6.5 M   | Included     |
| Citrix Appliance                           | 768.0 K | Included     |
| NCP Enterprise VPN Client                  | 27.0 M  | Not included |
| Fluendo GStreamer Codec Plugins            | 6.8 M   | Included     |
| IBM i Access Client Solutions              | 72.5 M  | Not included |
| Red Hat Enterprise Virtualization          | 3.0 M   | Included     |
| Parallels Client                           | 5.5 M   | Included     |
| NVIDIA graphics driver                     | 115.0 M | Not included |
| Imprivata Appliance                        | 10.8 M  | Included     |
| Evidian AuthMgr                            | 2.8 M   | Included     |
| Hardware Video Acceleration                | 13.0 M  | Included     |
| Extra Font Package                         | 1.0 M   | Included     |
| Fluendo GStreamer AAC Decoder              | 1.2 M   | Included     |
| x32 Compatibility Support                  | 48.0 M  | Included     |
| Cisco JVDI client                          | 45.8 M  | Included     |
| PrinterLogic                               | 40.8 M  | Not included |
| Biosec BS Login                            | 10.0 M  | Not included |
| Login VSI Login Enterprise                 | 28.8 M  | Not included |
| Stratusphere UX CID Key software           | 2.8 M   | Not included |
| Elastic Filebeat                           | 15.8 M  | Not included |
| WVD                                        | 13.8 M  | Included     |
| Local Browser (Chromium)                   | 81.2 M  | Not included |
| deskMate client                            | 5.8 M   | Included     |
| Cisco Webex Teams VDI                      | 32.0 M  | Not included |
| Cisco Webex Meetings VDI                   | 36.8 M  | Not included |
| Zoom Media Plugin                          | 39.8 M  | Not included |
| Teradici PCoIP Client                      | 7.8 M   | Included     |
| 90meter Smart Card Support                 | 256.0 K | Included     |

|                                            |         |              |
|--------------------------------------------|---------|--------------|
| Mobile Device Access USB (Limited support) | 256.0 K | Not included |
| VPN OpenConnect (Limited support)          | 1.5 M   | Not included |
| Scanner support / SANE (Limited support)   | 2.5 M   | Not included |
| VirtualBox (Limited support)               | 62.5 M  | Not included |

## General Information 11.04.100

To be beneficial to all new features and implementations, it is recommended to use UMS 6.04.100 or higher and update the corresponding profiles.

Firmware downgrade to older versions (11.01 or 11.02) is not possible, due to the unsigned firmware update files.

The following clients and features are not supported anymore:

- Caradigm
- Citrix Legacy Sessions
- Citrix Web Interface
- Citrix StoreFront Legacy
- Citrix HDX Flash Redirection
- Citrix XenDesktop Appliance Mode
- Flash Player Download
- JAVA Web Start
- Leostream Java Connect
- Systancia AppliDis
- VIA graphics driver

## Known Issues 11.04.100

### Firmware Update

- On **devices with 2 GB of flash storage**, it could happen that there is **not enough space for updating all features**. In this case, a corresponding error message occurs and unused features must be disabled in IGEL Setup under **System > Firmware Customization > Features** to perform the firmware update.

### Firefox

- **Firefox IGEL extensions are not updated automatically** under some circumstances. After an update from 11.03.xxx to 11.04.100, the IGEL extensions will stay on the old version.  
In this case, the following settings concerning **kiosk mode** cannot be executed:
  - Switch off hotkey for new window/tab
  - Blocking of internal browser pages like preferences, file picker, specific local directories

As a workaround:

- a **reset to defaults** should be performed
- or the **browser's mimetype template** can be switched **from "Standard" to "Minimal"** by registry key `browserglobal.app.mimetypes_template`. There, the browser profile is renewed as well.  
After the TC received the new setting, **reboot** and **set** the `mimetypes_template` registry key to **"Standard"** again.

## Citrix

- With activated **DRI3** and an **AMD GPU Citrix H.264 acceleration plugin** could freeze. Selective H.264 mode (API v2) is not affected from this issue.
- Citrix has known issues with **GStreamer1.0** which describe problems with **multimedia redirection of H.264, MPEG1 and MPEG2**. GStreamer1.0 is used if browser content redirection is active.
- **Browser content redirection** does not work with activated **DRI3** and **hardware accelerated H.264 deep compression codec**.
- **Citrix StoreFront login** with **Gemalto smartcard** middleware does not detect smartcard correctly if the card is inserted after start of login.  
Workaround: Insert the smartcard before starting the StoreFront login.
- **Citrix H.264 acceleration plugin** does not work with **enabled** server policy **Optimize for 3D graphics workload** in combination with server policy **Use video codec compression > For the entire screen**.
- To launch **multiple desktop sessions** with **Citrix HDX RTME** and **Citrix H.264** acceleration plugin, the following registry key must be enabled.

[More...](#)

|           |                                                                  |
|-----------|------------------------------------------------------------------|
| Parameter | Activate workaround for dual RTME sessions and H264 acceleration |
| Registry  | <code>ica.workaround-dual-rtme</code>                            |
| Value     | <u>enabled</u> / <u>disabled</u>                                 |

This workaround is not applicable when "Enable Secure ICA" is active for the specific delivery group.

- Using **CWA 19.x** sometimes **freezes the session** while session logoff from a published desktop.  
Workaround: **Use CWA 18.10.0**.
- During the running **Microsoft Teams Optimization of Citrix Workspace App 20.06, webcam redirection or screen sharing** may lead to **display errors** like black stripes or flickering.
- The **performance** of Citrix sessions when using **Workspace App 20.06** may be lower on some devices.  
A possible **workaround** is to **disable the virtual channels for Microsoft Teams** and **NSAP** or to set the **HDX transport protocol** to **TCP** only.
  - `ica.module.virtualdriver.vdwebrtc.enable`
  - `ica.module.virtualdriver.nsap.enable`
  - The protocol can be set via the Setup parameter **Sessions > Citrix > Citrix Global > Options > HDX Adaptive Transport over EDT** or via the **server policy** 'HDX Adaptive Transport'.

## VMware Horizon

- **Client drive mapping** and **USB redirection** for storage devices should not be enabled both at the same time.
  - On the one hand, when using USB redirection for storage devices: The USB on-insertion feature is only working when the client drive mapping is switched off. In the IGEL Setup client drive mapping can be found in: **Sessions > Horizon Client > Horizon Client Global > Drive Mapping > Enable Drive Mapping**. It is also recommended to disable local **Storage Hotplug** on setup page **Devices > Storage Devices > Storage Hotplug**.
  - On the other hand, when using drive mapping instead, it is recommended to either switch off USB redirection entirely or at least deny storage devices by adding a filter to the USB class rules. Furthermore, Horizon Client relies on the OS to mount the storage devices itself. Enable local `Storage Hotplug` on Setup page **Devices > Storage Devices > Storage Hotplug**.
- **External drives** mounted already before connection do not appear in the **remote desktop**.  
Workaround: map the directory /media as a drive. Then the external devices will show up inside the media drive.
- **After the disconnect of an RDP-based session**, the Horizon main **window** which contains the server or sessions overview **cannot be resized anymore**.
- **Seamless application windows in Horizon Client may not be displayed correctly**. When starting the first seamless app, a new iconified window appears in the taskbar, and only if you click on it, the application will show up.  
On some hardware (UD7-H850, UD2-M250, UD2-D220), however, the client aborts when this new window is de-iconified.

#### Imprivata

- On **devices with 2 GB of flash storage**, it could happen that there is not enough space to enable the **Imprivata partition after the update to 11.04.100**. In this case, a corresponding error message occurs and **unused features must be disabled** (in IGEL Setup under **System > Firmware Customization > Features**). Imprivata has to be (re-)enabled after a reboot then.

#### Wi-Fi

- TP-Link Archer T2UH Wi-Fi adapters does not work after system suspend/resume. Workaround: Disable system suspend at **IGEL Setup > System > Power Options > Shutdown**.

#### Parallels Client

- **Native USB redirection** does not work with Parallels Client.

#### Smartcard

- **Citrix Certificate Identity Declaration login** does not work with **SecMaker** smartcards.
- In seldom cases, the **authentication** hung when using **A.E.T. SafeSign smartcards**.

#### Appliance Mode

- Appliance mode **RHEV/Spice: spice-xpi firefox plugin** is no longer supported. The **Console Invocation** has to allow 'Native' client (auto is also possible) and should be started in fullscreen to prevent any opening windows.

#### Multimedia

- Multimedia redirection with **GStreamer** could fail with the **Nouveau GPU driver**.

## Hyper-V

- **Hyper-V (Generation 2)** needs **a lot of memory (RAM)**. The machine needs a sufficient amount of memory allocated.

## VirtualBox

- The current **VirtualBox Guest Tools/Drivers** will not work with **VirtualBox 5.2.x or older** hosts which leads to a black screen and non-working graphics.  
Possible workaround: Install with 'Failsafe Installation + Recovery' and set the registry key `x.drivers.force_vesa` to 'true'.
- When running in VirtualBox virtualization, **resizing the window will not automatically change desktop resolution** of IGEL OS guest.

## Audio

- **Audio jack detection on Advantech POC-W243L** doesn't work. Therefore, sound output goes through a possibly connected headset and the internal speakers.
- **IGEL UD2 (D220)** fails to restore the volume level of the speaker when the device used **firmware version 11.01.110** before.

## Hardware

- **HP t730** could freeze when monitors with **different resolutions** are connected (1920x1200 + 2560x1440 + 3840x1600 for example). When this occurs, the registry key `x.drivers.kms.best_console_mode` has to be set to **disabled**.
- Some newer **Delock 62599 active DisplayPort-to-DVI (4k)** adapters only work with INTEL devices.

## Remote Management

- **AIT feature with IGEL Starter License** is **supported** by the **UMS version 6.05.100**.

## Base system

- **Update from memory stick** requires network online state (when multiple update stages are involved).

## deskMate

- Integrated deskMate solution. Some stability issues may remain.

## Security Fixes 11.04.100

### Firefox

- Updated Mozilla **Firefox** to **68.10.0esr**:
  - Fixes for **mfsa2020-11**, also known as CVE-2020-6819 and CVE-2020-6820
  - Fixes for **mfsa2020-13**, also known as:  
[More...](#)
  - CVE-2020-6828, CVE-2020-6827, CVE-2020-6821, CVE-2020-6822, and CVE-2020-6825
  - Fixes for **mfsa2020-17** also known as:

**More...**

CVE-2020-12387, CVE-2020-12388, CVE-2020-12389,  
 CVE-2020-6831, CVE-2020-12392,  
 CVE-2020-12393, and CVE-2020-1239

- Fixes for **mfsa2020-21** also known as:

**More...**

CVE-2020-12399, CVE-2020-12405,  
 CVE-2020-12406, and CVE-2020-12410

- Fixes for **mfsa2020-25** also known as:

**More...**

CVE-2020-12417, CVE-2020-12418, CVE-2020-12419,  
 CVE-2020-12420, and CVE-2020-12421

- Changed option to **deny local file browsing** via file:// URI per default now.

**More...**

|            |                                                                |
|------------|----------------------------------------------------------------|
| IGEL Setup | <b>Firefox Browser &gt; Firefox Browser Global &gt; Window</b> |
| Parameter  | Hide local filesystem                                          |
| Registry   | browserglobal.app.filepicker_dialog_hidden                     |
| Value      | <u>enabled</u> / disabled                                      |

## Base system

- **SSH protocol version 1 is now disabled.** All remote connections via SSH must use SSHv2.

## Driver

- Updated **Nvidia driver** to version **440.100**.

## New Features 11.04.100

## Citrix

- Integrated **Citrix Workspace App 20.06**.

Available Citrix Workspace Apps in this release: **20.06** (default), **19.12**, and **18.10**

- Added a registry key to enable optimization for **Microsoft Teams**.

**More...**

|            |                                                                                               |
|------------|-----------------------------------------------------------------------------------------------|
| IGEL Setup | <b>Sessions &gt; Citrix &gt; Citrix Global &gt; Unified Communications &gt; VDI Solutions</b> |
| Parameter  | Microsoft Teams optimization                                                                  |
| Registry   | ica.module.virtualdriver.vdwebrtc.enable                                                      |
| Value      | <u>on</u> / off                                                                               |

- Added a registry key to enable support for **NetScaler App Experience (NSAP)** virtual channel.

**More...**

|           |                                                   |
|-----------|---------------------------------------------------|
| Parameter | HDX uses the NSAP virtual channel                 |
| Registry  | <code>ica.module.virtualdriver.nsap.enable</code> |
| Value     | <u>on</u> / off                                   |

- Integrated **Citrix HDX/RTME 2.9**.
- Integrated **ZOOM Media Plugin for Citrix** to optimize performance for ZOOM video calls and conferences.
- IGEL x64: 5.0.415463.0619 requires Windows x86 or x64: 5.0.24002.0619. <https://support.zoom.us/hc/en-us/articles/360031096531-Getting-Started-with-VDI>

**More...**

|            |                                                                                               |
|------------|-----------------------------------------------------------------------------------------------|
| IGEL Setup | <b>Sessions &gt; Citrix &gt; Citrix Global &gt; Unified Communications &gt; VDI Solutions</b> |
| Parameter  | Zoom Media Plugin                                                                             |
| Registry   | <code>ica.module.virtualdriver.vdzoom.enable</code>                                           |
| Value      | <u>enabled</u> / <u>disabled</u>                                                              |

- Updated **signotec Virtual Channel** to version **8.0.9**.

The corresponding changes are:

- Logging has been improved.
- A problem with the communication with the signature pads was fixed.
- USB communication via bulk transfer is model-independent (improved speed).

- Removed parameter **Content redirection** / `ica.wfclient.crenabled` from TC Setup (**Sessions > Citrix > Citrix Global > HDX Multimedia**).

#### OSC Installer

- Added **dialog "Feature Selection"** in **IGEL OS Creator** for the selection of features to be installed on the target device. It interactively shows if the current selection of features fits onto the device. The selection of features is saved on the OSC installer medium (when allowed) and set as the default selection for the next installation. If "**Migrate Old Settings**" is selected, the set of features of the old installation is set as the default selection.
- **Reduced memory requirements** of OSC installer for **machines without Nvidia graphic card**.

#### WVD

- Added **AAC Codec support** to Audio Output redirection.

**More...**

|          |                                               |
|----------|-----------------------------------------------|
| Registry | <code>sessions.wvd%.options.enable-aac</code> |
| Value    | <u>enabled</u> / <u>disabled</u>              |

#### RDP/IGEL RDP Client 2

- Added the **possibility to add a black background** to the RDP auto-reconnect window.

**More...**

|          |                                                              |
|----------|--------------------------------------------------------------|
| Registry | <code>sessions.rdp.options.reconnect-black-fullscreen</code> |
|----------|--------------------------------------------------------------|

|       |                           |
|-------|---------------------------|
| Type  | bool                      |
| Value | enabled / <u>disabled</u> |

- Added configuration option for the **amount of RDP auto-reconnect retries**. The default value will remain "20". A value of "0" means infinite retries.

[More...](#)

|          |                                                        |
|----------|--------------------------------------------------------|
| Registry | sessions.rdp.winconnect%.options.reconnect-max-retries |
| Type     | Integer                                                |
| Value    | <u>20</u>                                              |

#### VMware Horizon

- Updated **VMware Horizon** to version **5.4.1**.

For usage with **Blast protocol**, it is recommended to enable **DRI3 graphics mode**:

|           |                           |
|-----------|---------------------------|
| Parameter | Use DRI3                  |
| Registry  | x.driver.use_dri3         |
| Value     | enabled / <u>disabled</u> |

- Fixed **handling of RDP's fullscreen mode span**, which means to combine all local monitors for one big remote session.

#### PowerTerm

- Updated **Ericom PowerTerm** LTC to version **14.0.0.45623**.

#### Parallels Client

- Updated **Parallels Client** to version **17.1.1**.

#### Teradici PCoIP Client

- Updated **Teradici PCoIP** Client to version **20.04.2-18.04**. The new version supports **hardware-accelerated H.264 decoding with Ultra PCoIP**.
- New parameters:

[More...](#)

|           |                   |
|-----------|-------------------|
| Parameter | Log level         |
| Registry  | pcoip.log-level   |
| Value     | 0 / 1 / 2 / 3 / 4 |

PCoIP sessions **can now use the global setting**.

[More...](#)

|           |                       |
|-----------|-----------------------|
| Parameter | Show codec indicator  |
| Registry  | pcoip.codec_indicator |

|       |                                                                                                                                                                                                        |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Value | <u>disabled</u> / enabled                                                                                                                                                                              |
| Info  | Show a small dot in the bottom left corner during the session to indicate which codec is being used. Green indicates simple codec; blue indicates tic2 codec. This setting is only available globally. |

## XEN

- Added support to run as **XEN guest system**.

## NX client

- Updated **NoMachine NX Client** to version **6.11.2**.

## ThinLinc

- Updated **ThinLinc** to version **4.12**.

## Network

- DHCP changes:**

The system now sends a **vendor-class-identifier(option 60)** "**igel-dhcp-1**". Furthermore, it requests **vendor-encapsulated-options (43)**. Those can be used to transfer IGEL-specific options **igelrmserver(224)** and **umsstructuretag(226)** in the vendor namespace (with the same option numbers and types) instead of in the global namespace.

The former way is also still functional, but values transferred in the new way override those which were transferred the old way.

Apart from 224 and 226 one more option is defined in the vendor space: **"exclusive"**, **option 1**, **type byte**. Its presence means that global options 224 and 226 shall not be interpreted in the traditional way and only settings in the vendor space apply.

IPv6 is not involved.

- Added support for **LTE module HP lt4132**.
- Updated **Network Manager** to version **1.20.4**.
  - The range of **network.interfaces.wirelesslan.device0.bgscan.module** now includes **"default"** for using original upstream Network Manager settings.
- Added some **additional Ethernet network drivers**.

**More...**

- vxge : Neterion's X3100 Series 10GbE PCIe I/OVirtualized Server adapter
- myri10ge : Myricom 10G driver (10GbE)
- tehuti : Tehuti Networks(R) network driver
- bnxt\_en : Broadcom BCM573xx network driver
- bnx2x : QLogic BCM57710/57711/57711E/57712/57712\_MF/57800/57800\_MF/57810/57810\_MF/57840/57840\_MF driver
- Added a registry key for specifying a **space-separated list of DNS resolver options**. See "**man resolv.conf**".

[More...](#)

| Parameter | Option list         |
|-----------|---------------------|
| Registry  | network.dns.options |
| Type      | string              |
| Value     | <u>empty</u>        |

## Wi-Fi

- Added support for **WPA3 Personal network authentication**.
- Added a registry key for **preferring WPA3 Personal** (i.e. SAE) or **WPA2 Personal** at the time a connection is created with Wireless Manager when the access point offers both:

[More...](#)

|           |                                       |
|-----------|---------------------------------------|
| Parameter | Prefer WPA3 Personal to WPA2 Personal |
| Registry  | network.applet.wireless.prefer_sae    |
| Range     | [default] [yes] [no]                  |
| Info      | "default" currently means "no"        |

- Added **captive portal support for Wi-Fi**. Passing through a captive portal (which is basically a web application) is sometimes **necessary to achieve full network connectivity** (here also referred to as online state).
  - The **feature is disabled when** the following **registry key is empty**. Otherwise, it should be a **URI** that is **suitable for NetworkManager connectivity check**.
   
**More...**

|           |                                            |
|-----------|--------------------------------------------|
| Parameter | Online check URI                           |
| Registry  | network.global.onlinecheck.uri             |
| Range     | [] [http://connectivity-check.ubuntu.com/] |
| Value     | http://connectivity-check.ubuntu.com/      |

- The following key specifies the **conditions of the online check**. It is also required that **no Ethernet cable is plugged in** and **DHCP is not set** in the UMS.
   
**More...**

|           |                                                    |
|-----------|----------------------------------------------------|
| Parameter | Condition for online check                         |
| Registry  | network.global.onlinecheck.condition               |
| Range     | [None] [Network is user-defined] [Network is open] |

- This key determines **how many seconds to wait for full network connectivity** before the network connection is considered complete with incomplete connectivity. The timeout should allow a user to do what is necessary for passing through the captive portal.
   
**More...**

|           |                                    |
|-----------|------------------------------------|
| Parameter | Online check timeout               |
| Registry  | network.global.onlinecheck.timeout |
| Type      | integer                            |
| Value     | 120                                |

- Enabled **use of 802.11r**, also known as **fast BSS transition** or FT. This is confirmed to work at least in the **mode "over the air"**.

#### Smartcard

- Updated **OpenSC** to version **0.20.0**. See <https://github.com/OpenSC/OpenSC/releases/tag/0.20.0> for detailed release notes.

#### Cisco JVDI Client

- Updated **Cisco JVDI** client to version **12.9.0**.

#### Cisco Webex VDI

- Integrated the new feature **Cisco Webex Teams VDI for Citrix** and **Horizon** sessions.  
**Cisco Webex Teams** version: **3.0.15711.0**

- Added a parameter to activate the feature within **Citrix**:

[More...](#)

| Registry   | vmware.view.vdciscoteams.enable                                                                |
| Value      | enabled / <u>disabled</u>                                                                      |

- Integrated the new feature **Cisco Webex Meetings VDI for Citrix** sessions.

Client Version: **40.7.0.375**

- Added a parameter to activate the feature within **Citrix**:

[More...](#)

|            |                                                                                       |
|------------|---------------------------------------------------------------------------------------|
| IGEL Setup | <b>Sessions &gt; Citrix &gt; Citrix Global &gt; Unified Communications &gt; Cisco</b> |
| Parameter  | Cisco Webex Meetings VDI                                                              |
| Registry   | ica.module.virtualdriver.vdciscomeetings.enable                                       |
| Value      | enabled / <u>disabled</u>                                                             |

#### Base system

- Updated base system to **Ubuntu LTS** version **18.04**.
- Updated **kernel** to version **5.4.48**.
- Added **notification for critical system out-of-memory state** when the available **system memory is lower than 40 MB** and **processes were killed** to prevent the system from freezing.
- Display **AMD Memory Guard in Boot Mode** when it's active.
- Added **notification option for Session Autostart** when a autostart delay is configured. It is possible to cancel the session autostart or to start immediately.

[More...](#)

|            |                                   |
|------------|-----------------------------------|
| IGEL Setup | <b>* &gt; Desktop integration</b> |
| Parameter  | Autostart notification            |
| Value      | enabled / <u>disabled</u>         |

- Added correct **UI handling** for **Wacom DTU-1141B**.
- Updated **CA Certificates** to version **20190122** (Mozilla authority bundle version **2.30**). The following authorities were added:

- Added parameter to override **rate limit of debug messages** in journal. It should be enabled for debugging processes which generate a big amount of messages in order to avoid skipping of messages.

[More...](#)

|           |                               |
|-----------|-------------------------------|
| Parameter | No rate limit                 |
| Registry  | system.journald.no_rate_limit |
| Value     | enabled / <u>disabled</u>     |

- It's possible to **extend the login options of the Kerberos** login window now.

There are several new registry keys:

[More...](#)

|           |                                                |
|-----------|------------------------------------------------|
| Parameter | extended login                                 |
| Registry  | sessions.xlock0.options.login_extension_active |
| Value     | enabled / <u>disabled</u>                      |

If enabled, an "**Associate Type**" **combo box** is shown. The **entries of the combo box** are **configured with** the following **login\_feature1**, **login\_feature2**, and **login\_feature3** **keys**.

- Configure the **label of the "Associate Type" combo box**:

[More...](#)

|           |                                              |
|-----------|----------------------------------------------|
| Parameter | login features label                         |
| Registry  | sessions.xlock0.options.login_features_label |
| Value     | Default: empty which means "Associate Type"  |

- **The first entry of the "Associate Type" combo box.** To enable the combo box entry, add e.g. the text "Store associate at home store".

[More...](#)

|           |                                        |
|-----------|----------------------------------------|
| Parameter | login_feature1                         |
| Registry  | sessions.xlock0.options.login_feature1 |

**If the entry is selected, the username is expanded by a fixed string** defined in **login\_extension\_default** registry key.

- The **fixed username extension** for the first feature. It can be set e.g. by a script.

[More...](#)

|           |                                                 |
|-----------|-------------------------------------------------|
| Parameter | login extension default value                   |
| Registry  | sessions.xlock0.options.login_extension_default |

- **The second entry of the "Associate Type" combo box.** To enable the combo box entry, add e.g. the text "Store associate visiting this store".

[More...](#)

|           |                                        |
|-----------|----------------------------------------|
| Parameter | login_feature2                         |
| Registry  | sessions.xlock0.options.login_feature2 |

If the entry is selected, the username is expanded by a suffix that is entered in a separate entry widget.

- The **label of the entry field for the username suffix.** Set it e.g. to "Store Number".

[More...](#)

|           |                                               |
|-----------|-----------------------------------------------|
| Parameter | login_extension_label                         |
| Registry  | sessions.xlock0.options.login_extension_label |
| Value     | Default: empty which means "no label"         |

- **The third entry of the "Associate Type" combo box.** To enable the combo box entry, add e.g. the text "Homeoffice associate visiting this store".

[More...](#)

|           |                                        |
|-----------|----------------------------------------|
| Parameter | login_feature3                         |
| Registry  | sessions.xlock0.options.login_feature3 |

If the entry is selected, another domain can be selected from an appended domain combo box.

- The **label for the domain entry field.**

[More...](#)

|           |                                            |
|-----------|--------------------------------------------|
| Parameter | login domain label                         |
| Registry  | sessions.xlock0.options.login_domain_label |
| Value     | Default: empty which means "domain"        |

- The **extension to the username is added after a dot ('.')**.
- For the **domain drop-down box, four different domains are configurable** here:

[More...](#)

|            |                                                                  |
|------------|------------------------------------------------------------------|
| IGEL Setup | <b>Security &gt; Active Directory/Kerberos &gt; Domain 1 - 4</b> |
| Parameter  | Fully qualified domain name                                      |
| Registry   | auth.krb5.realms.realm0.realm                                    |
| Registry   | auth.krb5.realms.realm1.realm                                    |
| Registry   | auth.krb5.realms.realm2.realm                                    |
| Registry   | auth.krb5.realms.realm3.realm                                    |

- There are keys to **add more domain names:**

[More...](#)

|           |                                 |
|-----------|---------------------------------|
| Parameter | Domain                          |
| Registry  | auth.krb5.extended_domain%.name |

**Info**

Add a new instance for each domain entry.

- In the Kerberos login window, it's now possible to turn on or off **numlock** and/or **capslock for password input**.

Registry keys:

[More...](#)

|           |                                                                                                                |
|-----------|----------------------------------------------------------------------------------------------------------------|
| Parameter | Handling of numlock                                                                                            |
| Registry  | <code>sessions.xlock0.options.numlock_approach</code>                                                          |
| Range     | [ <u>don't change</u> ] [set on] [set off]                                                                     |
| Info      | "set on": force numlock on when password is entered<br>"set off": force numlock off when password is entered   |
| Parameter | Handling of capslock                                                                                           |
| Registry  | <code>sessions.xlock0.options.capslock_approach</code>                                                         |
| Range     | [ <u>don't change</u> ] [set on] [set off]                                                                     |
| Info      | "set on": force capslock on when password is entered<br>"set off": force capslock off when password is entered |

- It's now possible to **show a message in the Kerberos login window**. Registry key:

[More...](#)

|           |                                                  |
|-----------|--------------------------------------------------|
| Parameter | banner text                                      |
| Registry  | <code>sessions.xlock0.options.banner_text</code> |
| Info      | The user will see the message on the top border. |

- In the Kerberos login window, there is a **mode to convert passwords always to upper case**. To turn it on, use:

[More...](#)

|           |                                                                |
|-----------|----------------------------------------------------------------|
| Parameter | case-insensitive password                                      |
| Registry  | <code>sessions.xlock0.options.case_insensitive_password</code> |
| Value     | enabled / <u>disabled</u>                                      |

- With this key, the text for the **case-insensitive indicator** can be modified:

[More...](#)

|           |                                                            |
|-----------|------------------------------------------------------------|
| Parameter | case-insensitive text                                      |
| Registry  | <code>sessions.xlock0.options.case_insensitive_text</code> |
| Value     | Default: empty which means "case-insensitive"              |

- Fixed **ThinkPad Brazil keyboard layout**.

- It is possible to **show a custom logo** in the Kerberos login window. Also, the **background and text color is customizable** now.

| Info      | Background color in the format #rrggbba<br>Example: #7700ff |

- Added **new local logon method "Login with Smart Card Certificate"**. It implements the **pam\_pkcs11 smartccard authentication module**. For a successful configuration, the following has to be provided via **UMS file transfer**:
  - root and intermediate CA certificates** for verification of the client certificates in folder /etc/pam\_pkcs11/cacerts
  - file /etc/pam\_pkcs11/cn\_map which contains **mappings of Common Names to UPN names**.  
Each line is in the format \<common name> -> \<logon name>  
where  
\<common name> is the common name part of the subject of the certificate  
\<logon name> is
  - in case of **Kerberos Enterprise** (auth.login.krb5\_enterprise) **disabled**:  
the UPN name of the SubjectAltName extension of the certificate,  
e.g. [user@MY.DOMAIN](mailto:user@MY.DOMAIN)<sup>417</sup>
  - in case of **Kerberos Enterprise** (auth.login.krb5\_enterprise) **enabled**:  
the UPN name of the SubjectAltName extension of the certificate with Default Domain (auth.krb5.libdefaults.default\_realm) suffix,  
e.g. [user@DOMAIN.SUFFIX@DEFAULT.DOMAIN](mailto:user@DOMAIN.SUFFIX@DEFAULT.DOMAIN)<sup>418</sup>
- The logon method **can either be used standalone or together with Kerberos logon** as a fallback if Kerberos does not succeed.

| Registry  | sessions.xlock0.options.auto_login |
| Value     | <u>enabled</u> / <u>disabled</u>   |

## X11 system

- Changed: Use **modesetting graphics driver** on **devices with newer intel GPUs**.
- Changed registry key:

[More...](#)

|           |                                                   |
|-----------|---------------------------------------------------|
| Parameter | Use generic modesetting driver for INTEL hardware |
| Registry  | x.drivers.intel.use_modesetting                   |
| Range     | [Auto] [True] [False]                             |

- Updated **DisplayLink driver** to version **5.3.1.34**.

- Added new registry key for **Nvidia cards** (use this **if you want to use PRIME**):

[More...](#)

|           |                                                  |
|-----------|--------------------------------------------------|
| Parameter | Enable/Disable NVIDIA Kernel Modesetting support |
| Registry  | x.drivers.nvidia.use_modeset                     |
| Range     | [Default] [Enabled] [Disabled]                   |
| Info      | "Default" is currently the same as "disabled"    |

- Updated **florence soft keyboard** to version **0.6.3**.

- Removed 640x480** from possible **display resolution range**.

- Added possibility to **change the order of primary** and **secondary graphic card**.

New registry key:

[More...](#)

|           |                                                    |
|-----------|----------------------------------------------------|
| Parameter | Make the secondary graphic card to the primary one |
| Registry  | x.drivers.swap_card0_with_card1                    |
| Value     | <u>true</u> / <u>false</u>                         |

- Added possibility to **invert the order of all graphic cards**.

New registry key:

[More...](#)

|           |                                      |
|-----------|--------------------------------------|
| Parameter | Invert default graphic card ordering |
| Registry  | x.drivers.swap_all                   |
| Value     | true / false                         |

- Added possibility to **choose the driver** which should become **the primary graphic card**.

New registry key:

[More...](#)

|           |                                                                             |
|-----------|-----------------------------------------------------------------------------|
| Parameter | Choose which drivers should be preferred to become the primary graphic card |
| Registry  | x.drivers.preferred_driver                                                  |
| Value     |                                                                             |

## X server

- Added possibility to influence **mode used for mirroring screens with different resolutions**. (Notice: here scaling may not always work).

New registry key:

[More...](#)

|           |                                                                                   |
|-----------|-----------------------------------------------------------------------------------|
| Parameter | Choose the mode which should be used for mirroring monitors if resolution differs |
| Registry  | x.xserver0.mirror_mode                                                            |
| Range     | [Default] [Biggest common resolution] [Scaling]                                   |
| Value     | Default (use panning if needed)                                                   |

## Driver

- Updated **Grundig Dictation driver for Citrix** and **RDP** to version **0.10**.

The changes are:

- Support **third-party USB HID devices** in a more flexible way
- Fixed USB transfer overflow for **Philips LFH 9620**
- Remove **erroneous debug output** in release configuration
- Allow to **control** also "**Headphone**" **volume & switches**

- Updated **Olympus driver for dictation** to version **2020-03-23-143654**.

**Changelog:**

New:

- DR-1200: PID 0225
- DR-2300: PID 0256

Changed:

- PID 0253 from DR-2100 to DR-1200

- Updated **Philips Speech driver** to version **G12.9**.

The changes are:

- Support for **Philips SpeechLive**

- Faster and more reliable remote session connection status check
- **Shutdown of the PSPDispatcher.exe** on the server if it's not in use anymore.
- Updated **StepOver TCP client** and **Citrix plugin** to version **2.4.2**. Fixed **crash of Citrix** session while **using the signature pad**.

## Audio

- Integrated **new sound mixer**.
- New combo box for **audio device selection in TC Setup** available:
  - **Accessories > Sound Preferences > Options > Default Sound Output**
  - **Accessories > Sound Preferences > Options > Default Sound Input**

## Appliance Mode

- Integrated: The **new Browser Appliance mode** is the successor for the XenDesktop appliance mode. The Browser is configured as in XenDesktop appliance mode, but **does not use the upstream SAS window**.

[More...](#)

|            |                                                  |
|------------|--------------------------------------------------|
| IGEL Setup | <b>Sessions &gt; Appliance Mode</b>              |

| Registry   | xen.xenapp-morph.enabled                         |
| Type       | Bool                                             |
| Value      | enabled / disabled                               |
| IGEL Setup | <b>Sessions &gt; Appliance Mode &gt; Browser</b> |
| Parameter  | Web URL                                          |
| Registry   | xen.xenapp-morph.xendeliveryserverurl            |
| Type       | string                                           |

- A **hyperlink to the "On-screen Keyboard"** is available on the right side under **"Related Configurations"**.

## Multimedia

- Added **ffmpeg support** for following codecs:
  - Added support for **new decoders**:
    - [More...](#)
    - flac, gif, libaom\_av1, mjpeg, mjpegb,  
mp1, mp1float, mp2, mp3, mp3adu,  
mp3adufloat, mp3float, opus, theora, vorbis,  
vp2, vp8, vp9, and wavepack
  - Added support for **new encoder**: libopus
  - Added support for **new hwaccels**:
    - [More...](#)
    - mjpeg\_vaapi, mpeg1\_vdpau, mpeg2\_vaapi,  
mpeg2\_vdpau, vp8\_vaapi, and vp9\_vaapi
  - Added support for **new parsers**: avi, flac, gif, matroska, mp3, ogg, and wav
  - Added support for **new demuxers**: avi, flac, gif, matroska, ogg, and wav
  - Added support for **new muxers**: ogg and opus

## Chromium Browser

- Integrated **Chromium** browser version **83.0.4103.61** as experimental feature.  
Configurable at **IGEL Setup > Sessions > Chromium Browser > Chromium Browser Global** and **IGEL Setup > Sessions > Chromium Browser > Chromium Browser Sessions**
- Main switch to enable and disable **IGEL configuration**:

| Parameter  | H.264 decoding                                                                                                                 |
| Registry   | chromiumglobal.app.h264_decoding                                                                                               |
| Value      | enabled / disabled                                                                                                             |
| Info       | Enable Audio/Video playback of non-free codecs (H.264+AAC) - the support is in a beta state and therefore disabled by default. |

## Evidian

- Added the Evidian **built-in option 'Process To Spy'**.  
[More...](#)

|          |                         |
|----------|-------------------------|
| Registry | evidian.processtospy    |
| Value    | YOUR-PROCESS / disabled |

## ControlUp

- Integrated **ControlUp Monitoring Tool for Citrix** and **Horizon** sessions.

## Hardware

- Added hardware support for **Lenovo M625q**.
- Added hardware support for **LG CL600N**.
- Added hardware support for **HP Engage Go Mobile System**.
- Added hardware support for **Fujitsu FUTRO S740**.

- Added hardware support for **OnLogic CL210G-10**.
- Added hardware support for **OnLogic KARBON 300**.
- Added hardware support for **Rein Medical Clinio S 522TCT** and **S 524TCT**.
- Added hardware support for **HP t640 Thin Client**.
- Added basic support for **Macbook models 2018 and newer**.
- Added support for **Sennheiser MB 660, SC 630, SC 45, SC 160 headsets**.
- Added support for **Plantronics Savi 8245 Office, Voyager 6200 UC, Savi 8220 headsets**.
- Added serial port driver for **Exar UART PCIe card**.
- Added driver for **GSPCA based webcams**.

#### TC Setup (Java)

- Added Setup page **Sessions > Horizon Client > Horizon Client Global > Window**. Settings for "**Window size**" and "**Multimonitor full-screen mode**" can be set.  
These settings are repeated and originate in RDP Global but are now presented in a more obvious place for Horizon sessions.

#### IGEL Cloud Gateway

- Added support for **Secure Terminal over ICG**.
- **Changed default order of connecting to the IGEL Remote Management** - an available UMS Server is preferred now by default. The device establishes a configured ICG connection only if the UMS Server is not reachable. This behavior can be changed by the parameter:

|----------|-------------------------------------------------------|
| Registry | <code>system.remotemanager.icg_try_ums_connect</code> |
| Value    | <u>true</u> / false                                   |

#### Fabulatech

- Updated **FabulaTech Scanner for Remote Desktop** client to version **2.4.0.11**.
- Updated **FabulaTech plugins** to version **3.6.2**.
- Updated **Fabulatech USB for Remote Desktop plugins** to version **3.6.8**.

#### Jabra

- **Jabra Xpress** (JDU) is upgraded to the **7.2.0-509** version. List of the newly introduced parameters:

#### Resolved Issues 11.04.100

##### Citrix

- "**Green artifacts**" problem in Citrix sessions (most probably) fixed.
- Citrix **hardware video acceleration** supports the **latest Intel hardware**.

##### OSC Installer

- Fixed issue with **filesystems not** always get detected correctly in **initramfs OSC Installer** (needed for using iso file boot parameter).
- Fixed: **username and password in the error message** are not shown anymore when firmware file could not be downloaded.
- Get **URLs** with **username:password@** working.

## RDP/IGEL RDP Client 2

- Fixed error when **renaming a non-empty shared folder**.

## WVD

- Includes **WVD client** with fixed **RDcoreSDK** version.
- **Clipboard redirection** has potential privacy and security risks and is therefore **disabled by default**.
- **IGEL WVD Client** integrated

## VMware Horizon

- Fixed missing **support for ThinPrint** and **Skype for Business** when starting **Horizon from Firefox browser**.

## Firefox

- Fixed Firefox **block extension missing tabs** created via command line argument.
- Fixed **rtsp media stream** with enabled apparmor.
- **Show "blocked" page instead of closing tab** when blocked page is viewed in Firefox.
- Fixed functionality in the local setup to start the **certificate manager of the Firefox browser**.
- Fixed functionality in the local setup to **start the Firefox browser with the internal page to show the installed plugins**.
- Fixed **restart mechanism in the Firefox** browser where the browser could not be closed on suspend resulting in a superfluous browser window on resume.

## Network

- Improved **Wi-Fi DHCP lease handling**: Leases are discarded when the network changes. The former behavior caused problems with certain iPhone IOS versions.
- **802.1X failures** now generally **result in falling back to a connection without authentication**, e.g. also in the case of 802.1X settings that don't make sense at all. This only **applies if the fallback is allowed** of course.
- **wpa\_supplicant** now adds **timestamps to entries of its log file**.
- Use **e1000e driver** out of the kernel **as default** instead of the third-party driver.
- Added a registry key that determines whether **lldpd is in receive-only mode**.  
**More...**

|            |                                                                                      |
|------------|--------------------------------------------------------------------------------------|
| Parameter  | Disable sending LLDP packets                                                         |
| Registry   | network.lldp.rxonly                                                                  |
| Value      | true                                                                                 |
| Attention: | If the behavior since 10.06.100 shall be preserved, this key must be set to "false". |

- Updated **scep** to version **0.7.0**.

## Wi-Fi

- Fixed non-working **Marvell WLAN device 8997** (SDIO version).

## NCP VPN

- Added fix for **NCP Secure Client**.

## genucard VPN

- **genucard 3 is supported** now.

## Imprivata

- **Control the visibility** of the **Horizon session control bar** via registry parameter:

[More...](#)

|          |                           |
|----------|---------------------------|
| Registry | vmware.view.menu-bar      |
| Value    | <u>enabled</u> / disabled |

- Honor the Citrix Window Configuration in **Imprivata Appliance Mode**.

- Fixed **Lock key** and **Tap out** behavior.

- Fixed **MS RDSH** session.

- Simplified the configuration of **Imprivata FUS**.

- **Enable the following** if you use **Imprivata** versions **above 6.3**:

[More...](#)

|          |                                  |
|----------|----------------------------------|
| Registry | imprivata.gain_permission        |
| Value    | <u>enabled</u> / <u>disabled</u> |

- Fixed **bug regarding Imprivata** and **On-Screen Keyboard**.

- **Restore the keyboard map** after Horizon sessions.

## Smartcard

- Fixed not working **90meter in Firefox** when **apparmor** is active.

- Fixed problem in **smartcard resource manager PC/SC-Lite** which caused **disconnects of VMware Horizon sessions** when using smartcards with certain applications.

- Added **driver for smartcard reader Elatec TWN4 CCID** (USB 0x09D8:0x0425).

- Updated **cryptovision scInterface** to version **7.3.1**.

The changes are:

[More...](#)

- Consolidated features of the last versions 7.2 and 7.1

- Malta eID Release

- Added Admin Card Gemalto V3

- Updated **PC/SC-Lite smartcard resource manager** to version **1.8.26**.

## HID

- Fixed: **Switching touchpad to other driver** via IGEL registry key.

## CUPS Printing

- Added new version **25.1.0.425** of **Printerlogic Printer Installer Client**.

- Added **new printer models** into IGEL OS from the current CUPS drivers.

## Base System

- Fixed bug in **folder generation of the Application Launcher**.
- Fixed **TLS certificate verification** problem of **certificates signed by "USERTrust RSA CA" or "COMODO RSA CA"**. The problem could occur in clients like Citrix Workspace App and VMWare Horizon client.
- Fixed **password change with AD/Kerberos**. Before this fix, the password complexity rules were not enforced for users with the Reset Password permission for their account.
- You can now **connect to Bluetooth devices without pairing**. For this a new registry key is available.

**More...**

|           |                                 |
|-----------|---------------------------------|
| Parameter | connect devices without pairing |
| Registry  | devices.bluetooth.connect_only  |
| Value     | enabled / disabled              |

- **Some devices do not connect automatically after reboot**. To fix that, bluetoothctl connect \<device-ID> can be executed via script. If the **device is connected (0)** or **not (1)** can be seen in return value.

**Known devices** that do not connect:

- dialog semiconductor IoT Multi Sensor DK
- **SSHv1 support is now removed** due to newer openssh libraries.
- **Forcing protocol version 1 via SSH Session > Options is no longer possible**.
- The network.ssh\_server.server\_key\_bits registry key parameter is **removed** due to **depreciation of SSHv1**.
- Updates **systemd** to **Ubuntu Focal version**.
- Improved **stability of mounting network shares** when using a **static network configuration**.
- Fixed **apparmor cache issue after update with OSC installer**.
- Bug fix: **touchscreen calibration** on 1 or more normal screen with 1 touch screen environment.
- Fixed **syslog**, **kern.log**, **auth.log**, and **daemon.log** entries are **not shown in IGEL System Log Viewer**.
- Updated **Grub2** to current Debian SID/Bullseye version **2.04**.
- **Removed** deprecated registry keys system.idlecommand.
- New **Bluetooth pairing tool** and **Bluetooth tray icon** for Bionic.
- Updated **kernel** to mainline version **5.4.48**.
- If used as master image, the **image will expand itself to full size** (limited to 16 GiB) on flash. This is done only on first boot and never again.
- Possible **rollout of initial settings, certificates or licenses placed on first partition** for this you need to:
  - a. Write image to your USB/Flash medium.
  - b. Mount or simply access the **1. VFAT partition** which is present (should be empty).
  - c. Copy your **setup.ini** and/or **\*\*.lic files** to the 1st partition (no directories).
  - d. Create a ca-certs directory and copy your certificates into it. They will be copied to the /wfs/ca-certs directory on first boot.
  - e. You can now copy the USB/Flash medium several times if needed.
  - f. On first boot, the device will reboot out of the splash screen (reread changed partition table)
  - g. The settings, certificates and/or licenses will get rolled out and deleted from the 1st partition.

- Added initial support for **Thunderbolt devices** (only limited support here, may work but is not guaranteed).
- Updated IGEL **EULA**.
- Updated **AMD Microcode** to version **3.20191218.1**.
- Updated **Intel Microcode** to version **20200520** and a special update for **J1900 devices**.
- Updated **Intel Microcode** to **20200616** version.
- Added a **userspace oom killer** to the firmware.

#### Firmware Update

- An **ongoing firmware update can now be canceled by the user** when the network online status could not be reached after 10 seconds (since start of the firmware update).

#### H264

- **Citrix hardware video acceleration** supports the latest Intel hardware.

#### Storage Devices

- Fixed mount issues with **Iphone XR/XE/11PRO**.
- **Mobile Device Access** feature respects USB Access Control now.
- Fixed unwanted **ownership change** of automounted Linux filesystem root directories.

#### X11 System

- Fixed **Display Switch not saving settings over reboot**.
  - **Default to settings from Setup** instead of mirror when no Display Switch profile is available.
- Prevent misconfiguration that **picks GPU without render capability as primary** (e.g. Displaylink).
- Improved **Nvidia** with **additional GPU handling**.
- Fixed error with **single-gpu Nvidia card support**.

#### X server

- Fixed a **Xorg crash** due to a **NULL pointer dereference in the Intel driver**.

#### Window Manager

- Fixed **random login** (greeter) **window focus** issues.

#### Shadowing/VNC

- Added the "**snapfb**" option for the VNC server.  
[More...](#)

|          |                                                                                            |
|----------|--------------------------------------------------------------------------------------------|
| Registry | <code>network.vncserver.snapfb</code>                                                      |
| Value    | <u>enabled</u> / <u>disabled</u>                                                           |
| Info     | This option should only be enabled with experienced delays in remote or shadowing session. |

- Improved **security of the password authentication method** - the VNC server does not require anymore a file holding the password. **During client authentication**, the **server retrieves** now the **password from the IGEL Setup**.

#### VNC Viewer

- Fixed **occasional freeze of shadowing session** e.g. when resizing a window. Now **the session gets unlocked again after about 20 seconds.**

**More...**

|           |                                                     |
|-----------|-----------------------------------------------------|
| Parameter | Unlock X server in case of shadowing session freeze |
| Registry  | network.vncserver.grab_buster                       |
| Type      | bool                                                |
| Value     | <u>enabled</u> / disabled                           |

#### VirtualBox

- Fixed **no automatic resolution changes** as **virtualbox guest** issue.

#### Audio

- Fixed **headset microphone using 3.5mm audio jack** in **Dell Wyse 3040**.
- Added possibility to **set** some **snd\_hda\_intel kernel module parameter** to overcome possible issues with sound devices.

New registry keys:

**More...**

|           |                                                                                               |
|-----------|-----------------------------------------------------------------------------------------------|
| Parameter | Enable Message Signaled Interrupt                                                             |
| Registry  | system.sound_driver.snd_hda_intel.enable_ms_i                                                 |
| Type      | bool                                                                                          |

| Value     | <u>Auto</u>                                                                |
| Parameter | If you encounter sound problems try to choose one of the alternative masks |
| Registry  | system.sound_driver.snd_hda_intel.probe_mask                               |
| Range     | [ <u>Auto</u> ] [1] [8]                                                    |

- Old settings. **Command at startup removed.**

#### Jabra

- **Avoid deploying of the same Jabra Xpress package several times** on the same Jabra device.

#### Evidian

- Evidian now **triggers the regular Horizon session script**.

#### Hardware

- Fixed non-working **Prolific PL2303 USB-to-serial adapters**.

#### TC Setup (Java)

- **Removed "default" button** left of selection box IGEL Setup: **Sessions > Citrix > Citrix Global > Window > Multimonitor full-screen mode**.

#### Remote Management

- Fixed **repeated firmware registering over the ICG** which can occur after a new firmware was successfully registered in the UMS. The device invokes firmware registering again after every settings transfer from the device to the UMS. This behavior lasts until reboot.
- Fixed **syncing settings changed on the device if the UMS wasn't reachable**.
- Fixed handling of the **structure tag** if it was **configured in the system dialog "UMS Registering"**.

## IGEL Cloud Gateway

- **Maximum waiting time for a response from the ICG server** can now be **configured by** the parameter **system.remotemanager.rmagent\_timeout** (default: 90 seconds).

## VNC

- **Shadowing notification** is **restricted to primary monitor** and **cannot be moved outside of the monitor's visible range**.
- Fixed **sporadic connection failure** in VNC server.
- Fixed **occasional freeze of shadowing session** e.g. when resizing a window. Now the session gets unlocked again after about 20 seconds.

## General Information 11.03.500

Firmware downgrade to older versions (11.01 or 11.02) is not possible, due to the unsigned firmware update files.

The following clients and features are not supported anymore:

- Caradigm
- Citrix Legacy Sessions
- Citrix Web Interface
- Citrix StoreFront Legacy
- Citrix HDX Flash Redirection
- Citrix XenDesktop Appliance Mode
- Flash Player Download
- JAVA Web Start
- Leostream Java Connect
- Systancia AppliDis
- VIA graphics driver

## Security Fixes 11.03.500

### Firefox

- Updated Mozilla Firefox to **68.6.0 ESR**.
- Fixes for **mfsa2020-09**, also known as:

[More...](#)

CVE-2020-6805, CVE-2020-6806, CVE-2020-6807, CVE-2020-6811, CVE-2019-20503, CVE-2020-6812, and CVE-2020-6814

- Fix for **mfsa2020-03**, also known as CVE-2019-17026.
- Fixes for **mfsa2020-02**, also known as:

[More...](#)

CVE-2019-17016, CVE-2019-17017, CVE-2019-17022, and CVE-2019-17024

- Fixes for **mfsa2019-37**, also known as:

[More...](#)

CVE-2019-17008, CVE-2019-11745, CVE-2019-17010, CVE-2019-17005, CVE-2019-17011, and CVE-2019-17012

### Base system

- Fixed **libxml2** security issues CVE-2020-7595 and CVE-2019-19956.

- Fixed **nss** security issues CVE-2019-17007, CVE-2019-17006, and CVE-2019-11745.
  - Fixed **libvncserver** security issue CVE-2019-15681.
  - Fixed **libexif** security issues CVE-2019-9278, CVE-2017-7544, and CVE-2016-6328.
  - Fixed **cyrus-sasl2** security issue CVE-2019-19906.
  - Fixed **samba** security issues CVE-2019-14907, CVE-2019-14870, and CVE-2019-14861.
  - Fixed **zulu** security issues:  
[More...](#)
- CVE-2020-2583, CVE-2020-2590, CVE-2020-2593, CVE-2020-2601,  
CVE-2020-2604, CVE-2020-2659, and CVE-2020-2654

## Known Issues 11.03.500

### Firmware Update

- On **devices with 2 GB of flash storage**, it could happen that there is **too little space for updating all features**. In this case, a corresponding error message occurs and **unused features** must be **disabled** in IGEL Setup **under System > Firmware Customization > Features** to perform the firmware update.

### Firefox

- **Firefox IGEL extensions are not updated automatically** under some circumstances. After an update from 11.03.10x to 11.03.500, the IGEL extensions will stay on the old version.  
In this case, the following settings concerning **kiosk mode** cannot be executed:
  - Switch off Hotkey for new window/tab
  - Blocking of internal browser pages like preferences, file picker, specific local directories

As a workaround:

- a **reset to defaults** should be performed
  - or the **browser's mimetype template** can be switched **from "Standard" to "Minimal"** by registry key `browserglobal.app.mimetypes_template`. There, the browser profile is renewed as well.
- After the TC got the new setting, **reboot** and **set** the `mimetypes_template` registry key **back to "Standard"**.

### Citrix

- With activated **DRI3** and an **AMD GPU Citrix H.264 acceleration plugin** could freeze. Selective H.264 mode (API v2) is not affected from this issue.
  - Citrix has known issues with **GStreamer1.0** which describe problems with **multimedia redirection of H.264, MPEG1 and MPEG2**. GStreamer1.0 is used if browser content redirection is active.
  - **Browser content redirection** does not work with activated **DRI3** and **hardware accelerated H.264 deep compression codec**.
  - **Citrix StoreFront login** with **Gemalto smartcard** middleware does not detect smartcard correctly if the card is inserted after start of login.
- Workaround: Insert the smartcard before starting the StoreFront login.

- **Citrix H.264 acceleration plugin** does not work with **enabled** server policy **Optimize for 3D graphics workload** in combination with server policy **Use video codec compression > For the entire screen**.
- To launch **multiple desktop sessions** with **Citrix HDX RTME** and **Citrix H.264** acceleration plugin, the following registry key must be enabled.

[More...](#)

|           |                                                                  |
|-----------|------------------------------------------------------------------|
| Parameter | Activate workaround for dual RTME sessions and H264 acceleration |
| Registry  | ica.workaround-dual-rtme                                         |
| Value     | enabled / <u>disabled</u>                                        |

This workaround is not applicable when "Enable Secure ICA" is active for the specific delivery group.

- Using **CWA 19.x** sometimes **freezes the session** while session logoff from a published desktop.  
Workaround: **Use CWA 18.10.0**.

#### VMware Horizon

- **Client drive mapping** and **USB redirection** for storage devices should not be enabled both at the same time.
  - On the one hand, when using USB redirection for storage devices: The USB on-insertion feature is only working when the client drive mapping is switched off. In the IGEL Setup client drive mapping can be found in: **Sessions > Horizon Client > Horizon Client Global > Drive Mapping > Enable Drive Mapping**. It is also recommended to disable local **Storage Hotplug** on setup page **Devices > Storage Devices > Storage Hotplug**.
  - On the other hand, when using drive mapping instead, it is recommended to either switch off USB redirection entirely or at least deny storage devices by adding a filter to the USB class rules. Furthermore, Horizon Client relies on the OS to mount the storage devices itself. Enable local `Storage Hotplug` on setup page **Devices > Storage Devices > Storage Hotplug**.
- **External drives** mounted already before connection do not appear in the **remote desktop**.  
Workaround: map the directory /media as a drive. Then the external devices will show up inside the media drive.
- **After disconnect of an RDP based session**, the Horizon main **window** which contains the server or sessions overview **cannot be resized anymore**.
- **Seamless application windows in Horizon Client may not be displayed correctly**. When starting the first seamless app, a new iconified window appears in the taskbar, and only if you click on it, the application will show up.  
On some hardware (UD7-H850, UD2-M250, UD2-D220), however, the client aborts when this new window is de-iconified.

#### Imprivata

- On **devices with 2 GB of flash storage**, it could happen that there is too little space to enable the **Imprivata partition after the update to 11.03.500**. In this case, a corresponding error message occurs and **unused features must be disabled** (in IGEL Setup under **System > Firmware Customization > Features**). Imprivata has to be (re-)enabled after a reboot then.

#### Wi-Fi

- TP-Link Archer T2UH Wi-Fi adapters does not work after system suspend/resume. Workaround: Disable system suspend at **IGEL Setup > System > Power Options > Shutdown**.

#### Parallels Client

- **Native USB redirection** does not work with Parallels Client.

#### Smartcard

- In seldom cases, the **authentication** hung when using **A.E.T. SafeSign smartcards**.

#### Appliance Mode

- Appliance mode **RHEV/Spice: spice-xpi firefox plugin** is no longer supported. The **Console Invocation** has to allow 'Native' client (auto is also possible) and should be started in fullscreen to prevent any opening windows.

#### Multimedia

- Multimedia redirection with **GStreamer** could fail with the **Nouveau GPU driver**.

#### Hyper-V

- **Hyper-V** (Generation 2) needs **a lot of memory**. The machine needs a sufficient amount of memory allocated.

#### VirtualBox

- The current **VirtualBox Guest Tools/Drivers** will not work with **VirtualBox 5.2.x or older** hosts which leads to black screen and non-working graphic.  
Workaround: Install with 'Failsafe Installation + Recovery' and set the registry key `x.drivers.force_vesa` to true.
- When running in VirtualBox virtualization, **resizing the window will not automatically change desktop resolution** of IGEL OS guest.

#### Audio

- **Audio jack detection on Advantech POC-W243L doesn't work**. Sound output goes through the headset connection and the internal speakers.
- **IGEL UD2 (D220)** fails to restore the volume level of the speaker when the device used **firmware version 11.01.110** before.

#### Hardware

- **HP t730** could freeze when monitors with **different resolutions** are connected (1920x1200 + 2560x1440 + 3840x1600 for example). When this occurs, the registry key `x.drivers.kms.best_console_mode` has to be set to **disabled**.
- Some newer **Delock 62599 active DisplayPort to DVI (4k)** adapters only work with INTEL devices.

#### Remote Management

- **AIT feature with IGEL Starter License is supported** by the next **UMS version 6.05.100**.

## New Features 11.03.500

#### Citrix

- Integrated **Citrix Workspace App 19.12**
- Available **Citrix Workspace Apps** in this release: **19.12** (default), **19.10**, and **18.10**
- New **registry keys**:
  - Added a registry key for enabling **full-screen banner "Citrix Desktop Viewer"** when starting a Desktop or Application session.

[More...](#)

|           |                                   |
|-----------|-----------------------------------|
| Parameter | Show Citrix Desktop Viewer screen |
| Registry  | ica.module.cdviewerscreen         |
| Value     | <u>off</u> / on                   |

- Added a registry key to enable usage of **Chromium Embedded Framework (CEF) for Browser Content Redirection (BCR)** [Experimental].

[More...](#)

|           |                                              |
|-----------|----------------------------------------------|
| Parameter | Use Chromium Embedded Framework (CEF)        |
| Registry  | ica.allregions.usecefbrowser                 |
| Value     | <u>factory default is "*" / false</u> / true |

- "factory default" impact can be set by config file.
- Changed default:

[More...](#)

|           |                                       |
|-----------|---------------------------------------|
| Parameter | VDTUI protocol                        |
| Registry  | ica.module.virtualdriver.vdtui.enable |
| Value     | <u>off</u> / <u>on</u>                |

## WVD

- Integrated **IGEL WVD Client**.

## VMware Horizon

- Updated **VMware Horizon Client** to version **5.3.0**.

## ThinLinc

- Updated **ThinLinc Client** to version **4.11.0**.

## Smartcard

- Updated **Gemalto / Safenet smartcard middleware** to version **10.7.7**.
- Added **support for smartcard reader HP Business Slim Smartcard CCID Keyboard**.
- Added **configuration parameter to disable PIN pad functionality of smartcard readers**, driven by Open Source CCID driver. This might work to solve problems with PIN pads, but lowers security level.

[More...](#)

|           |                                 |
|-----------|---------------------------------|
| Parameter | Disable PIN pad                 |
| Registry  | scard.pcscd.ccid.disable_pinpad |

|       |                           |
|-------|---------------------------|
| Value | <u>disabled</u> / enabled |
|-------|---------------------------|

- Added possibility to **add custom CCID smartcard readers to Open Source CCID driver**. Readers can be specified by USB Vendor, Product Id, and custom name:

[More...](#)

|           |                                          |
|-----------|------------------------------------------|
| Parameter | USB Vendor Id                            |
| Registry  | scard.pcscd.ccid.custom_reader<num>.vid  |
| Value     |                                          |
| Parameter | USB Product Id                           |
| Registry  | scard.pcscd.ccid.custom_reader<num>.pid  |
| Value     |                                          |
| Parameter | Reader name                              |
| Registry  | scard.pcscd.ccid.custom_reader<num>.name |
| Value     |                                          |

- Updated **Athena IDProtect library** to version 7. This version **supports CRYPTAS TicTok V3 cards**. Known issue: The **detection of locked PIN does not work**.

#### CUPS Printing

- Added **CUPS Printer port "USB class printer"**. The USB printer is assigned, in this case, by **matching patterns of USB Manufacturer and Product name strings**. In this way, a single printer definition could work for a class of different USB printer models.

[More...](#)

|            |                                                          |
|------------|----------------------------------------------------------|
| IGEL Setup | <b>Devices &gt; Printer &gt; CUPS &gt; Printers</b>      |

| IGEL Setup | <b>Devices &gt; Printer &gt; CUPS &gt; Printers</b>      |
| Parameter  | Product pattern                                          |
| Registry   | print.cups.printer<num>.product                          |

- Updated **PrinterLogic Printer-Installer-Client** to version **25.1.0.381**. Fixed tray icon functionality.

## Cisco JVDI Client

- Integrated **Cisco JVDI 12.7.1 client**. Cisco JVDI 12.7.0 has been removed.

## Base system

- Added **Starter License functionality**.

This license is now part of every new IGEL OS installation and is **valid for 30 days**. The license will be activated with the first boot after the initial installation. More and detailed information via <https://kb.igel.com/licensing>.

- Added 'Licensing' tool to 'System' in **local Start menu**. Disable the tool by key:  
[More...](#)

| IGEL Setup | <b>Accessories &gt; License Browser</b>    |
|------------|--------------------------------------------|
| Parameter  | Start Menu's System tab                    |
| Registry   | sessions.license_browser0.startmenu_system |
| Value      | <u>enabled</u> / disabled                  |

If there is only the Starter License and no UMS connection, the **Licensing tool is shown on the desktop by default**.

- Added feature **Custom Partition to Workspace Edition license**.
- Updated **Fluendo multimedia codecs** to the following versions: **gst-fluendo-vadec - 30/01/2020 0.10.212**.
- **Kerberos Logon:**  
You can now **turn on/off numlock** and/or **capslock** for password input. Registry keys:

|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

## Wi-Fi

- Added **driver for Realtek 8822ce** and **8822be** Wi-Fi hardware.
- Added driver for **Realtek 8821cu** Wi-Fi hardware.

## Driver

- Updated **Crossmatch DP driver for fingerprint**. The new version allows the **fingerprint image** to be **sent via the Citrix channel**. With this change, customers will be able to develop their own SW using the Crossmatch DP SDK.

## Misc

- Updated **Login PI 3.6** to the new **Login Enterprise 4.0**.

## Resolved Issues 11.03.500

## Citrix

- Fixed **video playback on BBC websites** redirected via Citrix Browser Content Redirection.
- Fixed **Multimedia redirection** and **HDX RealTime Media Engine** may used concurrently.

## OSC Installer

- Fixed issue with **failed partitioning**.

## RDP/IGEL RDP Client 2

- Added a new parameter to control **audio latency** (in milliseconds) which **defines the amount of buffered audio data in the RDP client**.

[More...](#)

|          |                              |
|----------|------------------------------|
| Registry | rdp.winconnect.sound-latency |
| Value    | <u>125</u> (msec)            |

## WVD

- Improved overall sound quality.
- Fixed issue caused **audio redirection to fail randomly**.
- Clipboard redirection has potential privacy and security risks** and is therefore disabled by default.
- Fixed **dead key support** (key composition).
- Fixed **sound getting choppy** after a while.
- Several **bugfixes** for all kind of **stability issues**.

## VMware Horizon

- Fixed: **Save VMWare Horizon user from last login** when **in appliance mode**. Reduced the options for "**Preset login information**" to either "**from last login**" or "**from session setup**". The redundant option "from appliance mode" **is removed** because the appliance mode is also treated as a session.

[More...](#)

|            |                                                                                 |
|------------|---------------------------------------------------------------------------------|
| IGEL Setup | <b>Sessions &gt; Horizon Client &gt; Horizon Client Global &gt; Local Logon</b> |
| Parameter  | Preset login information                                                        |
| Registry   | vmware.login.saveusertype                                                       |
| Range      | [Set user/domain from last login] [Set user/domain from session setup]          |

- Fixed **Skype for Business** integration.

#### Firefox

- Fixed **switching off** firmware feature **PrinterLogic removes browser policies file**.
- Fixed **hiding the URL input** results in **disappearing web content**.
- Fixed **browser startscript** which was waiting for a new window even when browser was not configured to open an extra one.

#### Network

- Use **e1000e driver out-of-the-kernel as default** instead of the third-party driver.

#### Wi-Fi

- Fixed **connection problems by updating the regulatory domain database**.
- Improved **persistence of Wi-Fi switch state** across reboots.
- Fixed problems with **Wi-Fi backports driver** and older **Wi-Fi adapters** or **adapters with external kernel drivers**.

#### Open VPN

- Fixed **timing in OpenVPN credential dialogs** to prevent **focus loss** when started too early at system boot.
- Fixed **session management** where **VPN connections could get stuck when wrong passwords** were entered with no possibility of retry.

#### Imprivata

- Hide the **Imprivata session templates on the desktop** as this is misleading.

#### Smartcard

- Fixed smartcard reader **VASCO/OneSpan Digipass 905. Disabled USB auto suspend** for all smart card readers.
- Added **parameter to control the used smartcard protocol** when connecting with raw and other protocols allowed. Enable to read smartcards using **NHS Identity Agent**.

[More...](#)

|           |                                |
|-----------|--------------------------------|
| Parameter | Avoid raw protocol             |
| Registry  | scard.pcscd.avoid_raw_protocol |

|       |                     |
|-------|---------------------|
| Value | <u>false</u> / true |
|-------|---------------------|

- Fixed use of **IDPrime smartcards inside sessions** with readers driven by **Open Source CCID** smartcard reader driver: implemented attribute SCARD\_ATTR\_CHANNEL\_ID.
- Added parameter to **delay smartcard insertion events** (in milliseconds). This solves issues reading smartcards within the **Citrix Workspace App**. Issue occurred when inserting the card after already started StoreFront login.

**More...**

|           |                                       |
|-----------|---------------------------------------|
| Parameter | Delay smart card insertion event time |
| Registry  | scard.pcscd.card_insert_event_delay   |
| Value     | 0                                     |

#### Base system

- Fixed **NTP sync problem** with some **Windows Timeservers**.

New registry key:

**More...**

|           |                                                                                |
|-----------|--------------------------------------------------------------------------------|
| Parameter | NTP max allowed distance                                                       |
| Tooltip   | Set this to a larger value can help to synchronize with unreliable NTP servers |
| Registry  | system.time.ntp_max_distance                                                   |
| Type      | Integer                                                                        |
| Value     | <u>16</u> (new default 16 seconds instead of 3 before)                         |

- Added **\_diag kernel modules** needed by **Stratusphere IPS**.
- Fixed **Next** button usage in **Setup Assistant** while **registering for an evaluation license**.
- Fixed issue with **mounting USB devices** in the **Licensing tool**.
- If used as a master image, the **image will expand itself to full size** (limited to 16 GiB) on flash. This is done only **on first boot** and never again.
- Possible **rollout of initial settings, certificates, or licenses placed on the first partition**.

The necessary steps are:

- Writing image to USB or Flash medium
- Mount or simply access the 1. VFAT partition which is present (should be empty)
- Copying the modified `setup.ini` and/or `**.lic` files to the 1st partition (no directories)
- For copying certificates, a `ca-certs` directory must be created where the desired certificates can be inserted. These will be copied to the `/wfs/ca-certs` directory on first boot.
- The USB/Flash medium can be copied several times as needed
- With the initial boot, the device will reboot out of the splash screen (re-read changed partition table)
- The settings, certificates and/or licenses will be deployed and also deleted from the 1st partition.

#### Firmware update

- Improve **download speed for SFTP update sources**.

#### Appliance Mode

- Fixed **RHEV/Spice appliance mode**.

X11 system

- Fixed **displays not being automatically set up on boot**.

Media Player (Parole)

- Fixed **handling of player latency** (stream buffering).

Hardware

- Fixed non-working **Prolific PL2303 USB-to-serial adapters**.
- Fixed non-working **keyboard and touchpad on Microsoft Surface 3 Laptop**.

IGEL Cloud Gateway

- Handle **UMS jobs** intended to be executed on the next boot. This feature requires **UMS 6.05.100 or later**.

## 7.9.2 IGEL OS Creator (OSC)

### Supported Devices

|         |                                     |

## Component Versions 11.03.500

- **Clients**

| Product  | Version   |
|----------|-----------|
| Zulu JRE | 8.44.0.11 |

- **Smartcard**

|                             |                |
|-----------------------------|----------------|
| Reader Driver MUSCLE CCID   | 1.4.31-1igel10 |
| Resource Manager PC/SC Lite | 1.8.23-1igel11 |

- **System Components**

|                                         |                              |
|-----------------------------------------|------------------------------|
| OpenSSL                                 | 1.0.2g-1ubuntu4.15           |
| Bluetooth stack (bluez)                 | 5.50-0ubuntu1igel5           |
| MESA OpenGL stack                       | 19.2.5-1igel93               |
| VDPAU Library version                   | 1.2-1igel911                 |
| Graphics Driver INTEL                   | 2.99.917+git20191117-igel939 |
| Graphics Driver ATI/Radeon              | 19.0.1-3igel936              |
| Graphics Driver ATI/AMDGPU              | 19.0.1-5igel924              |
| Graphics Driver Nouveau (Nvidia Legacy) | 1.0.16-1igel867              |
| Graphics Driver Nvidia                  | 418.56-0ubuntu1              |
| Graphics Driver Vboxvideo               | 1.0.0-igel798                |
| Graphics Driver VMware                  | 13.3.0-2igel857              |
| Graphics Driver QXL (Spice)             | 0.1.5-2build2-igel925        |
| Graphics Driver FBDEV                   | 0.5.0-1igel819               |
| Graphics Driver VESA                    | 2.4.0-1igel855               |
| Input Driver Evdev                      | 2.10.6-1igel975              |

|                                 |                               |
|---------------------------------|-------------------------------|
| Input Driver Elographics        | 1.4.1-1build5igel633          |
| Input Driver Synaptics          | 1.9.1-1ubuntu1igel866         |
| Input Driver VMMouse            | 13.1.0-1ubuntu2igel635        |
| Input Driver Wacom              | 0.36.1-0ubuntu2igel888        |
| Kernel                          | 4.19.85 #mainline-lxos-r2875  |
| Xorg X11 Server                 | 1.20.5-1igel914               |
| Lightdm Graphical Login Manager | 1.18.3-0ubuntu1.1             |
| XFCE4 Window Manager            | 4.12.3-1ubuntu2igel675        |
| ISC DHCP Client                 | 4.3.3-5ubuntu12.10igel7       |
| WebKit2Gtk                      | 2.24.2-0ubuntu0.19.04.1igel18 |
| Python2                         | 2.7.12                        |
| Python3                         | 3.5.2                         |

## New Features 11.03.500

### OSC Installer

- Added **Starter License** functionality.

This license is now part of every new IGEL OS installation and is **valid for 30 days**. The license will be **activated with the first boot** after the initial installation. For more information, see <https://kb.igel.com/licensing>.

## Resolved Issues 11.03.500

### OSC Installer

- Fixed issue with **failed partitioning**.

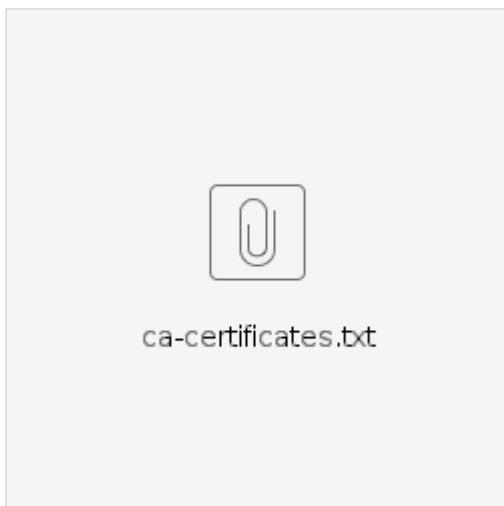

## 7.10 Notes for Release 11.03.110

VirtualBox

6.0.14-dfsg-1igel33

## General Information 11.03.110

Firmware downgrade to older versions (11.01 or 11.02) is not possible, due to the unsigned firmware update files.

The following clients and features are not supported anymore:

- Caradigm
- Citrix Legacy Sessions
- Citrix Web Interface
- Citrix StoreFront Legacy
- Citrix HDX Flash Redirection
- Citrix XenDesktop Appliance Mode
- Flash Player Download
- JAVA Web Start
- Leostream Java Connect
- Systancia AppliDis
- VIA graphics driver

## Known Issues 11.03.110

### Firefox

- **Firefox IGEL extensions are not updated automatically** under some circumstances. After an update from 11.03.10x to 11.03.110, the IGEL extensions will stay on the old version.

In this case, the following settings concerning **kiosk mode** cannot be executed:

- Switch off Hotkey for new window/tab
- Blocking of internal browser pages like preferences, file picker, specific local directories

As a workaround:

- a **reset to defaults** should be performed
- or the **browser's mimetype template** can be switched **from "Standard" to "Minimal"** by registry key browserglobal.app.mimetypes\_template. There, the browser profile is renewed as well.  
After the TC got the new setting, **reboot** and **set** the **mimetypes\_template** registry key **back to "Standard"**.

### Citrix

- With activated **DRI3** and an **AMD GPU Citrix H.264 acceleration plugin** could freeze. Selective H.264 mode (API v2) is not affected from this issue.
- Citrix has known issues with **GStreamer1.0** which describe problems with **multimedia redirection of H.264, MPEG1 and MPEG2**. GStreamer1.0 is used if browser content redirection is active.

- **Browser content redirection** does not work with activated **DRI3** and **hardware accelerated H.264 deep compression codec**.
- **Citrix StoreFront login** with **Gemalto smartcard** middleware does not detect smartcard correctly if the card is inserted after start of login.  
Workaround: Insert the smartcard before starting the StoreFront login.
- **Citrix H.264 acceleration plugin** does not work if server policy **Optimize for 3D graphics workload** is enabled together with server policy **Use video codec compression > For the entire screen**.
- To launch **multiple desktop sessions** with **Citrix HDX RTME** and **Citrix H.264** acceleration plugin a registry key must be enabled.

[More...](#)

|           |                                                                  |
|-----------|------------------------------------------------------------------|
| Parameter | Activate workaround for dual RTME sessions and H264 acceleration |
| Registry  | ica.workaround-dual-rtme                                         |
| Value     | <u>enabled</u> / <u>disabled</u>                                 |

This workaround is not applicable when "Enable Secure ICA" is active for the specific delivery group.

- **Multimedia redirection** isn't working if "HDX RealTime Media Engine" is enabled at the same time.

Workaround: Switch off **HDX RealTime Media Engine**.

| Registry   | ica.module.virtualdriver.hdxrtme.enable                                                            |
| Value      | <u>enabled</u> / <u>disabled</u>                                                                   |

- With Citrix **Workspace App 19.10.0** or **19.8.0** the session sometimes freezes while session logoff from a published desktop:

Workaround: Use **CWA 18.10.0**.

| Range      | <u>Default (19.10.0) / 18.10.0 / 19.8.0 / 19.10.0</u>                       |

## VMware Horizon

- **After disconnect of an RDP based session**, the Horizon main **window** which contains the server or sessions overview **cannot be resized anymore**.
- **Seamless application windows in Horizon Client may not be displayed correctly**. When starting the first seamless app a new iconified window appears in the taskbar and only if you click on it the application will show up.

- **Client drive mapping** and **USB redirection** for storage devices should not be enabled both at the same time.
  - On the one hand, when using USB redirection for storage devices: The USB on-insertion feature is only working when the client drive mapping is switched off. In the IGEL Setup client drive mapping can be found in: **Sessions > Horizon Client > Horizon Client Global > Drive Mapping > Enable Drive Mapping**. It is also recommended to disable local **Storage Hotplug** on setup page **Devices > Storage Devices > Storage Hotplug**.
  - On the other hand, when using drive mapping instead, it is recommended to either switch off USB redirection entirely or at least deny storage devices by adding a filter to the USB class rules. Furthermore Horizon Client relies on the OS to mount the storage devices itself. Enable local `Storage Hotplug` on setup page **Devices > Storage Devices > Storage Hotplug**.
- **External drives** mounted already before connection do not appear in the **remote desktop**.  
Workaround: map the directory /media as a drive. Then the external devices will show up inside the media drive.

#### Wi-Fi

- TP-Link Archer T2UH Wi-Fi adapters does not work after system suspend/resume. Workaround: Disable system suspend at **IGEL Setup > System > Power Options > Shutdown**.

#### Parallels Client

- **Native USB redirection** does not work with Parallels Client.

#### Smartcard

- In seldom cases the **authentication** hung when using **A.E.T. SafeSign smartcards**.

#### Appliance Mode

- Appliance mode **RHEV/Spice: spice-xpi firefox plugin** is no longer supported. The **Console Invocation** has to allow 'Native' client (auto is also possible) and should be started in fullscreen to prevent any opening windows.

#### Multimedia

- Multimedia redirection with **GStreamer** could fail with the **Nouveau GPU driver**.

#### Audio

- **Audio jack detection on Advantech POC-W243L doesn't work**. Sound output goes through the headset connection and the internal speakers.
- **IGEL UD2 (D220)** fails to restore the volume level of the speaker when the device used **firmware version 11.01.110** before.

#### VirtualBox

- The current **VirtualBox Guest Tools/Drivers** will not work with **VirtualBox 5.2.x or older** hosts which leads to black screen and non working graphic.  
Workaround: Install with 'Failsafe Installation + Recovery' and set registry key `x.drivers.force_vesa` to true.
- When running in VirtualBox virtualization, **resizing the window will not automatically change desktop resolution** of IGEL OS guest.

## Hardware

- **HP t730** could freeze when monitors with **different resolutions** are connected (1920x1200 + 2560x1440 + 3840x1600 for example). When this occurs, the registry key `x.drivers.kms.best_console_mode` has to be set to disabled.
- Some newer **Delock 62599 active DisplayPort to DVI (4k)** adapters only work with INTEL devices.

## Security Fixes 11.03.110

### Firefox

- Updated Mozilla Firefox to **68.4.1esr**.
- Fix for **mfsa2020-03**, also known as CVE-2019-17026.
- Fixes for **mfsa2020-02**, also known as: CVE-2019-17016, CVE-2019-17017, CVE-2019-17022, and CVE-2019-17024.
- Fixes for **mfsa2019-37**, also known as:  
[More...](#)  
 CVE-2019-17008, CVE-2019-11745, CVE-2019-17010,  
 CVE-2019-17005, CVE-2019-17011, and CVE-2019-17012.

## New Features 11.03.110

### Citrix

- Integrated **Citrix Workspace App 19.12**
- Available **Citrix Workspace Apps** in this release: **19.12** (default), **19.10**, and **18.10**
- New **registry keys**:
  - Added a registry key for enabling **full-screen banner "Citrix Desktop Viewer"** when starting a Desktop or Application session.  
[More...](#)

|           |                                        |
|-----------|----------------------------------------|
| Parameter | Show Citrix Desktop Viewer screen      |
| Registry  | <code>ica.module.cdviewerscreen</code> |
| Value     | <u>off</u> / on                        |

- Added a registry key to enable usage of **Chromium Embedded Framework (CEF) for Browser Content Redirection (BCR)** [Experimental].  
[More...](#)

|           |                                           |
|-----------|-------------------------------------------|
| Parameter | Use Chromium Embedded Framework (CEF)     |
| Registry  | <code>ica.allregions.usecefbrowser</code> |
| Value     | <u>factory default</u> / false / true     |

- "factory default" means that can be set by config file.
- Changed default:

| Registry | ica.module.virtualdriver.vdtui.enable |
| Value    | off / <u>on</u>                       |

## Resolved Issues 11.03.110

### OSC Installer

- Fixed deployment of IGEL OS with **IGEL Deployment Appliance**.

### Firefox

- Fixed **possibility to remove the browser's navigation bar**. In 11.03.100, the whole browser content was invisible without the navigation bar.

### Wi-Fi

- Fixed **support for some newer Wi-Fi chipsets**.
- Fixed **Wi-Fi backport driver** instability problems with updating them to **5.4-rc8-1**.

### Imprivata

- Fixed **race condition** that may lead to unexpected behavior with RDP connections.
- Fixed **VMware Horizon session disconnect**.

### Smartcard

- Fixed bug in **smartcard transaction locking**.

### Cisco JVDI Client

- The **Cisco EULA** must be accepted together with the IGEL EULA before installing IGEL OS and also within IGEL Setup Assistant when requesting an IGEL OS demo license.

### Base system

- Fixed potential **temporary settings loss when resuming from standby**.

### RDP/IGEL RDP Client 2

- Fixed **Fabulotech Scanner Redirection** not working for **RDP Remote Apps**.

## General Information 11.03.100

Firmware downgrade to older versions (11.01 or 11.02) is not possible, due to the unsigned firmware update files.

The following clients and features are not supported anymore:

- Caradigm
- Citrix Legacy Sessions
- Citrix Web Interface
- Citrix StoreFront Legacy
- Citrix HDX Flash Redirection
- Citrix XenDesktop Appliance Mode
- Flash Player Download
- JAVA Web Start
- Leostream Java Connect
- Systancia AppliDis
- VIA graphics driver

## Security Fixes 11.03.100

### Firefox

- Updated Mozilla Firefox to **68.2.0esr**
  - Fixes for **mfsa2019-33**.
  - [More...](#)

CVE-2019-15903, CVE-2019-11757, CVE-2019-11758, CVE-2019-11759,  
 CVE-2019-11760, CVE-2019-11761, CVE-2019-11762, CVE-2019-11763,  
 CVE-2019-11764.

- Fixes for **mfsa2019-26**.
    - [More...](#)
- CVE-2019-11746, CVE-2019-11744, CVE-2019-11742, CVE-2019-11752,  
 CVE-2019-9812, CVE-2019-11743, CVE-2019-11748, CVE-2019-11749,  
 CVE-2019-11750, CVE-2019-11738, CVE-2019-11747, CVE-2019-11735,  
 CVE-2019-11740.

### Base system

- Added **cryptographic signatures** to OS 11 firmware files to prevent reading from corrupt images or disks.
  - Updates to firmwares without valid signatures are blocked.
  - When a signature error on the system partition is detected, the system is halted immediately. For system recovery a reinstallation via the OS Creator tool (OSC) is required. A signature error during early boot is signalized by a beep sequence.
  - When a signature error in another partition is detected the partition is removed and a firmware update is triggered to reinstall the corrupt partition.
  - Added user visible notification about partition signature errors.
- Fixed **admin logout from rescue shell** after suspend.
- Fixed security issue **CVE-2019-15902** in **4.19.x kernel**.
- Updated **Intel microcodes** to version **20191115** to fix various security issues (CVE-2019-11135, CVE-2019-0117 and CVE-2019-11139).
- Fixed **cups** security issues CVE-2019-8696, CVE-2019-8675 and CVE-2019-86.
- Fixed **openjpeg2** security issues CVE-2018-6616, CVE-2018-5785, CVE-2018-18088, CVE-2018-14423 and CVE-2017-17480.
- Fixed **xorg-server** security issue CVE-2018-14665.
- Fixed **expat** security issue CVE-2019-15903.
- Fixed **freetype** security issue CVE-2015-9383.
- Fixed **ghostscript** security issues.  
**More...**

CVE-2019-14817, CVE-2019-14813, CVE-2019-14812,  
CVE-2019-14811, CVE-2019-10216 and CVE-2019-14869.
- Fixed **python2.7** security issues.  
**More...**

CVE-2019-9948, CVE-2019-9947, CVE-2019-9740, CVE-2019-9636,  
CVE-2019-5010, CVE-2019-10160 , CVE-2018-20852, CVE-2019-16935 and CVE-2019-16056.
- Fixed **python3.5** security issues.  
**More...**

CVE-2019-9948, CVE-2019-9947, CVE-2019-9740, CVE-2019-9636,

- Fixed **libjpeg-turbo** security issues CVE-2019-2201, CVE-2018-20330 and CVE-2018-19664.
- Fixed **python-ecdsa** security issues CVE-2019-14859, CVE-2019-14853 and CVE-2019-1485.
- Restricted access to **journalctl log** file for root only.
- Limit list of allowed **TLS ciphers** according to the Germany BSI recommendation (TR-0210202 Version 2019-01). The functionality is controlled by a parameter.

[More...](#)

|          |                                              |
|----------|----------------------------------------------|
| Registry | system.security.remote_management.tls_policy |
| Value    | Default / BSI                                |

The limited cipher list is applied on TLS (SSL) connections in:

- IGEL RM Agent
- Secure Shadowing
- Secure Terminal
- Firmware Update

- Custom Partition

## Known Issues 11.03.100

### Citrix

- With activated **DRI3** and an **AMD GPU Citrix H.264 acceleration plugin** could freeze. Selective H.264 mode (API v2) is not affected from this issue.
- Citrix has known issues with **GStreamer1.0** which describe problems with **multimedia redirection of H.264, MPEG1 and MPEG2**. GStreamer1.0 is used if browser content redirection is active.
- **Browser content redirection** does not work with activated **DRI3** and **hardware accelerated H.264 deep compression codec**.
- **Citrix StoreFront login** with **Gemalto smartcard** middleware does not detect smartcard correctly if the card is inserted after start of login.  
Workaround: Insert the smartcard before starting the StoreFront login.
- **Citrix H.264 acceleration plugin** does not work if server policy **Optimize for 3D graphics workload** is enabled together with server policy **Use video codec compression > For the entire screen**.
- To launch **multiple desktop sessions** with **Citrix HDX RTME** and **Citrix H.264** acceleration plugin a registry key must be enabled.

[More...](#)

|           |                                                                  |
|-----------|------------------------------------------------------------------|
| Parameter | Activate workaround for dual RTME sessions and H264 acceleration |
| Registry  | ica.workaround-dual-rtme                                         |
| Value     | enabled / disabled                                               |

This workaround is not applicable when "Enable Secure ICA" is active for the specific delivery group.

- **Multimedia redirection** isn't working if "HDX RealTime Media Engine" is enabled at the same time.

Workaround: Switch off **HDX RealTime Media Engine**.

- With Citrix **Workspace App 19.10.0 or 19.8.0** the session sometimes freezes while session logoff from a published desktop. :

Workaround: Use **CWA 18.10.0**.

## VMware Horizon

- **After disconnect of an RDP based session**, the Horizon main **window** which contains the server or sessions overview **cannot be resized anymore**.
- **Seamless application windows in Horizon Client may not be displayed correctly**. When starting the first seamless app a new iconified window appears in the taskbar and only if you click on it the application will show up.
- **Client drive mapping** and **USB redirection** for storage devices should not be enabled both at the same time.
  - On the one hand, when using USB redirection for storage devices: The USB on-insertion feature is only working when the client drive mapping is switched off. In the IGEL Setup client drive mapping can be found in: **Sessions > Horizon Client > Horizon Client Global > Drive Mapping > Enable Drive Mapping**. It is also recommended to disable local **Storage Hotplug** on setup page **Devices > Storage Devices > Storage Hotplug**.
  - On the other hand, when using drive mapping instead, it is recommended to either switch off USB redirection entirely or at least deny storage devices by adding a filter to the USB class rules. Furthermore Horizon Client relies on the OS to mount the storage devices itself. Enable local `Storage Hotplug` on setup page **Devices > Storage Devices > Storage Hotplug**.
- **External drives** mounted already before connection do not appear in the **remote desktop**. Workaround: map the directory /media as a drive. Then the external devices will show up inside the media drive.

## WiFi

- TP-Link Archer T2UH WiFi adapters does not work after system suspend/resume. Workaround: Disable system suspend at **IGEL Setup > System > Power Options > Shutdown**.

## Parallels Client

- **Native USB redirection** does not work with Parallels Client.

## Smartcard

- In seldom cases the **authentication** hung when using **A.E.T. SafeSign smartcards**.

## Appliance Mode

- Appliance mode **RHEV/Spice: spice-xpi firefox plugin** is no longer supported. The **Console Invocation** has to allow 'Native' client (auto is also possible) and should be started in fullscreen to prevent any opening windows.

## Multimedia

- Multimedia redirection with **GStreamer** could fail with the **Nouveau GPU driver**.

## Audio

- **Audio jack detection on Advantec POC-W243L doesn't work.** Sound output goes through the headset connection and the internal speakers.
- **IGEL UD2 (D220)** fails to restore the volume level of the speaker when the device used **firmware version 11.01.110** before.

#### VirtualBox

- The current **VirtualBox Guest Tools/Drivers** will not work with **VirtualBox 5.2.x or older** hosts which leads to black screen and non working graphic.  
Workaround: Install with 'Failsafe Installation + Recovery' and set registry key `x.drivers.force_vesa` to true.
- When running in VirtualBox virtualization, **resizing the window will not automatically change desktop resolution** of IGEL OS guest.

#### Hardware

- **HP t730** could freeze when monitors with **different resolutions** are connected (1920x1200 + 2560x1440 + 3840x1600 for example). When this occurs, the registry key `x.drivers.kms.best_console_mode` has to be set to disabled.
- Some newer **Delock 62599 active DisplayPort to DVI (4k)** adapters only work with INTEL devices.

#### New Features 11.03.100

##### Citrix

- Integrated **Citrix Workspace app 19.10**
- Available Citrix Workspace apps in this release: 19.10 (default), 19.08 and 18.10
- Added a registry key to enable **Transparent User Interface [TUI] Virtual Channel [VC]** protocol.  
**More...**

|           |                                                    |
|-----------|----------------------------------------------------|
| Parameter | Enable VDTUI protocol                              |
| Registry  | <code>ica.module.virtualdriver.vdtui.enable</code> |
| Value     | <code>enabled</code> / <code>disabled</code>       |

- Updated **libwebkit2gtk-4.0-37** to version **2.26.2**. It is now possible to **enable debug output for Citrix Browser Content Redirection** by running the script `/config/bin/install-webkit-debug`. The debug output is written to `/var/log/user/webcontainer.debug`.

Only short sessions with enabled debug output can be tracked, due to the huge amount of debugging data which is written to the log file.

- Added support for **FabulaTech Scanner for Remote Desktop**.

## ThinLinc

- Updated ThinLinc Client to version **4.10.1**.

## Parallels Client

- Updated Parallels Client to Version **17.0.1**.  
 For using the FIPS 140-2 compliance mode no special handling is needed anymore.

## Teradici PCoIP Client

- Updated Teradici PCoIP client to **19.05.9**.

## Imprivata

- Added: When **available flash** is **bigger than 2GB**, 500 MB will be used for the Imprivata data partition.

## Cisco JVDI Client

- Integrated new **Cisco Jabber Softphone for VDI** (Cisco JVDI Client) version 12.7 in 64bit.

## Base system

- Added support for **exFAT filesystem**.
  - Updated **Kernel to version 4.19.85** with **WiFi backport drivers 5.3.6.1**.
  - Updated **Intel microcodes to version 20191115** to fix various security issues (CVE-2019-11135, CVE-2019-0117 and CVE-2019-11139).
  - Updated **Xorg Xserver** from version 1.19.6 to **1.20.5**.
  - Updated **Mesa OpenGL stack** from version 19.0.8 to **19.2.5**.
  - Updated the **X11 video** and **input drivers** to their most current available versions.
  - Added functionality to **enable or disable touchpad with a hotkey**.
- More...**

- Updated **Fluendo multimedia codecs** to the following versions:

gst-fluendo-h264dec - 18/09/2019 0.10.54

gst-fluendo-vadec - 16/10/2019 0.10.210

- Added **beep sequence** to signalize a **missing system partition** during early boot.

#### CUPS Printing

- Updated **Printer Installer** client to version **25.1.0.303**.
- Added missing **cups model names** for some printers.

#### Smartcard

- Updated **MUSCLE Open Source CCID** driver to version **1.4.31**. Added additional smartcard reader **Cherry SECURE BOARD**.
- Updated **SecMaker Net iD** smartcard library to version **6.8.1.31**. The changes are:
  - Support for **Gemalto IDPrime 940** and **3940**.
  - Support for new **VRK card** (IDEA IAS ECC, spec: FINEID S1 - FINEID S1 Electronic ID Application v4.0).
  - Support for **Aventra MyEID v4.0** (customer specific card profile with read support only).
  - Fixed problem with **detection of cards in Net iD Card Portal**.
  - Other fixes, see release notes at [SecMaker](#)<sup>424</sup>.

#### WiFi

- Added **backports kernel drivers** with version **5.3.6-1** for better WiFi support.
- Disabled **backports drivers** for **Microsoft Surface** Laptop 3.
- Added new registry key to enable or disable the use of the **backport drivers** (reboot is needed).  
**More...**

|           |                                         |
|-----------|-----------------------------------------|
| Parameter | Use the newer backport drivers for WiFi |
| Registry  | network.drivers.use_backport_drivers    |

<sup>424</sup> <https://service.secmaker.com/releasenotes/>

|       |                                                               |
|-------|---------------------------------------------------------------|
| Range | <u>Default</u> (normally use backport drivers) / False / True |
|-------|---------------------------------------------------------------|

- Added switch for more aggressively search of configured **hidden WiFi networks**.

**More...**

|           |                                                           |
|-----------|-----------------------------------------------------------|
| Parameter | Force connection to hidden network                        |
| Registry  | network.interfaces.wirelesslan.device0.mssid_force_hidden |
| Value     | <u>never</u> / once / continuously                        |

The default value **never** preserves the old behaviour.

Changing can be useful in situations where the system cannot detect any configured WiFi in the environment. If **once** is selected, the system will blindly try to connect to all configured hidden networks once (until the network as a whole gets started again). In the case of **continuously**, it will continue trying to connect to hidden networks.

Remarks: An access point found in this way will be remembered next time and its reconnecting will be faster. Search for hidden networks in the Wireless Manager is not affected.

#### Driver

- Updated **Philips Speech Driver** to version **12.8.5**.
- Added login with **BioSec BS Login Hand Vein Recognition** software. The parameters have to be set in IGEL Setup Registry.

**More...**

|            |                                                         |
|------------|---------------------------------------------------------|
| Parameter  | Login with Biosec BS Login                              |
| Registry   | auth.login.biosec_bslogin                               |
| Value      | <u>enabled</u> / <u>disabled</u>                        |
| Parameter  | URL of LifePassServer                                   |
| Registry   | auth.biosec.lifeppassserverurl                          |
| Value      | <u>localhost:10100</u>                                  |
| IGEL Setup | <b>System &gt; Firmware Customization &gt; Features</b> |
| Parameter  | Biosec BS Login                                         |
| Registry   | services.biosec_bslogin.enabled                         |
| Value      | <u>enabled</u> / <u>disabled</u>                        |

- Added **Broadcom Tigon3** network driver.

#### X11 system

- Added support for secure keyboard input with **Cherry SECURE BOARD 1.0**.

In secure mode all keyboard input devices are suppressed except pre-personalized Cherry SECURE BOARD 1.0 devices. For the encrypted communication certificates and keys in directories /wfs/cherry/ca-certs and /wfs/cherry/client-certs are required.

**More...**

|            |                                                |
|------------|------------------------------------------------|
| IGEL Setup | <b>User Interface &gt; Input &gt; Keyboard</b> |
| Parameter  | Secure keyboard input with Cherry SECURE BOARD |
| Registry   | devices.cherry_secureboard.enable              |
| Value      | enabled / <u>disabled</u>                      |
| Parameter  | Debug messages for Cherry SECURE BOARD         |
| Registry   | devices.cherry_secureboard.debug               |
| Value      | enabled / <u>disabled</u>                      |

- Added the possibility to configure the **screen brightness** with registry keys.

**More...**

|           |                                   |
|-----------|-----------------------------------|
| Parameter | Brightness value                  |
| Registry  | x.xserver0.brightness             |
|           | x.xserver0.screen[1-7].brightness |
| Range     | 0.1 - <u>1.0</u> (darker)         |
|           | <u>1.0</u> - 3.0 (brighter)       |

- Added new registry keys to be able to configure some **modesetting graphics driver options** if needed.

**More...**

|           |                                                                       |
|-----------|-----------------------------------------------------------------------|
| Parameter | Use DRI3 PageFlip feature                                             |
| Registry  | x.drivers.modesetting.use_page_flip                                   |
| Range     | <u>Default</u> (normally use page flip feature) / disabled / enabled  |
| Parameter | Use shadow framebuffer layer                                          |
| Registry  | x.drivers.modesetting.use_shadow_fb                                   |
| Range     | <u>Default</u> (normally use shadow framebuffer) / disabled / enabled |
| Parameter | Use double shadow framebuffer to improve VNC performance              |
| Registry  | x.drivers.modesetting.use_double_shadow                               |
| Range     | <u>disabled</u> / enabled                                             |
| Parameter | Use software cursor for modesetting driver                            |
| Registry  | x.drivers.modesetting.use_sw_cursor                                   |
| Range     | <u>Default</u> (normally disabled)                                    |
| Parameter | Choose acceleration method                                            |

|           |                                                                           |
|-----------|---------------------------------------------------------------------------|
| Registry  | <code>x.drivers.modesetting.accel_method</code>                           |
| Range     | <u>Default</u> (normally Glamor is used) / Glamor / None                  |
| Parameter | Force usage of DRI3 regardless of <code>x.drivers.use_dri3</code> setting |
| Registry  | <code>x.drivers.modesetting.force_dri3</code>                             |
| Range     | <u>disabled</u> / enabled                                                 |

## Misc

- Added support for **Stratusphere UX** from Liquidware.

**More...**

|            |                                                             |
|------------|-------------------------------------------------------------|
| IGEL Setup | <b>Accessories &gt; Connector ID Key Software</b>           |
| Parameter  | Enable Stratusphere UX CID Key                              |
| Registry   | <code>stratusphere_ux.cid_key_software.enable</code>        |
| IGEL Setup | <b>Accessories &gt; Connector ID Key Software</b>           |
| Parameter  | Stratusphere hub                                            |
| Registry   | <code>stratusphere_ux.cid_key_software.hub</code>           |
| IGEL Setup | <b>Accessories &gt; Connector ID Key Software</b>           |
| Parameter  | Stratusphere machine group                                  |
| Registry   | <code>stratusphere_ux.cid_key_software.machine_group</code> |
| IGEL Setup | <b>Accessories &gt; Connector ID Key Software</b>           |
| Parameter  | Stratusphere user group                                     |
| Registry   | <code>stratusphere_ux.cid_key_software.user_group</code>    |

- Added the launcher of Login VSI's monitoring tool **Login PI** to the IGEL OS which can be configured from setup via parameters and started from the UMS.

Besides of specifying the parameters given below, a SSL certificate must be provided and deployed via the UMS. This has to be obtained from the Login PI server manually. Given the parameters and the certificate, **the launcher can be started via job from the UMS**.

**More...**

|            |                                                  |
|------------|--------------------------------------------------|
| IGEL Setup | <b>Accessories &gt; Login PI</b>                 |
| Parameter  | Server URL                                       |
| Registry   | <code>debug.tools.login_pi.server_url</code>     |
| IGEL Setup | <b>Accessories &gt; Login PI</b>                 |
| Parameter  | Secret                                           |
| Registry   | <code>debug.tools.login_pi.crypt_password</code> |

## Hardware

- Added recognition for **IGEL UD2 M250C** with **8 GB eMMC** with product id **UD2-LX 51**.
- Added support for **IGEL UD3 M350C** with product id **UD3-LX 60**.
- UD7** with active **AMD Secure Processor** feature uses new product id **UD7-LX 11**.
- Improved support for **ADS-Tec VMT9000** devices:
  - Enable **rs-232 additional power supply** without restart.

- Enable **external wifi antenna** without restart.
  - Enable **shutdown by ignition off**.
  - Enable **watchdog service**.
  - Added hardware support for **LG CL600N**.
  - Added hardware support for **LG CL600W**.
  - Added new registry keys to be able to configure some **new i915 parameter**.
- More...**

|           |                                                          |
|-----------|----------------------------------------------------------|
| Parameter | Disable the use of limited color range for DisplayPort 1 |
| Registry  | x.drivers.intel.dp1_no_limited_color_range               |
| Range     | <u>Default</u> / disabled / enabled                      |

**Info:** Only for M250C the use of limited color range for DP1 is disabled.

- Added support for newer Prolific PL2303 USB serial adapters (used in UD3-LX 60).

## Resolved Issues 11.03.100

### Citrix

- Fixed **video playback** with enabled **Citrix Browser Content Redirection**.

### RDP/IGEL RDP Client 2

- Fixed **RDP graphics issues** with **Windows 2008(R2)** Server (when RemoteFX is not enabled).
- Fixed **RDP Web Access Domain Visibility** not working correctly.
- Fixed **sound glitch** while using **PulseAudio** system. PulseAudio is now the default sound driver.

### VMware Horizon

- Fixed **sound issue in Horizon client 5.x using PCoIP protocol**.

### Firefox

- Fixed: **Homepage** cannot be set
- Fixed: **RTSP media stream** with enabled apparmor.

### Network

- Fixed issue with configuration of more than one **NTP server**.
- Fixed network interface device order for **Dell Wyse 5070 Thin Client** so that the onboard interface always is the first one.

When endpoint is updated from a previous firmware version, network interface device order might change

- Changed **minimal allowed MSS size to 750** to avoid problems with some VPN solutions.
- Added new registry keys to be able to configure the **minimal allowed TCP MSS size**.

**More...**

|           |                               |
|-----------|-------------------------------|
| Parameter | Minimal TCP send MSS size     |
| Registry  | system.sysctl.tcp_min_snd_mss |

|       |     |
|-------|-----|
| Range | 750 |
|-------|-----|

## Smartcard

- Fixed not working **90meter** in **Firefox** when apparmor is enabled.
- Fixed handling of smartcards in **pcsc-lite**: Improved transaction locking. A new parameter was introduced to control the new behavior (enabled by default).

[More...](#)

|           |                                        |
|-----------|----------------------------------------|
| Parameter | Abort stalled transactions             |
| Registry  | scard.pcscd.abort_stalled_transactions |
| Range     | <u>enabled</u> / disabled              |

- Fixed **bug in smartcard transaction locking**.
- Fixed **IGEL Smartcard** to be able to handle **VoIP client Ekiga** sessions.
- Fixed **smartcard usernames displayed on login screen**: non-ASCII characters were not shown correctly before.
- Fixed **error message on login screen**, shown when smart card PIN is locked.

## Base system

- Fixed **license handling**: Add-on licenses can be used on top of Workspace Edition evaluation licenses now.
- Fixed **warnings when evaluation license is about to expire**. In detail, removed warning when **Enterprise Management Pack** is about to expire and WE is already licensed.
- Fixed **ActiveDirectory/Kerberos password** change with **Change Password** accessory for users which are member of many (~300+) AD groups.
- Fixed **IGEL License retrieval via FTP protocol** in **IGEL Setup Assistant** and **Licenses Browser tool**.
- Fixed **bug in reboot message** where not all available translations were used.
- Fixed problems with **missing library** if using **OpenConnect** feature.
- Changed: **Bluetooth is off by default again**. It will be temporary enabled for auto pairing before the initial Setup Assistant runs. Only if a device is paired during this phase, Bluetooth is enabled afterwards. To enable Bluetooth support by configuration use this parameter:

[More...](#)

|            |                                  |
|------------|----------------------------------|
| IGEL Setup | <b>Devices &gt; Bluetooth</b>    |
| Parameter  | Bluetooth                        |
| Registry   | devices.bluetooth.enable         |
| Value      | <u>enabled</u> / <u>disabled</u> |

- Fixed **license information** of Add-On licenses in category evaluation.
- Re-fixed broken **custom bootsplash** when doing a reset to factory defaults via UMS.

## Custom Partition

- Automatic constrain of minimum size for **custom partition to 5MB**.

## Firmware update

- **Automatic firmware update** is now checked after retrieval of UMS settings.

- If there are some not executed changes in the network configuration, these **changes are applied automatically** before performing firmware update.

#### Storage Devices

- Fixed bug: **udiskd mounted storage devices** on behalf of user processes (e.g. parole) even if Storage Hotplug was disabled in the setup.

#### X11 system

- Fixed issue with **Wacom Signing Pads** not being recognized as displays.
- Solved issues with certain **monitors** on **UD2 LX50**.
- Fixed **Multi-GPU NVIDIA** setups with **Display Switch**.
- Prevent configuration of **Display Switch** utility on unlicensed device.
- Fixed an issue with **modesetting driver** and **DisplayLink USB graphic adapters**.

#### X server

- Fixed **Xorg freezes** when usage of **modesetting driver** and **video acceleration**.

#### Shared Workplace

- Fixed broken **Shared Workplace** authentication when ICG is used.

#### Hardware

- Fixed **EFI freeze** problem **after bootcode update** on devices like the HP t630 and probably others too.
- Added: **Bluetooth tool shows now a message when no device is connected**.
- Fixed issue with **limited colors** on the **DisplayPort 1 of UD2-LX50**.

#### Remote Management

- Fixed **automatic registering** in the UMS using DNS entry or DHCP tag during initial rollout.

#### IGEL Cloud Gateway

- Fixed search for an available **buddy update server** when devices are managed over **ICG**.

#### VNC

- Fixed **sporadic connection failure** in VNC server.

#### CA Certificates Contained in IGEL OS 11.03

IGEL OS 11.03 contains the following CA certificates:

| Certificate name               | Expiry date                 | File in /etc/ssl/certs             |
|--------------------------------|-----------------------------|------------------------------------|

### 7.12.3 General Information 11.02.150

The following clients and features are not supported anymore:

- Caradigm
- Citrix Legacy Sessions
- Citrix Web Interface
- Citrix StoreFront Legacy
- Citrix HDX Flash Redirection
- Citrix XenDesktop Appliance Mode
- Flash Player Download

- JAVA Web Start
- Leostream Java Connect
- Systancia AppliDis
- VIA graphics driver

#### 7.12.4 Security Fixes 11.02.150

##### Firefox

- Updated **Firefox** browser to version **60.9.0 ESR**.  
Including Fixes from **Security Advisory 2019-27**:  
[More...](#)  
CVE-2019-11746, CVE-2019-11744, CVE-2019-11753, CVE-2019-11752, CVE-2019-9812, CVE-2019-11743, and CVE-2019-11740.
- Fixes for **mfsa2019-22**, also known as:  
[More...](#)  
CVE-2019-9811, CVE-2019-11711, CVE-2019-11712, CVE-2019-11713, CVE-2019-11729, CVE-2019-11715, CVE-2019-11717, CVE-2019-11719, CVE-2019-11730, and CVE-2019-11709.
- Fixes for **mfsa2019-19**, also known as: CVE-2019-11708.
- Fixes for **mfsa2019-18**, also known as: CVE-2019-11707.
- Fixes for **mfsa2019-08**, also known as:  
[More...](#)  
CVE-2019-9790, CVE-2019-9791, CVE-2019-9792, CVE-2019-9793, CVE-2019-9795, CVE-2019-9796, CVE-2018-18506, and CVE-2019-9788.
- Fixes for **mfsa2019-05**, also known as: CVE-2018-18356, CVE-2019-5785.
- Fixes for **mfsa2019-02**, also known as: CVE-2018-18500, CVE-2018-18505, and CVE-2018-18501.
- Added allowance for Firefox to access **Yubikey (FIDO/U2F)** if apparmor is active.

##### Base system

- Fixed security issue **CVE-2019-15902** in **4.19.x kernel**.
- Set default **umask to 0077** for all non-root users.
- Remote users home is now **/home/ruser**.
- Fixed **policykit-1** security issue CVE-2019-6133.
- Fixed **tiff** security issues:  
[More...](#)  
CVE-2019-7663, CVE-2019-6128, CVE-2018-19210, CVE-2018-17000, CVE-2018-12900, and CVE-2018-10779.
- Fixed **lcms2** security issue CVE-2018-16435.
- Fixed **libpng1.6** security issues CVE-2019-7317 and CVE-2018-13785.
- Fixed **nss** security issues CVE-2018-18508, CVE-2019-11729, and CVE-2019-11719.
- Fixed **procps** security issues:

**More...**

CVE-2018-1126, CVE-2018-1125, CVE-2018-1124,  
CVE-2018-1123 and CVE-2018-1122.

- Fixed **evince** security issues CVE-2019-11459 and CVE-2019-1010006.
- Fixed **gdk-pixbuf** security issue CVE-2017-12447.
- Fixed **gst-plugins-base0.10** security issue CVE-2019-9928.
- Fixed **bind9** security issues CVE-2019-6465, CVE-2018-5745 and CVE-2018-5743.
- Fixed **libgd2** security issues CVE-2019-6978 and CVE-2019-6977.
- Fixed **ghostscript** security issues CVE-2019-3839, CVE-2019-3838 and CVE-2019-3835.
- Fixed **ldb** security issue CVE-2019-3824.
- Fixed **file** security issues CVE-2019-8907 and CVE-2019-8905.
- Fixed **poppler** security issues:

**More...**

CVE-2019-9200, CVE-2019-9903, CVE-2019-9631, CVE-2019-12293,  
CVE-2019-10872, CVE-2019-10023, CVE-2019-10021, CVE-2019-10019,  
CVE-2019-10018, CVE-2018-20662, CVE-2018-18897, and CVE-2017-9865.

- Fixed **samba** security issues CVE-2019-3880 and CVE-2018-16860.
- Fixed **openssl** security issue CVE-2019-1559.
- Fixed **libxslt** security issue CVE-2019-11068.
- Fixed **openssh** security issue CVE-2019-6111.
- Fixed **wget** security issue CVE-2019-5953.
- Fixed **wpa** security issues:

**More...**

CVE-2019-9495, CVE-2019-9497, CVE-2019-9498,  
CVE-2019-9499, and CVE-2019-11555.

- Fixed **gtk+2.0** security issue CVE-2013-7447.
- Fixed **heimdal** security issues CVE-2019-12098 and CVE-2018-16860.
- Fixed **webkit2gtk** security issues CVE-2019-8615, CVE-2019-8607, and CVE-2019-8595.
- Fixed **gimp** security issues:

**More...**

CVE-2017-17786, CVE-2017-17789, CVE-2017-17784,  
CVE-2017-17787, CVE-2017-17785, and CVE-2017-17788.

- Fixed **libtomcrypt** security issue CVE-2018-12437.
- Fixed **unzip** security issues CVE-2019-13232, CVE-2018-1000035, CVE-2016-9844, and  
CVE-2014-9913.
- Fixed **curl** security issues:

**More...**

CVE-2018-16840, CVE-2018-16839, CVE-2019-3823,  
CVE-2019-3822, CVE-2018-16890, and CVE-2019-5346.

- Fixed **gnutls28** security issues CVE-2018-10846, CVE-2018-10845, CVE-2018-10844, and  
CVE-2018-1084.
- Fixed **db5.3** security issue CVE-2019-8457.

- Fixed **qtbase-opensource-src** security issues CVE-2018-19873, CVE-2018-19870, and CVE-2018-15518.

- Fixed **libssh2** security issues:

[More...](#)

CVE-2019-3863, CVE-2019-3862, CVE-2019-3861, CVE-2019-3860, CVE-2019-3859, CVE-2019-3858, CVE-2019-3857, CVE-2019-3856, and CVE-2019-3855.

- Fixed **network-manager** security issue CVE-2018-15688.

- Fixed **elfutils** security issues:

[More...](#)

CVE-2019-7665, CVE-2019-7150, CVE-2019-7149, CVE-2018-18521, CVE-2018-18520, CVE-2018-18310, CVE-2018-16403, CVE-2018-16402, and CVE-2018-16062.

- Fixed **libsndfile** security issues:

[More...](#)

CVE-2019-3832, CVE-2018-19758, CVE-2018-19662, CVE-2018-19661, CVE-2018-19432, CVE-2018-13139, CVE-2017-6892, CVE-2017-17457, CVE-2017-17456, CVE-2017-16942, CVE-2017-14634, CVE-2017-14246, and CVE-2017-14245.

- Fixed **dbus** security issue CVE-2019-12749.

- Fixed **vim** security issues CVE-2019-12735 and CVE-2017-5953.

- Fixed **glib2.0** security issue CVE-2019-12450.

- Fixed **openssl (1.1.x)** security issues:

[More...](#)

CVE-2019-1543, CVE-2018-0737, CVE-2018-0735, CVE-2018-0734, and CVE-2018-0732.

- Fixed **sqlite3** security issues:

[More...](#)

CVE-2019-9937, CVE-2019-9936, CVE-2019-8457, CVE-2018-20506, CVE-2018-20346, CVE-2017-2520, CVE-2017-2519, CVE-2017-2518, CVE-2017-13685, CVE-2017-10989, and CVE-2016-6153.

- Fixed **systemd** security issues:

[More...](#)

CVE-2019-6454, CVE-2019-6454, CVE-2018-1049, CVE-2018-15686, and CVE-2019-3842.

- Fixed **libseccomp** security issue CVE-2019-9893.

- Fixed **bzip2** security issues CVE-2019-12900 and CVE-2016-3189.

- Fixed **imagemagick** security issues:

CVE-2019-9956, CVE-2019-7398, CVE-2019-7397, CVE-2019-7396, CVE-2019-7175, CVE-2019-11598, CVE-2019-11597, CVE-2019-11472, CVE-2019-11470, CVE-2019-10650, CVE-2019-10131, CVE-2018-20467, CVE-2018-18025, CVE-2018-18024, CVE-2018-18016, CVE-2018-17966,

CVE-2018-17965, CVE-2018-16413, CVE-2018-16412, CVE-2017-12806, and CVE-2017-12805.

- Fixed **expat** security issue CVE-2018-20843.
- Fixed **glib2.0** security issue CVE-2019-13012.
- Fixed **libvirt** security issues CVE-2019-10167 and CVE-2019-10161.
- Fixed **gvfs** security issue CVE-2019-12795.
- Fixed **libmspack** security issue CVE-2019-1010305.
- Fixed **bash** security issue CVE-2019-9924.
- Fixed **openldap** security issues CVE-2019-13565 and CVE-2019-13057.
- Updated **libwebkit2gtk-4.0-37** to version **2.24.2**.

Security fixes:

**More...**

CVE-2019-8595, CVE-2019-8607, CVE-2019-8615, CVE-2019-6251, CVE-2018-4373, CVE-2018-4375, CVE-2018-4376, CVE-2018-4378, CVE-2018-4382, CVE-2018-4392, CVE-2018-4416, CVE-2018-4345, CVE-2018-4386, and CVE-2018-4372.

- Fixed a vulnerability in the **custom environment variable framework**.
- Fixed possible malicious **owner change within TC setup configuration**.
- Fixed **kernel TCP** vulnerabilities CVE-2019-11477: **SACK Panic**, CVE-2019-11478: **SACK Slowness**, and CVE-2019-11479: **Excess resource consumption due to low MSS values**.
- Changed minimally allowed **MSS size** to **1000** to prevent possible Denial of Service attacks.
- Fixed a vulnerability in **Java configuration script**.

## 7.12.5 Known Issues 11.02.150

### Citrix

- With activated DRI3 and AMD GPU, Citrix **H.264 acceleration** plugin could **freeze**. Selective H.264 mode (API v2) is not affected from this issue.
- Citrix has known issues with **GStreamer1.0** which describe problems with **multimedia redirection of H264, MPEG1 and MPEG2**. GStreamer 1.0 is used if browser content redirection is active.
- **Browser content redirection** does not work with **activated DRI3** and hardware accelerated **H.264 deep compression codec**.
- Citrix **StoreFront** login with **Gemalto smartcard middleware** does not detect smartcard correctly if the card is **inserted after start** of Login.  
As a workaround, insert the smartcard before starting StoreFront login.
- Citrix **H.264 acceleration plugin** does not work with **enabled** server policy "Optimize for 3D graphics workload" in combination with server policy "Use video codec compressin" > "For the entire screen".
- To launch **multiple desktop sessions** with **Citrix HDX RTME** and **Citrix H.264 acceleration plugin**, the following registry key must be enabled:  
**More...**

|           |                                                                  |
|-----------|------------------------------------------------------------------|
| Parameter | Activate workaround for dual RTME sessions and H264 acceleration |
| Registry  | ica.workaround-dual-rtme                                         |

|              |                           |
|--------------|---------------------------|
| <b>Value</b> | <u>enabled / disabled</u> |
|--------------|---------------------------|

This workaround is not applicable when "Enable Secure ICA" is active for the specific delivery group.

#### VMware Horizon

- **Client drive mapping** and **USB redirection for storage devices** should not be enabled both at the same time.
  - On the one hand, if you want to use **USB redirection** for your storage devices: Note that the **USB on-insertion feature** is only working if the **client drive mapping** is switched off. In the IGEL Setup client, **drive mapping** can be found under **Sessions > Horizon Client > Horizon Client Global > Drive Mapping > Enable drive mapping**. It is also recommended to disable local **Storage Hotplug** under **Setup > Devices > Storage Devices > Storage Hotplug**.
  - On the other hand, if you use **drive mapping** instead, it is recommended to either **switch off USB redirection entirely** or at least to **deny storage devices** by adding a filter to the USB class rules. Furthermore, Horizon Client relies on the OS to mount the storage devices itself. Enable local **Storage Hotplug** under **Setup > Devices > Storage Devices > Storage Hotplug**.
- **External drives** mounted already before connection **do not appear in the remote desktop**. Workaround: map the directory /media as a drive. Then the external devices will show up inside the media drive.

#### Wi-Fi

- **TP-Link Archer T2UH Wi-Fi adapters** do not work after system suspend/resume. Workaround: Disable system suspend under **IGEL Setup > System > Power Options > Shutdown**.

#### Parallels Client

- **Native USB redirection does not work** with Parallels Client.
- For using the new **FIPS 140-2 compliance mode**, it is necessary to connect to the **Parallels RAS** once with disabled FIPS support.

#### Smartcard

- In seldom cases, the authentication hung when using **A.E.T. SafeSign smartcards**.

#### Appliance Mode

- Appliance mode **RHEV/Spice**: spice-xpi firefox plugin is no longer supported. The "Console Invocation" has to allow 'Native' client (auto is also possible) and should be started in fullscreen to prevent any opening windows.

#### Multimedia

- Multimedia **redirection with GStreamer** could fail with the **Nouveau GPU driver**.

#### Audio

- IGEL **UD2 (D220)** fails to restore the **volume level of the speaker** when the device used firmware version **11.01.110** before.

## 7.12.6 New Features 11.02.150

### Hardware

- Improved support for **ADS-Tec VMT9000** devices:
  - Enable **rs-232 additional power supply** without restart.
  - Enable an **external Wi-Fi antenna** without restart.
  - Enable **shutdown by ignition off**.
- Added hardware support for **Dell WYSE 5020**.

## 7.12.7 Resolved Issues 11.02.150

### DP/IGEL RDP Client 2

- Fixed **RDP graphics** issues with **Windows 2008(R2) Server** (when **RemoteFX** is not enabled).
- Fixed some smaller **graphical RDP issues** with **Windows 2012 R2** if using **Clearcodec**.

### Network

- Changed **minimally allowed MSS size** to "**750**" to avoid problems with some VPN solutions.
- Added a new registry key to be able to configure the **minimally allowed TCP MSS size**.

A new registry key:

|           |                                                                             |
|-----------|-----------------------------------------------------------------------------|
| Parameter | Minimal TCP send MSS size                                                   |
| Registry  | system.sysctl.tcp_min_snd_mss                                               |
| Type      | Integer                                                                     |
| Value     | <u>750</u>                                                                  |
| Tooltip   | Minimal TCP send MSS size (configurable value in the area from 200 to 1450) |

### Hardware

- Fixed **EFI freeze** problem **after bootcode update on** devices like the **HP t630** and probably others too.
- Added support for newer **Prolific PL2303 USB serial adapters** (used in UD3 LX60).

### Firefox

- Fixed: **Homepage cannot be set**.

### X11 system

- Fixed **Multi-GPU NVIDIA** setups **with Display Switch**.
- Prevent configuration of **Display Switch** utility **on unlicensed devices**.
- Added **new registry keys** to be able **to configure some modesetting options** if needed.

New registry keys:

### 7.13.3 General Information 11.02.130

The following clients and features are not supported anymore:

- Caradigm
- Citrix Legacy Sessions
- Citrix Web Interface
- Citrix StoreFront Legacy
- Citrix HDX Flash Redirection
- Citrix XenDesktop Appliance Mode
- Flash Player Download
- JAVA Web Start
- Leostream Java Connect
- Systancia AppliDis
- VIA graphics driver.

### 7.13.4 Security Fixes 11.02.130

#### Firefox

- Updated **Firefox** browser to version **60.8.0 ESR**.

- Fixes for **mfsa2019-22**, also known as:

[More...](#)

CVE-2019-9811, CVE-2019-11711, CVE-2019-11712, CVE-2019-11713, CVE-2019-11729, CVE-2019-11715, CVE-2019-11717, CVE-2019-11719, CVE-2019-11730, and CVE-2019-11709.

- Fixes for **mfsa2019-19**, also known as: CVE-2019-11708.

- Fixes for **mfsa2019-18**, also known as: CVE-2019-11707.

- Fixes for **mfsa2019-08**, also known as:

[More...](#)

CVE-2019-9790, CVE-2019-9791, CVE-2019-9792, CVE-2019-9793, CVE-2019-9795, CVE-2019-9796, CVE-2018-18506, and CVE-2019-9788.

- Fixes for **mfsa2019-05**, also known as: CVE-2018-18356, CVE-2019-5785.

- Fixes for **mfsa2019-02**, also known as: CVE-2018-18500, CVE-2018-18505, and CVE-2018-18501.

- Added allowance for Firefox to access **Yubikey (FIDO/U2F)** if apparmor is active.

#### Base system

- Set default **umask to 0077** for all non-root users.

- Remote users home is now **/home/ruser**.

- Fixed **policykit-1** security issue CVE-2019-6133.

- Fixed **tiff** security issues:

[More...](#)

CVE-2019-7663, CVE-2019-6128, CVE-2018-19210, CVE-2018-17000, CVE-2018-12900, and CVE-2018-10779.

- Fixed **lcms2** security issue CVE-2018-16435.
- Fixed **libpng1.6** security issues CVE-2019-7317 and CVE-2018-13785.
- Fixed **nss** security issues CVE-2018-18508, CVE-2019-11729, and CVE-2019-11719.
- Fixed **procps** security issues:  
[More...](#)

CVE-2018-1126, CVE-2018-1125, CVE-2018-1124,  
CVE-2018-1123 and CVE-2018-1122.

- Fixed **evince** security issues CVE-2019-11459 and CVE-2019-1010006.
- Fixed **gdk-pixbuf** security issue CVE-2017-12447.
- Fixed **gst-plugins-base0.10** security issue CVE-2019-9928.
- Fixed **bind9** security issues CVE-2019-6465, CVE-2018-5745 and CVE-2018-5743.
- Fixed **libgd2** security issues CVE-2019-6978 and CVE-2019-6977.
- Fixed **ghostscript** security issues CVE-2019-3839, CVE-2019-3838 and CVE-2019-3835.
- Fixed **ldb** security issue CVE-2019-3824.
- Fixed **file** security issues CVE-2019-8907 and CVE-2019-8905.
- Fixed **poppler** security issues:  
[More...](#)

CVE-2019-9200, CVE-2019-9903, CVE-2019-9631, CVE-2019-12293,  
CVE-2019-10872, CVE-2019-10023, CVE-2019-10021, CVE-2019-10019,  
CVE-2019-10018, CVE-2018-20662, CVE-2018-18897, and CVE-2017-9865.

- Fixed **samba** security issues CVE-2019-3880 and CVE-2018-16860.
- Fixed **openssl** security issue CVE-2019-1559.
- Fixed **libxslt** security issue CVE-2019-11068.
- Fixed **openssh** security issue CVE-2019-6111.
- Fixed **wget** security issue CVE-2019-5953.
- Fixed **wpa** security issues:  
[More...](#)

CVE-2019-9495, CVE-2019-9497, CVE-2019-9498,  
CVE-2019-9499, and CVE-2019-11555.

- Fixed **gtk+2.0** security issue CVE-2013-7447.
- Fixed **heimdal** security issues CVE-2019-12098 and CVE-2018-16860.
- Fixed **webkit2gtk** security issues CVE-2019-8615, CVE-2019-8607, and CVE-2019-8595.
- Fixed **gimp** security issues:  
[More...](#)

CVE-2017-17786, CVE-2017-17789, CVE-2017-17784,  
CVE-2017-17787, CVE-2017-17785, and CVE-2017-17788.

- Fixed **libtomcrypt** security issue CVE-2018-12437.
- Fixed **unzip** security issues CVE-2019-13232, CVE-2018-1000035, CVE-2016-9844, and  
CVE-2014-9913.
- Fixed **curl** security issues:  
[More...](#)

CVE-2018-16840, CVE-2018-16839, CVE-2019-3823,  
CVE-2019-3822, CVE-2018-16890, and CVE-2019-5346.

- Fixed **gnutls28** security issues CVE-2018-10846, CVE-2018-10845, CVE-2018-10844, and CVE-2018-1084.
- Fixed **db5.3** security issue CVE-2019-8457.
- Fixed **qtbase-opensource-src** security issues CVE-2018-19873, CVE-2018-19870, and CVE-2018-15518.
- Fixed **libssh2** security issues:  
[More...](#)

CVE-2019-3863, CVE-2019-3862, CVE-2019-3861, CVE-2019-3860, CVE-2019-3859, CVE-2019-3858, CVE-2019-3857, CVE-2019-3856, and CVE-2019-3855.
- Fixed **network-manager** security issue CVE-2018-15688.
- Fixed **elfutils** security issues:  
[More...](#)

CVE-2019-7665, CVE-2019-7150, CVE-2019-7149, CVE-2018-18521, CVE-2018-18520, CVE-2018-18310, CVE-2018-16403, CVE-2018-16402, and CVE-2018-16062.
- Fixed **libsndfile** security issues:  
[More...](#)

CVE-2019-3832, CVE-2018-19758, CVE-2018-19662, CVE-2018-19661, CVE-2018-19432, CVE-2018-13139, CVE-2017-6892, CVE-2017-17457, CVE-2017-17456, CVE-2017-16942, CVE-2017-14634, CVE-2017-14246, and CVE-2017-14245.
- Fixed **dbus** security issue CVE-2019-12749.
- Fixed **vim** security issues CVE-2019-12735 and CVE-2017-5953.
- Fixed **glib2.0** security issue CVE-2019-12450.
- Fixed **openssl (1.1.x)** security issues:  
[More...](#)

CVE-2019-1543, CVE-2018-0737, CVE-2018-0735, CVE-2018-0734, and CVE-2018-0732.
- Fixed **sqlite3** security issues:  
[More...](#)

CVE-2019-9937, CVE-2019-9936, CVE-2019-8457, CVE-2018-20506, CVE-2018-20346, CVE-2017-2520, CVE-2017-2519, CVE-2017-2518, CVE-2017-13685, CVE-2017-10989, and CVE-2016-6153.
- Fixed **systemd** security issues:  
[More...](#)

CVE-2019-6454, CVE-2019-6454, CVE-2018-1049, CVE-2018-15686, and CVE-2019-3842.
- Fixed **libseccomp** security issue CVE-2019-9893.
- Fixed **bzip2** security issues CVE-2019-12900 and CVE-2016-3189.
- Fixed **imagemagick** security issues:  
[More...](#)

CVE-2019-9956, CVE-2019-7398, CVE-2019-7397, CVE-2019-7396, CVE-2019-7175, CVE-2019-11598, CVE-2019-11597, CVE-2019-11472, CVE-2019-11470, CVE-2019-10650, CVE-2019-10131, CVE-2018-20467, CVE-2018-18025, CVE-2018-18024, CVE-2018-18016, CVE-2018-17966, CVE-2018-17965, CVE-2018-16413, CVE-2018-16412, CVE-2017-12806, and CVE-2017-12805.

- Fixed **expat** security issue CVE-2018-20843.
- Fixed **glib2.0** security issue CVE-2019-13012.
- Fixed **libvirt** security issues CVE-2019-10167 and CVE-2019-10161.
- Fixed **gvfs** security issue CVE-2019-12795.
- Fixed **libmspack** security issue CVE-2019-1010305.
- Fixed **bash** security issue CVE-2019-9924.
- Fixed **openldap** security issues CVE-2019-13565 and CVE-2019-13057.
- Updated **libwebkit2gtk-4.0-37** to version **2.24.2**.

Security fixes:

[More...](#)

CVE-2019-8595, CVE-2019-8607, CVE-2019-8615, CVE-2019-6251, CVE-2018-4373, CVE-2018-4375, CVE-2018-4376, CVE-2018-4378, CVE-2018-4382, CVE-2018-4392, CVE-2018-4416, CVE-2018-4345, CVE-2018-4386, and CVE-2018-4372.

- Fixed a vulnerability in the **custom environment variable framework**.
- Fixed possible malicious **owner change within TC setup configuration**.
- Fixed **kernel TCP** vulnerabilities CVE-2019-11477: **SACK Panic**, CVE-2019-11478: **SACK Slowness**, and CVE-2019-11479: **Excess resource consumption due to low MSS values**.
- Changed minimally allowed **MSS size** to **1000** to prevent possible Denial of Service attacks.
- Fixed a vulnerability in **Java configuration script**.

### 7.13.5 Known Issues 11.02.130

#### Citrix

- With activated DRI3 and AMD GPU, Citrix **H.264 acceleration** plugin could **freeze**. Selective H.264 mode (API v2) is not affected from this issue.
- Citrix has known issues with **GStreamer1.0** which describe problems with **multimedia redirection of H264, MPEG1 and MPEG2**. GStreamer 1.0 is used if browser content redirection is active.
- **Browser content redirection** does not work with **activated DRI3** and hardware accelerated **H.264 deep compression codec**.
- Citrix **StoreFront** login with **Gemalto smartcard middleware** does not detect smartcard correctly if the card is **inserted after start** of Login.  
As a workaround, insert the smartcard before starting StoreFront login.
- Citrix **H.264 acceleration plugin** does not work with **enabled** server policy "Optimize for 3D graphics workload" in combination with server policy "Use video codec compression" > "For the entire screen".
- To launch **multiple desktop sessions** with **Citrix HDX RTME** and **Citrix H.264 acceleration plugin**, the following registry key must be enabled:

### More...

|           |                                                                  |
|-----------|------------------------------------------------------------------|
| Parameter | Activate workaround for dual RTME sessions and H264 acceleration |
| Registry  | ica.workaround-dual-rtme                                         |
| Value     | enabled / <u>disabled</u>                                        |

This workaround is not applicable when "Enable Secure ICA" is active for the specific delivery group.

### VMware Horizon

- **Sound redirection in PCoIP** is broken when the so-called lightweight-client is used, which has become the new default.  
Sound redirection can still be used by choosing the rollback-client instead. This can be done by setting the IGEL Registry key:

### More...

|           |                                         |
|-----------|-----------------------------------------|
| Parameter | Allow rollback to former client variant |
| Registry  | vmware.view.allow-client-rollback       |
| Value     | enabled / <u>disabled</u>               |

- **Client drive mapping** and **USB redirection for storage devices** should not be enabled both at the same time.
  - On the one hand, if you want to use **USB redirection** for your storage devices: Note that the **USB on-insertion feature** is only working if the **client drive mapping** is switched off.  
In the IGEL Setup client, **drive mapping** can be found under **Sessions > Horizon Client > Horizon Client Global > Drive Mapping > Enable drive mapping**.  
It is also recommended to disable local **Storage Hotplug** under **Setup > Devices > Storage Devices > Storage Hotplug**.
  - On the other hand, if you use **drive mapping** instead, it is recommended to either **switch off USB redirection entirely** or at least to **deny storage devices** by adding a filter to the USB class rules.  
Furthermore, Horizon Client relies on the OS to mount the storage device itself. Enable local **Storage Hotplug** under **Setup > Devices > Storage Devices > Storage Hotplug**.

- **External drives** mounted already before connection **do not appear in the remote desktop**.  
Workaround: map the directory /media as a drive. Then the external devices will show up inside the media drive.

### WiFi

- **TP-Link Archer T2UH WiFi adapters** do not work after system suspend/resume.  
Workaround: Disable system suspend under **IGEL Setup > System > Power Options > Shutdown**.

### Parallels Client

- **Native USB redirection does not work** with Parallels Client.
- For using the new **FIPS 140-2 compliance mode**, it is necessary to connect to the **Parallels RAS** once with disabled FIPS support.

### Smartcard

- In seldom cases, the authentication hung when using **A.E.T. SafeSign smartcards**.

### Appliance Mode

- Appliance mode **RHEV/Spice**: spice-xpi firefox plugin is no longer supported. The "Console Invocation" has to allow 'Native' client (auto is also possible) and should be started in fullscreen to prevent any opening windows.

#### Multimedia

- Multimedia **redirection with GStreamer** could fail with the **Nouveau GPU driver**.

#### Audio

- IGEL **UD2 (D220)** fails to restore the **volume level of the speaker** when the device used firmware version **11.01.110** before.

### 7.13.6 Resolved Issues 11.02.130

#### Base system

- Fixed **ActiveDirectory/Kerberos password change** with "Change Password" accessory for users who are members of many (~300+) AD groups.
- Fixed **IGEL license retrieval** via FTP protocol in IGEL Setup Assistant and integrated license browser.

#### Remote Management

- Fixed **automatic registering in the UMS** using DNS entry or DHCP tag.

### 7.14 Notes for Release 11.02.100

## General Information 11.02.100

The following clients and features are not supported anymore:

- Caradigm
- Citrix Legacy Sessions
- Citrix Web Interface
- Citrix StoreFront Legacy
- Citrix HDX Flash Redirection
- Citrix XenDesktop Appliance Mode
- Flash Player Download
- JAVA Web Start
- Leostream Java Connect
- Systancia AppliDis
- VIA graphics driver.

## Security Fixes 11.02.100

### Firefox

- Updated **Firefox** browser to version **60.8.0 ESR**.
- Fixes for **mfsa2019-22**, also known as:

[More...](#)

CVE-2019-9811, CVE-2019-11711, CVE-2019-11712, CVE-2019-11713, CVE-2019-11729, CVE-2019-11715, CVE-2019-11717, CVE-2019-11719, CVE-2019-11730, and CVE-2019-11709.

- Fixes for **mfsa2019-19**, also known as: CVE-2019-11708.
- Fixes for **mfsa2019-18**, also known as: CVE-2019-11707.
- Fixes for **mfsa2019-08**, also known as:

[More...](#)

CVE-2019-9790, CVE-2019-9791, CVE-2019-9792, CVE-2019-9793, CVE-2019-9795, CVE-2019-9796, CVE-2018-18506, and CVE-2019-9788.

- Fixes for **mfsa2019-05**, also known as: CVE-2018-18356, CVE-2019-5785.
- Fixes for **mfsa2019-02**, also known as: CVE-2018-18500, CVE-2018-18505, and CVE-2018-18501.
- Added allowance for Firefox to access **Yubikey (FIDO/U2F)** if apparmor is active.

### Base system

- Set default **umask to 0077** for all non-root users.
- Remote users home is now **/home/ruser**.
- Fixed **policykit-1** security issue CVE-2019-6133.
- Fixed **tiff** security issues:  
[More...](#)

CVE-2019-7663, CVE-2019-6128, CVE-2018-19210, CVE-2018-17000, CVE-2018-12900, and CVE-2018-10779.

- Fixed **lcms2** security issue CVE-2018-16435.
- Fixed **libpng1.6** security issues CVE-2019-7317 and CVE-2018-13785.
- Fixed **nss** security issues CVE-2018-18508, CVE-2019-11729, and CVE-2019-11719.
- Fixed **procps** security issues:  
[More...](#)

CVE-2018-1126, CVE-2018-1125, CVE-2018-1124, CVE-2018-1123 and CVE-2018-1122.

- Fixed **evince** security issues CVE-2019-11459 and CVE-2019-1010006.
- Fixed **gdk-pixbuf** security issue CVE-2017-12447.
- Fixed **gst-plugins-base0.10** security issue CVE-2019-9928.
- Fixed **bind9** security issues CVE-2019-6465, CVE-2018-5745 and CVE-2018-5743.
- Fixed **libgd2** security issues CVE-2019-6978 and CVE-2019-6977.
- Fixed **ghostscript** security issues CVE-2019-3839, CVE-2019-3838 and CVE-2019-3835.
- Fixed **ldb** security issue CVE-2019-3824.
- Fixed **file** security issues CVE-2019-8907 and CVE-2019-8905.
- Fixed **poppler** security issues:  
[More...](#)

CVE-2019-9200, CVE-2019-9903, CVE-2019-9631, CVE-2019-12293, CVE-2019-10872, CVE-2019-10023, CVE-2019-10021, CVE-2019-10019, CVE-2019-10018, CVE-2018-20662, CVE-2018-18897, and CVE-2017-9865.

- Fixed **samba** security issues CVE-2019-3880 and CVE-2018-16860.
- Fixed **openssl** security issue CVE-2019-1559.
- Fixed **libxslt** security issue CVE-2019-11068.
- Fixed **openssh** security issue CVE-2019-6111.
- Fixed **wget** security issue CVE-2019-5953.
- Fixed **wpa** security issues:  
[More...](#)

CVE-2019-9495, CVE-2019-9497, CVE-2019-9498, CVE-2019-9499, and CVE-2019-11555.

- Fixed **gtk+2.0** security issue CVE-2013-7447.
- Fixed **heimdal** security issues CVE-2019-12098 and CVE-2018-16860.
- Fixed **webkit2gtk** security issues CVE-2019-8615, CVE-2019-8607, and CVE-2019-8595.
- Fixed **gimp** security issues:

CVE-2019-8595, CVE-2019-8607, CVE-2019-8615, CVE-2019-6251, CVE-2018-4373, CVE-2018-4375, CVE-2018-4376, CVE-2018-4378, CVE-2018-4382, CVE-2018-4392, CVE-2018-4416, CVE-2018-4345, CVE-2018-4386, and CVE-2018-4372.

- Fixed a vulnerability in the **custom environment variable framework**.
- Fixed possible malicious **owner change within TC setup configuration**.
- Fixed **kernel TCP** vulnerabilities CVE-2019-11477: **SACK Panic**, CVE-2019-11478: **SACK Slowness**, and CVE-2019-11479: **Excess resource consumption due to low MSS values**.
- Changed minimally allowed **MSS size** to **1000** to prevent possible Denial of Service attacks.
- Fixed a vulnerability in **Java configuration script**.

## Known Issues 11.02.100

### Citrix

- With activated DRI3 and AMD GPU, Citrix **H.264 acceleration** plugin could **freeze**. Selective H.264 mode (API v2) is not affected from this issue.
- Citrix has known issues with **GStreamer1.0** which describe problems with **multimedia redirection of H264, MPEG1 and MPEG2**. GStreamer 1.0 is used if browser content redirection is active.
- **Browser content redirection** does not work with **activated DRI3** and hardware accelerated **H.264 deep compression codec**.
- Citrix **StoreFront** login with **Gemalto smartcard middleware** does not detect smartcard correctly if the card is **inserted after start** of Login.  
As a workaround, insert the smartcard before starting StoreFront login.
- Citrix **H.264 acceleration plugin** does not work with **enabled** server policy "Optimize for 3D graphics workload" in combination with server policy "Use video codec compression" > "For the entire screen".

- To launch **multiple desktop sessions** with **Citrix HDX RTME** and **Citrix H.264 acceleration plugin**, the following registry key must be enabled:

[More...](#)

|           |                                                                  |
|-----------|------------------------------------------------------------------|
| Parameter | Activate workaround for dual RTME sessions and H264 acceleration |
| Registry  | ica.workaround-dual-rtme                                         |
| Range     | enabled / <u>disabled</u>                                        |

This workaround is not applicable when "Enable Secure ICA" is active for the specific delivery group.

#### VMware Horizon

- Client drive mapping** and **USB redirection for storage devices** should not be enabled both at the same time.
  - On the one hand, if you want to use **USB redirection** for your storage devices: Note that the **USB on-insertion feature** is only working if the **client drive mapping** is switched off. In the IGEL Setup client, **drive mapping** can be found under **Sessions > Horizon Client > Horizon Client Global > Drive Mapping > Enable drive mapping**. It is also recommended to disable local **Storage Hotplug** under **Setup > Devices > Storage Devices > Storage Hotplug**.
  - On the other hand, if you use **drive mapping** instead, it is recommended to either **switch off USB redirection entirely** or at least to **deny storage devices** by adding a filter to the USB class rules. Furthermore, Horizon Client relies on the OS to mount the storage device itself. Enable local **Storage Hotplug** under **Setup > Devices > Storage Devices > Storage Hotplug**.
- External drives** mounted already before connection **do not appear in the remote desktop**. Workaround: map the directory /media as a drive. Then the external devices will show up inside the media drive.

#### WiFi

- TP-Link Archer T2UH WiFi adapters** do not work after system suspend/resume. Workaround: Disable system suspend under **IGEL Setup > System > Power Options > Shutdown**.

#### Parallels Client

- Native USB redirection does not work** with Parallels Client.
- For using the new **FIPS 140-2 compliance mode**, it is necessary to connect to the **Parallels RAS** once with disabled FIPS support.

#### Smartcard

- In seldom cases, the authentication hung when using **A.E.T. SafeSign smartcards**.

#### Appliance Mode

- Appliance mode **RHEV/Spice**: spice-xpi firefox plugin is no longer supported. The "Console Invocation" has to allow 'Native' client (auto is also possible) and should be started in fullscreen to prevent any opening windows.

#### Multimedia

- Multimedia **redirection with GStreamer** could fail with the **Nouveau GPU driver**.

## Audio

- IGEL **UD2 (D220)** fails to restore the **volume level of the speaker** when the device used firmware version **11.01.110** before.

## New Features 11.02.100

## Citrix

- Integrated **Citrix Workspace app 19.06**.

Available Citrix Workspace apps in this release: 19.06, 13.10 and 13.5.

- Added a new registry key to support **1536-bit RSA keys** for client authentication. Factory default for this release is "true".

**More...**

|           |                                       |
|-----------|---------------------------------------|
| Parameter | Enables RSA 1536 cipher suite         |
| Registry  | ica.allregions.enable_rsa_1536        |
| Range     | <u>factory default</u> / false / true |

- Added a new **registry key** to enable **different cipher suites** for client authentication. Factory default for this release is "ALL".

**More...**

|           |                                                   |
|-----------|---------------------------------------------------|
| Parameter | Enables different cipher suite                    |
| Registry  | ica.allregions.sslciphers                         |
| Range     | <u>factory default</u> / ALL / GOV / COM          |
|           | > TLS_ECDHE_RSA_WITH_AES_256_GCM_SHA384 – GOV/ALL |
|           | > TLS_ECDHE_RSA_WITH_AES_256_GCM_SHA384 – GOV/ALL |
|           | > TLS_ECDHE_RSA_WITH_AES_128_CBC_SHA – COM/ALL    |

- Added a new **registry key** to support **keyboard layout synchronization**.

**More...**

|           |                                               |
|-----------|-----------------------------------------------|
| Parameter | Keyboard layout synchronization               |
| Registry  | ica.modules.virtualdriver.keyboardsync.enable |
| Value     | <u>false</u> / true                           |

- Updated **Citrix HDX RTME** used for optimization of Skype for Business to version **2.8.0-2235**.
- Added support for **Citrix Workspace Launcher** functionality as described at <https://support.citrix.com/article/CTX237727>.
- Added **Citrix Farm Selection**, a facility to manually select one of the configured services / farms for StoreFront login.

**More...**

|           |                                    |
|-----------|------------------------------------|
| Parameter | Citrix store selection             |
| Registry  | ica.pnlogin.farm_selection.enabled |
| Value     | <u>off</u> / on                    |

**Info:**

Off: All servers are used in parallel. If switched on, a user has to select the store via a dialog box before entering the login data.

- **Timeout** for the selection dialog:

| Parameter  | HDX Realtime Media Engine                                                                                                                                         |
| Registry   | ica.module.virtualdriver.hdxrtme.enable                                                                                                                           |

|       |                           |
|-------|---------------------------|
| Value | <u>enabled / disabled</u> |
|-------|---------------------------|

- Updated the **Nuance virtual channel** for ICA to version **B301**.

#### RDP/IGEL RDP Client 2

- Added a field '**Collection**' to RDP session server page.  
[More...](#)

**IGEL Setup > Sessions > RDP > RDP Sessions > RDP Session > Server**

**IGEL Setup > Sessions > RDP > RDP Sessions > RDP Session > Options**

|           |                                                  |
|-----------|--------------------------------------------------|
| Parameter | Collection                                       |
| Registry  | sessions.winconnect<NR>.option.load-balance-info |

#### VMware Horizon

- Added parameters to specify **webcam frame size** and **rate for RTAV**.

[More...](#)

|           |                               |
|-----------|-------------------------------|
| Parameter | Webcam frame width            |
| Registry  | vmware.view.rtav-frame-width  |
| Value     | <u>&lt;empty_string&gt;</u>   |
| Parameter | Webcam frame height           |
| Registry  | vmware.view.rtav-frame-height |
| Value     | <u>&lt;empty_string&gt;</u>   |
| Parameter | Webcam frame rate             |
| Registry  | vmware.view.rtav-frame-rate   |
| Value     | <u>&lt;empty_string&gt;</u>   |

- Updated **Horizon Client** to version **5.0.0-12557422**.
- Added a possibility to easily evaluate **Horizon Blast decoder states**. By default, sessions are evaluated after usage, and the result is written into the journal log. This can also be used with GUI notifications at runtime.
- Added **new USB classes** to **Horizon USB Redirection** class configuration: **Audio (input)**, **Audio (Output)**, **Imaging**, **Video (Input)**.

#### Parallels Client

- Updated **Parallels Client** to version **17.0**.
- Added a possibility to set apps to **autostart on Parallels RAS**.

#### PowerTerm

- Added **Ericom PowerTerm** terminal emulation. This feature requires an **additional license**.  
The following **versions** are available:  
**12.0.1.0\_20170219.2-dev-34574**  
**12.5\_x64\_20190619\_12.5.1.40008**

#### IBM\_525

- Improved startup time** of IBM iAccess Client.

- **Improved configuration** of IBM iAccess Client via **IGEL Setup**.

## NX client

- Updated **NoMachine Client** to version **6.7.6**.

## ThinLinc

- Updated **Cendio ThinLinc** to version **4.10**.
  - Added support for all of **ThinLinc's login methods: password, public key, smartcard and Kerberos**. Additional parameters can be set when smartcard is chosen.

| Info:     | <p>Added small dot in the bottom left corner during the session to indicate which codec is being used. Green indicates simple codec; blue indicates tic2 codec.</p> <p>This is only available as global setting.</p> |

- UMS option "**Save device files for support**" now includes Teradici PCoIP client's data.

## Firefox

- Added new parameters: **Allow a custom command before and after browser session**.

[More...](#)

| Registry  | sessions.browser%.init_action  |
| Value     | <u>&lt;empty string&gt;</u>    |
| Parameter | final_action                   |
| Registry  | sessions.browser%.final_action |
| Value     | <u>&lt;empty string&gt;</u>    |

## Network

- New feature regarding **lock** and **logon screen**: Network icons are shown on the panel and appear under the same conditions as during normal operation. None of them has a context menu though. Clicking on the Wi-Fi icon directly invokes the Wireless Manager when it is enabled. If blocking/unblocking Wi-Fi by the user is enabled, there is an additional button on the Wireless Manager for blocking and a preceding dialog for unblocking.
- SCEP**: Added a registry key for specifying a **suffix for CommonName/SubjectAltName** when the type is "**DNS Name (auto)**" or "**DNS Name as UPN (auto)**".

[More...](#)

|                                                                                                                   |                                               |
|-------------------------------------------------------------------------------------------------------------------|-----------------------------------------------|
| Parameter                                                                                                         | CommonName/SubjectAltName Suffix              |
| Registry                                                                                                          | network.scepclient.cert%.subjectaltnamesuffix |
| Value                                                                                                             | <u>&lt;empty&gt;</u>                          |
| <b>Info:</b>                                                                                                      |                                               |
| Automatic replacements in the value:                                                                              |                                               |
| %D -> the system's DNS domain name at the time the CSR is created<br>%% -> %<br>Other %X are currently discarded. |                                               |

- Added a mechanism for **retrieving the SCEP challenge password with a custom script**. Setting the following registry key to "true" enables the use of the script. The registry key network.scepclient.cert%.crypt\_password will be ignored. (The script may use it for its own purpose though.)

[More...](#)

|           |                                                         |
|-----------|---------------------------------------------------------|
| Parameter | Use Challenge Password Command                          |
| Registry  | network.scepclient.cert%.use_challenge_password_command |
| Value     | <u>enabled / disabled</u>                               |

If the above key is enabled, the value of this key will be passed to bash for execution. It happens when the SCEP challenge password is needed for creating a certificate signing request. The script is supposed to output the challenge password on its standard output. For convenience, any Carriage-Return characters are stripped off the script before execution by bash.

| Value     | <u>enabled / disabled</u>                  |

- Added support for **Realtek 8821CE wireless cards**.

## Imprivata

- **Imprivata Appliance 6.3** or higher is needed now.  
Please see the Imprivata Supported Components guide (<http://documentation.imprivata.com/01RefArch/Content/Topics/OSSupportedComponents.htm#ProvID>) for support and upgrade considerations.
- Added a new parameter to Imprivata.conf: "**Redirection of Smartcards**".  
**More...**

#### **IGEL Setup > Sessions > Appliance Mode > Imprivata**

| Registry  | scard.pkcs11.opensc.default.pcsc.connect_exclusive                 |
| Value     | <u>enabled</u> / <u>disabled</u>                                   |
| Parameter | Disconnect action                                                  |
| Registry  | scard.pkcs11.opensc.default.pcsc.disconnect_action                 |
| Value     | <u>leave</u> / <u>reset</u> / <u>unpower</u>                       |
| Parameter | Transaction end action                                             |
| Registry  | scard.pkcs11.opensc.default.pcsc.transaction_end_action            |
| Value     | <u>leave</u> / <u>reset</u> / <u>unpower</u>                       |
| Parameter | Reconnect action                                                   |
| Registry  | scard.pkcs11.opensc.default.pcsc.reconnect_action                  |
| Value     | <u>leave</u> / <u>reset</u> / <u>unpower</u>                       |
| Parameter | Enable pinpad                                                      |
| Registry  | scard.pkcs11.opensc.default.pcsc.enable_pinpad                     |
| Value     | <u>enabled</u> / <u>disabled</u>                                   |
| Parameter | Use PIN caching                                                    |
| Registry  | scard.pkcs11.opensc.default.pkcs15.use_pin_caching                 |
| Value     | <u>enabled</u> / <u>disabled</u>                                   |
| Parameter | How many times to use a PIN from cache before re-authenticating it |
| Registry  | scard.pkcs11.opensc.default.pkcs15.pin_cache_counter               |
| Value     | <u>10</u>                                                          |

|           |                                                                  |
|-----------|------------------------------------------------------------------|
| Parameter | PIN caching ignores user consent                                 |
| Registry  | scard.pkcs11.opensc.default.pkcs15.pin_cache_ignore_user_consent |
| Value     | enabled / <u>disabled</u>                                        |

- Updated **cryptovision sc/interface PKCS#11** smartcard library to version **7.1.20**.

Changes in this revision:

- Fixed a possible **deadlock** in the PKCS#11 module on Linux, if **C\_Finalize** is called during a PCSC event, for example **C\_WaitForSlotEvent**.
- ROCA check** in the Smartcard Manager, based on the "ROCA detection tool", see <https://github.com/crocs-muni/roca>.
- Renaming** of the container label in Smartcard Manager **with F2** is now possible.

#### CUPS Printing

- Added **SMB Network Print** client function.

| Registry                                                                        | print.cups.printer<NR>.crypt_password |

Base system

- Added a possibility to configure **scheduled commands**. Registry keys: system.cron.\*\*
- Buddy update** enhancements:

- Automatic load balancing:**

A client collects up to eight server candidates from which one is selected randomly. Collection stops when the number specified in the following registry key is reached. Otherwise collection stops after a timeout.

[More...](#)

|           |                                    |
|-----------|------------------------------------|
| Parameter | Buddy Update Server Candidates     |
| Registry  | update.ftp.buddy_server_candidates |
| Value     | 1                                  |

- Grouping:**

Buddy update servers and clients only interact with each other when they are in the same group determined by the following registry key (a non-negative integer number). This feature is mainly useful when different firmware versions shall be used in parallel.

[More...](#)

|           |                           |
|-----------|---------------------------|
| Parameter | Buddy Group ID            |
| Registry  | update.ftp.buddy_group_id |
| Value     | 0                         |

- Added: **Firmware update** scheduled **on shutdown** is now **invoked on reboot** too.
- Added package **ldap-utils** which can be used by custom scripts.
- Updated **Kernel** to mainline version **4.19.65**.
- Moved the **EULA** page in IGEL Setup Assistant into the **demo activation workflow**.
- Updated EULA** displayed in OSC and IGEL Setup Assistant.
- Added: When IGEL Setup Assistant is used to download a **demo license via Wi-Fi**, the **local Wi-Fi manager** will be **enabled by default**.
- Updated **Fluendo multimedia codecs** to the following versions:

[More...](#)

|                        |            |          |

## Driver

- Added registry keys to modify the Intel graphic driver usage of **framebuffer compression** and **power management**.

New registry keys:

[More...](#)

|           |                                                             |
|-----------|-------------------------------------------------------------|
| Parameter | Power saving display C-States to use                        |
| Registry  | x.drivers.intel.dc_setting                                  |
| Range     | <a href="#">[Default]</a> [Disable] [Up to DC5] [Up to DC6] |
| Info:     | "Default" - driver default                                  |
| Parameter | Use framebuffer compression                                 |
| Registry  | x.drivers.intel.fbc_setting                                 |
| Range     | <a href="#">[Default]</a> [Disable]                         |
| Info:     | "Default" - driver default                                  |

- Updated **Philips Speech Driver** to version **12.7.11**.
- Updated **signotec Citrix Virtual Channel** driver to version **8.0.8**.
- Updated **StepOver TCP Client** to version **2.3.2**.
- Updated **deviceTRUST Client** to version **19.1.200**. These are the release notes:  
Welcome to the release of the deviceTRUST 19.1.200 IGEL client, providing the context of IGEL thin client and UD Pocket devices into your virtual sessions. This release includes support for logical disks attached to the IGEL endpoint, plus bug fixes and stability improvements over the previous 19.1.100 release.

## Logical Disks

We've added support for real-time properties representing the LOGICAL DISKS attached to the IGEL endpoint. This includes:

**More...**

DEVICE\_LOGICALDISK\_X\_TYPE – Either Fixed or Removable.  
 DEVICE\_LOGICALDISK\_X\_LABEL – The volume label.  
 DEVICE\_LOGICALDISK\_X\_FILESYSTEM – The type of file system.  
 DEVICE\_LOGICALDISK\_X\_PATHS – The paths that the disk is mounted.  
 DEVICE\_LOGICALDISK\_X\_TOTALMB – The total space available on the disk. This property is only available for mounted disks.  
 DEVICE\_LOGICALDISK\_X\_FREEMB – The free space available on the disk. This property is only available for mounted disks.  
 DEVICE\_LOGICALDISK\_X\_NAME – The name of the underlying physical disk.  
 DEVICE\_LOGICALDISK\_X\_VENDORID – The vendor identifier uniquely identifying the manufacturer. This property is only available for USB or PCI connected devices.  
 DEVICE\_LOGICALDISK\_X\_PRODUCTID – The product identifier uniquely identifying the product. This property is only available for USB or PCI connected devices.  
 DEVICE\_LOGICALDISK\_X\_SERIALNUMBER – The serial number of the physical disk.  
 DEVICE\_LOGICALDISK\_X\_BUSTYPE – The storage bus type linked to the physical disk.  
 DEVICE\_LOGICALDISK\_COUNT – The number of logical disks.

#### X11 system

- Added a new parameter to allow configuration of '**Display Switch**' confirmation dialog timeout.

**More...**

| IGEL Setup | <b>Accessories &gt; Display Switch &gt; Options</b> |
|------------|-----------------------------------------------------|
| Parameter  | Timeout for confirmation dialog                     |
| Registry   | sessions.user_display0.options.confirm_timeout      |
| Value      | 10                                                  |

- Re-Enable 'Display Switch' session start script to cycle simple modes.
- Added new options for **lid handling**.

**More...**

|           |                                       |
|-----------|---------------------------------------|
| Parameter | Lid close action while plugged in     |
| Registry  | system.actions.lid.ac                 |
| Range     | [Turn off display] [Suspend]          |
| Parameter | Lid close action while not plugged in |
| Registry  | system.actions.lid.battery            |
| Range     | [Turn off display] [Suspend]          |

- Added new registry keys to change the xorg input driver for an input device class.  
 New registry keys:

For keyboards:

**More...**

|           |                               |
|-----------|-------------------------------|
| Parameter | Xorg driver to use            |
| Registry  | userinterface.keyboard.driver |
| Range     | [Evdev] [Libinput]            |

For touchpads:

**More...**

|           |                                |
|-----------|--------------------------------|
| Parameter | Xorg driver to use             |
| Registry  | userinterface.touchpad.driver  |
| Range     | [Evdev] [Synaptics] [Libinput] |

For touchscreens:

**More...**

|           |                                       |
|-----------|---------------------------------------|
| Parameter | Xorg driver to use                    |
| Registry  | userinterface.touchscreen.xorg_driver |
| Range     | [Evdev] [Libinput]                    |

For mouse:

**More...**

|           |                            |
|-----------|----------------------------|
| Parameter | Xorg driver to use         |
| Registry  | userinterface.mouse.driver |
| Range     | [Evdev] [Libinput]         |

- Added some registry keys to disable loading of **DRM kernel modules** (graphic).

**More...**

|           |                                              |
|-----------|----------------------------------------------|
| Parameter | Disable the loading of the RADEON DRM driver |
| Registry  | x.drivers.ati.disable                        |
| Value     | 0                                            |
| Parameter | Disable the loading of the AMDGPU DRM driver |
| Registry  | x.drivers.amdgpu.disable                     |
| Value     | 0                                            |
| Parameter | Disable the loading of the i915 DRM driver   |
| Registry  | x.drivers.intel.disable                      |

|           |                                                 |
|-----------|-------------------------------------------------|
| Value     | <u>0</u>                                        |
| Parameter | Disable the loading of the NVIDIA kernel driver |
| Registry  | x.drivers.nvidia.disable                        |
| Value     | <u>0</u>                                        |
| Parameter | Disable the loading of the NOUVEAU DRM driver   |
| Registry  | x.drivers.nouveau.disable                       |
| Value     | <u>0</u>                                        |
| Parameter | Disable the loading of the QXL DRM driver       |
| Registry  | x.drivers.qxl.disable                           |
| Value     | <u>0</u>                                        |
| Parameter | Disable the loading of the VMGFX DRM driver     |
| Registry  | x.drivers.vmware.disable                        |
| Value     | <u>0</u>                                        |
| Parameter | Disable the loading of the VBOXVIDEO DRM driver |
| Registry  | x.drivers.vboxvideo.disable                     |
| Value     | <u>0</u>                                        |

- Updated **DisplayLink** driver to version **5.1.26** to solve some startup issues.

#### Evidian

- Updated **Evidian rsUserAuth** to version **1.5.7116**.

#### Hardware

- Added hardware support for **Rein Medical Silenio 122CT and 124CT**.
- Added hardware support for **Advantech POC-W213L** and **POC-W243L**.
- Added hardware support for **ADS-TEC VMT 9000 Serie**.
- Added hardware support for **Fujitsu Esprimo Q957**.
- Added hardware support for **ADS-TEC VMT 9000 Serie**.
- Added hardware support for **LG AiO Cloud Device 38"**
- Added hardware support for the following **headsets**:  
**More...**
  - Jabra Engage 50
  - Jabra Engage 65

- Jabra Engage 75
- Jabra Evolve 30 II (Ver. B)
- Jabra Evolve 30 II (Ver. C)
- Jabra Evolve 40 (Ver. B) - USB-C
- Jabra Evolve 40 (Ver. D)
- Jabra Evolve 65
- Jabra Evolve 75
- Plantronics Voyager 5200 UC
- Plantronics Voyager 6200 UC
- Plantronics Voyager 8200 UC
- Plantronics ENCOREPRO 720 + DA70
- Plantronics ENCOREPRO 720 + DA80
- Plantronics ENCOREPRO 520D + DA90
- Sennheiser SC70
- Added hardware support for **HP t430**.
- Added hardware support for **HP t420**.

#### Java

- Replaced Oracle JRE by **AZUL's Zulu JRE**.
- Updated **Zulu JRE** to version **8.40.0.25**.

#### Remote Management

- **Connection order between UMS and ICG** can now be configured.  
[More...](#)

|          |                                                       |
|----------|-------------------------------------------------------|
| Registry | <code>system.remotemanager.icg_try_ums_connect</code> |
| Value    | <u>enabled</u> / <u>disabled</u>                      |

When an ICG connection is configured and the parameter is enabled, the device tries to connect directly to UMS. If the connection was established successfully, the device is managed by UMS and not over ICG until new start of the device or network.

#### IGEL Cloud Gateway

- Added **VNC Shadowing** support **over ICG**. To use this feature, **UMS 6.02.110 or later** and **ICG 2.01.100 or later** are required.

#### Resolved Issues 11.02.100

##### Citrix

- Improved **USB handling of SpaceMouse**.
- Improved **USB redirection** handling with **Citrix Workspace App 19.06**.
- Fixed **stability issues** with **Citrix Browser Content Redirection**.

##### OSC Installer

- Fixed: OSC Installer does not disable **EFI** when **MSDOS partitioning** was chosen.

## Citrix Receiver 13

- Added a **switch** to enable the possibility to **launch multiple desktop sessions with RTME and h.264 acceleration**. This switch should not be used when "**Enable Secure ICA**" is active for specific delivery group.

|----------|---------------------------|
| Registry | ica.workaround-dual-rtme  |
| Value    | <u>enabled / disabled</u> |

## RDP/IGEL RDP Client 2

- Added a registry key to use **rdpglobal window settings for remote apps**.

[More...](#)

|           |                                                             |
|-----------|-------------------------------------------------------------|
| Parameter | Enable global windwos settings for remote app               |
| Registry  | rdp.winconnect.enable-global-window-settings-for-remote-app |
| Value     | <u>enabled / disabled</u>                                   |

- Added negotiation: **Kerberos as fallback for disabled NTLM authentication**. This only works when **Active Directory/Kerberos Logon** is enabled.
- Fixed **RD Web Access** not working with special characters in name or password. This only works when **Active Directory/Kerberos Logon** is enabled.
- Fixed **smartcard redirection in RDP: SCardGetAttrib** was failing if **pbAttr** was NULL. The fix should help running Dutch Zorg-ID applications.

## RD Web Access

- Fixed **not starting RDP Remote Applications**.

## VMware Horizon

- Added **recognition for password change** and **password expired** dialog in Horizon local logon sessions or appliance mode.
- Fixed configuration choice for usage of **relative mouse feature**.
- Added possibility to use the **rollback variant of the Horizon Client**.

[More...](#)

|-----------|-----------------------------------------|
| Parameter | Allow rollback to former client variant |
| Registry  | vmware.view.allow-client-rollback       |
| Value     | <u>enabled / disabled</u>               |

- Fixed a problem with the client where connection to the **remote desktop using PCoIP protocol failed** occasionally.

## Teradici PCoIP Client

- Fixed unwanted **restart of login window** after session logoff or disconnect.

## Firefox

- Fixed Firefox **not accepting proxy credentials** from setup.
- Fixed **print hotkey** disable option not working with Firefox 60.
- Fixed **browserglobal.app.local\_subdirs\_whitelist** not working.

## Network

- Fixed: **Failure to reach SCEP server** in the client certificate renewal phase resulted in loss of SCEP server and client certificates.
- Changed **e1000e driver** to out of tree version **3.4.2.3** directly from Intel.
- Changed **igb driver** to out of tree version **5.3.5.22** directly from Intel.
- Added possibility to **switch between third-party** and **kernel Intel IGB network driver**.

New registry key:

| Range     | [Auto] [Yes] [No]                  |

**Info:** "Auto" (use r8168 in most cases)

- Added a possibility to choose the **variant of the realtek r8168 driver**.

A new registry key:

**More...**

|           |                                                                 |
|-----------|-----------------------------------------------------------------|
| Parameter | Choose realtek r8168 variant (only if "prefer r8168" is chosen) |
| Registry  | network.drivers.r8169.r8168_variant                             |
| Range     | [Default] [No NAPI] [NAPI]                                      |

**Info:** "Default" (use NAPI in most cases)

- Fixed: **Second Ethernet** interface **did not get configured** when the first one was disabled.
- Fixed: **802.1X Ethernet** configuration **with user interaction** was broken.

## Wi-Fi

- Fixed not working **TP Link Archer T2UH**.
- Fixed not working **Broadcom SDIO WLAN cards** as present in Advantech AIM8IAC device for example.

## Smartcard

- Updated **cryptovision sc/interface PKCS#11 smartcard library** to version **7.1.20**.
- Fixed a possible **deadlock** in the **PKCS#11 module** on Linux if **C\_Finalize** is called during a PCSC event, for example C\_WaitForSlotEvent.
- Fixed **OpenSC** setting **max\_send\_size** for reader driver pcsc in **/etc/opensc/opensc.conf**.
- Fixed **Dell KB813 Smartcard Keyboard** in combination with certain smartcards driven by OpenSC PKCS#11 module. Before this fix, **authentication to Citrix StoreFront and VMWare Horizon failed**.

## Base system

- Improved: Ensured that the **Unit ID for IGEL devices is the MAC address of the onboard network card**.
- Fixed **license expiry warning at boot**. Before this fix, in some cases the warning wrongly appeared at every boot.
- Fixed **unmounting storage devices via In-session control bar**.
- Fixed **server-dependent crash** when installing license via FTP.
- Fixed retrieving of **serial number of a connected screen**.
- Fixed random **90 seconds shutdown delay** (systemd).
- Fixed wrong behavior with **expired evaluation licenses** in some cases.
- Added message in **bootsplash** when a custom partition will get created.
- Fixed **bug in the screenlock countdown** that occurred, when display of remaining seconds was not desired.
- Fixed **shortcut configuration for shutdown, restart and icon** sort to be applied without reboot.
- Added **apparmor** rule to allow **tcpdump** to write to /debuglog.
- Fixed **hotkey configuration to be applied without reboot**.
- Fixed: **UD2 screen goes black** with certain multimonitor configurations.
- Improved new **license detection** in **IGEL Setup Assistant**.
- Fixed **AD/Kerberos logon** in case parameter **auth.login.krb5\_enterprise** is set to false.
- Fixed: **System logoff waits for Citrix logoff** now.
- Fixed **NTP synchronization** problems **when changing the NTP client** from **timesyncd** to **chrony**.
- Added **switch** to enable **DNS hostname lookup for SSH server**:

[More...](#)

|           |                                     |
|-----------|-------------------------------------|
| Parameter | Use DNS to resolve client hostnames |
| Registry  | network.ssh_server.use_dns          |
| Value     | <u>enabled</u> / <u>disabled</u>    |

- Fixed **USB printer aliases**.
- Fixed **gtk-3 icon sizes for High DPI** configurations.
- Enhanced **bootloader** to allow the setting of some kernel command line parameters with registry keys.

New registry keys:

| Parameter                                   | IOMMU usage setting for AMD systems.          |
| Registry                                    | system.kernel.bootparams.amd_iommu            |
| Range                                       | [ <u>On</u> ] [Off]                           |
| <i>Info: Use IOMMU if possible</i>          |                                               |

|                                    |                                        |
|------------------------------------|----------------------------------------|
| Parameter                          | IOMMU usage setting for Intel systems. |
| Registry                           | system.kernel.bootparams.intel_iommu   |
| Range                              | [On] [Off]                             |
| <b>Info:</b> Use IOMMU if possible |                                        |

- Added a new registry key to set **USB quirks**:

[More...](#)

|           |                                                                                              |
|-----------|----------------------------------------------------------------------------------------------|
| Parameter | Set XHCI USB quirks to fix some hardware issues                                              |
| Registry  | system.kernel.bootparams.xhci-hcd_quirks                                                     |
| Range     | [No quirk] [Spurious Reboot quirk] [Spurious Wakeup quirk]<br>[Spurious Reboot Wakeup quirk] |

- Lenovo ThinkCentre M73 needs the **system.kernel.bootparams.xhci-hcd\_quirks** registry key set to `Spurious Reboot quirk` to fix reboot after shutdown problem.
- Added column "**Syslog style template**" to **Remote Syslog setup page**. This allows to change rsyslog output style e.g. to newer SyslogProtocol23Format which is supported by graylog.
- Disable **martian packet logging**.

## Driver

- Updated **deviceTRUST Client** to version **19.1.200**.
  - Fixed an issue reading the **DEVICE\_IGEL\_ICG\_SERVER** property.
  - Fixed an issue where the **NETWORK** and **LOCATION** property providers **could cause the client to freeze** if a disconnection occurred whilst these property providers were checking for changes.
  - Fixed an **open file handle leak** which led to the client process reaching its file handle limits when left running for a long period of time.
- Fixed not working **WACOM** device **DTU-1141B**.

## Custom Partition

- Added **message in bootsplash** when a **custom partition** will get **created**.
- Fixed **ownership of extracted data**: don't preserve original owner while extracting data into custom partition.

## Storage Devices

- Fixed **automounting of storage devices** inside of **Olympus DS-9500 Digital Voice Recorder**.

## Appliance Mode

- Fixed: **In-session control bar** could not be deactivated in **Citrix SelfService appliance mode**.

## X11 system

- There is now a **registry key to ignore a 3Dconnexion SpaceMouse** for IGEL graphical use (X11). If activated, the SpaceMouse is only passed through to the desktop session. If disabled, it acts like a standard mouse.

- USB device reset** via USB powercycle is now available on **UD6/UD7**.
- Fixed: Problems with **internal graphic cards** and **Nvidia graphic cards**.
- Display Switch** application will now use some settings from 'Advanced' dialog in 'Simple' mode.
- Fixed **display hotplug failing** on initial lock screen with Active Directory logon.
- Fixed **screen corruption** with DPMS and enabled composite manager.
- Fixed **screen flickering** in some cases when "**Force NumLock On**" (x.global.forcenumlock) is active.
- Fixed **Display Switch** utility not starting with some translations.
- Fixed an issue with the **noDDC mode** which was not always working as expected.
- Fixed **wrongly detected embedded DisplayPort** on **Dell Wyse 5070** Extended hardware.
- Added the possibility to change an **embedded DisplayPort** to a normal **DisplayPort**.

| Use linear framebuffer only in special cases. |                                              |

- Fixed configuration where old **Display Switch** took precedence over configuration from new Display Switch and preventing changes.

## X Server

- Fixed issue with **primary / secondary screens** were switched in some cases.

## Audio

- Fixed **bad quality sound over DisplayPort** in a Citrix ICA session or other applications using ALSA API.
- Fixed **jack detection of the headphone port in Dell Wyse 3040**.
- Fixed **configuration of default audio output and input**.

## Media Player (Parole)

- Fixed a problem where **parole media player** would **hang** instead of playing audio **while audio-visualization** is enabled.
- Fixed parole media player **not handling audio hotkeys in fullscreen mode**.

## Misc

- **Monitoring Agent** uses now **only the half size of the debuglog partition**.  
When the setup option **log\_max\_size** with the option **log\_rotation** creates an overall consumption that is bigger than 50% of the debuglog partition size, the size for each log automatically will be decreased to a value that allows a full rotation which occupies exactly 50% of the partition size.

## Hardware

- Fixed not working **network** on **Beckhoff CB3163, CB6263** and **CB6363** systems.
- Fixed not working network on **Lex 3I380D**.
- Fixed **shutdown** issue of **Lenovo ThinkCentre M73** (rebooted 2 - 3 seconds after power off).

- Added a **possibility to change** some **DRM settings** and **limit the DisplayPort lane bandwidth** on Intel devices.

Added new registry keys:

| Info: "0" means default setting. Use the default setting. |                                                                                                   |
| Parameter                                                 | Limit the maximum console resolution height to this value.                                        |
| Registry                                                  | x.drivers.kms.max_console_height                                                                  |
| Type                                                      | Integer                                                                                           |
| Value                                                     | "0"                                                                                               |
| Info: "0" means default setting. Use the default setting. |                                                                                                   |
| Parameter                                                 | Set graphic kernel driver debug level.                                                            |
| Registry                                                  | x.drivers.kms.debug_level                                                                         |
| Range                                                     | [No debug] [Basic] [Basic + core] [Basic + core + atomic] [Full]                                  |
| Info: Warning log will grow very fast.                    |                                                                                                   |
| Only for Intel i915 driver:                               |                                                                                                   |
| Parameter                                                 | Limit the maximum DisplayPort lane link rate.                                                     |
| Registry                                                  | x.drivers.intel.max_dp_link_rate                                                                  |
| Range                                                     | [default] [1.62Gbps] [2.16Gbps] [2.7Gbps] [3.24Gbps]<br>[4.32Gbps] [5.4Gbps] [6.48Gbps] [8.1Gbps] |
| Info: "Default" means hardware default limit.             |                                                                                                   |

|                                       |                                                        |
|---------------------------------------|--------------------------------------------------------|
| Parameter                             | Disable the DP audio support in the i915 DRM driver.   |
| Registry                              | x.drivers.intel.disable_dp_audio                       |
| Range                                 | <u>[Default]</u> [No][Yes]                             |
| Info: "Default" - support is enabled. |                                                        |
| Parameter                             | Disable the HDMI audio support in the i915 DRM driver. |
| Registry                              | x.drivers.intel.disable_hdmi_audio                     |
| Range                                 | <u>[Default]</u> [No][Yes]                             |
| Info: "Default" - support is enabled. |                                                        |

- Fixed **black screen** issue with some monitors and 2560x1440 resolution - occurred on **UD2 LX50** and **other Intel GPUs**.
- Fixed detection of **Dell Wyse 5070** for the non-extended version.
- Fixed issues with **not working Touchpad** and **Trackpoint** on Lenovo laptops.
- Fixed **vanishing mouse cursor on Ryzen 3** devices.
- Fixed problems with **2 or more monitors** on a **DisplayLink** adapter.
- Added possibility to use **AMDGPU PRO** driver instead of the kernel integrated driver.
- **Ryzen 3** devices (1200, 1300X, 2200G, 2200U and 2300U) **will use the AMDGPU PRO driver** if registry key x.drivers.amdgpu.use\_amdgpu\_pro is set to auto (default).
- A new registry key (settings to this key will only work after reboot):
   
**More...**

|           |                                 |
|-----------|---------------------------------|
| Parameter | Use AMDGPU PRO driver           |
| Registry  | x.drivers.amdgpu.use_amdgpu_pro |
| Range     | <u>[Auto]</u> [True] [False]    |

## Remote Management

- When **TC is managed over ICG**, settings received in the connection stage does not apply immediately. The settings must be applied after user prompt dialog.
- Fixed **UMS synchronization** of configuration changes made in "Emergency mode". Fixed sporadically failures while sending data over ICG.
- Fixed **wallpaper configuration** if ICG protocol is used.
- Fixed **releasing from UMS** when the device was offline during removal from UMS.
- Added: The **endpoint can now report up to 8 monitors** in UMS information.
- Fixed **UMS jobs** have not been executed when delivered at the next system boot.

## CA Certificates Contained in IGEL OS 11.02.100

Contained CA certificates:

- ACCVRAIZ1, expires Dec 31 09:37:37 2030 GMT (ACCVRAIZ1.crt)
- AC RAIZ FNMT-RCM, expires Jan 1 00:00:00 2030 GMT (AC\_RAIZ\_FNMT-RCM.crt)
- Actalis Authentication Root CA, expires Sep 22 11:22:02 2030 GMT (Actalis\_Authentication\_Root\_CA.crt)
- AddTrust External CA Root, expires May 30 10:48:38 2020 GMT (AddTrust\_External\_Root.crt)
- AffirmTrust Commercial, expires Dec 31 14:06:06 2030 GMT (AffirmTrust\_Commercial.crt)
- AffirmTrust Networking, expires Dec 31 14:08:24 2030 GMT (AffirmTrust\_Networking.crt)
- AffirmTrust Premium, expires Dec 31 14:10:36 2040 GMT (AffirmTrust\_Premium.crt)
- AffirmTrust Premium ECC, expires Dec 31 14:20:24 2040 GMT (AffirmTrust\_Premium\_ECC.crt)
- Amazon Root CA 1, expires Jan 17 00:00:00 2038 GMT (Amazon\_Root\_CA\_1.crt)
- Amazon Root CA 2, expires May 26 00:00:00 2040 GMT (Amazon\_Root\_CA\_2.crt)
- Amazon Root CA 3, expires May 26 00:00:00 2040 GMT (Amazon\_Root\_CA\_3.crt)
- Amazon Root CA 4, expires May 26 00:00:00 2040 GMT (Amazon\_Root\_CA\_4.crt)
- Atos TrustedRoot 2011, expires Dec 31 23:59:59 2030 GMT (Atos\_TrustedRoot\_2011.crt)
- Autoridad de Certificacion Firmaprofesional CIF A62634068, expires Dec 31 08:38:15 2030 GMT (Autoridad\_de\_Certificacion\_Firmaprofesional\_CIF\_A62634068.crt)
- Baltimore CyberTrust Root, expires May 12 23:59:00 2025 GMT (Baltimore\_CyberTrust\_Root.crt)
- Buypass Class 2 Root CA, expires Oct 26 08:38:03 2040 GMT (Buypass\_Class\_2\_Root\_CA.crt)
- Buypass Class 3 Root CA, expires Oct 26 08:28:58 2040 GMT (Buypass\_Class\_3\_Root\_CA.crt)
- CA Disig Root R2, expires Jul 19 09:15:30 2042 GMT (CA\_Disig\_Root\_R2.crt)
- CFCA EV ROOT, expires Dec 31 03:07:01 2029 GMT (CFCA\_EV\_ROOT.crt)
- COMODO Certification Authority, expires Dec 31 23:59:59 2029 GMT (COMODO\_Certification\_Authority.crt)
- COMODO ECC Certification Authority, expires Jan 18 23:59:59 2038 GMT (COMODO\_ECC\_Certification\_Authority.crt)
- COMODO RSA Certification Authority, expires Jan 18 23:59:59 2038 GMT (COMODO\_RSA\_Certification\_Authority.crt)
- Certigna, expires Jun 29 15:13:05 2027 GMT (Certigna.crt)
- Certigna Root CA, expires Oct 1 08:32:27 2033 GMT (Certigna\_Root\_CA.crt)
- Certinomis - Root CA, expires Oct 21 09:17:18 2033 GMT (Certinomis\_-\_Root\_CA.crt)

| XFCE4 Window Manager                    | 4.12.3-1ubuntu2igel675        |
| ISC DHCP Client                         | 4.3.3-5ubuntu12.10igel7       |
| WebKit2Gtk                              | 2.24.2-0ubuntu0.19.04.1igel18 |
| Python2                                 | 2.7.12                        |
| Python3                                 | 3.5.2                         |

## New Features 11.02.100

### Hardware

- Added hardware support for **Rein Medical Silenio 122CT** and **124CT**.
- Added hardware support for **Advantech POC-W213L** and **POC-W243L**.

- Added hardware support for **ADS-TEC VMT 9000 Serie**.
- Added hardware support for **Fujitsu Esprimo Q957**.
- Added hardware support for **ADS-TEC VMT 9000 Serie**.
- Added hardware support for **LG AiO Cloud Device 38"**.
- Added hardware support for **HP t430**.
- Added hardware support for **HP t420**.

## 7.15 Notes for Release 11.01.130

- **Features with Limited IGEL Support**

Mobile Device Access USB

VPN OpenConnect

Scanner support

VirtualBox

- **Features with Limited Functionality**

Cisco JVDI Client

### 7.15.3 General Information 11.01.130

The following clients and features are not supported anymore:

- Caradigm
- Citrix Legacy Sessions
- Citrix Web Interface
- Citrix StoreFront Legacy
- Citrix HDX Flash Redirection
- Citrix XenDesktop Appliance Mode
- Flash Player Download
- Ericom PowerTerm
- JAVA Web Start
- Leostream Java Connect
- Systancia AppliDis
- VIA graphics driver.

### 7.15.4 Known Issues 11.01.130

#### Citrix

- With activated DRI3 and AMD GPU, Citrix **H.264 acceleration** plugin could **freeze**. Selective H.264 mode (API v2) is not affected from this issue.
- Citrix has known issues with **GStreamer1.0** which describe problems with **multimedia redirection of H264, MPEG1 and MPEG2**. GStreamer 1.0 is used if browser content redirection is active.
- **Browser content redirection** does not work with **activated DRI3** and hardware accelerated **H.264 deep compression codec**.
- Citrix **StoreFront** login with **Gemalto smartcard middleware** does not detect smartcard correctly if the card is **inserted after start** of Login.  
As a workaround, insert the smartcard before starting StoreFront login.
- When using **Citrix Workspace App 19.03** in combination with **Philips Speech** driver, the session occasionally terminates improperly at logout and hangs.  
As a workaround, the usage of Citrix Receiver 13.10 is recommended when Philips Speech driver is needed.
- Citrix **H.264 acceleration plugin** does not work with **enabled** server policy "Optimize for 3D graphics workload" in combination with server policy "Use video codec compression" > "For the entire screen".
- To launch **multiple desktop sessions** with **Citrix HDX RTME** and **Citrix H.264 acceleration plugin**, the following registry key must be enabled:  
**More...**

|           |                                                                  |
|-----------|------------------------------------------------------------------|
| Parameter | Activate workaround for dual RTME sessions and H264 acceleration |
| Registry  | ica.workaround-dual-rtme                                         |
| Range     | enabled / <u>disabled</u>                                        |

This workaround is not applicable when "Enable Secure ICA" is active for the specific delivery group.

#### VMware Horizon

- **External drives** mounted already before connection **do not appear in the remote desktop**.  
Workaround: mapping the directory / media as a drive on desktop. The external devices will show up within the media drive then.
- **Client drive mapping** and **USB redirection for storage devices** should not be enabled both at the same time.
  - On the one hand, if you want to use **USB redirection** for your storage devices: Note that the **USB on-insertion feature** is only working if the **client drive mapping** is switched off.  
In the IGEL Setup client, **drive mapping** can be found under **Sessions > Horizon Client > Horizon Client Global > Drive Mapping > Enable drive mapping**.  
It is also recommended to disable local **Storage Hotplug** under **Setup > Devices > Storage Devices > Storage Hotplug**.
  - On the other hand, if you use **drive mapping** instead, it is recommended to either **switch off USB redirection entirely** or at least to **deny storage devices** by adding a filter to the USB class rules.  
Furthermore, Horizon Client relies on the OS to mount the storage devices itself. Enable **Storage Hotplug** under **Setup > Devices > Storage Devices > Storage Hotplug**. The **Number of storage hotplug devices** has to be set to at least 1.

#### Parallels Client

- **Native USB redirection does not work** with Parallels Client.
- For using the new **FIPS 140-2 compliance mode**, it is necessary to connect to the **Parallels RAS** once with disabled FIPS support.

#### Smartcard

- In seldom cases, the authentication hung when using **A.E.T. SafeSign smartcards**.

#### Multimedia

- Multimedia **redirection with GStreamer** could fail with the **Nouveau GPU driver**.

#### Base system

- On **NVIDIA GPU drivers**, the reported **resolutions of a display** may contain unsupported resolutions. When any of those are configured, there are visual bugs (e.g. the desktop does not render properly).

## 7.15.5 Security Fixes 11.01.130

#### Firefox

- Updated **Firefox** browser to version **60.8.0 ESR**.
- Fixed **mfsa2019-22** security issues:  
[More...](#)

CVE-2019-9811, CVE-2019-11711, CVE-2019-11712, CVE-2019-11713, CVE-2019-11729, CVE-2019-11715, CVE-2019-11717, CVE-2019-11719, CVE-2019-11730 and CVE-2019-11709.

- Fixed **mfsa2019-19** security issue CVE-2019-11708.
- Fixed **mfsa2019-18** security issue CVE-2019-11707.
- Fixed **mfsa2019-08** security issues:  
[More...](#)

CVE-2019-9790, CVE-2019-9791, CVE-2019-9792, CVE-2019-9793, CVE-2019-9795, CVE-2019-9796, CVE-2018-18506 and CVE-2019-9788.

- Fixed **mfsa2019-05** security issues CVE-2018-18356 and CVE-2019-5785.
- Fixed **mfsa2019-02** security issues CVE-2018-18500, CVE-2018-18505 and CVE-2018-18501.

## 7.15.6 New Features 11.01.130

Citrix

- Added support for **Citrix Workspace Launcher** functionality as described at <https://support.citrix.com/article/CTX237727>.

Base system

- Replaced **timesyncd** with **chrony NTP**.  
A new registry key:  
[More...](#)

|           |                                        |
|-----------|----------------------------------------|
| Parameter | Use NTP Servers from DNS SRV record    |
| Registry  | system.time.ntp_use_dnssrv_timeservers |
| Value     | <u>enabled</u> / <u>disabled</u>       |

Evidian

- Integrated **Evidian AuthMgr** version **1.5.7116**.

## 7.15.7 Resolved Issues 11.01.130

VMware Horizon

- Added a possibility to use the **rollback variant of the Horizon Client**.  
[More...](#)

|           |                                         |
|-----------|-----------------------------------------|
| Parameter | Allow rollback to former client variant |
| Registry  | vmware.view.allow-client-rollback       |
| Value     | <u>enabled</u> / <u>disabled</u>        |

Base system

- Fixed **NTP synchronization problems** with changing the NTP client from **timesyncd** to **chrony**.
- Fixed **USB printer aliases**.

## X11 system

- Fixed **screen corruption with DPMS** and enabled **composite manager**.
- Added consideration of **hardware limits** for choosing **automatic resolution in Xorg config** (currently only for IGEL hardware).

## Hardware

- Fixed **black screen** issue with some monitors and 2560x1440 resolution (occurred on **UD2 LX50** and **other Intel GPUs**).

## 7.16 Notes for Release 11.01.120

### 7.16.3 General Information 11.01.120

The following clients and features are not supported anymore:

- Caradigm
- Citrix Legacy Sessions
- Citrix Web Interface
- Citrix StoreFront Legacy
- Citrix HDX Flash Redirection
- Citrix XenDesktop Appliance Mode
- Flash Player Download
- Ericom PowerTerm
- JAVA Web Start
- Leostream Java Connect
- Systancia AppliDis
- VIA graphics driver

### 7.16.4 Security Fixes 11.01.120

Firefox

- Updated Firefox browser to version **60.7.2 ESR**.
- Fixed **mfsa2019-19** security issue CVE-2019-11708.
- Fixed **mfsa2019-18** security issue CVE-2019-11707.
- Fixed **mfsa2019-08** security issues.

[More...](#)

CVE-2019-9790, CVE-2019-9791, CVE-2019-9792, CVE-2019-9793,  
CVE-2019-9795, CVE-2019-9796, CVE-2018-18506, CVE-2019-9788.

- Fixed **mfsa2019-05** security issues CVE-2018-18356 and CVE-2019-5785.
- Fixed **mfsa2019-02** security issues CVE-2018-18500, CVE-2018-18505 and CVE-2018-18501.

Base system

- Fixed kernel TCP vulnerabilities **CVE-2019-11477**: SACK Panic, **CVE-2019-11478**: SACK Slowness and **CVE-2019-11479**: Excess Resource Consumption Due to Low MSS Values.
- Changed **minimally allowed MSS size** to '**1000**' to prevent possible Denial-of-Service attacks.

### 7.16.5 New Features 11.01.120

Citrix

- Added support for **Citrix Workspace Launcher** functionality as described at <https://support.citrix.com/article/CTX237727>.

## Teradici PCoIP Client

- Updated **Teradici PCoIP Client** to version **19.05.4**.

## 7.16.6 Resolved Issues 11.01.120

## Citrix

- SpaceMouse: Improved **USB handling**.
- Citrix Workspace App 19.03: Improved **USB redirection handling**.

## Network

- Fixed: The **second Ethernet interface** did not get configured when the first one was disabled.

## Base system

- Fixed **license expiry warning** at boot. Before this fix, in some cases the warning wrongly appeared at every boot.
- Fixed: **System logout** waits for Citrix logout now.

## Appliance Mode

- Fixed: **In-session control bar** could not be deactivated in **Citrix Self-Service appliance mode**.

## X11 system

- Fixed: Problems with **internal graphic cards** and **Nvidia graphic cards**.

## RD Web Access

- Fixed not starting **RDP Remote Applications**.

## Hardware

- Fixed **not working network** on Beckhoff CB3163, CB6263 and CB6363 systems.
- Fixed **not working network** on Lex 3I380D.
- Fixed **black screen** issue with some monitors and 2560x1440 resolution (occurred on UD2 LX50).
- Added possibility to **change** some **DRM settings** and limit the **DisplayPort lane bandwidth** on Intel devices.
- Added **new registry keys**:

### 7.17.3 General Information 11.01.110

The following clients and features are not supported anymore

- Caradigm
- Citrix Legacy Sessions
- Citrix Web Interface
- Citrix StoreFront Legacy
- Citrix HDX Flash Redirection
- Citrix XenDesktop Appliance Mode
- Flash Player Download
- Ericom PowerTerm
- JAVA Web Start
- Leostream Java Connect
- Systancia AppliDis
- VIA graphics driver

### 7.17.4 Security Fixes 11.01.110

Firefox

- Updated Mozilla Firefox to version **60.7.0esr**.
- Fixed **mfsa2019-08** security issues.

[More...](#)

CVE-2019-9790, CVE-2019-9791, CVE-2019-9792, CVE-2019-9793,  
CVE-2019-9795, CVE-2019-9796, CVE-2018-18506, CVE-2019-9788.

- Fixed **mfsa2019-05** security issues CVE-2018-18356 and CVE-2019-5785.
- Fixed **mfsa2019-02** security issues CVE-2018-18500, CVE-2018-18505 and CVE-2018-18501.
- Firefox is now allowed to access **YubiKey** (FIDO/U2F) if **AppArmor** is active.

Base system

- Updated **libwebkit2gtk-4.0-37** to version **1.24.2**.

CVE-2018-4386 and CVE-2018-4372.

## 7.17.5 Known Issues 11.01.110

Citrix

- With an **activated DRI3** and an **AMD GPU**, **Citrix H.264 acceleration plugin** could freeze. A selective H.264 mode (API v2) is not affected by this issue.
- Citrix has known issues with **GStreamer1.0** which describe problems with **multimedia redirection** of H.264, MPEG1 and MPEG2. GStreamer1.0 is used if **browser content redirection** is active.
- **Browser content redirection** does not work with **activated DRI3** and **hardware accelerated H.264 deep compression codec**.
- **Citrix StoreFront Login** with **Gemalto smartcard middleware** does not detect smartcard correctly if the card is inserted after the start of Login.  
As a workaround, insert the smartcard before starting StoreFront Login.
- When using **Citrix Workspace App 18.10** in combination with **Philips Speech driver**, the session occasionally does not properly terminate at logoff and hangs.  
As a workaround, the usage of Citrix Receiver 13.10 is recommended when Philips Speech driver is needed.
- **Citrix H.264 acceleration plugin** does not work with the **enabled** server policy **Optimize for 3D graphics workload** in combination with the server policy **Use video codec compression > For the entire screen**.

VMware Horizon

- **External drives** are mounted already before connection, do not appear in the **remote desktop**.  
Workaround: Mapping the directory/media as a drive on desktop. The external devices will show up within the media drive then.
- **Client drive mapping** and **USB redirection for storage devices** should not be enabled both at the same time.

- On the one hand, when using **USB redirection for storage devices**: The USB on-insertion feature is only working when the client drive mapping is switched off. In the IGEL Setup client drive mapping can be found in: **Sessions > Horizon Client > Horizon Client Global > Drive Mapping > Enable Drive Mapping**. It is also recommended to disable local **Storage Hotplug** on setup page **Devices > Storage Devices > Storage Hotplug**.
- On the other hand, when using **drive mapping** instead, it is recommended either to switch off USB redirection entirely or at least to deny storage devices by adding a filter to the USB class rules. Furthermore, Horizon Client relies on the OS to mount the storage devices itself. **Storage Hotplug** on setup page **Devices > Storage Devices > Storage Hotplug** has to be enabled and the **Number of storage hotplug devices** has to be set to at least 1.

#### Parallels Client

- Native USB redirection** does not work with Parallels Client.
- For using the new **FIPS 140-2 compliance mode**, it is necessary to connect to the **Parallels RAS** once with **disabled FIPS support**.

#### Smartcard

- In seldom cases, the authentication hung when using **A.E.T. SafeSign** smartcards.

#### Multimedia

- Multimedia redirection with **GStreamer** could fail with the **Nouveau GPU driver**.

#### Base system

- On **NVIDIA GPU** drivers, the **reported resolutions** of a display may contain unsupported resolutions. When any of those are configured, there are visual bugs (e.g. the desktop does not render properly).

### 7.17.6 New Features 11.01.110

#### Citrix

- Integrated **Citrix Workspace app 19.03**.  
Added new registry key to support **1536-bit RSA** keys for client authentication.  
[More...](#)

|           |                                       |
|-----------|---------------------------------------|
| Parameter | Enable RSA 1536 cipher suit           |
| Registry  | ica.allregions.enabl_rsa_1536         |
| Range     | <u>factory default</u> / false / true |

- Added new registry key to enable **different cipher suites** for client authentication.  
[More...](#)

|           |                                 |
|-----------|---------------------------------|
| Parameter | Enables different cipher suites |
|-----------|---------------------------------|

|          |                                          |
|----------|------------------------------------------|
| Registry | <code>ica.allregions.sslciphers</code>   |
| Range    | <u>factory default</u> / ALL / GOV / COM |

- TLS\_ECDHE\_RSA\_WITH\_AES\_256\_GCM\_SHA384 – GOV/ALL
- TLS\_ECDHE\_RSA\_WITH\_AES\_256\_GCM\_SHA384 – GOV/ALL
- TLS\_ECDHE\_RSA\_WITH\_AES\_128\_CBC\_SHA – COM/ALL
- Added new registry key to support **keyboard layout synchronization**.

**More...**

|           |                                                            |
|-----------|------------------------------------------------------------|
| Parameter | Keyboard layout synchronization                            |
| Registry  | <code>ica.modules.virtualdriver.keyboardsync.enable</code> |
| Value     | <u>enabled</u> / <u>disabled</u>                           |

- Updated **Citrix HDX RTME**, used for optimization of Skype for Business, to version **2.8.0-2235**

## RDP/IGEL RDP Client 2

- Added **Field Collection to RDP** session server page

## VMware Horizon

- Added parameters to **specify webcam frame size** and **rate for RTAV**.

**More...**

|           |                                            |
|-----------|--------------------------------------------|
| Parameter | Webcam frame width                         |
| Registry  | <code>vmware.view.rtav-frame-width</code>  |
| Value     | <code>&lt;empty_string&gt;</code>          |
| Parameter | Webcam frame height                        |
| Registry  | <code>vmware.view.rtav-frame-height</code> |
| Value     | <code>&lt;empty_string&gt;</code>          |
| Parameter | Webcam frame rate                          |
| Registry  | <code>vmware.view.rtav-frame-rate</code>   |
| Value     | <code>&lt;empty_string&gt;</code>          |

- Updated **Horizon Client** to version **5.0.0-12557422**

- Added possibility to easily evaluate **Horizon Blast decoder states**. By default sessions are evaluated after usage and the result is written into the journal log.  
This can also be used with GUI notifications at runtime.

## Teradici PCoIP Client

- Added **Teradici PCoIP** Client version **19.05.1**. This feature requires an additional license.

| Registry   | <code>sessions.pcoip&lt;NR&gt;.options.log-level</code>                                                                                                             |
| Range      | [Critical][Error][Info][Debug]                                                                                                                                      |

## Network

- Added a mechanism for retrieving the **SCEP challenge password** with a **custom script**. Setting the following registry key to true enables the use of the script. The registry key `network.scepclient.cert%.crypt_password` will be ignored. (The script may use it for its own purpose though.)

**More...**

|           |                                                                      |
|-----------|----------------------------------------------------------------------|
| Parameter | Use Challenge Password Command                                       |
| Registry  | <code>network.scepclient.cert%.use_challenge_password_command</code> |

|       |                           |
|-------|---------------------------|
| Value | <u>enabled / disabled</u> |
|-------|---------------------------|

- If the above key is **true**, the value of this key will be passed to **bash for execution**. It happens when the SCEP challenge password is needed for creating a **certificate signing request**. The script is supposed to output the challenge password on its standard output. For convenience any carriage return characters are stripped off the script before execution by bash.

#### Wi-Fi

- Added support for **Realtek 8821CE wireless cards**.

#### Smartcard

- Added **90meter** smart card library. This feature requires an additional license.

## Base System

- Added package **ldap-utils** which can be used by **custom scripts**.

- Updated **libwebkit2gtk-4.0-37** to version **1.24.2**.

### More...

CVE-2019-8595, CVE-2019-8607, CVE-2019-8615, CVE-2019-6251,

CVE-2018-4373, CVE-2018-4375, CVE-2018-4376, CVE-2018-4378,

CVE-2018-4382, CVE-2018-4392, CVE-2018-4416, CVE-2018-4345,

CVE-2018-4386, CVE-2018-4372

- Updated **EULA** displayed in **OSC** and **IGEL Setup Assistant**.

- When the **IGEL Setup Assistant** is used to download a demo license via WiFi, the **local WiFi manager** will be enabled by default.

- Added possibility to **configure scheduled commands**. Registry keys: system.cron.\*

## Driver

- Updated **deviceTRUST Client** to version **19.1.200**. This release includes support for logical disks attached to the IGEL endpoint, plus bug fixes and stability improvements over the previous 19.1.100 release.

### Logical Disks

Added support for real-time properties representing the LOGICAL DISKS attached to the IGEL endpoint.

#### This includes...

- DEVICE\_LOGICALDISK\_X\_TYPE – Either Fixed or Removable.
- DEVICE\_LOGICALDISK\_X\_LABEL – The volume label.
- DEVICE\_LOGICALDISK\_X\_FILESYSTEM – The type of file system.
- DEVICE\_LOGICALDISK\_X\_PATHS – The paths that the disk is mounted.
- DEVICE\_LOGICALDISK\_X\_TOTALMB – The total space available on the disk. This property is only available for mounted disks.
- DEVICE\_LOGICALDISK\_X\_FREEMB – The free space available on the disk. This property is only available for mounted disks.
- DEVICE\_LOGICALDISK\_X\_NAME – The name of the underlying physical disk.
- DEVICE\_LOGICALDISK\_X\_VENDORID – The vendor identifier uniquely identifying the manufacturer. This property is only available for USB or PCI connected devices.
- DEVICE\_LOGICALDISK\_X\_PRODUCTID – The product identifier uniquely identifying the product. This property is only available for USB or PCI connected devices.
- DEVICE\_LOGICALDISK\_X\_SERIALNUMBER – The serial number of the physical disk.
- DEVICE\_LOGICALDISK\_X\_BUSTYPE – The storage bus type linked to the physical disk.
- DEVICE\_LOGICALDISK\_COUNT – The number of logical disks.

- Added registry keys to **modify the intel graphic driver usage** of framebuffer compression and power management.

|           |                                          |
|-----------|------------------------------------------|
| Parameter | Power saving display C-States to use.    |
| Registry  | x.drivers.intel.dc_setting               |
| Range     | [Default][Disable][Up to DC5][Up to DC6] |
| Parameter | Use framebuffer compression.             |
| Registry  | x.drivers.intel.fbc_setting              |
| Range     | [Default][Disable]                       |

## X11 System

- Added new registry keys to **change the xorg input driver** for a input device class.

[More...](#)

For keyboards:

|           |                               |
|-----------|-------------------------------|
| Parameter | Xorg driver to use            |
| Registry  | userinterface.keyboard.driver |
| Range     | [Evdev] [Libinput]            |

For touchpads:

|           |                                |
|-----------|--------------------------------|
| Parameter | Xorg driver to use             |
| Registry  | userinterface.touchpad.driver  |
| Range     | [Evdev] [Synaptics] [Libinput] |

For touchscreens:

|           |                                       |
|-----------|---------------------------------------|
| Parameter | Xorg driver to use                    |
| Registry  | userinterface.touchscreen.xorg_driver |
| Range     | [Evdev][Libinput]                     |

For mouse:

|           |                                         |
|-----------|-----------------------------------------|
| Parameter | Xorg driver to use                      |
| Registry  | <code>userinterface.mouse.driver</code> |
| Range     | [ <u>Evdev</u> ][Libinput]              |

- Added some registry keys to **disable loading of DRM kernel modules** (graphic).

| Value     | <u>enabled / disabled</u>                        |
| Parameter | Disable the loading of the VBOXVIDEO DRM driver. |
| Registry  | x.drivers.vboxvideo.disable                      |
| Value     | <u>enabled / disabled</u>                        |

## Java

- Replaced **Oracle JRE** by **AZUL's Zulu JRE** version **8.36.0.1**.

## 7.17.7 Resolved Issues 11.01.110

## OSC Installer

- Fixed OSC Installer to **not disable EFI**, if MSDOS partitioning was chosen.

## Citrix

- Fixed stability issues with **Citrix Browser Content Redirection**.
- Fixed crash when **H264 acceleration** and **RTME** will be used on two or more concurrent **VDI sessions**.

## RDP/IGEL RDP Client 2

- Added registry key to use **rdpglobal window settings** for remote apps.  
[More...](#)

|           |                                                             |
|-----------|-------------------------------------------------------------|
| Parameter | Enable global windows settings for remote app               |
| Registry  | rdp.winconnect.enable-global-window-settings-for-remote-app |
| Value     | <u>enabled / disabled</u>                                   |

## VMware Horizon

- Added recognition for **password change** and **password expired dialog** in **Horizon local logon sessions** or **appliance mode**
- Fixed the configuration choice to use the **relative mouse feature**

## Firefox

- Fixed firefox not accepting **proxy credentials** from setup.
- Fixed **print hotkey disable option** not working with Firefox 60.
- Fixed browserglobal.app.local\_subdirs\_whitelist not working.
- Updated **Firefox** browser to version **60.7.0esr**.
- Fixes for **mfsa2019-08**.

**More...**

- CVE-2019-9790, CVE-2019-9791, CVE-2019-9792, CVE-2019-9793,
  - CVE-2019-9795, CVE-2019-9796, CVE-2018-18506, CVE-2019-9788.
- Fixes for **mfsa2019-05**, also known as: CVE-2018-18356, CVE-2019-5785.
- Fixes for **mfsa2019-02**, also known as: CVE-2018-18500, CVE-2018-18505, CVE-2018-18501.

## Network

- Fixed: Failure to reach **SCEP server** in the client certificate renewal phase resulted in loss of SCEP server and client certificates.
- Changed **e1000e driver** to out of tree version **3.4.2.3** - directly from Intel.
- Changed **igb driver** to out of tree version **5.3.5.22** - directly from Intel.
- Added possibility to switch between **thirdparty** and **kernel intel IGB network driver**.

**More...**

|           |                                       |
|-----------|---------------------------------------|
| Parameter | Use thirdparty igb kernel module.     |
| Registry  | network.drivers.igb.prefer_thirdparty |
| Value     | [Auto] [Yes] [No]                     |

Info: "Auto" uses thirdparty in most cases

- Added possibility to switch between **thirdparty** and **kernel intel E1000E network driver**.

**More...**

|           |                                          |

**Info:** "Auto" uses r8169 in most cases

- Added possibility to choose the variant of the **realtek r8168 driver**.

**More...**

|           |                                                                |
|-----------|----------------------------------------------------------------|
| Parameter | Choose realtek r8168 variant (only if prefer r8168 is chosen). |
| Registry  | network.drivers.r8169.r8168_variant                            |
| Value     | [Default][No NAPI][NAPI]                                       |

**Info:** "Auto" uses NAPI in most cases

## Wi-Fi

- Fixed non working **TP Link Archer T2UH**.

## Imprivata

- Fixed **Fast User Switching** with **Citrix** connections.

## Smartcard

- Fixed **OpenSC** setting `max_send_size` for reader driver pcsc in `/etc/opensc/opensc.conf`.
- Fixed **Dell KB813 smartcard keyboard** in combination with certain smartcards driven by **OpenSC PKCS#11** module. Before this fix authentication to **Citrix StoreFront** and **VMWare Horizon** failed.

## Base system

- Fixed retrieving of **serial number** from display.
- Fixed **random 90 seconds shutdown delay** (systemd).
- Fixed wrong behavior with **expired evaluation licenses** in some cases.
- Fixed a bug in the **screenlock countdown** that occurred when display of remaining seconds was not desired.
- Added **apparmor rule** to allow tcpdump to write to `/debuglog`.
- Bugfix **hotkey setting need reboot**.
- Fixed **UD2 screen goes black** problem with certain multimonitor configurations.
- Fixed **gtk-3 icon sizes** for **High-DPI** configurations.
- Enhanced **bootloader** to allow the setting of some kernel commandline parameters with registry keys.

**Info: Use IOMMU if possible**

Parameter      IOMMU usage setting for Intel systems.

Registry      system.kernel.bootparams.intel\_iommu

Range      [On] [Off]

**Info: Use IOMMU if possible**

- Moved the **EULA** page in **IGEL Setup Assistant** into the **demo activation workflow**.
- Added new registry key to set **USB quirks**.

[More...](#)

Parameter      Set XHCI USB quirks to fix some hardware issues.

Registry      system.kernel.bootparams.xhci-hcd\_quirks

Range      [No quirk] [Spurious Reboot quirk] [Spurious Wakeup quirk][Spurious Reboot Wakeup quirk]

- Lenovo **ThinkCentre M73** needs the system.kernel.bootparams.xhci-hcd\_quirks registry key set to **Spurious Reboot quirk** to fix reboot after shutdown problem.

#### Driver

- Updated **deviceTRUST** Client to version **19.1.200**.

##### Bug Fixes:

- Fixed an issue reading the **DEVICE\_IGEL\_ICG\_SERVER** property.
- Fixed an issue where the **NETWORK** and **LOCATION** property providers could cause the client to freeze if a disconnection occurred whilst these property providers were checking for changes.
- Fixed an **open file handle leak** which lead to the client process reaching its file handle limits when left running for a long period of time.
- Fixed non working **WACOM device DTU-1141B**.

#### Custom Partition

- Fixed **ownership of extracted data**: don't preserve original owner while extracting data into custom partition.

#### Storage Devices

- Fixed **auto mounting** of storage devices inside of **Olympus DS-9500 Digital Voice Recorder**.

#### X11 system

- There is now a registry key to ignore a **3Dconnexion SpaceMouse** for IGEL graphical use (X11). If activated, the **SpaceMouse** is only passed through to the desktop session. If false, it acts also as the standard mouse.

 0x256F; \*\*; 3Dconnexion; SpaceMouse

- USB device reset via USB powercycle on UD6/UD7 available.
- Fixed screen flicker in some cases if "Force NumLock On" (`x.global.forcenumlock`) is active.
- Fixed Display Switch utility not starting with some translations.
- Fixed an issue with the noDDC mode not always working as expected.
- Fixed wrongly detected embedded DisplayPort on Dell Wyse 5070 Extended hardware.
- Added the possibility to change an embedded DisplayPort to a normal DisplayPort.

|           |                                                                                                   |
|-----------|---------------------------------------------------------------------------------------------------|
| Parameter | Use embedded displayport as normal displayport (reboot required).                                 |
| Registry  | <code>x.drivers.intel.edp_is_dp</code>                                                            |
| Range     | <u><a href="#">[default]</a></u> <u><a href="#">[enable]</a></u> <u><a href="#">[disable]</a></u> |

- Fixed some multimonitor (>4) issues with Nvidia graphic cards.
- Updated DisplayLink driver to version 5.1.26 to solve some startup issues.
- Fixed configuration from the old Display Switch taking precedence over configuration from new Display Switch and preventing changes.

## Audio

- Fixed bad quality sound over DisplayPort in a Citrix ICA session or other applications using ALSA API.
- Fixed jack detection of the headphone port in Dell Wyse 3040.
- Fixed configuration of default audio output and input.

#### Media Player (Parole)

- Fixed a problem where parole media player would hang instead of playing audio while audio-visualization is enabled.

#### Hardware

- Fixed vanishing mouse cursor on Ryzen 3 devices.
  - Fixed issues with non working Touchpad and Trackpoint on Lenovo laptops.
  - Hardware detect HP t430.
  - Added possibility to use AMDGPU PRO driver instead of the kernel integrated driver.  
Ryzen 3 devices (1200, 1300X, 2200G, 2200U and 2300U) will use the AMDGPU PRO driver if registry key `x.drivers.amdgpu.use_amdgpu_pro` is set to auto (default).
- New registry key (settings to this key will only work after reboot):  
[More...](#)

|           |                                              |
|-----------|----------------------------------------------|
| Parameter | Use AMDGPU PRO driver.                       |
| Registry  | <code>x.drivers.amdgpu.use_amdgpu_pro</code> |
| Range     | [Auto] [True] [False]                        |

#### Remote Management

- If TC is managed over ICG, then settings do not apply immediately when received in connection stage. The settings must be applied after user prompt dialog.

- **Features with Limited Functionality**

Cisco JVDI Client

12.1

## General Information 11.01.100

The following clients and features are not supported anymore:

- Caradigm
- Citrix Legacy Sessions
- Citrix Web Interface
- Citrix StoreFront Legacy
- Citrix HDX Flash Redirection
- Citrix XenDesktop Appliance Mode
- Flash Player Download
- Ericom PowerTerm
- JAVA Web Start
- Leostream Java Connect
- Systancia AppliDis
- VIA graphics driver

## Known Issues 11.01.100

### Citrix

- With **activated DRI3** and an **AMD GPU Citrix H.264 acceleration plugin** could freeze. Selective H.264 mode (API v2) is not affected from this issue.
- Citrix has known issues with **GStreamer1.0** which describe problems with multimedia redirection of H.264, MPEG1 and MPEG2. GStreamer1.0 is used if **browser content redirection** is active.
- **Browser content redirection** does not work with activated **DRI3** and **hardware accelerated H.264 deep compression codec**.
- **Citrix StoreFront Login** with **Gemalto smartcard middleware** does not detect smartcard correctly if the card is inserted after start of Login.  
As a workaround, insert the smartcard before starting StoreFront Login.
- When using **Citrix Workspace App 18.10** in combination with **Philips Speech driver**, the session occasionally does not properly terminate at logoff and hangs.  
As a workaround, usage of Citrix Receiver 13.10 is recommended when Philips Speech driver is needed.
- **Citrix H.264 acceleration plugin** does not work with **enabled** server policy **Optimize for 3D graphics workload** in combination with server policy **Use video codec compression > For the entire screen**.

### VMware Horizon

- **External drives** are mounted already before connection, do not appear in the **remote desktop**.  
Workaround: Mapping the directory/media as a drive on desktop. The external devices will show up within the media drive then.

- **Client drive mapping** and **USB redirection for storage devices** should not be enabled both at the same time.
  - On the one hand, when using **USB redirection for storage devices**: The USB on-insertion feature is only working when the client drive mapping is switched off. In the IGEL Setup client drive mapping can be found in: **Sessions > Horizon Client > Horizon Client Global > Drive Mapping > Enable Drive Mapping**. It is also recommended to disable local **Storage Hotplug** on setup page **Devices > Storage Devices > Storage Hotplug**.
  - On the other hand, when using **drive mapping** instead, it is recommended to either switch off USB redirection entirely or at least deny storage devices by adding a filter to the USB class rules. Furthermore, Horizon Client relies on the OS to mount the storage devices itself. **Storage Hotplug** on setup page **Devices > Storage Devices > Storage Hotplug** has to be enabled and the **Number of storage hotplug devices** has to set to at least 1.

#### Parallels Client

- **Native USB redirection** does not work with Parallels Client.
- For using the new **FIPS 140-2 compliance mode**, it is necessary to connect to the **Parallels RAS** once with **disabled FIPS support**.

#### Smartcard

- In seldom cases, the authentication hung when using **A.E.T. SafeSign** smartcards.

#### Multimedia

- Multimedia redirection with **GStreamer** could fail with the Nouveau GPU driver.

#### Base system

- On **NVIDIA GPU** drivers, the **reported resolutions** of a display may contain unsupported resolutions. When any of those are configured, there are visual bugs (e.g. the desktop does not render properly).

## New Features 11.01.100

#### Base system

- Support for **IGEL OS 11 license deployment** with **IGEL UMS 6** (via 'Automatic License Deployment')
- Support for **manual license deployment** in IGEL Setup Assistant
- Support for **demo license registration** in IGEL Setup Assistant
- Unified **IGEL OS 11 firmware** for IGEL and third-party hardware (New update file prefix: lxos)
- **Writable partitions are encrypted now**
- Use **IGEL OS Creator** for IGEL OS 11 installation and recovery (Download file: OSC\_11.01.100.zip)

#### X11 system

- Reworked **user interface**
- **New wallpapers** have been added with **transparent background** so that the custom desktop color shows through. Selection of one of the new **Desktop Color** wallpapers in combination with an adjustment of desktop colors will provide this individual effect. The 2nd desktop color and the gradients also work with that.

- The new **Display Switch** tool can use **multiple different profiles**, automatically chosen at runtime depending on the currently connected monitors. A profile is created, when the current monitor layout/resolution is configured via the Display Switch utility. The profile will be associated with the currently connected displays automatically (manufacturer, model and used connector are used for allocation) and if applicable, the state of the laptop lid. The setup will be restored by hot-(un)plugging known displays, means the system will automatically switch to the already configured profile. The Display Switch utility itself got a new interface. All base functionality can be configured via Drag&Drop.

An example workflow:

- Connect the hardware and close/open lid
- Open the Display Switch Utility
  - A quick (simple) setting can be selected directly.
  - Should the desired use case be different from the provided choices, the **Advanced** button opens a drag and drop interface for further settings.
- In this interface, the **displays can be dragged and dropped** for the intended configuration. The display will snap adjacent to others.
- If a display should not be used, it can be dragged to the **Disabled** area on the top right - the screen will be reactivated when it is dragged back to the active area.
- To show the same content on multiple displays, one display should be dragged onto an other active screen. The interface will show **Mirror**. The mirroring monitor will be displayed on the lower right.
- With the **Apply** button the current state will be set, with 'Yes' on the "Keep configuration" dialog the current settings will be saved to persistent storage and associated with the profile.
- Advanced functionality** (panning/scaling/resolutions) can be configured in drop-down boxes, hidden in a **drawer on the right side**. The drawer can be expanded by clicking the '<' button on the right edge.

- For the **Display Switch** functionality the following parameters should be enabled for proper usage.

**More...**

|            |                                                     |
|------------|-----------------------------------------------------|
| IGEL Setup | <b>Accessories &gt; Display Switch &gt; Options</b> |
| Parameter  | Preserve settings over reboot                       |
| Registry   | sessions.user_display0.options.preserve_settings    |
| Value      | enabled / <u>disabled</u>                           |
| IGEL Setup | <b>Accessories &gt; Display Switch &gt; Options</b> |
| Parameter  | Smart display configuration                         |
| Registry   | x.auto_associate                                    |

|       |                           |
|-------|---------------------------|
| Value | <u>enabled / disabled</u> |
|-------|---------------------------|

- The **IGEL Display Switch** utility is now used for **NVIDIA graphics** devices as well.
- Automatic DPI detection** has been added by the following parameter.

[More...](#)

|            |                                                 |
|------------|-------------------------------------------------|
| IGEL Setup | <b>User Interface &gt; Display &gt; Options</b> |
| Parameter  | Monitor DPI Detection                           |
| Registry   | x.xserver0.auto_dpi                             |
| Value      | Off / <u>Smart</u> / Pixel-Precise              |

With the **Smart** automatic DPI detection the user interface is now usable out of the box on 4k displays.

**Smart:** Auto detect the DPI but only use a few values whichever is closest to the calculated DPI value. Used DPI values: 96, 125, 150, 175, 200, 225, 250, 275, 300.

**Off:** No auto DPI detection, fixed Monitor DPI value is used.

**Pixel-Precise:** Auto detect the DPI value and use it when it is within 65-300 DPI. Otherwise, 96 DPI is used.

- Improved **High DPI** support for various applications.
- Added **xprintidle** tool to firmware.
- Added a parameter to **delay DisplayPort handling** by a certain number of seconds to mitigate disabled outputs causing a reconfiguration.

[More...](#)

|           |                                                                                                 |
|-----------|-------------------------------------------------------------------------------------------------|
| Parameter | Delay DisplayPort disconnect events by N seconds to prevent reconfiguration with weird monitors |
| Registry  | sessions.user_display0.options.delay_dp_hotplug                                                 |
| Value     | <u>2</u>                                                                                        |

## Firefox

- The Firefox configuration is now only done by global parameters found at setup pages: **IGEL Setup > Sessions > Browser > Browser Global**
- Session specific parameters are: **startup page**, **start monitor** and **autostart**

## Audio

- Added support for deployment of **Jabra Xpress** packages with **IGEL UMS 6**.

|            |                                                                         |
|------------|-------------------------------------------------------------------------|
| IGEL Setup | <b>Devices &gt; Unified Communications &gt; Jabra &gt; Jabra Xpress</b> |
| Parameter  | Device Dashboard URL                                                    |

|                      |                                                                                                  |
|----------------------|--------------------------------------------------------------------------------------------------|
| Registry             | <code>jabra.xpress.device_dashboard.server_url</code>                                            |
| IGEL Setup Parameter | <b>Devices &gt; Unified Communications &gt; Jabra &gt; Jabra Xpress</b><br>Package               |
| Registry             | <code>jabra.xpress.package_name</code>                                                           |
| IGEL Setup Parameter | <b>Devices &gt; Unified Communications &gt; Jabra &gt; Jabra Xpress</b><br>Source URL            |
| Registry             | <code>jabra.xpress.package_url</code>                                                            |
| IGEL Setup Parameter | <b>Devices &gt; Unified Communications &gt; Jabra &gt; Jabra Xpress</b><br>Check SSL certificate |
| Registry             | <code>jabra.xpress.package_url_ssl_cert_check</code>                                             |
| Value                | <u>enabled</u> / disabled                                                                        |
| IGEL Setup Parameter | <b>Devices &gt; Unified Communications &gt; Jabra &gt; Jabra Xpress</b><br>Password              |
| Registry             | <code>jabra.xpress.package_url_crypt_password</code>                                             |

- Added support of **automatic suspend for wireless Jabra USB audio devices**. A device will be suspended after idle time over 5 seconds and automatically resumed again, when an application wants to playback or record audio data over the device.

|                      |                                                                    |
|----------------------|--------------------------------------------------------------------|
| IGEL Setup Parameter | <b>Devices &gt; Unified Communications &gt; Jabra &gt; Options</b> |
| Parameter            | Suspend on idle                                                    |
| Registry             | <code>devices.jabra.suspend_on_idle</code>                         |
| Value                | <u>enabled</u> / disabled                                          |

TC Setup (Java)

- Local TC setup theme** can be configured now.

[More...](#)

|           |                                        |
|-----------|----------------------------------------|
| Parameter | Color Theme                            |
| Registry  | <code>userinterface.setup.theme</code> |

|       |                                            |
|-------|--------------------------------------------|
| Value | Auto / Dark / Dark & Light / Light / Ocean |
|-------|--------------------------------------------|

- Added **High DPI scaling**

#### On-screen keyboard

- Added new parameters to **auto show and hide the on-screen keyboard**. To use this feature, the on-screen keyboard should be set to **autostart** and **restart**. The on-screen keyboard will start in a hidden state and automatically appears when a text field is selected. Confirmed to work within Firefox and on lockscreen.

[More...](#)

|            |                                                                         |
|------------|-------------------------------------------------------------------------|
| IGEL Setup | <b>Accessories &gt; On-Screen Keyboard &gt; Application Integration</b> |
| Parameter  | Automatically show On-Screen Keyboard when text field is selected       |
| Registry   | userinterface.softkeyboard.autoshow                                     |
| Value      | enabled / <u>disabled</u>                                               |
| Parameter  | Automatically hide On-Screen Keyboard when text field is deselected     |
| Registry   | userinterface.softkeyboard.autohide                                     |
| Value      | enabled / <u>disabled</u>                                               |

#### Appliance Mode

- Streamlined the **on-screen keyboard** settings for appliance mode.
- Add new parameter to enable the on-screen keyboard in appliance mode. With **enabled Appliance Mode Access** the on-screen keyboard should set to auto start.

[More...](#)

|            |                                            |
|------------|--------------------------------------------|
| IGEL Setup | <b>Accessories &gt; On-Screen Keyboard</b> |
| Parameter  | Appliance Mode Access                      |
| Registry   | sessions.gtkeyboard0.appliance_mode_access |
| Value      | enabled / <u>disabled</u>                  |

- Alternatively, the button to **show/hide** the on-screen keyboard can be displayed in **appliance mode**, to provide a quick method to turn the keyboard on or off.

[More...](#)

|            |                                                                                                               |
|------------|---------------------------------------------------------------------------------------------------------------|
| IGEL Setup | <b>Accessories &gt; On-Screen Keyboard &gt; Application Integration &gt; On-Screen Keyboard Toggle Button</b> |
| Parameter  | Show button                                                                                                   |
| Registry   | userinterface.touchescreen.keyboard.touchkey.enable                                                           |

| Value | <u>enabled / disabled</u> |
|-------|---------------------------|
|-------|---------------------------|

- **Removed the old options** to individually enable/disable and position the on-screen keyboard for various appliance mode settings.

#### Hardware

- Added hardware support for **HP t530**.

### CA Certificates Contained in IGEL OS 11.01.100

Contained CA certificates:

## 7.18.2 IGEL OS Creator (OSC)

### Supported Devices

| IGEL devices:   |
|-----------------|
| UD2-LX 40       |
| UD3-LX 51       |
| UD3-LX 50       |
| UD5-LX 50       |
| UD6-LX 51       |
| UD7-LX 10       |
| UD9-LX Touch 41 |
| UD9-LX 40       |

For supported devices, see [Third-Party Devices Supported by IGEL OS 11](#)<sup>451</sup>.

- [General Information 11.01.100](#)(see page 1869)
- [Component Versions 11.01.100](#)(see page 1869)

### General Information 11.01.100

- **IGEL OS Creator** is used for **IGEL OS 11** installation and recovery on:
  - Supported IGEL hardware
  - IGEL UD Pocket
  - Supported x86 hardware
- Find details in the IGEL OS Creator manual at <https://kb.igel.com/osc-manual>

### Component Versions 11.01.100

## General Information 10.06.170

The following clients and features are not supported anymore:

- Citrix Receiver 12.1 and 13.1 - 13.4;
- Citrix Access Gateway Standard Plug-in;
- Dell vWorkspace Connector for Linux;
- Ericom PowerTerm Emulation 9 and 11;
- Ericom Webconnect;
- IGEL Legacy RDP Client (rdesktop);
- Virtual Bridges VERDE Client;
- PPTP VPN Support;
- IGEL Upgrade License Tool with IGEL Smartcard Token;
- Remote Management by setup.ini file transfer (TFTP);
- Remote Access via RSH;
- Legacy Philips Speech Driver;
- T-Systems TCOS Smartcard Support;
- DUS Series touchscreens;
- Elo serial touchscreens;
- Video hardware acceleration support is discontinued on UD10-LX Touch 10 and UD10-LX 10;
- H.264 hardware acceleration support is discontinued on UD10-LX Touch 10 and UD10-LX 10;
- Java WebStart;
- Storage hotplug devices are not automatically removed anymore, instead they must always be ejected manually:
  - by a panel tray icon;
  - by an icon in the **In-Session Control Bar** (configurable under **IGEL Setup > User Interface > Desktop**);
  - by a **Safely Remove Hardware** session (configurable under **IGEL Setup > Accessories**).

The following clients and features are not available in this release:

- Cherry eGK Channel;
- Open VPN Smartcard Support;
- Asian Input Methods;
- Composite Manager.

## Security Fixes 10.06.170

### Firefox

- Updated Mozilla **Firefox** to **68.4.1esr**.
- Fix for **mfsa2020-03**, also known as CVE-2019-17026.
- Fixes for **mfsa2020-02**, also known as: CVE-2019-17016, CVE-2019-17017, CVE-2019-17022, and CVE-2019-17024.
- Fixes for **mfsa2019-37**, also known as:  
[More...](#)  
CVE-2019-17008, CVE-2019-11745, CVE-2019-17010, CVE-2019-17005, CVE-2019-17011, and CVE-2019-17012.
- Fixes for **mfsa2019-33**, also known as:  
[More...](#)  
CVE-2019-15903, CVE-2019-11757, CVE-2019-11758, CVE-2019-11759, CVE-2019-11760, CVE-2019-11761, CVE-2019-11762, CVE-2019-11763, and CVE-2019-11764.

## Known Issues 10.06.170

### Firefox

- As the behavior of Firefox has changed, following **settings for “Start in full-screen mode” and “Disable Hotkeys for open new window/tab” can be configured in first browser session only** – these are handled like a usual global setting, means the configuration within another browser session does not have an effect for these two parameters.

### Citrix

- With activated DRI3 and AMD GPU, Citrix **H.264 acceleration** plugin could **freeze**. Selective H.264 mode (API v2) is not affected from this issue.
- Citrix has known issues with **GStreamer1.0** which describe problems with **multimedia redirection of H264, MPEG1 and MPEG2**. GStreamer 1.0 is used if browser content redirection is active.
- **Browser content redirection** does not work with **activated DRI3** and hardware accelerated **H.264 deep compression codec**.
- Citrix **StoreFront** login with **Gemalto smartcard middleware** does not detect smartcard correctly if the card is **inserted after start** of Login.  
As a workaround, insert the smartcard before starting StoreFront login.
- Citrix **H.264 acceleration plugin** does not work with **enabled** server policy "Optimize for 3D graphics workload" in combination with server policy "Use video codec compression" > "For the entire screen".
- To launch **multiple desktop sessions** with **Citrix HDX RTME** and **Citrix H.264 acceleration plugin**, the following registry key must be enabled:  
[More...](#)

|           |                                                                  |
|-----------|------------------------------------------------------------------|
| Parameter | Activate workaround for dual RTME sessions and H264 acceleration |
|-----------|------------------------------------------------------------------|

|          |                           |
|----------|---------------------------|
| Registry | ica.workaround-dual-rtme  |
| Value    | enabled / <u>disabled</u> |

This workaround is not applicable when "Enable Secure ICA" is active for the specific delivery group.

#### VMware Horizon

- **External drives** mounted already before connection **do not appear in the remote desktop**.  
Workaround: map the directory /media as a drive. Then the external devices will show up inside the media drive.
- **Client drive mapping** and **USB redirection for storage devices** should not be enabled both at the same time.
  - On the one hand, if you want to use **USB redirection** for your storage devices: Note that the **USB on-insertion feature** is only working if the **client drive mapping** is switched off.  
In the IGEL Setup client, **drive mapping** can be found under **Sessions > Horizon Client > Horizon Client Global > Drive Mapping > Enable drive mapping**.  
It is also recommended to disable local **Storage Hotplug** under **Setup > Devices > Storage Devices > Storage Hotplug**.
  - On the other hand, if you use **drive mapping** instead, it is recommended to either **switch off USB redirection entirely** or at least to **deny storage devices** by adding a filter to the USB class rules.  
Furthermore, Horizon Client relies on the OS to mount the storage device itself. Enable local **Storage Hotplug** under **Setup > Devices > Storage Devices > Storage Hotplug**.

#### Parallels Client

- **Native USB redirection does not work** with Parallels Client.
- For using the new **FIPS 140-2 compliance mode**, it is necessary to connect to the **Parallels RAS** one time with FIPS support disabled.

#### Smartcard

- In seldom cases, the authentication hung when using **A.E.T. SafeSign smartcards**.

#### Appliance Mode

- Appliance mode **RHEV/Spice: spice-xpi** Firefox plugin **is no longer supported**. The **Console Invocation** has to allow **Native client** (auto is also possible) and it should start in fullscreen to prevent opening windows.

#### Wi-Fi

- **TP-Link Archer T2UH Wi-Fi adapters** do not work after system suspend/resume.  
Workaround: Disable system suspend under **IGEL Setup > System > Power Options > Shutdown**.

#### Base system

- Due to the removal of the Oracle JRE, **Java WebStart** is **not supported** anymore.

#### Hardware

- **Suspend on UD10** is disabled.

## New Features 10.06.170

### Citrix

- Integrated **Citrix Workspace App 19.12**
- Available **Citrix Workspace Apps** in this release: **19.12** (default), **19.10**, and **18.10**
- New **registry keys**:
  - Added a registry key for enabling **full-screen banner "Citrix Desktop Viewer"** when starting a Desktop or Application session.

[More...](#)

|           |                                   |
|-----------|-----------------------------------|
| Parameter | Show Citrix Desktop Viewer screen |
| Registry  | ica.module.cdviewerscreen         |
| Value     | <u>off</u> / <u>on</u>            |

- Added a registry key to enable usage of **Chromium Embedded Framework (CEF) for Browser Content Redirection (BCR)** [Experimental].

[More...](#)

|           |                                       |
|-----------|---------------------------------------|
| Parameter | Use Chromium Embedded Framework (CEF) |
| Registry  | ica.allregions.usecefbrowser          |
| Value     | <u>factory default</u> / false / true |

"Factory default" means that can be set by config file.

- Added a registry key to enable/disable **Transparent User Interface [TUI] Virtual Channel [VC] protocol**. The VDTUI protocol is enabled by default.

[More...](#)

|           |                                       |
|-----------|---------------------------------------|
| Parameter | Enable VDTUI protocol                 |
| Registry  | ica.module.virtualdriver.vdtui.enable |
| Value     | <u>off</u> / <u>on</u>                |

- Updated **libwebkit2gtk-4.0-37** to version **2.26.1**. It is now possible to enable **debug output for Citrix Browser Content Redirection** by running the script `/config/bin/install-webkit-debug`. The debug output is written to `/var/log/user/webcontainer.debug`. **CAUTION: You can run only short sessions with enabled debug output** because a lot of debugging data is written to the log file.

### Firefox

- Updated **Fluendo multimedia codecs** to the following versions:
  - gst-fluendo-h264dec - 18/09/2019 0.10.54
  - gst-fluendo-vadec - 16/10/2019 0.10.210

### Imprivata

- Usage of 500 MB for the Imprivata data partition** when **flash** is **bigger than 2 GB**.

### OS 11 Upgrade

- Add parameter to **skip battery checking in OS 11 Upgrade.**

|-----------|-----------------------------------------------------------------------------------------------------------|
| Parameter | Use at your own risk! Turns Battery safety check into warning only.<br>Any unbootable systems are on you. |
| Registry  | update.battery_is_only_warning                                                                            |
| Value     | enabled / <u>disabled</u>                                                                                 |

#### IGEL Cloud Gateway

- Added **support for shadowing via ICG.**

#### Resolved Issues 10.06.170

##### Imprivata

- Fixed **race condition** that may lead to **unexpected behavior with RDP connections.**
- Fixed **VMware Horizon session disconnect.**
- Fixed **Lock-key** and **Tap-out behavior.**
- Fixed **MS RDSH session.**

##### VMware Horizon

- Fixed **sound in Horizon client 5.x** using **PCoIP** protocol.

##### Caradigm

- **Caradigm restart loops** fixed.

##### Base system

- Fixed potential temporary **settings loss** when **resuming from standby.**
- **Automatic firmware update** is now checked after retrieval of UMS settings.
- When there are any **non-applied changes in the network configuration**, the **network will be reconfigured before the firmware update** starts.
- Re-fixed broken **custom bootsplash** when doing a **reset to factory defaults via UMS.**

##### Smartcard

- Updated **SecMaker Net iD smartcard library** to version **6.8.1.31**. The changes are:
 

[More...](#)

  - Support for **Gemalto IDPrime 940** and **3940**.
  - Support for new **VRK card** (IDEA IAS ECC, spec: FINEID S1 - FINEID S1 Electronic ID Application v4.0).
  - Support for **Aventra MyEID v4.0** (customer specific card profile with read support only).
    - Fixed problem with **detection of cards in Net iD Card Portal.**
    - Other fixes, see release notes at SecMaker.
  - Fixed **smartcard user names displayed on login screen**: non-ASCII characters were not shown correctly before.
  - Fixed **error message on login screen** shown when **smartcard PIN** is locked.

- Fixed handling of smartcards in **pcsc-lite: improved transaction locking**.  
A new parameter was introduced to control the new behavior (enabled by default):  
[More...](#)

|           |                                        |
|-----------|----------------------------------------|
| Parameter | Abort stalled transactions             |
| Registry  | scard.pcscd.abort_stalled_transactions |
| Value     | <u>enabled</u> / disabled              |

- Fixed IGEL Smartcard to be able to handle **VoIP client Ekiga sessions**.

#### Driver

- Updated **Philips Speech Driver** to version **12.8.5**.
- Updated **StepOver TCP Client** to version **2.3.2**.

#### CUPS Printing

- Updated **Printer Installer client** to version **25.1.0.303**.
- **Added** missing **CUPS model names** for some CUPS printers.

#### X11 system

- Fixed an issue with **modesetting driver** and **DisplayLink USB graphic adapters**.
- **Removed** registry key `x.drivers.glamor.use_dri3` as it is of no real use.
- **Updated Intel Xorg driver** to work fix issues with **DisplayLink USB adapters**.
- Fixed issue with **Wacom Signing Pads not being recognized as displays**.

#### X server

- Fix **HP Elitebook Display** issue **with HP Ultrathin Docking Station**.

#### Network

- Fixed issue when configuring **more than one NTP server**.
- Fixed **missing library with openconnect** feature.

#### OS 11 Upgrade

- Add special **warning when not connected to power line in upgrade boot**.

#### RDP/IGEL RDP Client 2

- Fixed **RDP Web Access Domain Visibility** not working correctly.

#### Remote Management

- Fixed broken **logon into Shared Workplace** on devices that are managed over **ICG**.
- Fixed **responding to requests searching an available buddy update server**.

#### VNC

- Fixed **sporadic connection failure in the VNC server**.

## 7.20.2 IGEL Universal Desktop OS 3

### Supported Hardware

## General Information 10.06.170

The following clients and features are not supported anymore:

- Citrix Receiver 12.1 and 13.1 - 13.4;
- Citrix Access Gateway Standard Plug-in;
- Dell vWorkspace Connector for Linux;
- Ericom PowerTerm Emulation 9 and 11;
- Ericom Webconnect;
- IGEL Legacy RDP Client (rdesktop);
- Virtual Bridges VERDE Client;
- PPTP VPN Support;
- IGEL Upgrade License Tool with IGEL Smartcard Token;
- Remote Management by setup.ini file transfer (TFTP);
- Remote Access via RSH;
- Legacy Philips Speech Driver;
- T-Systems TCOS Smartcard Support;
- DUS Series touchscreens;
- Elo serial touchscreens;
- VIA Graphics support;
- Java WebStart;
- Storage hotplug devices are not automatically removed anymore, instead they must be always ejected manually:
  - by panel tray icon;
  - by an icon in the **In-Session Control Bar** (configurable under **IGEL Setup > User Interface > Desktop**);
  - by a **Safely Remove Hardware** session (configurable under **IGEL Setup > Accessories**).

The following clients and features are not available in this release:

- Cherry eGK Channel;
- Open VPN Smartcard Support;
- Asian Input Methods;
- Composite Manager.

## Security Fixes 10.06.170

### Firefox

- Updated Mozilla **Firefox** to **68.4.1esr**.
- Fix for **mfsa2020-03**, also known as CVE-2019-17026.
- Fixes for **mfsa2020-02**, also known as: CVE-2019-17016, CVE-2019-17017, CVE-2019-17022, and CVE-2019-17024.
- Fixes for **mfsa2019-37**, also known as:  
[More...](#)

CVE-2019-17008, CVE-2019-11745, CVE-2019-17010,  
CVE-2019-17005, CVE-2019-17011, and CVE-2019-17012.

- Fixes for **mfsa2019-33**, also known as:  
[More...](#)

CVE-2019-15903, CVE-2019-11757, CVE-2019-11758,  
 CVE-2019-11759, CVE-2019-11760, CVE-2019-11761,  
 CVE-2019-11762, CVE-2019-11763, and CVE-2019-11764.

## Known Issues 10.06.170

### Firefox

- As the behavior of Firefox has changed, following **settings for “Start in full-screen mode” and “Disable Hotkeys for open new window/tab” can be configured in first browser session only** – these are handled like a usual global setting, means the configuration within another browser session does not have an effect for these two parameters.

### Citrix

- With activated DRI3 and AMD GPU, Citrix **H.264 acceleration** plugin could **freeze**. Selective H.264 mode (API v2) is not affected from this issue.
- Citrix has known issues with **GStreamer1.0** which describe problems with **multimedia redirection of H264, MPEG1 and MPEG2**. GStreamer 1.0 is used if browser content redirection is active.
- Browser content redirection** does not work with **activated DRI3** and hardware accelerated **H.264 deep compression codec**.
- Citrix **StoreFront** login with **Gemalto smartcard middleware** does not detect smartcard correctly if the card is **inserted after start** of Login.  
 As a workaround, insert the smartcard before starting StoreFront login.
- Citrix **H.264 acceleration plugin** does not work with **enabled** server policy "Optimize for 3D graphics workload" in combination with server policy "Use video codec compression" > "For the entire screen".
- To launch **multiple desktop sessions** with **Citrix HDX RTME** and **Citrix H.264 acceleration plugin**, the following registry key must be enabled:  
[More...](#)

|           |                                                                  |
|-----------|------------------------------------------------------------------|
| Parameter | Activate workaround for dual RTME sessions and H264 acceleration |
| Registry  | ica.workaround-dual-rtme                                         |
| Value     | enabled / disabled                                               |

This workaround is not applicable when "Enable Secure ICA" is active for the specific delivery group.

### VMware Horizon

- External drives** mounted already before connection **do not appear in the remote desktop**.  
 Workaround: map the directory /media as a drive. Then the external devices will show up inside the media drive.
- Client drive mapping** and **USB redirection for storage devices** should not be enabled both at the same time.
  - On the one hand, if you want to use **USB redirection** for your storage devices: Note that the **USB on-insertion feature** is only working if the **client drive mapping** is switched off.  
 In the IGEL Setup client, **drive mapping** can be found under **Sessions > Horizon Client > Horizon Client Global > Drive Mapping > Enable drive mapping**.

It is also recommended to disable local **Storage Hotplug** under Setup > **Devices > Storage Devices > Storage Hotplug**.

- On the other hand, if you use **drive mapping** instead, it is recommended to either **switch off USB redirection entirely** or at least to **deny storage devices** by adding a filter to the USB class rules.

Furthermore, Horizon Client relies on the OS to mount the storage device itself. Enable local **Storage Hotplug** under Setup >**Devices > Storage Devices > Storage Hotplug**.

#### Parallels Client

- **Native USB redirection does not work** with Parallels Client.
- For using the new **FIPS 140-2 compliance mode**, it is necessary to connect to the **Parallels RAS** one time with FIPS support disabled.

#### Smartcard

- In seldom cases, the authentication hung when using **A.E.T. SafeSign smartcards**.

#### Appliance Mode

- Appliance mode **RHEV/Spice: spice-xpi** Firefox plugin **is no longer supported**. The **Console Invocation** has to allow **Native client** (auto is also possible) and it should start in fullscreen to prevent opening windows.

#### Multimedia

- **Multimedia redirection with GStreamer** could fail with the **Nouveau GPU** driver.

#### Wi-Fi

- **TP-Link Archer T2UH Wi-Fi adapters** do not work after system suspend/resume.  
Workaround: Disable system suspend under **IGEL Setup > System > Power Options > Shutdown**.

#### Base system

- Due to the removal of the Oracle JRE, **Java WebStart** is **not supported** anymore.

### New Features 10.06.170

#### Citrix

- Integrated **Citrix Workspace App 19.12**
- Available **Citrix Workspace Apps** in this release: **19.12** (default), **19.10**, and **18.10**
- New **registry keys**:
  - Added a registry key for enabling **full-screen banner "Citrix Desktop Viewer"** when starting a Desktop or Application session.  
[More...](#)

|           |                                   |
|-----------|-----------------------------------|
| Parameter | Show Citrix Desktop Viewer screen |
| Registry  | ica.module.cdvviewerscreen        |
| Value     | off / on                          |

- Added a registry key to enable usage of **Chromium Embedded Framework (CEF) for Browser Content Redirection (BCR)** [Experimental].

[More...](#)

|           |                                       |
|-----------|---------------------------------------|
| Parameter | Use Chromium Embedded Framework (CEF) |
| Registry  | ica.allregions.usecefbrowser          |
| Value     | <u>factory default</u> / false / true |

"Factory default" means that can be set by config file.

- Added a registry key to enable/disable **Transparent User Interface [TUI] Virtual Channel [VC] protocol**. The VDTUI protocol is enabled by default.

[More...](#)

|           |                                       |
|-----------|---------------------------------------|
| Parameter | Enable VDTUI protocol                 |
| Registry  | ica.module.virtualdriver.vdtui.enable |
| Value     | off / <u>on</u>                       |

- Updated **libwebkit2gtk-4.0-37** to version **2.26.1**. It is now possible to enable **debug output for Citrix Browser Content Redirection** by running the script /config/bin/install-webkit-debug. The debug output is written to /var/log/user/webcontainer.debug. **CAUTION: You can run only short sessions with enabled debug output** because a lot of debugging data is written to the log file.

## Firefox

- Updated **Fluendo multimedia codecs** to the following versions:  
gst-fluendo-h264dec - 18/09/2019 0.10.54  
gst-fluendo-vadec - 16/10/2019 0.10.210

## Imprivata

- Usage of 500 MB for the Imprivata data partition** when **flash** is **bigger than 2 GB**.

## OS 11 Upgrade

- Add parameter to **skip battery checking in OS 11 Upgrade**.

[More...](#)

|           |                                                                                                        |
|-----------|--------------------------------------------------------------------------------------------------------|
| Parameter | Use at your own risk! Turns Battery safety check into warning only. Any unbootable systems are on you. |
| Registry  | update.battery_is_only_warning                                                                         |
| Value     | enabled / <u>disabled</u>                                                                              |

## IGEL Cloud Gateway

- Added **support for shadowing via ICG**.

## Resolved Issues 10.06.170

### Imprivata

- Fixed **race condition** that may lead to **unexpected behavior with RDP connections**.
- Fixed **VMware Horizon session disconnect**.

- Fixed **Lock-key** and **Tap-out behavior**.
- Fixed **MS RDSH** session.

#### VMware Horizon

- Fixed **sound in Horizon client 5.x** using **PCoIP** protocol.

#### Caradigm

- **Caradigm restart loops** fixed.

#### Base system

- Fixed potential temporary **settings loss** when **resuming from standby**.
- **Automatic firmware update** is now checked after retrieval of UMS settings.
- When there are any **non-applied changes in the network configuration**, the **network** will be **reconfigured before the firmware update** starts.
- Re-fixed broken **custom bootsplash** when doing a **reset to factory defaults via UMS**.

#### Smartcard

- Updated **SecMaker Net iD smartcard library** to version **6.8.1.31**. The changes are:
  - More...**
  - Support for **Gemalto IDPrime 940** and **3940**.
  - Support for new **VRK card** (IDEA IAS ECC, spec: FINEID S1 - FINEID S1 Electronic ID Application v4.0).
  - Support for **Aventra MyEID v4.0** (customer specific card profile with read support only).
  - Fixed problem with **detection of cards in Net iD Card Portal**.
  - Other fixes, see release notes at SecMaker.
- Fixed **smartcard user names displayed on login screen**: non-ASCII characters were not shown correctly before.
- Fixed **error message on login screen** shown when **smartcard PIN** is locked.
- Fixed handling of smartcards in **pcsc-lite: improved transaction locking**.  
A new parameter was introduced to control the new behavior (enabled by default):
  - More...**

|           |                                        |
|-----------|----------------------------------------|
| Parameter | Abort stalled transactions             |
| Registry  | scard.pcscd.abort_stalled_transactions |
| Value     | <u>enabled</u> / disabled              |

- Fixed IGEL Smartcard to be able to handle **VoIP client Ekiga sessions**.

#### Driver

- Updated **Philips Speech Driver** to version **12.8.5**.
- Updated **StepOver TCP Client** to version **2.3.2**.

#### CUPS Printing

- Updated **Printer Installer client** to version **25.1.0.303**.
- **Added** missing **CUPS model names** for some CUPS printers.

#### X11 system

- Fixed an issue with **modesetting driver** and **DisplayLink USB graphic adapters**.
- **Removed** registry key `x.drivers.glamor.use_dri3` as it is of no real use.
- **Updated Intel Xorg driver** to work fix issues with **DisplayLink USB adapters**.
- Fixed issue with **Wacom Signing Pads not being recognized as displays**.

#### X server

- Fix **HP Elitebook Display** issue **with HP Ultrasmart Docking Station**.

#### Network

- Fixed issue when configuring **more than one NTP server**.
- Fixed **missing library with openconnect** feature.

#### OS 11 Upgrade

- Add special **warning when not connected to power line in upgrade boot**.

#### RDP/IGEL RDP Client 2

- Fixed **RDP Web Access Domain Visibility** not working correctly.

#### Remote Management

- Fixed broken **logon into Shared Workplace** on devices that are managed over **ICG**.
- Fixed **responding to requests searching** an available **buddy update server**.

#### VNC

- Fixed **sporadic connection failure in the VNC server**.

## 7.21 Notes for Release 10.06.130

• **Features with Limited Functionality**

|                   |        |
|-------------------|--------|
| Cisco JVDI Client | 12.1.0 |
|-------------------|--------|

## General Information 10.06.130

The following clients and features are not supported anymore:

- Citrix Receiver 12.1 and 13.1 - 13.4;
- Citrix Access Gateway Standard Plug-in;
- Dell vWorkspace Connector for Linux;
- Ericom PowerTerm Emulation 9 and 11;
- Ericom Webconnect;
- IGEL Legacy RDP Client (rdesktop);
- Virtual Bridges VERDE Client;
- PPTP VPN Support;
- IGEL Upgrade License Tool with IGEL Smartcard Token;
- Remote Management by setup.ini file transfer (TFTP);
- Remote Access via RSH;
- Legacy Philips Speech Driver;
- T-Systems TCOS Smartcard Support;
- DUS Series touchscreens;
- Elo serial touchscreens;
- Video hardware acceleration support is discontinued on UD10-LX Touch 10 and UD10-LX 10;
- H.264 hardware acceleration support is discontinued on UD10-LX Touch 10 and UD10-LX 10;
- Java WebStart;
- Storage hotplug devices are not automatically removed anymore, instead they must always be ejected manually:
  - by a panel tray icon;
  - by an icon in the **In-Session Control Bar** (configurable under **IGEL Setup > User Interface > Desktop**);
  - by a **Safely Remove Hardware** session (configurable under **IGEL Setup > Accessories**).

The following clients and features are not available in this release:

- Cherry eGK Channel;
- Open VPN Smartcard Support;
- Asian Input Methods;
- Composite Manager.

## Security Fixes 10.06.130

### Firefox

- Updated **Mozilla Firefox** to version **60.9.0 ESR**.  
Including fixes from **Security Advisory 2019-27**:  
[More...](#)

CVE-2019-11746, CVE-2019-11744, CVE-2019-11753, CVE-2019-11752,  
CVE-2019-9812, CVE-2019-11743, and CVE-2019-11740.

## Known Issues 10.06.130

### Citrix

- With activated DRI3 and AMD GPU, Citrix **H.264 acceleration** plugin could **freeze**. Selective H.264 mode (API v2) is not affected from this issue.
- Citrix has known issues with **GStreamer1.0** which describe problems with **multimedia redirection of H264, MPEG1 and MPEG2**. GStreamer 1.0 is used if browser content redirection is active.
- **Browser content redirection** does not work with **activated DRI3** and hardware accelerated **H.264 deep compression codec**.
- Citrix **StoreFront** login with **Gemalto smartcard middleware** does not detect smartcard correctly if the card is **inserted after start** of Login.  
As a workaround, insert the smartcard before starting StoreFront login.
- Citrix **H.264 acceleration plugin** does not work with **enabled** server policy "Optimize for 3D graphics workload" in combination with server policy "Use video codec compression" > "For the entire screen".
- To launch **multiple desktop sessions** with **Citrix HDX RTME** and **Citrix H.264 acceleration plugin**, the following registry key must be enabled:  
[More...](#)

|           |                                                                  |
|-----------|------------------------------------------------------------------|
| Parameter | Activate workaround for dual RTME sessions and H264 acceleration |
| Registry  | ica.workaround-dual-rtme                                         |
| Value     | <u>enabled</u> / <u>disabled</u>                                 |

This workaround is not applicable when "Enable Secure ICA" is active for the specific delivery group.

### VMware Horizon

- **External drives** mounted already before connection **do not appear in the remote desktop**.  
Workaround: map the directory /media as a drive. Then the external devices will show up inside the media drive.

- **Client drive mapping** and **USB redirection for storage devices** should not be enabled both at the same time.
  - On the one hand, if you want to use **USB redirection** for your storage devices: Note that the **USB on-insertion feature** is only working if the **client drive mapping** is switched off. In the IGEL Setup client, **drive mapping** can be found under **Sessions > Horizon Client > Horizon Client Global > Drive Mapping > Enable drive mapping**. It is also recommended to disable local **Storage Hotplug** under **Setup > Devices > Storage Devices > Storage Hotplug**.
  - On the other hand, if you use **drive mapping** instead, it is recommended to either **switch off USB redirection entirely** or at least to **deny storage devices** by adding a filter to the USB class rules. Furthermore, Horizon Client relies on the OS to mount the storage device itself. Enable local **Storage Hotplug** under **Setup > Devices > Storage Devices > Storage Hotplug**.

#### Parallels Client

- **Native USB redirection does not work** with Parallels Client.
- For using the new **FIPS 140-2 compliance mode**, it is necessary to connect to the **Parallels RAS** one time with FIPS support disabled.

#### Smartcard

- In seldom cases, the authentication hung when using **A.E.T. SafeSign smartcards**.

#### Appliance Mode

- Appliance mode **RHEV/Spice: spice-xpi** Firefox plugin **is no longer supported**. The **Console Invocation** has to allow **Native client** (auto is also possible) and it should start in fullscreen to prevent opening windows.

#### Wi-Fi

- **TP-Link Archer T2UH Wi-Fi adapters** do not work after system suspend/resume. Workaround: Disable system suspend under **IGEL Setup > System > Power Options > Shutdown**.

#### Base system

- Due to the removal of the Oracle JRE, **Java WebStart** is **not supported** anymore.

#### Hardware

- **Suspend on UD10** is disabled.

## Resolved Issues 10.06.130

#### RDP/IGEL RDP Client 2

- Fixed **RDP graphics issues with Windows 2008(R2) Server** (when **RemoteFX** is not enabled).
- Fixed some smaller **graphical RDP issues with Windows 2012 R2** if using **Clearcodec**.

#### Network

- Changed **minimally allowed MSS size** to '**750**' to avoid problems with some VPN solutions.
- Added a new registry key to be able to configure the **minimally allowed TCP MSS size**. A new registry key:

[More...](#)

|           |                                                                             |
|-----------|-----------------------------------------------------------------------------|
| Parameter | Minimal TCP send MSS size                                                   |
| Registry  | system.sysctl.tcp_min_snd_mss                                               |
| Type      | Integer                                                                     |
| Value     | 750                                                                         |
| Tooltip   | Minimal TCP send MSS size (configurable value in the area from 200 to 1450) |

#### OS 11 Upgrade

- Fixed **OS11 Upgrade failing** when IGEL Setup Assistant is auto started.

#### Base system

- Removed deprecated registry keys system.idlecommand....

#### X11 system

- Fixed problem with **modesetting driver** and **2 x 2160x1440 monitors** in extended configuration.
- Added a new registry key to enable the **use of linear framebuffer for modesetting driver**.

A new registry key:

|           |                                                          |
|-----------|----------------------------------------------------------|
| Parameter | Use linear instead of tiled framebuffer                  |
| Registry  | x.drivers.modesetting.use_linear_framebuffer             |
| Range     | [Default] [False] [True]                                 |
| Value     | "Default" (use linear framebuffer only in special cases) |

- Added a new registry key to disable/enable the use of DRI3 with GLAMOR acceleration.

A new registry key:

|           |                                                                             |
|-----------|-----------------------------------------------------------------------------|
| Parameter | Disable/Enable usage of DRI3 in GLAMOR acceleration                         |
| Registry  | x.drivers.glamor.use_dri3                                                   |
| Range     | [Auto] [False] [True]                                                       |
| Value     | "Auto" (use no DRI3 functions for modesetting driver with only DRI2 active) |

- Added new registry keys to be able to configure some modesetting options if needed.

New registry keys:

[More...](#)

|           |                                                          |
|-----------|----------------------------------------------------------|
| Parameter | Use DRI3 PageFlip feature                                |
| Registry  | x.drivers.modesetting.use_page_flip                      |
| Range     | [Default] [False] [True]                                 |
| Info      | "Default" (normally use page flip feature)               |
| Parameter | Use shadow framebuffer layer                             |
| Registry  | x.drivers.modesetting.use_shadow_fb                      |
| Range     | [Default] [False] [True]                                 |
| Info      | "Default" (normally use shadow framebuffer)              |
| Parameter | Use double shadow framebuffer to improve VNC performance |
| Registry  | x.drivers.modesetting.use_double_shadow                  |

|           |                                                              |
|-----------|--------------------------------------------------------------|
| Range     | <u>[False]</u> [True]                                        |
| Parameter | Use software cursor for modesetting driver                   |
| Registry  | x.drivers.modesetting.use_sw_cursor                          |
| Range     | <u>[Default]</u> [False] [True]                              |
| Info      | "Default" (normally false)                                   |
| Parameter | Choose acceleration method                                   |
| Registry  | x.drivers.modesetting.accel_method                           |
| Range     | <u>[Default]</u> [Glamor] [None]                             |
| Info      | "Default" (normally Glamor is used)                          |
| Parameter | Force usage of DRI3 regardless of x.drivers.use_dri3 setting |
| Registry  | x.drivers.modesetting.force_dri3                             |
| Type      | Bool                                                         |
| Value     | <u>False</u>                                                 |

## X server

- Fixed **Xorg freezes** if using **modesetting driver** and **video acceleration**.

## Hardware

- Fixed **EFI freeze** problem **after bootcode update on** devices like the **HP t630** and probably others too.
- Added support for newer **Prolific PL2303 USB serial adapters**.

## 7.21.2 IGEL Universal Desktop OS 3

Supported Hardware:

<https://kb.igel.com/udc3-supported-devices>

## General Information 10.06.130

The following clients and features are not supported anymore:

- Citrix Receiver 12.1 and 13.1 - 13.4;
- Citrix Access Gateway Standard Plug-in;
- Dell vWorkspace Connector for Linux;
- Ericom PowerTerm Emulation 9 and 11;
- Ericom Webconnect;
- IGEL Legacy RDP Client (rdesktop);
- Virtual Bridges VERDE Client;
- PPTP VPN Support;
- IGEL Upgrade License Tool with IGEL Smartcard Token;
- Remote Management by setup.ini file transfer (TFTP);
- Remote Access via RSH;
- Legacy Philips Speech Driver;
- T-Systems TCOS Smartcard Support;
- DUS Series touchscreens;
- Elo serial touchscreens;
- VIA Graphics support;
- Java WebStart;
- Storage hotplug devices are not automatically removed anymore, instead they must be always ejected manually:
  - by panel tray icon;
  - by an icon in the **In-Session Control Bar** (configurable under **IGEL Setup > User Interface > Desktop**);
  - by a **Safely Remove Hardware** session (configurable under **IGEL Setup > Accessories**).

The following clients and features are not available in this release:

- Cherry eGK Channel;
- Open VPN Smartcard Support;
- Asian Input Methods;
- Composite Manager.

## Security Fixes 10.06.130

### Firefox

- Updated **Mozilla Firefox** to version **60.9.0 ESR**.  
Including fixes from **Security Advisory 2019-27**:  
[More...](#)

CVE-2019-11746, CVE-2019-11744, CVE-2019-11753, CVE-2019-11752,  
CVE-2019-9812, CVE-2019-11743, and CVE-2019-11740.

## Known Issues 10.06.130

### Citrix

- With activated DRI3 and AMD GPU, Citrix **H.264 acceleration** plugin could **freeze**. Selective H.264 mode (API v2) is not affected from this issue.
- Citrix has known issues with **GStreamer1.0** which describe problems with **multimedia redirection of H264, MPEG1 and MPEG2**. GStreamer 1.0 is used if browser content redirection is active.
- **Browser content redirection** does not work with **activated DRI3** and hardware accelerated **H.264 deep compression codec**.
- Citrix **StoreFront** login with **Gemalto smartcard middleware** does not detect smartcard correctly if the card is **inserted after start** of Login.  
As a workaround, insert the smartcard before starting StoreFront login.
- Citrix **H.264 acceleration plugin** does not work with **enabled** server policy "Optimize for 3D graphics workload" in combination with server policy "Use video codec compression" > "For the entire screen".
- To launch **multiple desktop sessions** with **Citrix HDX RTME** and **Citrix H.264 acceleration plugin**, the following registry key must be enabled:  
[More...](#)

|           |                                                                  |
|-----------|------------------------------------------------------------------|
| Parameter | Activate workaround for dual RTME sessions and H264 acceleration |
| Registry  | ica.workaround-dual-rtme                                         |
| Value     | <u>enabled</u> / <u>disabled</u>                                 |

This workaround is not applicable when "Enable Secure ICA" is active for the specific delivery group.

### VMware Horizon

- **External drives** mounted already before connection **do not appear in the remote desktop**.  
Workaround: map the directory /media as a drive. Then the external devices will show up inside the media drive.

- **Client drive mapping** and **USB redirection for storage devices** should not be enabled both at the same time.
  - On the one hand, if you want to use **USB redirection** for your storage devices: Note that the **USB on-insertion feature** is only working if the **client drive mapping** is switched off. In the IGEL Setup client, **drive mapping** can be found under **Sessions > Horizon Client > Horizon Client Global > Drive Mapping > Enable drive mapping**. It is also recommended to disable local **Storage Hotplug** under **Setup > Devices > Storage Devices > Storage Hotplug**.
  - On the other hand, if you use **drive mapping** instead, it is recommended to either **switch off USB redirection entirely** or at least to **deny storage devices** by adding a filter to the USB class rules. Furthermore, Horizon Client relies on the OS to mount the storage device itself. Enable local **Storage Hotplug** under **Setup > Devices > Storage Devices > Storage Hotplug**.

#### Parallels Client

- **Native USB redirection does not work** with Parallels Client.
- For using the new **FIPS 140-2 compliance mode**, it is necessary to connect to the **Parallels RAS** one time with FIPS support disabled.

#### Smartcard

- In seldom cases, the authentication hung when using **A.E.T. SafeSign smartcards**.

#### Appliance Mode

- Appliance mode **RHEV/Spice: spice-xpi** Firefox plugin **is no longer supported**. The **Console Invocation** has to allow **Native client** (auto is also possible) and it should start in fullscreen to prevent opening windows.

#### Multimedia

- **Multimedia redirection with GStreamer** could fail with the **Nouveau GPU** driver.

#### Wi-Fi

- **TP-Link Archer T2UH Wi-Fi adapters** do not work after system suspend/resume. Workaround: Disable system suspend under **IGEL Setup > System > Power Options > Shutdown**.

#### Base system

- Due to the removal of the Oracle JRE, **Java WebStart** is **not supported** anymore.

## New Features 10.06.130

#### Hardware

- Added basic support for **HP t510** devices.
- Re-added **VIA driver for HP t510** to OS firmware (only limited support; provided "as is", without the guarantee of correct functionality).

## Resolved Issues 10.06.130

### RDP/IGEL RDP Client 2

- Fixed **RDP graphics issues with Windows 2008(R2) Server** (when **RemoteFX** is not enabled).
- Fixed some smaller **graphical RDP issues with Windows 2012 R2** if using **Clearcodec**.

### Network

- Changed **minimally allowed MSS size** to '750' to avoid problems with some VPN solutions.
- Added a new registry key to be able to configure the **minimally allowed TCP MSS size**.

A new registry key:

|           |                                                                             |
|-----------|-----------------------------------------------------------------------------|
| Parameter | Minimal TCP send MSS size                                                   |
| Registry  | system.sysctl.tcp_min_snd_mss                                               |
| Type      | Integer                                                                     |
| Value     | <u>750</u>                                                                  |
| Tooltip   | Minimal TCP send MSS size (configurable value in the area from 200 to 1450) |

### OS 11 Upgrade

- Fixed **OS11 Upgrade failing** when IGEL Setup Assistant is auto started.

### Base system

- Removed deprecated registry keys `system.idlecommand` . . . .

### X11 system

- Fixed problem with **modesetting driver** and **2 x 2160x1440 monitors** in extended configuration.
- Added a new registry key to enable the **use of linear framebuffer for modesetting driver**.

A new registry key:

|           |                                                          |
|-----------|----------------------------------------------------------|
| Parameter | Use linear instead of tiled framebuffer                  |
| Registry  | x.drivers.modesetting.use_linear_framebuffer             |
| Range     | [Default] [False] [True]                                 |
| Value     | "Default" (use linear framebuffer only in special cases) |

- Added a new registry key to disable/enable the use of DRI3 with GLAMOR acceleration.

A new registry key:

|           |                                                                             |
|-----------|-----------------------------------------------------------------------------|
| Parameter | Disable/Enable usage of DRI3 in GLAMOR acceleration                         |
| Registry  | x.drivers.glamor.use_dri3                                                   |
| Range     | [Auto] [False] [True]                                                       |
| Value     | "Auto" (use no DRI3 functions for modesetting driver with only DRI2 active) |

- Added new registry keys to be able to **configure some modesetting options** if needed.

New registry keys:

[More...](#)

|           |                           |
|-----------|---------------------------|
| Parameter | Use DRI3 PageFlip feature |
|-----------|---------------------------|

|           |                                                              |
|-----------|--------------------------------------------------------------|
| Registry  | x.drivers.modesetting.use_page_flip                          |
| Range     | [Default] [False] [True]                                     |
| Info      | "Default" (normally use page flip feature)                   |
| Parameter | Use shadow framebuffer layer                                 |
| Registry  | x.drivers.modesetting.use_shadow_fb                          |
| Range     | [Default] [False] [True]                                     |
| Info      | "Default" (normally use shadow framebuffer)                  |
| Parameter | Use double shadow framebuffer to improve VNC performance     |
| Registry  | x.drivers.modesetting.use_double_shadow                      |
| Range     | [False] [True]                                               |
| Parameter | Use software cursor for modesetting driver                   |
| Registry  | x.drivers.modesetting.use_sw_cursor                          |
| Range     | [Default] [False] [True]                                     |
| Info      | "Default" (normally false)                                   |
| Parameter | Choose acceleration method                                   |
| Registry  | x.drivers.modesetting.accel_method                           |
| Range     | [Default] [Glamor] [None]                                    |
| Info      | "Default" (normally Glamor is used)                          |
| Parameter | Force usage of DRI3 regardless of x.drivers.use_dri3 setting |
| Registry  | x.drivers.modesetting.force_dri3                             |
| Type      | Bool                                                         |
| Value     | False                                                        |

## X server

- Fixed **Xorg freezes** if using **modesetting driver** and **video acceleration**.

## Hardware

- Fixed **EFI freeze** problem **after bootcode update on** devices like the **HP t630** and probably others too.
- Added support for newer **Prolific PL2303 USB serial adapters**.

## 7.22 Notes for Release 10.06.120

## General Information 10.06.120

The following clients and features are not supported anymore:

- Citrix Receiver 12.1 and 13.1 - 13.4;
- Citrix Access Gateway Standard Plug-in;
- Dell vWorkspace Connector for Linux;
- Ericom PowerTerm Emulation 9 and 11;
- Ericom Webconnect;
- IGEL Legacy RDP Client (rdesktop);
- Virtual Bridges VERDE Client;
- PPTP VPN Support;
- IGEL Upgrade License Tool with IGEL Smartcard Token;
- Remote Management by setup.ini file transfer (TFTP);
- Remote Access via RSH;
- Legacy Philips Speech Driver;
- T-Systems TCOS Smartcard Support;
- DUS Series touch screens;
- Elo serial touchscreens;
- Video hardware acceleration support is discontinued on UD10-LX Touch 10 and UD10-LX 10;
- H.264 hardware acceleration support is discontinued on UD10-LX Touch 10 and UD10-LX 10;

- Java WebStart;
- Storage hotplug devices are not automatically removed anymore, instead they must always be ejected manually:
  - by panel tray icon;
  - by an icon in the **In-Session Control Bar** (configurable under **IGEL Setup > User Interface > Desktop**);
  - by a **Safely Remove Hardware** session (configurable under **IGEL Setup > Accessories**).

The following clients and features are not available in this release:

- Cherry eGK Channel;
- Open VPN Smartcard Support;
- Asian Input Methods;
- Composite Manager.

## Security Fixes 10.06.120

### Firefox

- Updated **Firefox** browser to version **60.8.0 ESR**.
- Fixed **mfsa2019-22** security issues:  
[More...](#)

CVE-2019-9811, CVE-2019-11711, CVE-2019-11712, CVE-2019-11713, CVE-2019-11729, CVE-2019-11715, CVE-2019-11717, CVE-2019-11719, CVE-2019-11730 and CVE-2019-11709.

- Fixed **mfsa2019-19** security issue CVE-2019-11708.
  - Fixed **mfsa2019-18** security issue CVE-2019-11707.
  - Fixed **mfsa2019-08** security issues:  
[More...](#)
- CVE-2019-9790, CVE-2019-9791, CVE-2019-9792, CVE-2019-9793, CVE-2019-9795, CVE-2019-9796, CVE-2018-18506 and CVE-2019-9788.
- Fixed **mfsa2019-05** security issues CVE-2018-18356 and CVE-2019-5785.
  - Fixed **mfsa2019-02** security issues CVE-2018-18500, CVE-2018-18505 and CVE-2018-18501.

### Shared Workplace

- Fixed **login in Shared Workplace** which accepts any user credentials in the 10.06.100 release. However, no user settings were applied to the device.

### Base system

- Updated **kernel** to version **4.19.65**.
- Fixed security issue CVE-2019-1125 aka **Spectre SWAPGS gadget vulnerability**.
- Fixed a vulnerability in **Java configuration script**.
- Fixed possibly malicious **owner change** with TC setup configuration.
- Fixed **policykit-1** security issues CVE-2018-19788 and CVE-2019-6133.
- Fixed **NSS** security issues CVE-2018-18508, CVE-2018-12404, CVE-2018-12384 and CVE-2018-0495.
- Fixed **PPP** security issue CVE-2018-11574.
- Fixed **imagemagick** security issues.

**More...**

CVE-2018-16750, CVE-2018-16749, CVE-2018-16645, CVE-2018-16644, CVE-2018-16643, CVE-2018-16642, CVE-2018-16640, CVE-2018-16323, CVE-2018-14437, CVE-2018-14436, CVE-2018-14435, CVE-2018-14434, CVE-2017-13144, CVE-2017-12430, CVE-2019-9956, CVE-2019-7398, CVE-2019-7397, CVE-2019-7396, CVE-2019-7175, CVE-2019-11598, CVE-2019-11597, CVE-2019-11472, CVE-2019-11470, CVE-2019-10650, CVE-2019-10131, CVE-2018-20467, CVE-2018-18025, CVE-2018-18024, CVE-2018-18016, CVE-2018-17966, CVE-2018-17965, CVE-2018-16413, CVE-2018-16412, CVE-2017-12806, and CVE-2017-12805.

- Fixed **systemd** security issues.

**More...**

CVE-2018-16866, CVE-2018-16865, CVE-2018-16864, CVE-2018-15688, CVE-2019-6454, CVE-2018-1049, CVE-2018-15686 and CVE-2019-3842.

- Fixed **CUPS** security issue CVE-2018-4700.

- Fixed **libarchive** security issues.

**More...**

CVE-2019-1000020, CVE-2019-1000019, CVE-2018-1000878, CVE-2018-1000877, and CVE-2017-14502.

- Fixed **avahi** security issues CVE-2018-1000845 and CVE-2017-6519.

- Fixed **bind9** security issues CVE-2019-6465, CVE-2018-5745, and CVE-2018-5743.

- Fixed **libcaca** security issues.

**More...**

CVE-2018-20549, CVE-2018-20548, CVE-2018-20547, CVE-2018-20546, CVE-2018-20545, and CVE-2018-20544.

- Fixed **libgd2** security issues CVE-2019-6978 and CVE-2019-6977.

- Fixed **ghostscript** security issues.

**More...**

CVE-2019-6116, CVE-2018-19477, CVE-2018-19476, CVE-2018-19475, CVE-2018-19409, CVE-2018-18284, CVE-2018-18073, CVE-2018-17961, CVE-2019-3838, and CVE-2019-3835.

- Fixed **krb5** security issues.

**More...**

CVE-2018-5730, CVE-2018-5729, CVE-2017-11462, CVE-2017-11368, CVE-2016-3120, and CVE-2016-3119.

- Fixed **texlive-bin** security issue CVE-2018-17407.

- Fixed **LDB** security issue CVE-2019-3824.

- Fixed **libmspack** security issues CVE-2018-18585 and CVE-2018-18584.

- Fixed **Perl** security issues CVE-2018-18314, CVE-2018-18313, CVE-2018-18312 and CVE-2018-18311.

- Fixed **poppler** security issues.

**More...**

CVE-2019-7310, CVE-2018-20650, CVE-2018-20551, CVE-2018-20481, CVE-2018-19149, CVE-2018-19060, CVE-2018-19059, CVE-2018-19058, CVE-2018-16646, and CVE-2019-9200.

- Fixed **Python 3.5** security issues CVE-2018-14647, CVE-2018-1061, CVE-2018-1060 and CVE-2018-106.
- Fixed **Net-SNMP** security issue CVE-2018-18065.
- Fixed **OpenSSL** security issues CVE-2019-1559, CVE-2018-5407 and CVE-2018-0734.
- Fixed **TIFF** security issues.

**More...**

CVE-2018-8905, CVE-2018-7456, CVE-2018-18661, CVE-2018-18557, CVE-2018-17101, CVE-2018-17100, CVE-2018-1710, CVE-2018-10963, CVE-2019-7663, CVE-2019-6128, CVE-2018-19210, CVE-2018-17000, CVE-2018-12900, and CVE-2018-10779.

- Fixed **libvncserver** security issues.

**More...**

CVE-2018-6307, CVE-2018-20750, CVE-2018-20749, CVE-2018-20748, CVE-2018-20024, CVE-2018-20023, CVE-2018-20022, CVE-2018-20021, CVE-2018-20020, CVE-2018-20019, CVE-2018-15127, and CVE-2018-15126.

- Fixed **WavPack** security issue CVE-2018-19840.
- Fixed **Samba** security issues.

**More...**

CVE-2018-16851, CVE-2018-16841, CVE-2018-14629, CVE-2019-3880, and CVE-2018-16860.

- Fixed **libxkbcommon** security issues.

**More...**

CVE-2018-15864, CVE-2018-15863, CVE-2018-15862, CVE-2018-15861, CVE-2018-15859, CVE-2018-15858, CVE-2018-15857, CVE-2018-15856, CVE-2018-15855, CVE-2018-15854, and CVE-2018-15853.

- Fixed **OpenSSH** security issues.

**More...**

CVE-2019-6111, CVE-2019-6109, CVE-2018-20685, CVE-2018-15473, and CVE-2016-10708.

- Fixed **Python 2.7** security issues.

**More...**

CVE-2018-14647, CVE-2018-1061, CVE-2018-1060, CVE-2018-106, CVE-2018-1000802, and CVE-2018-1000030.

- Fixed **lxml** security issue CVE-2018-19787.
- Fixed **gdk-pixbuf** security issues.

**More...**

CVE-2017-6314, CVE-2017-6313, CVE-2017-6312, CVE-2017-6311, CVE-2017-2870, CVE-2017-2862, CVE-2017-1000422, CVE-2016-6352, and CVE-2017-12447.

- Fixed **file** security issues CVE-2019-8907 and CVE-2019-8905.
- Fixed **wget** security issue CVE-2019-5953.
- Fixed **libxslt** security issue CVE-2019-11068.
- Fixed **Evince** security issue CVE-2019-11459.
- Fixed **webkit2gtk** security issues.

**More...**

CVE-2019-8595, CVE-2019-8607, CVE-2019-8615, CVE-2019-6251, CVE-2018-4373, CVE-2018-4375, CVE-2018-4376, CVE-2018-4378, CVE-2018-4382, CVE-2018-4392, CVE-2018-4416, CVE-2018-4345, CVE-2018-4386, and CVE-2018-4372.

- Fixed **gst-plugins-base0.10** security issue CVE-2019-9928.
- Fixed **WPA** security issues.

**More...**

CVE-2019-9495, CVE-2019-9497, CVE-2019-9498, CVE-2019-9499, and CVE-2019-11555.

- Fixed **Heimdal** security issues CVE-2019-12098 and CVE-2018-16860.
- Fixed **libimobiledevice** security issue CVE-2016-5104.
- Fixed **libpng1.6** security issues CVE-2019-7317 and CVE-2018-13785.
- Fixed **GIMP** security issues.

**More...**

CVE-2017-17786, CVE-2017-17789, CVE-2017-17784, CVE-2017-17787, CVE-2017-17785, and CVE-2017-17788

- Fixed **libtomcrypt** security issue CVE-2018-12437.
- Fixed **curl** security issues.

**More...**

CVE-2018-16840, CVE-2018-16839, CVE-2019-3823, CVE-2019-3822, CVE-2018-16890, CVE-2019-5346.

- Fixed **gnutls28** security issues CVE-2018-10846, CVE-2018-10845, CVE-2018-10844 and CVE-2018-1084.
- Fixed **qtbase-opensource-src** security issues CVE-2018-19873, CVE-2018-19870 and CVE-2018-15518.
- Fixed **db5.3** security issue CVE-2019-8457.
- Fixed **libssh2** security issues.

**More...**

CVE-2019-3863, CVE-2019-3862, CVE-2019-3861, CVE-2019-3860, CVE-2019-3859, CVE-2019-3858, CVE-2019-3857, CVE-2019-3856, and CVE-2019-3855.

- Fixed **network-manager** security issue CVE-2018-15688.
- Fixed **elfutils** security issues.

**More...**

CVE-2019-7665, CVE-2019-7150, CVE-2019-7149, CVE-2018-18521, CVE-2018-18520, CVE-2018-18310, CVE-2018-16403, CVE-2018-16402, and CVE-2018-16062.

- Fixed **libsndfile** security issues.

**More...**

CVE-2019-3832, CVE-2018-19758, CVE-2018-19662, CVE-2018-19661, CVE-2018-19432, CVE-2018-13139, CVE-2017-6892, CVE-2017-17457, CVE-2017-17456, CVE-2017-16942, CVE-2017-14634, CVE-2017-14246, and CVE-2017-14245.

- Fixed **dbus** security issue CVE-2019-12749.
  - Fixed **Vim** security issues CVE-2019-12735 and CVE-2017-5953.
- Fixed **sqlite3** security issues.

**More...**

CVE-2019-9937, CVE-2019-9936, CVE-2019-8457, CVE-2018-20506, CVE-2018-20346, CVE-2017-2520, CVE-2017-2519, CVE-2017-2518, CVE-2017-13685, CVE-2017-10989, and CVE-2016-6153.

- Fixed **libseccomp** security issue CVE-2019-9893.
- Fixed **bzip2** security issues CVE-2019-12900 and CVE-2016-3189.
- Fixed **Expat** security issue CVE-2018-20843.
- Fixed **unzip** security issues CVE-2019-13232, CVE-2018-1000035, CVE-2016-9844 and CVE-2014-9913.
- **Mount partitions** with "**nodev**" flag option.
- The home directory of the remote users is now **/home/ruser**.
- Default **umask** is set to **0077** for all non-root users.
- Fixed a vulnerability in the **custom environment variable framework**.
- Fixed kernel **TCP** vulnerabilities CVE-2019-11477: **SACK Panic**, CVE-2019-11478: **SACK Slowness** and CVE-2019-11479: **Excess Resource Consumption Due to Low MSS Values**.
- Changed **minimally allowed MSS size** to "**1000**" to prevent possible denial-of-service attacks.

## Known Issues 10.06.120

### Citrix

- With activated DRI3 and AMD GPU, Citrix **H.264 acceleration** plugin could **freeze**. Selective H.264 mode (API v2) is not affected from this issue.
- Citrix has known issues with **GStreamer1.0** which describe problems with **multimedia redirection of H264, MPEG1 and MPEG2**. GStreamer 1.0 is used if browser content redirection is active.
- **Browser content redirection** does not work with **activated DRI3** and hardware accelerated **H.264 deep compression codec**.
- Citrix **StoreFront** login with **Gemalto smartcard middleware** does not detect smartcard correctly if the card is **inserted after start** of Login.  
As a workaround, insert the smartcard before starting StoreFront login.
- Citrix **H.264 acceleration plugin** does not work with **enabled** server policy "Optimize for 3D graphics workload" in combination with server policy "Use video codec compression" > "For the entire screen".
- To launch **multiple desktop sessions** with **Citrix HDX RTME** and **Citrix H.264 acceleration plugin**, the following registry key must be enabled:  
**More...**

|           |                                                                  |
|-----------|------------------------------------------------------------------|
| Parameter | Activate workaround for dual RTME sessions and H264 acceleration |
| Registry  | ica.workaround-dual-rtme                                         |
| Value     | <u>enabled</u> / <u>disabled</u>                                 |

This workaround is not applicable when "Enable Secure ICA" is active for the specific delivery group.

#### VMware Horizon

- **Sound redirection in PCoIP** is broken when the so-called lightweight-client is used, which has become the new default.  
But Sound redirection can still be used by choosing the rollback-client instead. This can be done by setting the IGEL Registry key:  
[More...](#)

|           |                                         |
|-----------|-----------------------------------------|
| Parameter | Allow rollback to former client variant |
| Registry  | vmware.view.allow-client-rollback       |
| Value     | <u>enabled</u> / <u>disabled</u>        |

- **External drives** mounted already before connection **do not appear in the remote desktop**.  
Workaround: map the directory /media as a drive. Then the external devices will show up inside the media drive.
- **Client drive mapping** and **USB redirection for storage devices** should not be enabled both at the same time.
  - On the one hand, if you want to use **USB redirection** for your storage devices: Note that the **USB on-insertion feature** is only working if the **client drive mapping** is switched off.  
In the IGEL Setup client, **drive mapping** can be found under **Sessions > Horizon Client > Horizon Client Global > Drive Mapping > Enable drive mapping**.  
It is also recommended to disable local **Storage Hotplug** under **Setup > Devices > Storage Devices > Storage Hotplug**.
  - On the other hand, if you use **drive mapping** instead, it is recommended to either **switch off USB redirection entirely** or at least to **deny storage devices** by adding a filter to the USB class rules.  
Furthermore, Horizon Client relies on the OS to mount the storage device itself. Enable local **Storage Hotplug** under **Setup > Devices > Storage Devices > Storage Hotplug**.

#### Parallels Client

- **Native USB redirection does not work** with Parallels Client.
- For using the new **FIPS 140-2 compliance mode**, it is necessary to connect to the **Parallels RAS** one time with FIPS support disabled.

#### Smartcard

- In seldom cases, the authentication hung when using **A.E.T. SafeSign smartcards**.

#### Appliance Mode

- Appliance mode **RHEV/Spice**: spice-xpi Firefox plugin is no longer supported. The **Console Invocation** has to allow **Native client** (auto is also possible) and it should start in fullscreen to prevent opening windows.

## Wi-Fi

- **TP-Link Archer T2UH WiFi adapters** do not work after system suspend/resume.  
Workaround: Disable system suspend under **IGEL Setup > System > Power Options > Shutdown**.

## Base system

- Due to the removal of the Oracle JRE, **Java WebStart** is **not supported** anymore.

## Hardware

- **Suspend on UD10** is disabled.

## New Features 10.06.120

### Citrix

- Integrated **Citrix Workspace app 19.06**.  
Available Citrix Workspace apps in this release: 19.06, 19.03 and 13.10.

## Resolved Issues 10.06.120

### VMware Horizon

- Fixed: **Client connection** to the remote desktop **using PCoIP protocol** failed occasionally.

### OS 11 Upgrade

- Fixed major **upgrade** problem **with Intel network drivers**.
- Make OS 11 Upgrade **VPN detection more lenient** to allow blocked upgrade on some devices with integrated mobile broadband modem.

### Base system

- Fixed **ActiveDirectory/Kerberos password change** with "Change Password" accessory for users who are members of many (~300+) AD groups.

### Bluetooth

- Fixed not working **bluetooth for** some **Intel Wi-Fi cards**.

### Remote Management

- Fixed: **UMS jobs** have not been executed when delivered at the next system boot.
- Fixed **automatic registering in the UMS** using DNS entry or DHCP tag.

### Caradigm

- Updated firmware **7.3.3 of RFIDeas pcProx readers**.

## 7.22.2 IGEL Universal Desktop OS 3

### Supported Hardware:

|-------------------|--------|
| Cisco JVDI Client | 12.1.0 |
|-------------------|--------|

## General Information 10.06.120

The following clients and features are not supported anymore:

- Citrix Receiver 12.1 and 13.1 - 13.4;
- Citrix Access Gateway Standard Plug-in;
- Dell vWorkspace Connector for Linux;
- Ericom PowerTerm Emulation 9 and 11;
- Ericom Webconnect;
- IGEL Legacy RDP Client (rdesktop);
- Virtual Bridges VERDE Client;
- PPTP VPN Support;
- IGEL Upgrade License Tool with IGEL Smartcard Token;
- Remote Management by setup.ini file transfer (TFTP);
- Remote Access via RSH;
- Legacy Philips Speech Driver;
- T-Systems TCOS Smartcard Support;
- DUS Series touch screens;
- Elo serial touchscreens;

- VIA Graphics support;
- Java WebStart;
- Storage hotplug devices are not automatically removed anymore, instead they must be always ejected manually:
  - by panel tray icon;
  - by an icon in the **In-Session Control Bar** (configurable under **IGEL Setup > User Interface > Desktop**);
  - by a **Safely Remove Hardware** session (configurable under **IGEL Setup > Accessories**).

The following clients and features are not available in this release:

- Cherry eGK Channel;
- Open VPN Smartcard Support;
- Asian Input Methods;
- Composite Manager.

## Security Fixes 10.06.120

### Firefox

- Updated **Firefox** browser to version **60.8.0 ESR**.
- Fixed **mfsa2019-22** security issues:

[More...](#)

CVE-2019-9811, CVE-2019-11711, CVE-2019-11712, CVE-2019-11713, CVE-2019-11729, CVE-2019-11715, CVE-2019-11717, CVE-2019-11719, CVE-2019-11730 and CVE-2019-11709.

- Fixed **mfsa2019-19** security issue CVE-2019-11708.
- Fixed **mfsa2019-18** security issue CVE-2019-11707.
- Fixed **mfsa2019-08** security issues:

[More...](#)

CVE-2019-9790, CVE-2019-9791, CVE-2019-9792, CVE-2019-9793, CVE-2019-9795, CVE-2019-9796, CVE-2018-18506 and CVE-2019-9788.

- Fixed **mfsa2019-05** security issues CVE-2018-18356 and CVE-2019-5785.
- Fixed **mfsa2019-02** security issues CVE-2018-18500, CVE-2018-18505 and CVE-2018-18501.

### Shared Workplace

- Fixed **login in Shared Workplace** which accepts any user credentials in the 10.06.100 release. However, no user settings were applied to the device.

### Base system

- Updated **kernel** to version **4.19.65**.
- Fixed security issue CVE-2019-1125 aka **Spectre SWAPGS gadget vulnerability**.
- Fixed a vulnerability in **Java configuration script**.
- Fixed possibly malicious **owner change** with TC setup configuration.
- Fixed **policykit-1** security issues CVE-2018-19788 and CVE-2019-6133.
- Fixed **NSS** security issues CVE-2018-18508, CVE-2018-12404, CVE-2018-12384 and CVE-2018-0495.
- Fixed **PPP** security issue CVE-2018-11574.

- Fixed **imagemagick** security issues.

**More...**

CVE-2018-16750, CVE-2018-16749, CVE-2018-16645, CVE-2018-16644, CVE-2018-16643, CVE-2018-16642, CVE-2018-16640, CVE-2018-16323, CVE-2018-14437, CVE-2018-14436, CVE-2018-14435, CVE-2018-14434, CVE-2017-13144, CVE-2017-12430, CVE-2019-9956, CVE-2019-7398, CVE-2019-7397, CVE-2019-7396, CVE-2019-7175, CVE-2019-11598, CVE-2019-11597, CVE-2019-11472, CVE-2019-11470, CVE-2019-10650, CVE-2019-10131, CVE-2018-20467, CVE-2018-18025, CVE-2018-18024, CVE-2018-18016, CVE-2018-17966, CVE-2018-17965, CVE-2018-16413, CVE-2018-16412, CVE-2017-12806, and CVE-2017-12805.

- Fixed **systemd** security issues.

**More...**

CVE-2018-16866, CVE-2018-16865, CVE-2018-16864, CVE-2018-15688, CVE-2019-6454, CVE-2018-1049, CVE-2018-15686 and CVE-2019-3842.

- Fixed **CUPS** security issue CVE-2018-4700.

- Fixed **libarchive** security issues.

**More...**

CVE-2019-1000020, CVE-2019-1000019, CVE-2018-1000878, CVE-2018-1000877, and CVE-2017-14502.

- Fixed **avahi** security issues CVE-2018-1000845 and CVE-2017-6519.

- Fixed **bind9** security issues CVE-2019-6465, CVE-2018-5745, and CVE-2018-5743.

- Fixed **libcaca** security issues.

**More...**

CVE-2018-20549, CVE-2018-20548, CVE-2018-20547, CVE-2018-20546, CVE-2018-20545, and CVE-2018-20544.

- Fixed **libgd2** security issues CVE-2019-6978 and CVE-2019-6977.

- Fixed **ghostscript** security issues.

**More...**

CVE-2019-6116, CVE-2018-19477, CVE-2018-19476, CVE-2018-19475, CVE-2018-19409, CVE-2018-18284, CVE-2018-18073, CVE-2018-17961, CVE-2019-3838, and CVE-2019-3835.

- Fixed **krb5** security issues.

**More...**

CVE-2018-5730, CVE-2018-5729, CVE-2017-11462, CVE-2017-11368, CVE-2016-3120, and CVE-2016-3119.

- Fixed **texlive-bin** security issue CVE-2018-17407.

- Fixed **LDB** security issue CVE-2019-3824.

- Fixed **libmspack** security issues CVE-2018-18585 and CVE-2018-18584.

- Fixed **Perl** security issues CVE-2018-18314, CVE-2018-18313, CVE-2018-18312 and CVE-2018-18311.

- Fixed **poppler** security issues.

**More...**

CVE-2019-7310, CVE-2018-20650, CVE-2018-20551, CVE-2018-20481, CVE-2018-19149, CVE-2018-19060, CVE-2018-19059, CVE-2018-19058, CVE-2018-16646, and CVE-2019-9200.

- Fixed **Python 3.5** security issues CVE-2018-14647, CVE-2018-1061, CVE-2018-1060 and CVE-2018-106.
- Fixed **Net-SNMP** security issue CVE-2018-18065.
- Fixed **OpenSSL** security issues CVE-2019-1559, CVE-2018-5407 and CVE-2018-0734.
- Fixed **TIFF** security issues.

 CVE-2017-13685, CVE-2017-10989, and CVE-2016-6153.

- Fixed **libseccomp** security issue CVE-2019-9893.
- Fixed **bzip2** security issues CVE-2019-12900 and CVE-2016-3189.
- Fixed **Expat** security issue CVE-2018-20843.
- Fixed **unzip** security issues CVE-2019-13232, CVE-2018-1000035, CVE-2016-9844 and  
 CVE-2014-9913.
- **Mount partitions** with "**nodev**" flag option.
- The home directory of the remote users is now **/home/ruser**.
- Default **umask** is set to **0077** for all non-root users.
- Fixed a vulnerability in the **custom environment variable framework**.
- Fixed kernel **TCP** vulnerabilities CVE-2019-11477: **SACK Panic**, CVE-2019-11478: **SACK Slowness** and CVE-2019-11479: **Excess Resource Consumption Due to Low MSS Values**.
- Changed **minimally allowed MSS size** to "**1000**" to prevent possible denial-of-service attacks.

## Known Issues 10.06.120

### Citrix

- With activated DRI3 and AMD GPU, Citrix **H.264 acceleration** plugin could **freeze**. Selective H.264 mode (API v2) is not affected from this issue.
- Citrix has known issues with **GStreamer1.0** which describe problems with **multimedia redirection of H264, MPEG1 and MPEG2**. GStreamer 1.0 is used if browser content redirection is active.
- **Browser content redirection** does not work with **activated DRI3** and hardware accelerated **H.264 deep compression codec**.
- Citrix **StoreFront** login with **Gemalto smartcard middleware** does not detect smartcard correctly if the card is **inserted after start** of Login.  
 As a workaround, insert the smartcard before starting StoreFront login.
- Citrix **H.264 acceleration plugin** does not work with **enabled** server policy "Optimize for 3D graphics workload" in combination with server policy "Use video codec compression" > "For the entire screen".

- To launch **multiple desktop sessions** with **Citrix HDX RTME** and **Citrix H.264 acceleration plugin**, the following registry key must be enabled:

[More...](#)

|           |                                                                  |
|-----------|------------------------------------------------------------------|
| Parameter | Activate workaround for dual RTME sessions and H264 acceleration |
| Registry  | ica.workaround-dual-rtme                                         |
| Value     | <u>enabled</u> / <u>disabled</u>                                 |

This workaround is not applicable when "Enable Secure ICA" is active for the specific delivery group.

#### VMware Horizon

- Sound redirection in PCoIP** is broken when the so-called lightweight-client is used, which has become the new default.  
But Sound redirection can still be used by choosing the rollback-client instead. This can be done by setting the IGEL Registry key:

[More...](#)

|           |                                         |
|-----------|-----------------------------------------|
| Parameter | Allow rollback to former client variant |
| Registry  | vmware.view.allow-client-rollback       |
| Value     | <u>enabled</u> / <u>disabled</u>        |

- External drives** mounted already before connection **do not appear in the remote desktop**.  
Workaround: map the directory /media as a drive. Then the external devices will show up inside the media drive.
- Client drive mapping** and **USB redirection for storage devices** should not be enabled both at the same time.
  - On the one hand, if you want to use **USB redirection** for your storage devices: Note that the **USB on-insertion feature** is only working if the **client drive mapping** is switched off.  
In the IGEL Setup client, **drive mapping** can be found under **Sessions > Horizon Client > Horizon Client Global > Drive Mapping > Enable drive mapping**.  
It is also recommended to disable local **Storage Hotplug** under **Setup > Devices > Storage Devices > Storage Hotplug**.
  - On the other hand, if you use **drive mapping** instead, it is recommended to either **switch off USB redirection entirely** or at least to **deny storage devices** by adding a filter to the USB class rules.  
Furthermore, Horizon Client relies on the OS to mount the storage device itself. Enable local **Storage Hotplug** under **Setup > Devices > Storage Devices > Storage Hotplug**.

#### Parallels Client

- Native USB redirection does not work** with Parallels Client.
- For using the new **FIPS 140-2 compliance mode**, it is necessary to connect to the **Parallels RAS** one time with FIPS support disabled.

#### Smartcard

- In seldom cases, the authentication hung when using **A.E.T. SafeSign smartcards**.

#### Appliance Mode

- Appliance mode **RHEV/Spice**: spice-xpi Firefox plugin is no longer supported. The **Console Invocation** has to allow **Native client** (auto is also possible) and it should start in fullscreen to prevent opening windows.

#### Multimedia

- **Multimedia redirection with GStreamer** could fail with the Nouveau GPU driver.

#### Wi-Fi

- **TP-Link Archer T2UH WiFi adapters** do not work after system suspend/resume.  
Workaround: Disable system suspend under **IGEL Setup > System > Power Options > Shutdown**.

#### Base system

- Due to the removal of the Oracle JRE, **Java WebStart** is **not supported** anymore.

### New Features 10.06.120

#### Citrix

- Integrated **Citrix Workspace** app **19.06**.  
Available Citrix Workspace apps in this release: 19.06, 19.03, and 13.10.

### Resolved Issues 10.06.120

#### VMware Horizon

- Fixed: **Client connection** to the remote desktop **using PCoIP protocol** failed occasionally.

#### OS 11 Upgrade

- Fixed **UD Pocket upgrade process** with Wi-Fi connection.
- Fixed major **upgrade** problem **with Intel network drivers**.
- Make OS 11 Upgrade **VPN detection more lenient** to allow blocked upgrade on some devices with integrated mobile broadband modem.

#### Base system

- Fixed **ActiveDirectory/Kerberos password change** with "Change Password" accessory for users who are members of many (~300+) AD groups.

#### Bluetooth

- Fixed not working **bluetooth for** some **Intel Wi-Fi cards**.

#### Remote Management

- Fixed: **UMS jobs** have not been executed when delivered at next system boot.
- Fixed **automatic registering in the UMS** using DNS entry or DHCP tag.

#### Caradigm

- Updated firmware **7.3.3 of RFIDEas pcProx readers**.

## 7.23 Notes for Release 10.06.110

|-------------------|--------|
| Cisco JVDI Client | 12.1.0 |
|-------------------|--------|

## General Information 10.06.110

The following clients and features are not supported anymore:

- Citrix Receiver 12.1 and 13.1 - 13.4;
- Citrix Access Gateway Standard Plug-in;

- Dell vWorkspace Connector for Linux;
- Ericom PowerTerm Emulation 9 and 11;
- Ericom Webconnect;
- IGEL Legacy RDP Client (rdesktop);
- Virtual Bridges VERDE Client;
- PPTP VPN Support;
- IGEL Upgrade License Tool with IGEL Smartcard Token;
- Remote Management by setup.ini file transfer (TFTP);
- Remote Access via RSH;
- Legacy Philips Speech Driver;
- T-Systems TCOS Smartcard Support;
- DUS Series touch screens;
- Elo serial touchscreens;
- Video hardware acceleration support is discontinued on UD10-LX Touch 10 and UD10-LX 10;
- H.264 hardware acceleration support is discontinued on UD10-LX Touch 10 and UD10-LX 10;
- Java WebStart;
- Storage hotplug devices are not automatically removed anymore, instead they must be always ejected manually:
  - by panel tray icon;
  - by an icon in the **In-Session Control Bar** (configurable under **IGEL Setup > User Interface > Desktop**);
  - by a **Safely Remove Hardware** session (configurable under **IGEL Setup > Accessories**).

The following clients and features are not available in this release:

- Cherry eGK Channel;
- Open VPN Smartcard Support;
- Asian Input Methods;
- Composite Manager.

## Known Issues 10.06.110

### Citrix

- With activated DRI3 and AMD GPU, Citrix **H.264 acceleration** plugin could **freeze**. Selective H.264 mode (API v2) is not affected from this issue.
- Citrix has known issues with **GStreamer1.0** which describe problems with **multimedia redirection of H264, MPEG1 and MPEG2**. GStreamer 1.0 is used if browser content redirection is active.
- **Browser content redirection** does not work with **activated DRI3** and hardware accelerated **H.264 deep compression codec**.
- Citrix **StoreFront** login with **Gemalto smartcard middleware** does not detect smartcard correctly if the card is **inserted after start** of Login.  
As a workaround, insert the smartcard before starting StoreFront login.
- Citrix **H.264 acceleration plugin** does not work with **enabled** server policy "Optimize for 3D graphics workload" in combination with server policy "Use video codec compression" > "For the entire screen".

- To launch **multiple desktop sessions** with **Citrix HDX RTME** and **Citrix H.264 acceleration plugin**, the following registry key must be enabled:

[More...](#)

|           |                                                                  |
|-----------|------------------------------------------------------------------|
| Parameter | Activate workaround for dual RTME sessions and H264 acceleration |
| Registry  | ica.workaround-dual-rtme                                         |
| Range     | <u>enabled</u> / <u>disabled</u>                                 |

This workaround is not applicable when "Enable Secure ICA" is active for the specific delivery group.

#### VMware Horizon

- External drives** mounted already before connection **do not appear in the remote desktop**. Workaround: map the directory /media as a drive. Then the external devices will show up inside the media drive.
- Client drive mapping** and **USB redirection for storage devices** should not be enabled both at the same time.
  - On the one hand, if you want to use **USB redirection** for your storage devices: Note that the **USB on-insertion feature** is only working if the **client drive mapping** is switched off. In the IGEL Setup client, **drive mapping** can be found under **Sessions > Horizon Client > Horizon Client Global > Drive Mapping > Enable drive mapping**. It is also recommended to disable local **Storage Hotplug** under **Setup > Devices > Storage Devices > Storage Hotplug**.
  - On the other hand, if you use **drive mapping** instead, it is recommended to either **switch off USB redirection entirely** or at least to **deny storage devices** by adding a filter to the USB class rules. Furthermore, Horizon Client relies on the OS to mount the storage device itself. Enable local **Storage Hotplug** under **Setup > Devices > Storage Devices > Storage Hotplug**.

#### Parallels Client

- Native USB redirection does not work** with Parallels Client.
- For using the new **FIPS 140-2 compliance mode**, it is necessary to connect to the **Parallels RAS** one time with FIPS support disabled.

#### Smartcard

- In seldom cases, the authentication hung when using **A.E.T. SafeSign smartcards**.

#### Appliance Mode

- Appliance mode **RHEV/Spice**: spice-xpi Firefox plugin is no longer supported. The **Console Invocation** has to allow **Native client** (auto is also possible) and it should start in fullscreen to prevent opening windows.

#### WiFi

- TP-Link Archer T2UH WiFi adapters** do not work after system suspend/resume. Workaround: Disable system suspend under **IGEL Setup > System > Power Options > Shutdown**.

#### Base system

- Due to the removal of the Oracle JRE, **Java WebStart** is **not supported** anymore.

#### Hardware

- **Suspend on UD10** is disabled.

### Security Fixes 10.06.110

#### Firefox

- Updated **Firefox** browser to version **60.8.0 ESR**.
- Fixed **mfsa2019-22** security issues:  
[More...](#)

CVE-2019-9811, CVE-2019-11711, CVE-2019-11712, CVE-2019-11713, CVE-2019-11729, CVE-2019-11715, CVE-2019-11717, CVE-2019-11719, CVE-2019-11730 and CVE-2019-11709.

- Fixed **mfsa2019-19** security issue CVE-2019-11708.
  - Fixed **mfsa2019-18** security issue CVE-2019-11707.
  - Fixed **mfsa2019-08** security issues:  
[More...](#)
- CVE-2019-9790, CVE-2019-9791, CVE-2019-9792, CVE-2019-9793, CVE-2019-9795, CVE-2019-9796, CVE-2018-18506 and CVE-2019-9788.
- Fixed **mfsa2019-05** security issues CVE-2018-18356 and CVE-2019-5785.
  - Fixed **mfsa2019-02** security issues CVE-2018-18500, CVE-2018-18505 and CVE-2018-18501.

#### Shared Workplace

- Fixed **login in Shared Workplace** which accepts any user credentials in the 10.06.100 release. However, no user settings were applied to the device.

### New Features 10.06.110

#### Base system

- Replaced **timesyncd** with **chrony NTP**.  
A new registry key:  
[More...](#)

|           |                                        |
|-----------|----------------------------------------|
| Parameter | Use NTP Servers from DNS SRV record    |
| Registry  | system.time.ntp_use_dnssrv_timeservers |
| Value     | <u>enabled</u> / <u>disabled</u>       |

#### Evidian

- Integrated **Evidian AuthMgr** version **1.5.7116**.

#### Hardware

- Hardware support for **HP EliteBook 840 G3**.

## Resolved Issues 10.06.110

### Base system

- Fixed **NTP synchronization** problems with changing the NTP client from **timesyncd** to **chrony**.
- Fixed **USB printer aliases**.

### X11 system

- Fixed **screen corruption with DPMS** and enabled **composite manager**.
- Added consideration of **hardware limits** for choosing **automatic resolution in Xorg config** (currently only for IGEL hardware).

### Hardware

- Fixed **black screen** issue with some monitors and 2560x1440 resolution (occurred on **UD2 LX50**).

### Caradigm

- Updated **RF IDEas** reader tool for the usage with Caradigm.

## 7.23.2 IGEL Universal Desktop OS 3

### Supported Hardware:

|-------------------|--------|
| Cisco JVDI Client | 12.1.0 |
|-------------------|--------|

## General Information 10.06.110

The following clients and features are not supported anymore:

- Citrix Receiver 12.1 and 13.1 - 13.4;
- Citrix Access Gateway Standard Plug-in;
- Dell vWorkspace Connector for Linux;
- Ericom PowerTerm Emulation 9 and 11;
- Ericom Webconnect;
- IGEL Legacy RDP Client (rdesktop);
- Virtual Bridges VERDE Client;
- PPTP VPN Support;
- IGEL Upgrade License Tool with IGEL Smartcard Token;
- Remote Management by setup.ini file transfer (TFTP);
- Remote Access via RSH;
- Legacy Philips Speech Driver;
- T-Systems TCOS Smartcard Support;
- DUS Series touch screens;
- Elo serial touchscreens;
- VIA Graphics support;
- Java WebStart;
- Storage hotplug devices are not automatically removed anymore, instead they must be always ejected manually:
  - by panel tray icon;
  - by an icon in the **In-Session Control Bar** (configurable under **IGEL Setup > User Interface > Desktop**);
  - by a **Safely Remove Hardware** session (configurable under **IGEL Setup > Accessories**).

The following clients and features are not available in this release:

- Cherry eGK Channel;
- Open VPN Smartcard Support;
- Asian Input Methods;
- Composite Manager.

## Known Issues 10.06.110

### Citrix

- With activated DRI3 and AMD GPU, Citrix **H.264 acceleration** plugin could **freeze**. Selective H.264 mode (API v2) is not affected from this issue.
- Citrix has known issues with **GStreamer1.0** which describe problems with **multimedia redirection of H264, MPEG1 and MPEG2**. GStreamer 1.0 is used if browser content redirection is active.
- Browser content redirection** does not work with **activated DRI3** and hardware accelerated **H.264 deep compression codec**.
- Citrix **StoreFront** login with **Gemalto smartcard middleware** does not detect smartcard correctly if the card is **inserted after start** of Login.  
As a workaround, insert the smartcard before starting StoreFront login.
- Citrix **H.264 acceleration plugin** does not work with **enabled** server policy "Optimize for 3D graphics workload" in combination with server policy "Use video codec compression" > "For the entire screen".
- To launch **multiple desktop sessions** with **Citrix HDX RTME** and **Citrix H.264 acceleration plugin**, the following registry key must be enabled:  
[More...](#)

|           |                                                                  |
|-----------|------------------------------------------------------------------|
| Parameter | Activate workaround for dual RTME sessions and H264 acceleration |
| Registry  | ica.workaround-dual-rtme                                         |
| Range     | <u>enabled</u> / <u>disabled</u>                                 |

This workaround is not applicable when "Enable Secure ICA" is active for the specific delivery group.

### VMware Horizon

- External drives** mounted already before connection **do not appear in the remote desktop**.  
Workaround: map the directory /media as a drive. Then the external devices will show up inside the media drive.
- Client drive mapping** and **USB redirection for storage devices** should not be enabled both at the same time.
  - On the one hand, if you want to use **USB redirection** for your storage devices: Note that the **USB on-insertion feature** is only working if the **client drive mapping** is switched off.  
In the IGEL Setup client, **drive mapping** can be found under **Sessions > Horizon Client > Horizon Client Global > Drive Mapping > Enable drive mapping**.  
It is also recommended to disable local **Storage Hotplug** under **Setup > Devices > Storage Devices > Storage Hotplug**.
  - On the other hand, if you use **drive mapping** instead, it is recommended to either **switch off USB redirection entirely** or at least to **deny storage devices** by adding a filter to the USB class rules.  
Furthermore, Horizon Client relies on the OS to mount the storage device itself. Enable local **Storage Hotplug** under **Setup > Devices > Storage Devices > Storage Hotplug**.

### Parallels Client

- **Native USB redirection does not work** with Parallels Client.
- For using the new **FIPS 140-2 compliance mode**, it is necessary to connect to the **Parallels RAS** one time with FIPS support disabled.

#### Smartcard

- In seldom cases, the authentication hung when using **A.E.T. SafeSign smartcards**.

#### Appliance Mode

- Appliance mode **RHEV/Spice**: spice-xpi Firefox plugin is no longer supported. The **Console Invocation** has to allow **Native client** (auto is also possible) and it should start in fullscreen to prevent opening windows.

#### Multimedia

- **Multimedia redirection with GStreamer** could fail with the Nouveau GPU driver.

#### WiFi

- **TP-Link Archer T2UH WiFi adapters** do not work after system suspend/resume.  
Workaround: Disable system suspend under **IGEL Setup > System > Power Options > Shutdown**.

#### Base system

- Due to the removal of the Oracle JRE, **Java WebStart** is **not supported** anymore.

### Security Fixes 10.06.110

#### Firefox

- Updated **Firefox** browser to version **60.8.0 ESR**.
- Fixed **mfsa2019-22** security issues:  
[More...](#)

CVE-2019-9811, CVE-2019-11711, CVE-2019-11712, CVE-2019-11713, CVE-2019-11729, CVE-2019-11715, CVE-2019-11717, CVE-2019-11719, CVE-2019-11730 and CVE-2019-11709.

- Fixed **mfsa2019-19** security issue CVE-2019-11708.
- Fixed **mfsa2019-18** security issue CVE-2019-11707.
- Fixed **mfsa2019-08** security issues:  
[More...](#)

CVE-2019-9790, CVE-2019-9791, CVE-2019-9792, CVE-2019-9793, CVE-2019-9795, CVE-2019-9796, CVE-2018-18506 and CVE-2019-9788.

- Fixed **mfsa2019-05** security issues CVE-2018-18356 and CVE-2019-5785.
- Fixed **mfsa2019-02** security issues CVE-2018-18500, CVE-2018-18505 and CVE-2018-18501.

#### Shared Workplace

- Fixed **login in Shared Workplace** which accepts any user credentials in the 10.06.100 release. However, no user settings were applied to the device.

## New Features 10.06.110

### Base system

- Replaced **timesyncd** with **chrony NTP**.

A new registry key:

**More...**

|           |                                        |
|-----------|----------------------------------------|
| Parameter | Use NTP Servers from DNS SRV record    |
| Registry  | system.time.ntp_use_dnssrv_timeservers |
| Value     | <u>enabled</u> / disabled              |

### Evidian

- Integrated **Evidian AuthMgr** version **1.5.7116**.

### Hardware

- Hardware support for **HP EliteBook 840 G3**.

## Resolved Issues 10.06.110

### Base system

- Fixed **NTP synchronization** problems with changing the NTP client from **timesyncd** to **chrony**.
- Fixed **USB printer aliases**.

### X11 system

- Fixed **screen corruption with DPMS** and enabled **composite manager**.

### Hardware

- Fixed **black screen** issue with some monitors and 2560x1440 resolution on Intel GPUs.

### Caradigm

- Updated **RF IDEas** reader tool for the usage with Caradigm.

## 7.24 Notes for Release 10.06.100

|-------------------|--------|
| Cisco JVDI Client | 12.1.0 |
|-------------------|--------|

## General Information 10.06.100

The following clients and features are not supported anymore:

- Citrix Receiver 12.1 and 13.1 - 13.4;
- Citrix Access Gateway Standard Plug-in;
- Dell vWorkspace Connector for Linux;
- Ericom PowerTerm Emulation 9 and 11;
- Ericom Webconnect;
- IGEL Legacy RDP Client (rdesktop);
- Virtual Bridges VERDE Client;
- PPTP VPN Support;
- IGEL Upgrade License Tool with IGEL Smartcard Token;
- Remote Management by setup.ini file transfer (TFTP);
- Remote Access via RSH;
- Legacy Philips Speech Driver;
- T-Systems TCOS Smartcard Support;
- DUS Series touch screens;
- Elo serial touchscreens;
- Video hardware acceleration support is discontinued on UD10-LX Touch 10 and UD10-LX 10;
- H.264 hardware acceleration support is discontinued on UD10-LX Touch 10 and UD10-LX 10;

- Java WebStart;
- Storage hotplug devices are not automatically removed anymore, instead they must be always ejected manually:
  - by panel tray icon;
  - by an icon in the **In-Session Control Bar** (configurable under **IGEL Setup > User Interface > Desktop**);
  - by a **Safely Remove Hardware** session (configurable under **IGEL Setup > Accessories**).

The following clients and features are not available in this release:

- Cherry eGK Channel;
- Open VPN Smartcard Support;
- Asian Input Methods;
- Composite Manager.

## Security Fixes 10.06.100

### Firefox

- Updated Mozilla **Firefox** to version **60.7.2 ESR**.
- Fixed **mfsa2019-19** security issue CVE-2019-11708.
- Fixed **mfsa2019-18** security issue CVE-2019-11707.
- Fixed **mfsa2019-10** security issues CVE-2019-9810 and CVE-2019-9813.
- Fixed **mfsa2019-08** security issues.

[More...](#)

CVE-2019-9790, CVE-2019-9791, CVE-2019-9792, CVE-2019-9793,  
CVE-2019-9795, CVE-2019-9796, CVE-2018-18506, CVE-2019-9788.

- Fixed **mfsa2019-05** security issues CVE-2018-18356 and CVE-2019-5785.
- Fixed **mfsa2019-02** security issues CVE-2018-18500, CVE-2018-18505 and CVE-2018-18501.
- Fixed **mfsa2018-30** security issues.

CVE-2018-17466, CVE-2018-18492, CVE-2018-18493,  
CVE-2018-18494, CVE-2018-18498, CVE-2018-12405.

- Allow Firefox to access YubiKey (FIDO/U2F) when AppArmor is active.

### Base system

- Fixed a vulnerability in **Java configuration script**.
- Fixed possibly malicious **owner change** with TC setup configuration.
- Fixed **policykit-1** security issues CVE-2018-19788 and CVE-2019-6133.
- Fixed **NSS** security issues CVE-2018-18508, CVE-2018-12404, CVE-2018-12384 and CVE-2018-0495.
- Fixed **PPP** security issue CVE-2018-11574.
- Fixed **imagemagick** security issues.

- Fixed **libseccomp** security issue CVE-2019-9893.
- Fixed **bzip2** security issues CVE-2019-12900 and CVE-2016-3189.
- Fixed **Expat** security issue CVE-2018-20843.
- Fixed **unzip** security issues CVE-2019-13232, CVE-2018-1000035, CVE-2016-9844 and CVE-2014-9913.
- **Mount partitions** with "**nodev**" flag option.
- The home directory of the remote users is now **/home/ruser**.
- Default **umask** is set to **0077** for all non-root users.
- Fixed a vulnerability in the **custom environment variable framework**.
- Fixed kernel **TCP** vulnerabilities CVE-2019-11477: **SACK Panic**, CVE-2019-11478: **SACK Slowness** and CVE-2019-11479: **Excess Resource Consumption Due to Low MSS Values**.
- Changed **minimally allowed MSS size** to "**1000**" to prevent possible denial-of-service attacks.

## Known Issues 10.06.100

### Citrix

- With activated DRI3 and AMD GPU, Citrix **H.264 acceleration** plugin could **freeze**. Selective H.264 mode (API v2) is not affected from this issue.
- Citrix has known issues with **GStreamer1.0** which describe problems with **multimedia redirection of H264, MPEG1 and MPEG2**. GStreamer 1.0 is used if browser content redirection is active.
- **Browser content redirection** does not work with **activated DRI3** and hardware accelerated **H.264 deep compression codec**.
- Citrix **StoreFront** login with **Gemalto smartcard middleware** does not detect smartcard correctly if the card is **inserted after start** of Login.  
As a workaround, insert the smartcard before starting StoreFront login.
- Citrix **H.264 acceleration plugin** does not work with **enabled** server policy "Optimize for 3D graphics workload" in combination with server policy "Use video codec compression" > "For the entire screen".
- To launch **multiple desktop sessions** with **Citrix HDX RTME** and **Citrix H.264 acceleration plugin**, the following registry key must be enabled:  
[More...](#)

|           |                                                                  |
|-----------|------------------------------------------------------------------|
| Parameter | Activate workaround for dual RTME sessions and H264 acceleration |
| Registry  | <code>ica.workaround-dual-rtme</code>                            |
| Range     | <code>enabled</code> / <code>disabled</code>                     |

This workaround is not applicable when "Enable Secure ICA" is active for the specific delivery group.

#### VMware Horizon

- **External drives** mounted already before connection **do not appear in the remote desktop**.  
Workaround: map the directory /media as a drive. Then the external devices will show up inside the media drive.
- **Client drive mapping** and **USB redirection for storage devices** should not be enabled both at the same time.
  - On the one hand, if you want to use **USB redirection** for your storage devices: Note that the **USB on-insertion feature** is only working if the **client drive mapping** is switched off.  
In the IGEL Setup client, **drive mapping** can be found under **Sessions > Horizon Client > Horizon Client Global > Drive Mapping > Enable drive mapping**.  
It is also recommended to disable local **Storage Hotplug** under **Setup > Devices > Storage Devices > Storage Hotplug**.
  - On the other hand, if you use **drive mapping** instead, it is recommended to either **switch off USB redirection entirely** or at least to **deny storage devices** by adding a filter to the USB class rules.  
Furthermore, Horizon Client relies on the OS to mount the storage device itself. Enable local **Storage Hotplug** under **Setup > Devices > Storage Devices > Storage Hotplug**.

#### Parallels Client

- **Native USB redirection does not work** with Parallels Client.
- For using the new **FIPS 140-2 compliance mode** it is necessary to connect to the **Parallels RAS** one time with FIPS support disabled.

#### Smartcard

- In seldom cases, the authentication hung when using **A.E.T. SafeSign smartcards**.

#### Appliance Mode

- Appliance mode **RHEV/Spice**: spice-xpi Firefox plugin is no longer supported. The **Console Invocation** has to allow **Native client** (auto is also possible) and it should start in fullscreen to prevent opening windows.

#### WiFi

- **TP-Link Archer T2UH WiFi adapters** do not work after system suspend/resume.  
Workaround: Disable system suspend under **IGEL Setup > System > Power Options > Shutdown**.

#### Base system

- Due to the removal of the Oracle JRE, **Java WebStart** is **not supported** anymore.

#### Hardware

- **Suspend on UD10** is disabled.

## New Features 10.06.100

#### OS 11 Upgrade

- It is now possible to **upgrade to IGEL OS 11**. For more information, see the how-to [Upgrading IGEL Devices from IGEL OS 10 to IGEL OS 11](#)(see page 174).

The **parameters for the upgrade**:

[More...](#)

#### IGEL Setup > System > Update > OS 11 Upgrade

|           |                                                                         |
|-----------|-------------------------------------------------------------------------|
| Parameter | Upgrade to OS 11                                                        |
| Registry  | <code>update.firmware_migrate_to_11</code>                              |
| Value     | <u>enabled</u> / <u>disabled</u>                                        |
| Parameter | Upgrade to OS 11 even if a previous upgrade attempt failed              |
| Registry  | <code>update.force_firmware_migrate_to_11</code>                        |
| Value     | <u>enabled</u> / <u>disabled</u>                                        |
| Parameter | Upgrade to OS 11 even if PowerTerm is enabled                           |
| Registry  | <code>update.migrate_to_11_with_powerterm</code>                        |
| Value     | <u>enabled</u> / <u>disabled</u>                                        |
| Parameter | Require an Enterprise Management Pack license to upgrade to OS 11       |
| Registry  | <code>update.migrate_to_11_enterprise_required</code>                   |
| Range     | [Smart] [Always] [Never]                                                |
| Parameter | Timeout waiting for OS 11 license to start automatic upgrade            |
| Registry  | <code>update.migrate_to_11_license_timeout</code>                       |
| Range     | [Disabled] [ <u>10 Minutes</u> ] [15 Minutes] [30 Minutes] [60 Minutes] |

The parameters for configuring the **desktop integration** of the **IGEL OS 11 Upgrade tool** are:

| Registry | sessions.os11_migration0.pulldown |
| Value    | <u>enabled</u> / <u>disabled</u>  |

## Citrix

- Integrated **Citrix Workspace app 19.03**.
- Added a new registry key to support **1536-bit RSA keys for client authentication**. Factory default for this release is "true".

**More...**

|           |                                       |
|-----------|---------------------------------------|
| Parameter | Enables RSA 1536 cipher suite         |
| Registry  | ica.allregions.enable_rsa_1536        |
| Range     | <u>factory default</u> / false / true |

- Added a new **registry key** to enable **different cipher suites**. Factory default for this release is "ALL".

**More...**

|           |                                                                                                                                                          |
|-----------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| Parameter | Enables different cipher suite                                                                                                                           |
| Registry  | ica.allregions.sslciphers                                                                                                                                |
| Range     | <u>factory default</u> / ALL / GOV / COM                                                                                                                 |
|           | > TLS_ECDHE_RSA_WITH_AES_256_GCM_SHA384 - GOV/ALL<br>> TLS_ECDHE_RSA_WITH_AES_256_GCM_SHA384 - GOV/ALL<br>> TLS_ECDHE_RSA_WITH_AES_128_CBC_SHA - COM/ALL |

- Added a new **registry key** to support **keyboard layout synchronization**.

**More...**

|           |                                               |
|-----------|-----------------------------------------------|
| Parameter | Keyboard layout synchronization               |
| Registry  | ica.modules.virtualdriver.keyboardsync.enable |
| Value     | <u>disabled</u> / enabled                     |

- Updated **Citrix HDX RTME** used for optimization of Skype for Business to version **2.8.0-2235**.
- Added support for **Citrix Workspace Launcher** functionality as described at <https://support.citrix.com/article/CTX237727>.
- Added a Citrix plugin for **hardware accelerated VDPAU based H.264 decoding** on AMD graphics chipsets:

**More...**

|           |                                                      |
|-----------|------------------------------------------------------|
| Parameter | Enable HW accelerated H264 vdpaucodec (experimental) |
| Registry  | ica.hw-accelerated-h264-vdpaucodec                   |
| Value     | <u>enabled</u> / <u>disabled</u>                     |

## RDP/IGEL RDP Client 2

- Added a field '**Collection**' to RDP session server page.

**More...****IGEL Setup > Sessions > RDP > RDP Sessions > RDP Session > Server****IGEL Setup > Sessions > RDP > RDP Sessions > RDP Session > Options**

|           |            |
|-----------|------------|
| Parameter | Collection |
|-----------|------------|

|          |                                                  |
|----------|--------------------------------------------------|
| Registry | sessions.winconnect<NR>.option.load-balance-info |
|----------|--------------------------------------------------|

## VMware Horizon

- Updated **Horizon Client** to version **5.0.0-12557422**.
- Added parameters to specify **webcam frame size** and **rate for RTAV**.

[More...](#)

|           |                               |
|-----------|-------------------------------|
| Parameter | Webcam frame width            |
| Registry  | vmware.view.rtav-frame-width  |
| Value     | <u>&lt;empty string&gt;</u>   |
| Parameter | Webcam frame height           |
| Registry  | vmware.view.rtav-frame-height |
| Value     | <u>&lt;empty string&gt;</u>   |
| Parameter | Webcam frame rate             |
| Registry  | vmware.view.rtav-frame-rate   |
| Value     | <u>&lt;empty string&gt;</u>   |

- Added a possibility to easily evaluate **Horizon Blast decoder states**. By default, sessions are evaluated after use and the result is written to the journal log.
- Added **continuous run mode** for USB-Arbitrator.

[More...](#)

|           |                                               |
|-----------|-----------------------------------------------|
| Parameter | USB-Arbitrator continuous run mode            |
| Registry  | vmware.view.usb.arbitrator-continuous-runmode |
| Value     | <u>enabled</u> / disabled                     |

- Added **recognition for password change** and **password expired dialog** in Horizon local logon sessions or appliance mode.
- Added **switch for Blast H.264 decoding** for VMware Horizon Client.

[More...](#)

|           |                           |
|-----------|---------------------------|
| Parameter | Blast H.264 decoding      |
| Registry  | vmware.view.blast-h264    |
| Value     | <u>enabled</u> / disabled |

- Added **switch to use systemwide proxy** in VMware Horizon appliance mode.

[More...](#)

|           |                           |
|-----------|---------------------------|
| Parameter | Use the systemwide proxy  |
| Registry  | vmwarevdmapp.use_proxy    |
| Value     | <u>enabled</u> / disabled |

## Parallels Client

- Updated **Parallels Client** to version **16.5.3 (64-Bit)**.
- Added a possibility to set apps to **autostart on Parallels RAS**.

## ThinLinc

- Updated **Cendio ThinLinc** to version **4.10**.

## RedHat Enterprise Virtualization Client.

- Updated **Remote Viewer** (RedHat Virtualization) to version **8.0**.
- Updated **Spice GTK** (RedHat Virtualization) to version **0.36**.

## IBM\_5250

- Updated **IBM iAccess Client** Solutions to version **1.1.8.1**.
- **Improved startup time** of IBM iAccess Client.
- **Improved configuration** of IBM iAccess Client **via IGEL Setup**.

[More...](#)

|                |                                                                                                           |
|----------------|-----------------------------------------------------------------------------------------------------------|
| Setup          | Sessions > IBM iAccess Client > iAccess Sessions > Session Name > Connection > Advanced                   |
| Parameter      | Bypass signon                                                                                             |

| Value     | [Top] [Bottom] [Left] [Right]                              |

## Firefox

- Updated **Mozilla Firefox** to version **60.7.2 ESR**.
  - Added new keys to **auto show and hide the on-screen software keyboard**. To use this feature, the keyboard should be set to autostart. After a restart is activated, the keyboard will appear automatically when an input box is selected. Confirmed to work in Firefox and on lockscreen.
- [More...](#)

|           |                                                                  |
|-----------|------------------------------------------------------------------|
| Parameter | Automatically hide software keyboard depending on focused widget |
| Registry  | userinterface.softkeyboard.autohide                              |
| Value     | <u>enabled</u> / <u>disabled</u>                                 |
| Parameter | Automatically show software keyboard depending on focused widget |
| Registry  | userinterface.softkeyboard.autoshow                              |
| Value     | <u>enabled</u> / <u>disabled</u>                                 |

- Added new parameters: **Allow a custom command before and after browser session.**

| Registry  | sessions.browser<NR>.app.navigation_buttons_hidden           |
| Value     | <u>enabled</u> / <u>disabled</u>                             |
| Parameter | Overflow Menu                                                |
| Registry  | sessions.browser<NR>.app.custom_toolbar.overflow-menu        |
| Value     | <u>open-file-button,feed-button,characterencoding-button</u> |

## Imprivata

- Imprivata Appliance 6.3** or higher is needed now.
- Added a new parameter to Imprivata.conf: "**Redirection of Smartcards**".

[More...](#)

| <b>IGEL Setup &gt; Sessions &gt; Appliance Mode &gt; Imprivata</b> |                                        |
|--------------------------------------------------------------------|----------------------------------------|
| Parameter                                                          | Redirection of Smartcards              |
| Registry                                                           | imprivata.native_smartcard_redirection |
| Value                                                              | <u>enabled</u> / <u>disabled</u>       |

- Added a new parameter: "**Path to Certificate**".

[More...](#)

### IGEL Setup > Sessions > Appliance Mode > Imprivata

|           |                               |
|-----------|-------------------------------|
| Parameter | Path to Certificate           |
| Registry  | imprivata.path_to_certificate |

#### Network

- Added **NCP Secure Enterprise VPN Client** version **5.10\_rev40552** (configurable under **IGEL Setup > Network > VPN > NCP VPN Client**).
- Added a new feature: **Network status icons** are **shown on the lock and logon screens**.
- Added a mechanism for **retrieving the SCEP challenge password with a custom script**. Setting the following registry key to "true" enables the use of the script. The registry key `network.scepclient.cert%.crypt_password` will be ignored. (The script may use it for its own purpose though.)

[More...](#)

|           |                                                                      |
|-----------|----------------------------------------------------------------------|
| Parameter | Use Challenge Password Command                                       |
| Registry  | <code>network.scepclient.cert%.use_challenge_password_command</code> |
| Value     | <u>enabled</u> / <u>disabled</u>                                     |

If the above key is enabled, the value of this key will be passed to bash for execution. It happens when the SCEP challenge password is needed for creating a certificate signing request. The script is supposed to output the challenge password on its standard output. For convenience, any Carriage-Return characters are stripped off the script before execution by bash.

|           |                                                                  |
|-----------|------------------------------------------------------------------|
| Parameter | Challenge Password Command                                       |
| Registry  | <code>network.scepclient.cert%.challenge_password_command</code> |
| Value     | <u>&lt;empty_string&gt;</u>                                      |

#### Wi-Fi

- Added support for **Realtek 8821CE wireless cards**.
- Added switch to determine **the source of WiFi scan results for Wireless Manager**. Selecting default is currently identical with the old mechanism (using the iwlist command). This may change in the future. When iwlist fails, NetworkManager is automatically used as a fallback.

- Added a possibility to configure **scheduled commands**. Registry keys: system.cron.\*\*
- Buddy update** enhancements:
  - Automatic load balancing:**  
A client collects up to eight server candidates from which one is selected randomly.

Collection stops when the number specified in the following registry key is reached.  
Otherwise collection stops after a timeout.

[More...](#)

|           |                                    |
|-----------|------------------------------------|
| Parameter | Buddy Update Server Candidates     |
| Registry  | update.ftp.buddy_server_candidates |
| Value     | 1                                  |

- **Grouping:**

Buddy update servers and clients only interact with each other when they are in the same group determined by the following registry key (a non-negative integer number). This feature is mainly useful when different firmware versions shall be used in parallel.

| gst-fluendo-wmvdec     | 20/03/2019 | 0.10.65  |

- Added a package **ldap-utils** which can be used by custom scripts.

## Driver

- Updated **DisplayLink driver** to version **5.1.26**.
- Updated **Philips Speech Driver** to version **12.7.11** - added **support for Philips AirBridge**.
- Added registry keys to modify the Intel graphic driver usage of **framebuffer compression** and **power management**.

New registry keys:

|           |                                             |
|-----------|---------------------------------------------|
| Parameter | Power saving display C-States to use        |
| Registry  | x.drivers.intel.dc_setting                  |
| Range     | [Default] [Disable] [Up to DC5] [Up to DC6] |
| Info:     | "Default" - driver default                  |
| Parameter | Use framebuffer compression                 |
| Registry  | x.drivers.intel.fbc_setting                 |
| Range     | [Default] [Disable]                         |
| Info:     | "Default" - driver default                  |

- Updated **signotec Citrix Virtual Channel** driver to version **8.0.8**.

- Updated **deviceTRUST Client** to version **19.1.200**. These are the release notes:

Welcome to the release of the deviceTRUST 19.1.200 IGEL client, providing the context of IGEL thin client and UD Pocket devices into your virtual sessions. This release includes support for logical disks attached to the IGEL endpoint, plus bug fixes and stability improvements over the previous 19.1.100 release.

## Logical Disks

We've added support for real-time properties representing the LOGICAL DISKS attached to the IGEL endpoint. This includes:

[More...](#)

DEVICE\_LOGICALDISK\_X\_TYPE – Either Fixed or Removable.

DEVICE\_LOGICALDISK\_X\_LABEL – The volume label.

DEVICE\_LOGICALDISK\_X\_FILESYSTEM – The type of file system.

DEVICE\_LOGICALDISK\_X\_PATHS – The paths that the disk is mounted.

DEVICE\_LOGICALDISK\_X\_TOTALMB – The total space available on the disk. This property is only available for mounted disks.

DEVICE\_LOGICALDISK\_X\_FREEMB – The free space available on the disk. This property is only available for mounted disks.

DEVICE\_LOGICALDISK\_X\_NAME – The name of the underlying physical disk.

DEVICE\_LOGICALDISK\_X\_VENDORID – The vendor identifier uniquely identifying the manufacturer. This property is only available for USB or PCI connected devices.

DEVICE\_LOGICALDISK\_X\_PRODUCTID – The product identifier uniquely identifying the product. This property is only available for USB or PCI connected devices.

DEVICE\_LOGICALDISK\_X\_SERIALNUMBER – The serial number of the physical disk.

DEVICE\_LOGICALDISK\_X\_BUSTYPE – The storage bus type linked to the physical disk.

DEVICE\_LOGICALDISK\_COUNT – The number of logical disks.

## X11 system

- Updated Xorg server from 1.19.6 to **1.20.5** version.
- Updated **Virtualbox** from 5.2.18 to **6.0.8** version.
- Updated **Mesa** from 18.2.1 to **19.0.8** version.
- Updated **Xorg video and input driver** to current upstream versions.
- Added new options for **laptop lid handling** dependent on power supply:

**More...**

|           |                                       |
|-----------|---------------------------------------|
| Parameter | Lid close action while plugged in     |
| Registry  | system.actions.lid.ac                 |
| Range     | [Turn off display] [Suspend]          |
| Parameter | Lid close action while not plugged in |
| Registry  | system.actions.lid.battery            |
| Range     | [Turn off display] [Suspend]          |

- The new **Display Switch tool** can use multiple different profiles, automatically chosen at runtime depending on the currently connected monitors.

A profile is created, when the current monitor layout/resolution is configured via the Display Switch utility. The profile will be associated with the current connected displays automatically (manufacturer, model and used connector are used for allocation) and if applicable, the state of the laptop lid. The setup will be restored by hot-(un)plugging known displays, means the system will automatically switch to the already configured profile.

The Display Switch utility itself got a new interface. All base functionality can be configured via Drag&Drop.

An example workflow:

- Connect the hardware and close/open the lid.
  - Open the Display Switch Utility:
    - A quick (simple) setting can be selected directly.
    - Should the desired use case be different from the provided choices, the 'Advanced' button opens a drag&drop interface for further settings.
  - In this interface the displays can be dragged and dropped for the intended configuration. The display will snap adjacent to others.
  - If a display should not be used, it can be dragged to the 'Disabled' area on the top right - the screen will be reactivated when it is dragged back to the active area.
  - To show the same content on multiple displays, one display should be dragged onto another active screen. The interface will show "Mirror". The mirroring monitor will be displayed on the lower right.
- With the 'Apply' button the current state will be set, with 'Yes' on the "Keep configuration" dialog the current settings will be saved to persistent storage and associated with the profile.
- Advanced functionality (panning/scaling/resolutions) can be configured in drop-down boxes, hidden in a drawer on the right side. The drawer can be expanded by clicking the '<' button on the right edge.
  - For the Display Switch functionality the following parameters should be enabled for proper usage:

|                       |                                                |
|-----------------------|------------------------------------------------|
| Parameter             | Use embedded displayport as normal displayport |
| Registry              | x.drivers.intel.edp_is_dp                      |
| Range                 | [default][enable][disable]                     |
| Info: Reboot required |                                                |

Java

- Replaced Oracle JRE by **AZUL's Zulu JRE**.
- **Removed** deprecated **Java WebStart** since it is not supported with non-Oracle JRE's.

#### X server

- Updated **Xephyr x session** to version **1.20.5**.

#### Hardware

- Added hardware support for the following headsets:

Jabra Engage 50;  
Jabra Engage 65;  
Jabra Engage 75;  
Jabra Evolve 30 II (Ver. B);  
Jabra Evolve 30 II (Ver. C);  
Jabra Evolve 40 (Ver. B) - USB-C;  
Jabra Evolve 40 (Ver. D);  
Jabra Evolve 65;  
Jabra Evolve 75;  
Plantronics Voyager 5200 UC;  
Plantronics Voyager 6200 UC;  
Plantronics Voyager 8200 UC;  
Sennheiser SC70.

#### Remote Management / IGEL Cloud Gateway

- **Connection order between UMS and ICG** can now be configured.  
[More...](#)

|           |                                                       |
|-----------|-------------------------------------------------------|
| Parameter | Prefer UMS over ICG                                   |
| Registry  | <code>system.remotemanager.icg_try_ums_connect</code> |
| Value     | <u>enabled</u> / <u>disabled</u>                      |

When an ICG connection is configured and the parameter is enabled, the device tries to connect directly to UMS. If the connection was established successfully, the device is managed by UMS and not over ICG until new start of the device or networking.

- **Firmware update scheduled on shutdown** is now invoked **on reboot** as well.
- Added some adaptations in **UMS Agent** concerning **migration to IGEL OS11**.

#### Resolved Issues 10.06.100

##### Citrix

- Now `ica.pnlogin.syncpasswordwithxscrnsrv` is removed, **ica.pnlogin.syncpasswordwithxlock** should be used, this provides the same functionality.
- Fixed **online meeting in VDI**: An enabled webcam will not cut the audio streaming anymore.
- Citrix **Workspace App 19.03**: Improved USB redirection handling.
- **Custom icons** now are visible **after StoreFront logon** using Citrix authentication method.
- **Appropriate icons** arise with IGEL and Citrix authentication.
- Fixed **stability issues** with Citrix Browser Content Redirection.

- Updated the **Nuance virtual channel** for ICA up to version **B301**.

#### RDP/IGEL RDP Client 2

- Added **Negotiate:Kerberos as fallback** if NTLM is disabled. This only works if Active Directory/Kerberos Logon is enabled.
- Added registry key to use **rdpglobal window settings for remote apps**.  
[More...](#)

|           |                                                             |
|-----------|-------------------------------------------------------------|
| Parameter | Enable global windows settings for remote app               |
| Registry  | rdp.winconnect.enable-global-window-settings-for-remote-app |
| Value     | enabled / disabled                                          |

- Fixed **empty warning window** being shown when closing RDP Web Applications started from browser.
- Fixed **smartcard redirection in RDP**: SCardGetAttrib was failing if pbAttr was NULL. The fix should help running Dutch Zorg-ID applications.

#### RD Web Access

- Fixed **RD Web Access** not working with **special characters in name or password**. This only works if Active Directory/Kerberos Logon is enabled.
- Fixed **empty warning dialogs** appearing when opening RD Web Application in the browser.
- Fixed **not starting RDP Remote Applications**.

#### VMware Horizon

- Fixed **Optimization for Skype for Business**.
- Fixed the configuration choice to use **the relative mouse feature**.

#### Parallels Client

- Updated **Parallels Client** to version **16.5.3** (64-Bit).
- Fixed: **Maximized windows** for published applications can be displayed incorrectly.
- Fixed: **Incorrect user credentials** can be picked up during connection if the same farm is registered in the client multiple times and with different user credentials.
- Fixed: Client **did not accept universal printing policies** set from the server.
- Fixed: **Module** opened in the background and **blocked the launcher** in some cases.
- Fixed: **Redirected smartcard** did not work **in a remote session**.
- Fixed: **Printers would not redirect to a remote session** when redirection is enforced via policies.

#### PowerTerm

- Fixed **editing** of parameter **sessions.powerterm\<INST>.logindialog.loginscript** in Setup Registry: now multiple lines are possible.
- PowerTerm Terminal Emulation: remove **obsolete SSH type SSH1** and **obsolete SSH cipher DES** from parameter ranges.

#### Firefox

- Fixed an issue where **Firefox does not accept proxy credentials** from setup.
- Fixed the **print hotkey disable option** with Firefox 60+.
- Fixed **browserglobal.app.local\_subdirs\_whitelist** not working.

- Fixed **Adobe Flash Player download** possibility.

## Network

- Improved **SCEP client robustness**:
  - The **cert\_agent script** doesn't terminate anymore when a problem occurs (e.g. the SCEP server is unreachable) but tries again after the expiry check interval.
  - When the client certificate has expired, there is still one attempt at renewing it. However, when that fails, a new one is requested. That obviously will fail if the client presents a challenge password that is not valid anymore.
- Restoring **WLAN/WWAN Modem state** after wakeup from standby or reboot.
- Improved **expire time of Ethernet no-link notification**.
- Added all **Ethernet network drivers from OS to LX** version.
- Changed **e1000e driver** to out of tree version **3.4.2.3** directly from Intel.
- Changed **igb driver** to out of tree version **5.3.5.22** directly from Intel.
- Fixed bug: **Failure to reach SCEP server** in the client certificate renewal phase resulted in loss of SCEP server and client certificates.
- SCEP: **A change of the CA fingerprint setting does not result in discarding all SCEP data anymore** if the fingerprint matches that of the current CA certificate. Firmware versions before 10.05.100 allowed an empty fingerprint. So, this is meant for users who must belatedly configure the fingerprint in order for client certificate renewal to work.  
A change of the **CAIdentifier** setting is not detected immediately and does not result in discarding all current data anymore. The new CAIdentifier will, however, be used in future SCEP operations.
- Fixed **instability with netmounts** with static ip configuration.
- Fixed problems with **windows share mounts**.
- Fixed **MBB router** configuration (broken since 10.05.500).
- Added a possibility to **switch between third-party** and **kernel Intel IGB network driver**.  
A new registry key:

|------------------------------------------|-----------------------------------------------------------------|
| Parameter                                | Choose realtek r8168 variant (only if "prefer r8168" is chosen) |
| Registry                                 | network.drivers.r8169.r8168_variant                             |
| Range                                    | [Default] [No NAPI] [NAPI]                                      |
| Info: "Default" (use NAPI in most cases) |                                                                 |

- Fixed bug: **Second Ethernet interface** did not get configured when the first one was disabled.
- Fixed **802.1X Ethernet configuration with user interaction**.

## WiFi

- Fixed bug: **WiFi connection to hidden SSID** did not work anymore after reediting with the Wireless Manager.
- Fixed not working **Broadcom SDIO WLAN cards** as present in Advantech AIM8IAC device for example.

## Smartcard

- Fixed **Dell KB813 Smartcard Keyboard** in combination with certain smart cards driven by OpenSC PKCS#11 module. Before this fix, authentication to Citrix StoreFront and VMWare Horizon failed.
- Improved **handling of PIV/CAC smart cards** in OpenSC.
- Updated **cryptovision sc/interface PKCS#11 smart card library** to version **7.1.20**.

Changes in this revision:

- Fixed **a possible deadlock in the PKCS#11 module** on Linux if C\_Finalize is called during a PCSC event, for example C\_WaitForSlotEvent.
- **ROCA check in the Smartcard Manager**, based on the "ROCA detection tool", see <https://github.com/crocs-muni/roca>.
- **Renaming container label** in Smartcard Manager with F2 now possible.
- Fixed **OpenSC setting max\_send\_size** for reader driver pcsc in **/etc.opensc.opensc.conf**.

## Application Launcher

- Fixed **confusion in nameserver list** caused by comments in /etc/resolv.conf.

## Base system

- Fixed issues with **gen4/5 Intel graphic driver** in kernel 4.18.20.
- Fixed **Screensaver and Screenlock timeouts** to be independent. This means, if both timeouts are set, the start of Screenlock will not reset the Screensaver timeout any more.
- Fixed **retrieving of serial number of a display**.
- Fixed **playback of AAC coded audio streams** on IGEL Zero products.
- Added possibility to set **intel\_idle.max\_cstate kernel cmdline parameter** with registry keys **to work against Intel CPU freezes**.
- Ensure that the **Unit ID** for IGEL devices is the MAC address of the onboard network card.

- **Enhanced handling of Unit ID.** On IGEL hardware the Unit ID isn't stored persistently any more by default. The persistent Unit ID can be removed with command `get_unit_id -r`. The persistent Unit ID storage can be forced with `get_unit_id -i -f -p` or with `get_unit_id -m` to manually choose a Unit ID from several network interfaces found on the device. Handle with extreme care since the Unit ID is the key for handling the endpoint in UMS.
- Replaced MIT Kerberos clients by **Heimdal Kerberos clients**.
- Improved the buddy update server performance for multiple simultaneous update clients.
- Fixed handling of an "**update on shutdown**" during suspend/resume.
- Fixed **shutdown** while IGEL Setup Assistant is shown.
- Fixed **delay in logon** as local user when logon with IGEL Smartcard is also active.
- Fixed **sporadic bootsplash issue**.
- Fixed **suspend/resume hangs** when logged into Citrix sessions.
- Fixed **CPU scaler and volume control applet suspend/resume issue**.
- Added **AppArmor** rule to allow tcpdump to write to `/debuglog`.
- Fixed random 90 seconds **shutdown delay** (systemd).
- Fixed **Custom Bootsplash installation**.
- Bugfix: **Create shortcuts** for terminal shutdown, terminal restart and icon sort **directly after reconfiguration**. A reboot is not needed anymore.
- Fixed: **System logoff waits for Citrix logoff** now.
- Fixed **broken custom bootsplash** when doing a reset to factory defaults via UMS.
- Bugfix: **hotkey** setting **needs restart**.
- **IGEL Setup Assistant** will persistently **activate WiFi** when a connection is enabled instead of after finishing it, to preserve settings when UMS sends license and stops it.
- Fixed **AD/Kerberos logon** in case parameter `auth.login.krb5_enterprise` is **set to 'false'**.
- Added a new registry key to set **USB quirks**:

[More...](#)

|           |                                                                                           |
|-----------|-------------------------------------------------------------------------------------------|
| Parameter | Set XHCI USB quirks to fix some hardware issues                                           |
| Registry  | <code>system.kernel.bootparams.xhci-hcd_quirks</code>                                     |
| Range     | [No quirk] [Spurious Reboot quirk] [Spurious Wakeup quirk] [Spurious Reboot Wakeup quirk] |

- Fixed: **Migration tool** did not start with **Spanish** language setting.
- Disabled **martian packet logging**.

## Driver

- Updated **deviceTRUST** Client to version **19.1.200**.

### Bug Fixes:

- Fixed an issue **reading the DEVICE\_IGEL\_ICG\_SERVER** property.
- Fixed an issue where the **NETWORK** and **LOCATION** property providers could **cause the client to freeze** if a disconnection occurred while these property providers were checking for changes.
- Fixed an **open file handle leak** which lead to the client process reaching its file handle limits when left running for a long period of time.

- Fixed not working **WACOM** device **DTU-1141B**.

#### Custom Partition

- Fixed **ownership of extracted data**: Do not preserve owner information while extracting data into custom partition.

#### Storage Devices

- Fixed **auto mounting of storage devices** inside of Olympus DS-9500 Digital Voice Recorder.

#### Appliance Mode

- Fixed bug: **In-session control bar** could not be deactivated **in Citrix SelfService appliance mode**.

#### X11 system

- Fixed **Microsoft Surface Pro 4 screen resolution** issue.
- Fixed the **missing volume control** in the panel when the panel is configured to disappear while the login/lock screen is shown.
- There is now a **registry key to ignore a 3Dconnexion SpaceMouse** for IGEL graphical use (X11). If activated, the SpaceMouse is only passed through to the desktop session. If false, it acts also as the standard mouse.

- **USB device reset** via USB powercycle is now available on **UD6/UD7**.
- Fixed **screen flicker** in some cases if **Force NumLock On** (x.global.forcenumlock) is active.

- Fixed not working **x.xserver0.screen1.flipscreens** registry key.
- Use **Index** and **Mode** from Advanced mode in Simple Mode **for Display Switch**.
- Fixed **display hotplug failing** on initial lock screen with Active Directory logon.
- The **in-session control bar** now **scales with the current DPI setting**.
- Fixed **Display Switch** utility **not starting with some translations**.
- Fixed an issue with the **noDDC mode** not always working as expected.
- Fixed a bug with thin clients **reporting the wrong monitor serial number**.

#### Window manager

- Fixed the option to **disable the local window manager**.

#### Audio

- Fixed **bad quality sound over DisplayPort** in a Citrix ICA session or other applications using ALSA API.
- Fixed **configuration of default audio output** and **input**.

#### Media Player (Parole)

- Fixed a problem where **parole media player** would **hang** instead of playing audio **while audio-visualization** is enabled.
- Fixed parole media player **not handling audio hotkeys in fullscreen mode**.

#### Multimedia

- Updated **multimedia codecs to fix freeze** when audio visualization is used.

#### Misc

- **Monitoring Agent** uses now **only the half size of the debuglog partition**.

When the setup option **log\_max\_size** with the option **log\_rotation** creates an overall consumption that is bigger than 50% of the debuglog partition size, the size for each log automatically will be decreased to a value that allows a full rotation which occupies exactly 50% of the partition size.

#### Hardware

- Fixed problems with **mouse cursor on Intel cherryview devices**.
- Added a **possibility to change** some **DRM settings** and **limit the DisplayPort lane bandwidth** on Intel devices.

Added new registry keys:

| Parameter                                                 | Limit the maximum DisplayPort lane link rate.                                                     |
| Registry                                                  | x.drivers.intel.max_dp_link_rate                                                                  |
| Range                                                     | [default] [1.62Gbps] [2.16Gbps] [2.7Gbps] [3.24Gbps]<br>[4.32Gbps] [5.4Gbps] [6.48Gbps] [8.1Gbps] |
| Info: "Default" means hardware default limit.             |                                                                                                   |

#### Remote Management / IGEL Cloud Gateway

- Fixed **wallpaper configuration** when ICG protocol is used.
- Fixed **UMS synchronization of configuration** when changes were made in "Emergency mode".
- Fixed sporadic **failures while sending data over ICG**.
- Fixed **removal from UMS** when the device was offline.
- Added: IGEL UMS agent sends **monitor information for maximum eight monitors** now.

#### Caradigm

- Fixed **Horizon session crash**.

#### IGEL Linux 10 Recovery

- Fixed **problem with forced no EFI installation**.

## 7.24.2 IGEL Universal Desktop OS 3

Supported Hardware:

<https://kb.igel.com/igelos/en/devices-supported-by-udc3-and-ud-pocket-3117174.html>

- Component Versions 10.06.100(see page 1996)
- General Information 10.06.100(see page 2000)
- Security Fixes 10.06.100(see page 2001)
- Known Issues 10.06.100(see page 2005)
- New Features 10.06.100(see page 2007)
- Resolved Issues 10.06.100(see page 2029)

### Component Versions 10.06.100

- **Clients**

| Product                           | Version                        |
|-----------------------------------|--------------------------------|
| Citrix HDX Realtime Media Engine  | 2.8.0-2235                     |
| Citrix Receiver                   | 13.10.0.20                     |
| Citrix Receiver                   | 13.5.0.10185126                |

- **Features with Limited Functionality**

|                   |        |
|-------------------|--------|
| Cisco JVDI Client | 12.1.0 |
|-------------------|--------|

## General Information 10.06.100

The following clients and features are not supported anymore:

- Citrix Receiver 12.1 and 13.1 - 13.4;
- Citrix Access Gateway Standard Plug-in;
- Dell vWorkspace Connector for Linux;
- Ericom PowerTerm Emulation 9 and 11;
- Ericom Webconnect;
- IGEL Legacy RDP Client (rdesktop);

- Virtual Bridges VERDE Client;
- PPTP VPN Support;
- IGEL Upgrade License Tool with IGEL Smartcard Token;
- Remote Management by setup.ini file transfer (TFTP);
- Remote Access via RSH;
- Legacy Philips Speech Driver;
- T-Systems TCOS Smartcard Support;
- DUS Series touch screens;
- Elo serial touchscreens;
- VIA graphics support;
- Java WebStart;
- Storage hotplug devices are not automatically removed anymore, instead they must be always ejected manually:
  - by panel tray icon;
  - by an icon in the **In-Session Control Bar** (configurable under **IGEL Setup > User Interface > Desktop**);
  - by a **Safely Remove Hardware** session (configurable under **IGEL Setup > Accessories**).

The following clients and features are not available in this release:

- Cherry eGK Channel;
- Open VPN Smartcard Support;
- Asian Input Methods;
- Composite Manager.

## Security Fixes 10.06.100

### Firefox

- Updated Mozilla **Firefox** to version **60.7.2 ESR**.
- Fixed **mfsa2019-19** security issue CVE-2019-11708.
- Fixed **mfsa2019-18** security issue CVE-2019-11707.
- Fixed **mfsa2019-10** security issues CVE-2019-9810 and CVE-2019-9813.
- Fixed **mfsa2019-08** security issues.

**More...**

CVE-2019-9790, CVE-2019-9791, CVE-2019-9792, CVE-2019-9793,  
CVE-2019-9795, CVE-2019-9796, CVE-2018-18506, CVE-2019-9788.

- Fixed **mfsa2019-05** security issues CVE-2018-18356 and CVE-2019-5785.
- Fixed **mfsa2019-02** security issues CVE-2018-18500, CVE-2018-18505 and CVE-2018-18501.
- Fixed **mfsa2018-30** security issues.

**More...**

CVE-2018-17466, CVE-2018-18492, CVE-2018-18493,  
CVE-2018-18494, CVE-2018-18498, CVE-2018-12405.

- Allow Firefox to access YubiKey (FIDO/U2F) when AppArmor is active.

### Base system

- Fixed a vulnerability in **Java configuration script**.

- Fixed possibly malicious **owner change** with TC setup configuration.
- Fixed **policykit-1** security issues CVE-2018-19788 and CVE-2019-6133.
- Fixed **NSS** security issues CVE-2018-18508, CVE-2018-12404, CVE-2018-12384 and CVE-2018-0495.
- Fixed **PPP** security issue CVE-2018-11574.
- Fixed **imagemagick** security issues.

CVE-2017-13685, CVE-2017-10989, and CVE-2016-6153.

- Fixed **libseccomp** security issue CVE-2019-9893.
- Fixed **bzip2** security issues CVE-2019-12900 and CVE-2016-3189.
- Fixed **Expat** security issue CVE-2018-20843.
- Fixed **unzip** security issues CVE-2019-13232, CVE-2018-1000035, CVE-2016-9844 and  
CVE-2014-9913.
- **Mount partitions** with "**nodev**" flag option.
- The home directory of the remote users is now **/home/ruser**.
- Default **umask** is set to **0077** for all non-root users.
- Fixed a vulnerability in the **custom environment variable framework**.
- Fixed kernel **TCP** vulnerabilities CVE-2019-11477: **SACK Panic**, CVE-2019-11478: **SACK Slowness**  
and CVE-2019-11479: **Excess Resource Consumption Due to Low MSS Values**.
- Changed **minimally allowed MSS size** to "**1000**" to prevent possible denial-of-service attacks.

## Known Issues 10.06.100

### Citrix

- With activated DRI3 and AMD GPU, Citrix **H.264 acceleration** plugin could **freeze**. Selective H.264 mode (API v2) is not affected by this issue.
- Citrix has known issues with **GStreamer1.0** which describe problems with **multimedia redirection of H264, MPEG1 and MPEG2**. GStreamer 1.0 is used if browser content redirection is active.
- **Browser content redirection** does not work with **activated DRI3** and hardware accelerated **H.264 deep compression codec**.
- Citrix **StoreFront** login with **Gemalto smartcard middleware** does not detect smartcard correctly if the card is **inserted after start** of Login.  
As a workaround, insert the smartcard before starting StoreFront login.

- Citrix **H.264 acceleration plugin** does not work with **enabled** server policy "Optimize for 3D graphics workload" in combination with server policy "Use video codec compression" > "For the entire screen".
- To launch **multiple desktop sessions** with **Citrix HDX RTME** and **Citrix H.264 acceleration plugin**, the following registry key must be enabled:  
[More...](#)

|           |                                                                  |
|-----------|------------------------------------------------------------------|
| Parameter | Activate workaround for dual RTME sessions and H264 acceleration |
| Registry  | ica.workaround-dual-rtme                                         |
| Range     | <u>enabled</u> / <u>disabled</u>                                 |

This workaround is not applicable when "Enable Secure ICA" is active for the specific delivery group.

#### VMware Horizon

- **External drives** mounted already before connection **do not appear in the remote desktop**.  
Workaround: map the directory /media as a drive. Then the external devices will show up inside the media drive.
- **Client drive mapping** and **USB redirection for storage devices** should not be enabled both at the same time.
  - On the one hand, if you want to use **USB redirection** for your storage devices: Note that the **USB on-insertion feature** is only working if the **client drive mapping** is switched off.  
In the IGEL Setup client, **drive mapping** can be found under **Sessions > Horizon Client > Horizon Client Global > Drive Mapping > Enable drive mapping**.  
It is also recommended to disable local **Storage Hotplug** under **Setup > Devices > Storage Devices > Storage Hotplug**.
  - On the other hand, if you use **drive mapping** instead, it is recommended to either **switch off USB redirection entirely** or at least to **deny storage devices** by adding a filter to the USB class rules.  
Furthermore, Horizon Client relies on the OS to mount the storage device itself. Enable local **Storage Hotplug** under **Setup > Devices > Storage Devices > Storage Hotplug**.

#### Parallels Client

- **Native USB redirection does not work** with Parallels Client.
- For using the new **FIPS 140-2 compliance mode** it is necessary to connect to the **Parallels RAS** one time with FIPS support disabled.

#### Smartcard

- In seldom cases, the authentication hung when using **A.E.T. SafeSign smartcards**.

#### Appliance Mode

- Appliance mode **RHEV/Spice**: spice-xpi Firefox plugin is no longer supported. The **Console Invocation** has to allow **Native client** (auto is also possible) and it should start in fullscreen to prevent opening windows.

#### Multimedia

- **Multimedia redirection with GStreamer** could **fail with the Nouveau GPU driver**.

## WiFi

- **TP-Link Archer T2UH WiFi adapters** do not work after system suspend/resume.  
Workaround: Disable system suspend under **IGEL Setup > System > Power Options > Shutdown**.

## Base system

- Due to the removal of the Oracle JRE, **Java WebStart** is **not supported** anymore.

## New Features 10.06.100

## OS 11 Upgrade

- It is now possible to **upgrade to IGEL OS 11**. For more information, see the how-to [Upgrading IGEL Devices from IGEL OS 10 to IGEL OS 11](#)(see page 174).

The **parameters for the upgrade**:

[More...](#)

| <b>IGEL Setup &gt; System &gt; Update &gt; OS 11 Upgrade</b> |                                                                   |
|--------------------------------------------------------------|-------------------------------------------------------------------|

## Citrix

- Integrated **Citrix Workspace app 19.03**.
- Added a new registry key to support **1536-bit RSA keys for client authentication**. Factory default for this release is "true".

**More...**

|           |                                       |
|-----------|---------------------------------------|
| Parameter | Enables RSA 1536 cipher suite         |
| Registry  | ica.allregions.enable_rsa_1536        |
| Range     | <u>factory default</u> / false / true |

- Added a new **registry key** to enable **different cipher suites**. Factory default for this release is "ALL".

**More...**

|           |                                          |
|-----------|------------------------------------------|
| Parameter | Enables different cipher suite           |
| Registry  | ica.allregions.sslciphers                |
| Range     | <u>factory default</u> / ALL / GOV / COM |

> TLS\_ECDHE\_RSA\_WITH\_AES\_256\_GCM\_SHA384 - GOV/ALL  
 > TLS\_ECDHE\_RSA\_WITH\_AES\_256\_GCM\_SHA384 - GOV/ALL  
 > TLS\_ECDHE\_RSA\_WITH\_AES\_128\_CBC\_SHA - COM/ALL

- Added a new **registry key** to support **keyboard layout synchronization**.

**More...**

|           |                                               |
|-----------|-----------------------------------------------|
| Parameter | Keyboard layout synchronization               |
| Registry  | ica.modules.virtualdriver.keyboardsync.enable |
| Value     | <u>disabled</u> / enabled                     |

- Updated **Citrix HDX RTME** used for optimization of Skype for Business to version **2.8.0-2235**.
- Added support for **Citrix Workspace Launcher** functionality as described at <https://support.citrix.com/article/CTX237727>.
- Added a Citrix plugin for **hardware accelerated VDPAU based H.264 decoding** on AMD graphics chipsets:

|-----------|-------------------------------------------------------|
| Parameter | Enable HW accelerated H264 vdpau codec (experimental) |
| Registry  | ica.hw-accelerated-h264-vdpau-codec                   |
| Value     | <u>enabled</u> / <u>disabled</u>                      |

## RDP/IGEL RDP Client 2

- Added a field '**Collection**' to RDP session server page.

[More...](#)

**IGEL Setup > Sessions > RDP > RDP Sessions > RDP Session > Server**

**IGEL Setup > Sessions > RDP > RDP Sessions > RDP Session > Options**

|           |                                                  |
|-----------|--------------------------------------------------|
| Parameter | Collection                                       |
| Registry  | sessions.winconnect<NR>.option.load-balance-info |

## VMware Horizon

- Updated **Horizon Client** to version **5.0.0-12557422**.
- Added parameters to specify **webcam frame size** and **rate for RTAV**.

[More...](#)

|           |                               |
|-----------|-------------------------------|
| Parameter | Webcam frame width            |
| Registry  | vmware.view.rtav-frame-width  |
| Value     | <u>&lt;empty string&gt;</u>   |
| Parameter | Webcam frame height           |
| Registry  | vmware.view.rtav-frame-height |
| Value     | <u>&lt;empty string&gt;</u>   |
| Parameter | Webcam frame rate             |
| Registry  | vmware.view.rtav-frame-rate   |
| Value     | <u>&lt;empty string&gt;</u>   |

- Added a possibility to easily evaluate **Horizon Blast decoder states**. By default, sessions are evaluated after use and the result is written to the journal log.
- Added **continuous run mode** for USB-Arbitrator.

|-----------|-------------------------------------|
| Parameter | Use the systemwide proxy            |
| Registry  | <code>vmwarevdmapp.use_proxy</code> |
| Value     | <u>enabled</u> / <u>disabled</u>    |

#### Parallels Client

- Updated **Parallels Client** to version **16.5.3 (64-Bit)**.
- Added a possibility to set apps to **autostart on Parallels RAS**.

#### ThinLinc

- Updated **Cendio ThinLinc** to version **4.10**.

#### RedHat Enterprise Virtualization Client.

- Updated **Remote Viewer** (RedHat Virtualization) to version **8.0**.
- Updated **Spice GTK** (RedHat Virtualization) to version **0.36**.

#### IBM\_5250

- Updated **IBM iAccess Client** Solutions to version **1.1.8.1**.
- **Improved startup time** of IBM iAccess Client.
- **Improved configuration** of IBM iAccess Client **via IGEL Setup**.

| Value     | <code>IBMi.kmp</code>                                                                        |
| Setup     | Sessions > IBM iAccess Client > iAccess Sessions > Session Name > Preferences > Popup Keypad |
| Parameter | Popup Keypad File                                                                            |
| Registry  | <code>sessions.iaccess&lt;NR&gt;.options.poppadfile</code>                                   |
| Setup     | Sessions > IBM iAccess Client > iAccess Sessions > Session Name > Preferences > Toolbar      |

|           |                                                             |
|-----------|-------------------------------------------------------------|
| Parameter | Toolbar File                                                |
| Registry  | <code>sessions.iaccess&lt;NR&gt;.options.toolbarfile</code> |
| Setup     | Sessions > IBM iAccess Client > iAccess Global > Tab Setup  |
| Parameter | Open new sessions in a new tab                              |
| Registry  | <code>ibm.iaccess.acssm.opensessionintab</code>             |
| Value     | <u>enabled</u> / <u>disabled</u>                            |
| Setup     | Sessions > IBM iAccess Client > iAccess Global > Tab Setup  |
| Parameter | Always display the tab bar                                  |
| Registry  | <code>ibm.iaccess.acssm.alwaysshownabar</code>              |
| Value     | <u>enabled</u> / <u>disabled</u>                            |
| Setup     | Sessions > IBM iAccess Client > iAccess Global > Tab Setup  |
| Parameter | Switch to new tab when created                              |
| Registry  | <code>ibm.iaccess.acssm.switchtonewtab</code>               |
| Value     | <u>enabled</u> / <u>disabled</u>                            |
| Setup     | Sessions > IBM iAccess Client > iAccess Global > Tab Setup  |
| Parameter | Send a warning when closing multiple tabs                   |
| Registry  | <code>ibm.iaccess.acssm.closemultipletabwarning</code>      |
| Value     | <u>enabled</u> / <u>disabled</u>                            |
| Setup     | Sessions > IBM iAccess Client > iAccess Global > Tab Setup  |
| Parameter | Do not start tabbed sessions until the tab is selected      |
| Registry  | <code>ibm.iaccess.acssm.tabdelayedstart</code>              |
| Value     | <u>enabled</u> / <u>disabled</u>                            |
| Setup     | Sessions > IBM iAccess Client > iAccess Global > Tab Setup  |
| Parameter | New Tab Action                                              |
| Registry  | <code>ibm.iaccess.acssm.newtabaction</code>                 |
| Value     | [Disable and Hide] [Run the Same] [Run Other...]            |
| Setup     | Sessions > IBM iAccess Client > iAccess Global > Tab Setup  |

|           |                                |
|-----------|--------------------------------|
| Parameter | Tab Placement                  |
| Registry  | ibm.iaccess.acssm.tabplacement |
| Value     | [Top] [Bottom] [Left] [Right]  |

## Firefox

- Updated **Mozilla Firefox** to version **60.7.2 ESR**.
- Added new keys to **auto show and hide the on-screen software keyboard**. To use this feature, the keyboard should be set to autostart. After a restart is activated, the keyboard will appear automatically when an input box is selected. Confirmed to work in Firefox and on lockscreen.

|           |                                                                  |
|-----------|------------------------------------------------------------------|
| Parameter | Automatically hide software keyboard depending on focused widget |
| Registry  | userinterface.softkeyboard.autohide                              |
| Value     | enabled / <u>disabled</u>                                        |
| Parameter | Automatically show software keyboard depending on focused widget |
| Registry  | userinterface.softkeyboard.autoshow                              |
| Value     | enabled / <u>disabled</u>                                        |

- Added new parameters: **Allow a custom command before and after browser session**.

|           |                                |
|-----------|--------------------------------|
| Parameter | init_action                    |
| Registry  | sessions.browser%.init_action  |
| Value     | <empty_string>                 |
| Parameter | final_action                   |
| Registry  | sessions.browser%.final_action |
| Value     | <empty_string>                 |

- Added options to customize Firefox overflow menu and hide navigation buttons.

|           |                                                       |
|-----------|-------------------------------------------------------|
| Parameter | Hide Navigation buttons                               |
| Registry  | sessions.browser<NR>.app.navigation_buttons_hidden    |
| Value     | enabled / <u>disabled</u>                             |
| Parameter | Overflow Menu                                         |
| Registry  | sessions.browser<NR>.app.custom_toolbar.overflow-menu |
| Value     | open-file-button,feed-button,characterencoding-button |

Imprivata

- **Imprivata Appliance 6.3** or higher is needed now.
- Added a new parameter to Imprivata.conf: "**Redirection of Smartcards**".  
[More...](#)

#### **IGEL Setup > Sessions > Appliance Mode > Imprivata**

|           |                                        |
|-----------|----------------------------------------|
| Parameter | Redirection of Smartcards              |
| Registry  | imprivata.native_smartcard_redirection |
| Value     | <u>enabled</u> / <u>disabled</u>       |

- Added a new parameter: "**Path to Certificate**".  
[More...](#)

#### **IGEL Setup > Sessions > Appliance Mode > Imprivata**

|           |                               |
|-----------|-------------------------------|
| Parameter | Path to Certificate           |
| Registry  | imprivata.path_to_certificate |

### Network

- Added **NCP Secure Enterprise VPN Client** version **5.10\_rev40552** (configurable under **IGEL Setup > Network > VPN > NCP VPN Client**).
- Added a new feature: **Network status icons** are **shown on the lock and logon screens**.
- Added a mechanism for **retrieving the SCEP challenge password with a custom script**. Setting the following registry key to "true" enables the use of the script. The registry key `network.scepclient.cert%.crypt_password` will be ignored. (The script may use it for its own purpose though.)  
[More...](#)

|           |                                                                      |
|-----------|----------------------------------------------------------------------|
| Parameter | Use Challenge Password Command                                       |
| Registry  | <code>network.scepclient.cert%.use_challenge_password_command</code> |
| Value     | <u>enabled</u> / <u>disabled</u>                                     |

If the above key is enabled, the value of this key will be passed to bash for execution. It happens when the SCEP challenge password is needed for creating a certificate signing request. The script is supposed to output the challenge password on its standard output. For convenience, any Carriage-Return characters are stripped off the script before execution by bash.

|           |                                                                  |
|-----------|------------------------------------------------------------------|
| Parameter | Challenge Password Command                                       |
| Registry  | <code>network.scepclient.cert%.challenge_password_command</code> |
| Value     | <u>&lt;empty string&gt;</u>                                      |

### WiFi

- Added support for **Realtek 8821CE wireless cards**.
- Added switch to determine the **source of WiFi scan results for Wireless Manager**. Selecting default is currently identical with the old mechanism (using the iwlist command). This may change in the future. When iwlist fails, NetworkManager is automatically used as a fallback.  
[More...](#)

|           |                                                      |
|-----------|------------------------------------------------------|
| Parameter | WiFi Scanner                                         |
| Registry  | network.interfaces.wirelesslan.device0.mssid_scanner |
| Range     | [default][iwlist][NetworkManager]                    |

## Smartcard

- New **IGEL Smartcard** mode **without Locking Desktop** (reintroduced feature of Linux 5.x firmware).

[More...](#)**IGEL Setup > Security > Logon > IGEL Smartcard**

|           |                                               |
|-----------|-----------------------------------------------|
| Parameter | Enable IGEL Smartcard without Locking Desktop |
| Registry  | scard.scardd.enable_nolock                    |
| Value     | enabled / <u>disabled</u>                     |

**IGEL Setup > Security > Logon > IGEL Smartcard**

|           |                                  |
|-----------|----------------------------------|
| Parameter | On Smartcard Removal, terminate  |
| Registry  | scard.scardd.session_termination |
| Value     | <u>all</u> / smartcard           |

- Updated **MUSCLE CCID** smartcard reader driver to version **1.4.30**.
- Updated **ACS CCID** smartcard driver to version **1.1.6**.
- Updated **REINER SCT** smartcard reader driver to version **3.99.5final.sp13**.
- Updated **SecMaker NetID** to version **6.7.2.36**: now **YubiKey 5** is supported.
- Updated **cryptovision sc/interface PKCS#11** smartcard library to version **7.1.20**.
- Added configuration parameters for some settings of **smartcard library OpenSC**.

| Registry  | system.kernel.bootparams.intel_iommu  |
| Range     | [On] [Off]                            |

Info: Use IOMMU if possible.

- Added a possibility to configure **scheduled commands**. Registry keys: system.cron.\*\*
- Buddy update** enhancements:

- Automatic load balancing:**

A client collects up to eight server candidates from which one is selected randomly. Collection stops when the number specified in the following registry key is reached. Otherwise collection stops after a timeout.

[More...](#)

|           |                                    |
|-----------|------------------------------------|
| Parameter | Buddy Update Server Candidates     |
| Registry  | update.ftp.buddy_server_candidates |
| Value     | 1                                  |

- Grouping:**

Buddy update servers and clients only interact with each other when they are in the same group determined by the following registry key (a non-negative integer number). This feature is mainly useful when different firmware versions shall be used in parallel.

- Added a package **ldap-utils** which can be used by custom scripts.

## Driver

- Updated **DisplayLink driver** to version **5.1.26**.
- Updated **Philips Speech Driver** to version **12.7.11** - added **support for Philips AirBridge**.
- Added registry keys to modify the Intel graphic driver usage of **framebuffer compression** and **power management**.

New registry keys:

| Parameter | Use framebuffer compression                 |
| Registry  | x.drivers.intel.fbc_setting                 |
| Range     | [Default] [Disable]                         |
| Info:     | "Default" - driver default                  |

- Updated **signotec Citrix Virtual Channel** driver to version **8.0.8**.
- Updated **deviceTRUST Client** to version **19.1.200**. These are the release notes:  
Welcome to the release of the deviceTRUST 19.1.200 IGEL client, providing the context of IGEL thin client and UD Pocket devices into your virtual sessions. This release includes support for logical disks attached to the IGEL endpoint, plus bug fixes and stability improvements over the previous 19.1.100 release.

## Logical Disks

We've added support for real-time properties representing the LOGICAL DISKS attached to the IGEL endpoint. This includes:

[More...](#)

DEVICE\_LOGICALDISK\_X\_TYPE – Either Fixed or Removable.

DEVICE\_LOGICALDISK\_X\_LABEL – The volume label.

DEVICE\_LOGICALDISK\_X\_FILESYSTEM – The type of file system.

DEVICE\_LOGICALDISK\_X\_PATHS – The paths that the disk is mounted.

DEVICE\_LOGICALDISK\_X\_TOTALMB – The total space available on the disk. This property is only available for mounted disks.

DEVICE\_LOGICALDISK\_X\_FREEMB – The free space available on the disk. This property is only available for mounted disks.

DEVICE\_LOGICALDISK\_X\_NAME – The name of the underlying physical disk.

DEVICE\_LOGICALDISK\_X\_VENDORID – The vendor identifier uniquely identifying the manufacturer. This

property is only available for USB or PCI connected devices.

DEVICE\_LOGICALDISK\_X\_PRODUCTID – The product identifier uniquely identifying the product. This property is only available for USB or PCI connected devices.

DEVICE\_LOGICALDISK\_X\_SERIALNUMBER – The serial number of the physical disk.

DEVICE\_LOGICALDISK\_X\_BUSTYPE – The storage bus type linked to the physical disk.

DEVICE\_LOGICALDISK\_COUNT – The number of logical disks.

## X11 system

- Updated Xorg server from 1.19.6 to **1.20.5** version.
- Updated **Virtualbox** from 5.2.18 to **6.0.8** version.
- Updated **Mesa** from 18.2.1 to **19.0.8** version.
- Updated **Nvidia driver** from 410.93 to **418.56** version.
- Updated **Xorg video and input driver** to current upstream versions.
- Added new options for **laptop lid handling** dependent on power supply:  
**More...**

|           |                                                      |
|-----------|------------------------------------------------------|
| Parameter | Lid close action while plugged in                    |
| Registry  | <a href="#">system.actions.lid.ac</a> <sup>453</sup> |
| Range     | [Turn off display] [Suspend]                         |
| Parameter | Lid close action while not plugged in                |
| Registry  | <a href="#">system.actions.lid.battery</a>           |
| Range     | [Turn off display] [Suspend]                         |

- The new **Display Switch tool** can use multiple different profiles, automatically chosen at runtime depending on the currently connected monitors.

A profile is created, when the current monitor layout/resolution is configured via the Display Switch utility. The profile will be associated with the current connected displays automatically (manufacturer, model and used connector are used for allocation) and if applicable, the state of the laptop lid. The setup will be restored by hot-(un)plugging known displays, means the system will automatically switch to the already configured profile.

The Display Switch utility itself got a new interface. All base functionality can be configured via Drag&Drop.

An example workflow:

- Connect the hardware and close/open the lid.
- Open the Display Switch Utility:
  - A quick (simple) setting can be selected directly.
  - Should the desired use case be different from the provided choices, the 'Advanced' button opens a drag&drop interface for further settings.

---

<sup>453</sup> <http://system.actions.lid.ac>

- In this interface the displays can be dragged and dropped for the intended configuration. The display will snap adjacent to others.
  - If a display should not be used, it can be dragged to the 'Disabled' area on the top right - the screen will be reactivated when it is dragged back to the active area.
  - To show the same content on multiple displays, one display should be dragged onto another active screen. The interface will show "Mirror". The mirroring monitor will be displayed on the lower right.
- With the 'Apply' button the current state will be set, with 'Yes' on the "Keep configuration" dialog the current settings will be saved to persistent storage and associated with the profile.
- Advanced functionality (panning/scaling/resolutions) can be configured in drop-down boxes, hidden in a drawer on the right side. The drawer can be expanded by clicking the '<' button on the right edge.
  - For the Display Switch functionality the following parameters should be enabled for proper usage:

[More...](#)

#### IGEL Setup > Accessories > Display Switch > Options

|           |                                                               |
|-----------|---------------------------------------------------------------|
| Parameter | Preserve settings over reboot                                 |
| Registry  | <code>sessions.user_display0.options.preserve_settings</code> |
| Value     | <u>enabled</u> / <u>disabled</u>                              |

#### IGEL Setup > Accessories > Display Switch > Options

|           |                                  |
|-----------|----------------------------------|
| Parameter | Smart display configuration      |
| Registry  | <code>x.auto_associate</code>    |
| Value     | <u>enabled</u> / <u>disabled</u> |

- The **IGEL Display Switch** utility is **now usable for NVIDIA graphics devices** as well.
- Added a new parameter to optionally start with opened '**Advanced**' drawer in **Display Switch**.

#### IGEL Setup > Accessories > Display Switch > Options

|           |                                                               |
|-----------|---------------------------------------------------------------|
| Parameter | Preserve settings over reboot                                 |
| Registry  | <code>sessions.user_display0.options.preserve_settings</code> |
| Value     | <u>enabled</u> / <u>disabled</u>                              |

#### IGEL Setup > Accessories > Display Switch > Options

|           |                                                        |
|-----------|--------------------------------------------------------|
| Parameter | Start with the advanced drawer opened                  |
| Registry  | <code>sessions.user_display0.options.start_open</code> |
| Value     | <u>enabled</u> / <u>disabled</u>                       |

- Added **xprintidle tool** to firmware.
- Added some registry keys to disable loading of **DRM kernel modules** (graphic).

|-----------|-----------------------------------------------|
| Parameter | Disable the loading of the RADEON DRM driver. |
| Registry  | <code>x.drivers.ati.disable</code>            |

|                                                                                                             |                                                  |
|-------------------------------------------------------------------------------------------------------------|--------------------------------------------------|
| Value                                                                                                       | <u>"0"</u>                                       |
| Parameter                                                                                                   | Disable the loading of the AMDGPU DRM driver.    |
| Registry                                                                                                    | x.drivers.amdgpu.disable                         |
| Value                                                                                                       | <u>"0"</u>                                       |
| Parameter                                                                                                   | Disable the loading of the i915 DRM driver.      |
| Registry                                                                                                    | x.drivers.intel.disable                          |
| Value                                                                                                       | <u>"0"</u>                                       |
| Parameter                                                                                                   | Disable the loading of the NVIDIA kernel driver. |
| Registry                                                                                                    | x.drivers.nvidia.disable                         |
| Value                                                                                                       | <u>"0"</u>                                       |
| Parameter                                                                                                   | Disable the loading of the NOUVEAU DRM driver.   |
| Registry                                                                                                    | x.drivers.nouveau.disable                        |
| Value                                                                                                       | <u>"0"</u>                                       |
| Parameter                                                                                                   | Disable the loading of the QXL DRM driver.       |
| Registry                                                                                                    | x.drivers.qxl.disable                            |
| Value                                                                                                       | <u>"0"</u>                                       |
| Parameter                                                                                                   | Disable the loading of the VMGFX DRM driver.     |
| Registry                                                                                                    | x.drivers.vmware.disable                         |
| Value                                                                                                       | <u>"0"</u>                                       |
| Parameter                                                                                                   | Disable the loading of the VBOXVIDEO DRM driver. |
| Registry                                                                                                    | x.drivers.vboxvideo.disable                      |
| Value                                                                                                       | <u>"0"</u>                                       |
| • Added the possibility to <b>change an embedded DisplayPort to a normal DisplayPort.</b><br><b>More...</b> |                                                  |
| Parameter                                                                                                   | Use embedded displayport as normal displayport   |
| Registry                                                                                                    | x.drivers.intel.edp_is_dp                        |
| Range                                                                                                       | [default][enable][disable]                       |

**Info:** Reboot required

#### Java

- Replaced Oracle JRE by **AZUL's Zulu JRE**.
- **Removed** deprecated **Java WebStart** since it is not supported with non-Oracle JRE's.

#### X server

- Updated **Xephyr x session** to version **1.20.5**.

#### Hardware

- Added hardware support for **HP t530**.
- Added hardware support for **HP Compaq Elite 8300**.
- Added hardware support for **HP EliteDesk 800 G3 mini**.
- Added hardware support for **HP EliteDesk 800 G3 SFF**.
- Added hardware support for **HP EliteDesk 800 G1 SFF**.
- Added hardware support for **Fujitsu Esprimo Q957**.
- Added hardware support for **Dell OptiPlex 9020**.
- Added hardware support for **Dell Latitude E6440**.
- Added hardware support for the following headsets:

[More...](#)

Jabra Engage 50;  
 Jabra Engage 65;  
 Jabra Engage 75;  
 Jabra Evolve 30 II (Ver. B);  
 Jabra Evolve 30 II (Ver. C);  
 Jabra Evolve 40 (Ver. B) - USB-C;  
 Jabra Evolve 40 (Ver. D);  
 Jabra Evolve 65;  
 Jabra Evolve 75;  
 Plantronics Voyager 5200 UC;  
 Plantronics Voyager 6200 UC;  
 Plantronics Voyager 8200 UC;  
 Sennheiser SC70.

#### Remote Management / IGEL Cloud Gateway

- **Connection order between UMS and ICG** can now be configured.  
[More...](#)

|           |                                                       |
|-----------|-------------------------------------------------------|
| Parameter | Prefer UMS over ICG                                   |
| Registry  | <code>system.remotemanager.icg_try_ums_connect</code> |
| Value     | <code>enabled</code> / <code>disabled</code>          |

When an ICG connection is configured and the parameter is enabled, the device tries to connect directly to UMS. If the connection was established successfully, the device is managed by UMS and not over ICG until new start of the device or networking.

- **Firmware update scheduled on shutdown** is now invoked **on reboot** as well.
- Added some adaptations in **UMS Agent** concerning **migration to IGEL OS11**.

## Resolved Issues 10.06.100

### Citrix

- Now ica.pnlogin.syncpasswordwithxscrnsrv is removed, **ica.pnlogin.syncpasswordwithxlock** should be used, this provides the same functionality.
- Fixed **online meeting in VDI**: An enabled webcam will not cut the audio streaming anymore.
- Citrix **Workspace App 19.03**: Improved USB redirection handling.
- Custom icons** now are visible **after StoreFront logon** using Citrix authentication method.
- Appropriate icons** arise with IGEL and Citrix authentication.
- Fixed **stability issues** with Citrix Browser Content Redirection.
- Updated the **Nuance virtual channel** for ICA up to version **B301**.

### RDP/IGEL RDP Client 2

- Added **Negotiate:Kerberos as fallback** if NTLM is disabled. This only works if Active Directory/Kerberos Logon is enabled.
- Added registry key to use **rdpglobal window settings for remote apps**.

**More...**

|           |                                                             |
|-----------|-------------------------------------------------------------|
| Parameter | Enable global window settings for remote app                |
| Registry  | rdp.winconnect.enable-global-window-settings-for-remote-app |
| Value     | <u>enabled</u> / <u>disabled</u>                            |

- Fixed **empty warning window** being shown when closing RDP Web Applications started from browser.
- Fixed **smartcard redirection in RDP**: SCardGetAttrib was failing if pbAttr was NULL. The fix should help running Dutch Zorg-ID applications.

### RD Web Access

- Fixed **RD Web Access** not working with **special characters in name or password**. This only works if Active Directory/Kerberos Logon is enabled.
- Fixed **empty warning dialogs** appearing when opening RD Web Application in the browser.
- Fixed **not starting RDP Remote Applications**.

### VMware Horizon

- Fixed **Optimization for Skype for Business**.
- Fixed the configuration choice to use **the relative mouse feature**.

### Parallels Client

- Updated **Parallels Client** to version **16.5.3** (64-Bit).
- Fixed: **Maximized windows** for published applications can be displayed incorrectly.
- Fixed: **Incorrect user credentials** can be picked up during connection if the same farm is registered in the client multiple times and with different user credentials.
- Fixed: Client **did not accept universal printing policies** set from the server.
- Fixed: **Module** opened in the background and **blocked the launcher** in some cases.
- Fixed: **Redirected smartcard** did not work **in a remote session**.
- Fixed: **Printers would not redirect to a remote session** when redirection is enforced via policies.

## PowerTerm

- Fixed **editing** of parameter **sessions.powerterm|<INST>.logindialog.loginscript** in Setup Registry: now multiple lines are possible.
- PowerTerm Terminal Emulation: remove **obsolete SSH type SSH1** and **obsolete SSH cipher DES** from parameter ranges.

## Firefox

- Fixed an issue where **Firefox does not accept proxy credentials** from setup.
- Fixed the **print hotkey disable option** with Firefox 60+.
- Fixed **browserglobal.app.local\_subdirs\_whitelist** not working.
- Fixed **Adobe Flash Player download** possibility.

## Network

- Improved **SCEP client robustness**:
  - The **cert\_agent script** doesn't terminate anymore when a problem occurs (e.g. the SCEP server is unreachable) but tries again after the expiry check interval.
  - When the client certificate has expired, there is still one attempt at renewing it. However, when that fails, a new one is requested. That obviously will fail if the client presents a challenge password that is not valid anymore.
- Restoring **WLAN/WWAN Modem state** after wakeup from standby or reboot.
- Improved **expire time of Ethernet no-link notification**.
- Added all **Ethernet network drivers from OS to LX** version.
- Changed **e1000e driver** to out of tree version **3.4.2.3** directly from Intel.
- Changed **igb driver** to out of tree version **5.3.5.22** directly from Intel.
- Fixed bug: **Failure to reach SCEP server** in the client certificate renewal phase resulted in loss of SCEP server and client certificates.
- SCEP: A change of the **CA fingerprint** setting **does not result in discarding all SCEP data anymore** if the fingerprint matches that of the current CA certificate. Firmware versions before 10.05.100 allowed an empty fingerprint. So, this is meant for users who must belatedly configure the fingerprint in order for client certificate renewal to work.

A change of the **CAIdentifier** setting is not detected immediately and does not result in discarding all current data anymore. The new CAIdentifier will, however, be used in future SCEP operations.

- Fixed **instability with netmounts** with static ip configuration.
- Fixed problems with **windows share mounts**.
- Fixed **MBB router** configuration (broken since 10.05.500).
- Added a possibility to **switch between third-party** and **kernel Intel IGB network driver**.

A new registry key:

|---------------------------------------------|---------------------------------------|
| Parameter                                   | Use thirdparty igb kernel module      |
| Registry                                    | network.drivers.igb.prefer_thirdparty |
| Range                                       | [Auto] [Yes] [No]                     |
| Info: "Auto" (use thirdparty in most cases) |                                       |

- Added a possibility to **switch between thirdparty** and **kernel Intel E1000E network driver**.

A new registry key:

**More...**

|           |                                          |
|-----------|------------------------------------------|
| Parameter | Use thirdparty e1000e kernel module      |
| Registry  | network.drivers.e1000e.prefer_thirdparty |
| Range     | [Auto] [Yes] [No]                        |

Info: "Auto" (use thirdparty in most cases)

- Added a possibility to **switch between thirdparty r8168 and kernel r8169 realtek network driver.**

A new registry key:

**More...**

|           |                                    |
|-----------|------------------------------------|
| Parameter | Use thirdparty r8168 kernel module |
| Registry  | network.drivers.r8169.prefer_r8168 |
| Range     | [Auto] [Yes] [No]                  |

Info: "Auto" (use r8168 in most cases)

- Added a possibility to choose the **variant of the realtek r8168 driver.**

A new registry key:

**More...**

|           |                                                                 |
|-----------|-----------------------------------------------------------------|
| Parameter | Choose realtek r8168 variant (only if "prefer r8168" is chosen) |
| Registry  | network.drivers.r8169.r8168_variant                             |
| Range     | [Default] [No NAPI] [NAPI]                                      |

Info: "Default" (use NAPI in most cases)

- Fixed bug: **Second Ethernet interface** did not get configured when the first one was disabled.
- Fixed **802.1X Ethernet configuration with user interaction.**

## WiFi

- Fixed bug: **WiFi connection to hidden SSID** did not work anymore after re-editing with the Wireless Manager.
- Fixed not working **Broadcom SDIO WLAN cards** as present in Advantech AIM8IAC device for example.

## Smartcard

- Fixed **Dell KB813 Smartcard Keyboard** in combination with certain smart cards driven by OpenSC PKCS#11 module. Before this fix, authentication to Citrix StoreFront and VMWare Horizon failed.
  - Improved **handling of PIV/CAC smart cards** in OpenSC.
  - Updated **cryptovision sc/interface PKCS#11 smart card library** to version **7.1.20**.
- Changes in this revision:
- Fixed **a possible deadlock in the PKCS#11 module** on Linux if C\_Finalize is called during a PCSC event, for example, C\_WaitForSlotEvent.
  - **ROCA check in the Smartcard Manager**, based on the "ROCA detection tool", see <https://github.com/crocs-muni/roca>.
  - **Renaming container label** in Smartcard Manager with F2 now possible.
  - Fixed **OpenSC setting max\_send\_size** for reader driver pcsc in **/etc/opensc/opensc.conf**.

## Application Launcher

- Fixed **confusion in nameserver list** caused by comments in /etc/resolv.conf.

## Base system

- Fixed: **Zotac Zbox will not shutdown.**
- Fixed issues with **gen4/5 Intel graphic driver** in kernel 4.18.20.
- Fixed **Screensaver and Screenlock timeouts** to be independent. This means, if both timeouts are set, the start of Screenlock will not reset the Screensaver timeout any more.
- Fixed **retrieving of serial number of a display.**
- Fixed **playback of AAC coded audio streams** on IGEL Zero products.
- Do not auto-start **UD-Pocket license browser** when the device has a proper license.
- Added possibility to set **intel\_idle.max\_cstate kernel cmdline parameter** with registry keys **to work against Intel CPU freezes.**
- **Enhanced handling of Unit ID.** The persistent Unit ID can be removed with command `get_unit_id -r`. The persistent Unit ID storage can be forced with `get_unit_id -i -f -p` or with `get_unit_id -m` to manually choose a Unit ID from several network interfaces found on the device. Handle with extreme care since the Unit ID is the key for handling the endpoint in UMS.
- Replaced MIT Kerberos clients by **Heimdal Kerberos clients**.
- Improved the buddy update server performance for multiple simultaneous update clients.
- Fixed handling of an "**update on shutdown**" during suspend/resume.
- Fixed **NVIDIA driver kernel warning messages**.
- Allow to **configure NVIDIA graphics cards** (rotation/resolution) **via Setup** again.
- Fixed **shutdown** while IGEL Setup Assistant is shown.
- Fixed **delay in logon** as local user when logon with IGEL Smartcard is also active.
- Fixed **sporadic bootsplash issue**.
- Fixed **suspend/resume hangs** when logged into Citrix sessions.
- Fixed **CPU scaler and volume control applet suspend/resume** issue.
- Added **AppArmor rule** to allow `tcpdump` to write to **/debuglog**.
- Fixed random 90 seconds **shutdown delay** (systemd).
- Fixed **Custom Bootsplash installation**.
- Bugfix: **Create shortcuts** for terminal shutdown, terminal restart and icon sort **directly after reconfiguration**. A reboot is not needed anymore.
- Fixed: **System logoff waits for Citrix logoff** now.
- Fixed **broken custom bootsplash** when doing a reset to factory defaults via UMS.
- Bugfix: **hotkey** setting **needs restart**.
- **IGEL Setup Assistant** will persistently **activate WiFi** when a connection is enabled instead of after finishing it, to preserve settings when UMS sends license and stops it.
- Fixed **AD/Kerberos logon** in case parameter **auth.login.krb5\_enterprise** is **set to 'false'**.
- Added a new registry key to set **USB quirks**:  
**More...**

|           |                                                                                              |
|-----------|----------------------------------------------------------------------------------------------|
| Parameter | Set XHCI USB quirks to fix some hardware issues                                              |
| Registry  | <code>system.kernel.bootparams.xhci-hcd_quirks</code>                                        |
| Range     | [No quirk] [Spurious Reboot quirk] [Spurious Wakeup quirk]<br>[Spurious Reboot Wakeup quirk] |

- **Lenovo ThinkCentre M73** needs the `system.kernel.bootparams.xhci-hcd_quirks` registry key set to "**Spurious Reboot quirk**" to fix reboot after shutdown problem.

- Fixed: **Migration tool** did not start with **Spanish** language setting.
- Disabled **martian packet logging**.

#### Driver

- Updated **deviceTRUST** Client to version **19.1.200**.

#### Bug Fixes:

- Fixed an issue **reading the DEVICE\_IGEL\_ICG\_SERVER** property.
- Fixed an issue where the **NETWORK** and **LOCATION** property providers could **cause the client to freeze** if a disconnection occurred while these property providers were checking for changes.
- Fixed an **open file handle leak** which lead to the client process reaching its file handle limits when left running for a long period of time.
- Fixed not working **WACOM** device **DTU-1141B**.

#### Custom Partition

- Fixed **ownership of extracted data**: Do not preserve owner information while extracting data into custom partition.

#### Storage Devices

- Fixed **auto mounting of storage devices** inside of Olympus DS-9500 Digital Voice Recorder.

#### Appliance Mode

- Fixed bug: **In-session control bar** could not be deactivated **in Citrix SelfService appliance mode**.

#### X11 system

- Fixed **Microsoft Surface Pro 4 screen resolution** issue.
- Fixed the **missing volume control** in the panel when the panel is configured to disappear while the login/lock screen is shown.
- There is now a **registry key to ignore a 3Dconnexion SpaceMouse** for IGEL graphical use (X11). If activated, the SpaceMouse is only passed through to the desktop session. If false, it acts also as the standard mouse.

| 0x046D     | 0xC62B     | Logitech, Inc. | 3Dconnexion SpaceMouse Pro               |
| 0x256F     | **         | 3Dconnexion    | SpaceMouse                               |

- Fixed **screen flicker** in some cases if **Force NumLock On** (x.global.forcenumlock) is active.
- Fixed not working **x.xserver0.screen1.flipscreens** registry key.
- Fixed **problems with internal graphic cards** and **NVIDIA graphic cards**.
- Use **Index** and **Mode** from Advanced mode in Simple Mode **for Display Switch**.
- Fixed **display hotplug failing** on initial lock screen with Active Directory logon.
- The **in-session control bar** now **scales with the current DPI** setting.
- Fixed **Display Switch** utility **not starting with some translations**.
- Fixed an issue with the **noDDC mode** not always working as expected.
- Fixed some **multimonitor (>4) issues with NVIDIA graphic cards**.
- Fixed **monitor screen ID** shown **with NVIDIA NV810 GPU**.
- Fixed a bug with thin clients **reporting the wrong monitor serial number**.

#### Window manager

- Fixed the option to **disable the local window manager**.

#### Audio

- Fixed **bad quality sound over DisplayPort** in a Citrix ICA session or other applications using ALSA API.
- Fixed **jack detection** of the headphone port **in Dell Wyse 3040**.
- Fixed **configuration of default audio output and input**.

#### Media Player (Parole)

- Fixed a problem where **parole media player** would **hang** instead of playing audio **while audio-visualization** is enabled.
- Fixed parole media player **not handling audio hotkeys in fullscreen mode**.

#### Multimedia

- Updated **multimedia codecs to fix freeze** when audio visualization is used.

#### Misc

- **Monitoring Agent** uses now **only the half size of the debuglog partition**.

When the setup option **log\_max\_size** with the option **log\_rotation** creates an overall consumption that is bigger than 50% of the debuglog partition size, the size for each log automatically will be decreased to a value that allows a full rotation which occupies exactly 50% of the partition size.

## Hardware

- Fixed wrongly detected **embedded DisplayPort on Dell Wyse 5070 Extended hardware.**
- Fixed **wakeup from suspend for Lenovo Ideapad 320-15IAP.**
- Fixed not working **network on Beckhoff CB3163, CB6263** and **CB6363** systems.
- Fixed not working **network on Lex 3I380D.**
- Fixed **shutdown issue of Lenovo ThinkCentre M73** (rebooted 2 - 3 seconds after power off).
- Fixed problems with **mouse cursor on Intel cherryview devices.**
- Fixed **detection of Dell Wyse 5070** for the non-extended version.
- Fixed not working **Laptop Display for Dell Latitude E5510.**
- Added a **possibility to change** some **DRM settings** and **limit the DisplayPort lane bandwidth** on Intel devices.

Added new registry keys:

**More...**

|                                                           |                                                                  |
|-----------------------------------------------------------|------------------------------------------------------------------|

| Info: "0" means default setting. Use the default setting. |                                                                  |
| Parameter                                                 | Set graphic kernel driver debug level.                           |
| Registry                                                  | x.drivers.kms.debug_level                                        |
| Range                                                     | [No debug] [Basic] [Basic + core] [Basic + core + atomic] [Full] |
| Info: Warning log will grow very fast.                    |                                                                  |

Only for Intel i915 driver:

|                                               |                                                                                                            |
|-----------------------------------------------|------------------------------------------------------------------------------------------------------------|
| Parameter                                     | Limit the maximum DisplayPort lane link rate.                                                              |
| Registry                                      | x.drivers.intel.max_dp_link_rate                                                                           |
| Range                                         | [ <u>default</u> ] [1.62Gbps] [2.16Gbps] [2.7Gbps] [3.24Gbps]<br>[4.32Gbps] [5.4Gbps] [6.48Gbps] [8.1Gbps] |
| Info: "Default" means hardware default limit. |                                                                                                            |

#### Remote Management / IGEL Cloud Gateway

- Fixed **wallpaper configuration** when ICG protocol is used.
- Fixed **UMS synchronization of configuration** when changes were made in "Emergency mode".
- Fixed sporadic **failures while sending data over ICG**.
- Fixed **removal from UMS** when the device was offline.
- Added: IGEL UMS agent sends **monitor information for maximum eight monitors** now.

#### Caradigm

- Fixed **Horizon session crash**.

## 7.25 Notes for Release 10.05.830

## General Information 10.05.830

The following clients and features are not supported anymore:

- Citrix Receiver 12.1 and 13.1 - 13.4;
- Citrix Access Gateway Standard Plug-in;
- Dell vWorkspace Connector for Linux;
- Ericom PowerTerm Emulation 9 and 11;
- Ericom Webconnect;
- IGEL Legacy RDP Client (rdesktop);
- Virtual Bridges VERDE Client;
- PPTP VPN Support;
- IGEL Upgrade License Tool with IGEL Smartcard Token;
- Remote Management by setup.ini file transfer (TFTP);
- Remote Access via RSH;
- Legacy Philips Speech Driver;
- t-Systems TCOS Smartcard Support;
- DUS Series touchscreens;
- Elo serial touchscreens;
- IGEL smartcard without locking desktop;
- Video Hardware Acceleration Support is discontinued on UD3-LX 42, UD3-LX 41, UD3-LX 40 (M320C/M330C) and UD10-LX Touch 10, UD10-LX 10;
- H.264 Hardware Acceleration Support is discontinued on UD3-LX 42, UD3-LX 41, UD3-LX 40 (M320C/M330C) and UD10-LX Touch 10, UD10-LX 10;
- Storage Hotplug devices are not automatically removed anymore, instead they must be always ejected manually:
  - by panel tray icon;
  - by an icon in the 'In-Session Control Bar' (configurable at **IGEL Setup > User Interface > Desktop**);
  - by a 'Safely Remove Hardware' session (configurable at **IGEL Setup > Accessories**).

The following clients and features are not available in this release:

- Cherry eGK Channel;
- Open VPN Smartcard Support;
- Asian Input Methods;
- Composite Manager.

## Known Issues 10.05.830

### Citrix

- With activated DRI3 and an AMD GPU, Citrix **H.264 acceleration** plugin could **freeze**. Selective H.264 mode (API v2) is not affected from this issue.
- Citrix has known issues with **gstreamer1.0** which describe problems with **multimedia redirection of H264, MPEG1 and MPEG2**. GStreamer 1.0 is used if browser content redirection is active.
- **Browser content redirection** does not work with **activated DRI3** and hardware accelerated **H.264 deep compression codec**.
- Citrix **StoreFront** login with **Gemalto smartcard middleware** does not detect smartcard correctly if the card is **inserted after start** of Login.  
As a workaround, insert the smartcard before starting StoreFront login.
- When using **Citrix Workspace App 18.10** in combination with **Philips Speech** driver, the session occasionally terminates improperly at logout and hangs.  
As a workaround, the usage of **Citrix Receiver 13.10** is recommended when Philips Speech driver is needed.
- Citrix **H.264 acceleration plugin** does not work with **enabled** server policy "Optimize for 3D graphics workload" in combination with server policy "Use video codec compression" > "For the entire screen".
- When **Expand the session over a self-selected number of monitors** (for **Multimonitor full-screen mode**) is used and Setup is restarted, **Restrict full-screen session to one monitor** is indicated and the monitor selection is greyed out. The functionality is available, only the notification in setup is broken.
- To launch **multiple desktop sessions** with **Citrix HDX RTME** and **Citrix H.264 acceleration plugin**, the following registry key must be enabled:  
[More...](#)

|           |                                                                  |
|-----------|------------------------------------------------------------------|
| Parameter | Activate workaround for dual RTME sessions and H264 acceleration |
| Registry  | ica.workaround-dual-rtme                                         |
| Range     | enabled / <u>disabled</u>                                        |

This workaround is not applicable when "Enable Secure ICA" is active for the specific delivery group.

### VMware Horizon

- **External drives** mounted already before connection **do not appear in the remote desktop**.  
Workaround: map the directory /media as a drive. Then the external devices will show up inside the media drive.
- **Client drive mapping** and **USB redirection for storage devices** should not be enabled both at the same time.
  - On the one hand, if you want to use **USB redirection** for your storage devices: Note that the **USB on-insertion feature** is only working if the **client drive mapping** is switched off.

In the IGEL Setup client, **drive mapping** can be found under **Sessions > Horizon Client > Horizon Client Global > Drive Mapping > Enable drive mapping**.

It is also recommended to disable local **Storage Hotplug** under Setup > **Devices > Storage Devices > Storage Hotplug**.

- On the other hand, if you use **drive mapping** instead, it is recommended to either **switch off USB redirection entirely** or at least to **deny storage devices** by adding a filter to the USB class rules.

Furthermore, Horizon Client relies on the OS to mount the storage device itself. Enable local **Storage Hotplug** under Setup >**Devices > Storage Devices > Storage Hotplug**.

#### Parallels Client

- **Native USB redirection does not work** with Parallels Client.
- For using the new **FIPS 140-2 compliance mode** it is necessary to connect to the **Parallels RAS** one time with FIPS support disabled.

#### Smartcard

- In some cases, there are instabilities when using **A.E.T. SafeSign smartcards**.

#### Appliance Mode

- Appliance mode **RHEV/Spice**: spice-xpi Firefox plugin is no longer supported. The **Console Invocation** has to allow **Native client** (auto is also possible) and it should start in fullscreen to prevent opening windows.

#### Hardware

- Suspend on **UD10** is disabled.

### New Features 10.05.830

#### Citrix

- Added support for **Citrix Workspace Launcher** functionality as described at <https://support.citrix.com/article/CTX237727>.
- Updated **Citrix HDX RTME** used for optimization of Skype for Business to version **2.8.0-2235**.
- Integrated **Citrix Workspace App 19.03**.
- Added: new registry key supports **1536-bit RSA keys for client authentication**.  
**More...**

|           |                                       |
|-----------|---------------------------------------|
| Parameter | Enable RSA 1536 cipher suite          |
| Registry  | ica.allregions.enabl_rsa_1536         |
| Range     | <u>factory default</u> / false / true |

- Added: new registry key to enable different **cipher suites client authentication**.  
**More...**

|           |                                 |
|-----------|---------------------------------|
| Parameter | Enables different cipher suites |
|-----------|---------------------------------|

|                                                 |                                          |
|-------------------------------------------------|------------------------------------------|
| Registry                                        | <code>ica.allregions.sslciphers</code>   |
| Range                                           | <u>factory default</u> / ALL / GOV / COM |
| <b>Info:</b>                                    |                                          |
| TLS_ECDHE_RSA_WITH_AES_256_GCM_SHA384 – GOV/ALL |                                          |
| TLS_ECDHE_RSA_WITH_AES_256_GCM_SHA384 – GOV/ALL |                                          |
| TLS_ECDHE_RSA_WITH_AES_128_CBC_SHA – COM/ALL    |                                          |

## VMware Horizon

- Added possibility to easily evaluate **Horizon Blast decoder states**. By default, sessions are evaluated after the use and the result is put to the journal log. But it can also be used with GUI notifications at runtime.

## Driver

- Added registry keys to modify the Intel graphic driver usage of **framebuffer compression** and **power management**.

New registry keys:

[More...](#)

|                                         |                                                    |
|-----------------------------------------|----------------------------------------------------|
| Parameter                               | Power saving display C-States to use.              |
| Registry                                | <code>x.drivers.intel.dc_setting</code>            |
| Range                                   | <u>[Default]</u> [Disable] [Up to DC5] [Up to DC6] |
| <b>Info:</b> "Default" - driver default |                                                    |
| Parameter                               | Use framebuffer compression.                       |
| Registry                                | <code>x.drivers.intel.fbc_setting</code>           |
| Range                                   | <u>[Default]</u> [Disable]                         |
| <b>Info:</b> "Default" - driver default |                                                    |

## X11 system

- Added some registry keys to disable loading of **DRM kernel modules** (graphic).

New registry keys:

[More...](#)

|           |                                               |
|-----------|-----------------------------------------------|
| Parameter | Disable the loading of the RADEON DRM driver. |
| Registry  | <code>x.drivers.ati.disable</code>            |
| Value     | <u>"0"</u>                                    |
| Parameter | Disable the loading of the AMDGPU DRM driver. |

|           |                                                  |
|-----------|--------------------------------------------------|

## Resolved Issues 10.05.830

### Firefox

- Fixed not working **browserglobal.app.local\_subdirs\_whitelist**.
- Fixed **print hotkey disable** option with Firefox 60+.

### RDP/IGEL RDP Client 2

- Fixed **smart card redirection in RDP: SCardGetAttrib** was failing if **pbAttr** was NULL. The fix should help running Dutch Zorg-ID applications.

### VMware Horizon

- Fixed: the configuration choice to **use the relative mouse feature**.

### Citrix

- Citrix Workspace App 19.03: Improved **USB redirection handling**.
- Issue solved: **Online meeting in VDI**: "enable webcam will cut the audio streaming".
- Fixed **stability issues** with Citrix Browser Content Redirection.

## Citrix Receiver 13

- Added a switch to enable the **possibility to launch multiple desktop sessions** with **RTME** and **H264 acceleration**. This switch should not be used when "Enable Secure ICA" is active for the specific delivery group.

**More...**

|          |                           |
|----------|---------------------------|
| Registry | ica.workaround-dual-rtme  |
| Value    | enabled / <u>disabled</u> |

## Network

- Fixed: The **second Ethernet interface** did not get configured when the first one was disabled.
- Added a possibility to switch between the third party **r8168** and **kernel r8169 realtek network driver**.

New registry key:

**More...**

|                                        |                                     |
|----------------------------------------|-------------------------------------|
| Parameter                              | Use thirdparty r8168 kernel module. |
| Registry                               | network.drivers.r8169.prefer_r8168  |
| Range                                  | [Auto] [Yes] [No]                   |
| Info: "Auto" (use r8169 in most cases) |                                     |

- Added a possibility to **choose the variant of the realtek r8168 driver**.

New registry key:

|                                          |                                                                       |
|------------------------------------------|-----------------------------------------------------------------------|
| Parameter                                | Choose realtek r8168 variant (only if <b>prefer r8168</b> is chosen). |
| Registry                                 | network.drivers.r8169.r8168_variant                                   |
| Range                                    | [Default] [No NAPI] [NAPI]                                            |
| Info: "Default" (use NAPI in most cases) |                                                                       |

## Base system

- Fixed: **System logout** waits for Citrix logout now.
- Fixed: **Migration tool** did not start with the **Spanish** language setting.
- Added new registry key to set **USB quirks**.

**More...**

|           |                                                  |
|-----------|--------------------------------------------------|
| Parameter | Set XHCI USB quirks to fix some hardware issues. |
| Registry  | system.kernel.bootparams.xhci-hcd_quirks         |

|       |                                                                                              |
|-------|----------------------------------------------------------------------------------------------|
| Range | [No quirk] [Spurious Reboot quirk] [Spurious Wakeup quirk]<br>[Spurious Reboot Wakeup quirk] |
|-------|----------------------------------------------------------------------------------------------|

- **Lenovo ThinkCentre M73** needs the system.kernel.bootparams.xhci-hcd\_quirks registry key set to "Spurious Reboot quirk" to fix reboot after shutdown problem.

X11 system

- There is now a **registry key to ignore a 3Dconnexion SpaceMouse** for IGEL graphical use (X11). If activated, the SpaceMouse is only passed through to the desktop session. If disabled, it acts also as the standard mouse.

| 0x256F | **     | 3Dconnexion    | SpaceMouse                               |

- **USB device reset** via USB powercycle is now available on **UD6/UD7**.
- Fixed problems with **internal graphic cards** and **NVIDIA graphic cards**.
- Fixed **Display Switch** utility not starting with some translations.
- Fixed an issue with the **noDDC mode** not always working as expected.
- Fixed some **multimonitor** (>4) issues with **Nvidia** graphic cards.
- Updated **DisplayLink driver** to version **5.1.26** to solve some startup issues.

Driver

- Fixed not working **WACOM** device **DTU-1141B**.

Hardware

- Fixed **not working network** on Beckhoff CB3163, CB6263 and CB6363 systems.
- Fixed **not working network** on Lex 3I380D.
- Fixed **black screen issue** with some monitors and 2560x1440 resolution (occurred on UD2 LX50).
- Added possibility to **change** some **DRM settings** and limit the **DisplayPort lane bandwidth** on Intel devices.
- Added new registry keys:

|-------|---------------------------------------------------------------------------------------------------|
| Range | [default] [1.62Gbps] [2.16Gbps] [2.7Gbps] [3.24Gbps]<br>[4.32Gbps] [5.4Gbps] [6.48Gbps] [8.1Gbps] |
|-------|---------------------------------------------------------------------------------------------------|

Info: "Default" means hardware default limit.

## Security Fixes 10.05.830

### Firefox

- Updated Mozilla **Firefox** to version **60.7.2 ESR**.
- Fixed **mfsa2019-19** security issue CVE-2019-11708.
- Fixed **mfsa2019-18** security issue CVE-2019-11707.
- Fixed **mfsa2019-10** security issues CVE-2019-9810 and CVE-2019-9813.
- Fixed **mfsa2019-08** security issues.

[More...](#)

CVE-2019-9790, CVE-2019-9791, CVE-2019-9792, CVE-2019-9793,  
CVE-2019-9795, CVE-2019-9796, CVE-2018-18506, CVE-2019-9788.

- Fixed **mfsa2019-05** security issues CVE-2018-18356 and CVE-2019-5785.
- Fixed **mfsa2019-02** security issues CVE-2018-18500, CVE-2018-18505 and CVE-2018-18501.
- Fixed **mfsa2018-30** security issues.

[More...](#)

CVE-2018-17466, CVE-2018-18492, CVE-2018-18493,  
CVE-2018-18494, CVE-2018-18498, CVE-2018-12405.

### Base system

- Fixed kernel TCP vulnerabilities **CVE-2019-11477**: SACK Panic, **CVE-2019-11478**: SACK Slowness and **CVE-2019-11479**: Excess Resource Consumption Due to Low MSS Values.
- Changed **minimally allowed MSS size** to '1000' to prevent possible Denial-of-Service attacks.
- Updated **libwebkit2gtk-4.0-37** to version **1.24.2**.

## Component Versions 10.05.830

- **Clients**

| <b>Product</b>                     | <b>Version</b>                  |
|------------------------------------|---------------------------------|
| Citrix HDX Realtime Media Engine   | 2.8.0-2235                      |
| Citrix Receiver                    | 13.10.0.20                      |
| Citrix Receiver                    | 13.5.0.10185126                 |
| Citrix Workspace App               | 19.3.0.5                        |
| deviceTRUST Citrix Channel         | 19.1.200.2                      |
| Ericom PowerTerm                   | 12.0.1.0.20170219.2-_dev_-34574 |
| Evidian AuthMgr                    | 1.5.6840                        |
| Evince PDF Viewer                  | 3.18.2-1ubuntu4.3               |
| FabulaTech USB for Remote Desktop  | 5.2.29                          |
| Firefox                            | 60.7.2                          |
| IBM iAccess Client Solutions       | 1.1.8.1                         |
| IGEL RDP Client                    | 2.2                             |
| Imprivata OneSign ProveID Embedded |                                 |
| deviceTRUST RDP Channel            | 19.1.200.2                      |
| Leostream Java Connect             | 3.3.7.0                         |
| NCP Secure Enterprise Client       | 5.10_rev40552                   |
| NX Client                          | 5.3.12                          |
| Open VPN                           | 2.3.10-1ubuntu2.1               |

|                                         |                         |
|-----------------------------------------|-------------------------|
| Oracle JRE                              | 1.8.0_202               |
| Parallels Client (64 bit)               | 16.5.2.20595            |
| Remote Viewer (RedHat Virtualization)   | 7.0-igel47              |
| Spice GTK (Red Hat Virtualization)      | 0.35                    |
| Spice Protocol (Red Hat Virtualization) | 0.12.14                 |
| Usbredir (Red Hat Virtualization)       | 0.8.0                   |
| Systancia AppliDis                      | 4.0.0.17                |
| ThinLinc Client                         | 4.9.0-5775              |
| ThinPrint Client                        | 7.5.88                  |
| Totem Media Player                      | 2.30.2                  |
| Parole Media Player                     | 1.0.1-0ubuntu1igel16    |
| VNC Viewer                              | 1.8.0+git20180123-igel1 |
| VMware Horizon Client                   | 4.10.0-11053294         |
| Voip Client Ekiga                       | 4.0.1                   |

- **Dictation**

|                                           |          |
|-------------------------------------------|----------|
| Diktamen driver for dictation             |          |
| Grundig Business Systems dictation driver |          |
| Nuance Audio Extensions for dictation     | B048     |
| Olympus driver for dictation              | 20180621 |
| Philips Speech Driver                     | 12.6.36  |

- **Signature**

|                           |          |

|-------------------|------|
| Cisco JVDI Client | 12.1 |
|-------------------|------|

## General Information 10.05.830

The following clients and features are not supported anymore:

- Citrix Receiver 12.1 and 13.1-13.4
- Citrix Access Gateway Standard Plug-in
- Dell vWorkspace Connector for Linux
- Ericom PowerTerm Emulation 9 and 11
- Ericom Webconnect
- IGEL Legacy RDP Client (rdesktop)
- Virtual Bridges VERDE Client
- PPTP VPN Support
- IGEL Upgrade License Tool with IGEL Smartcard Token
- Remote Management by setup.ini file transfer (TFTP)
- Remote Access via RSH
- Legacy Philips Speech Driver
- t-Systems TCOS Smartcard Support
- DUS Series touchscreens
- Elo serial touchscreens
- IGEL smartcard without locking desktop
- VIA Graphics Support
- Storage Hotplug devices are not automatically removed anymore, instead they must be always ejected manually:

- by panel tray icon;
- by an icon in the 'In-Session Control Bar' (configurable at **IGEL Setup > User Interface > Desktop**);
- by a 'Safely Remove Hardware' session (configurable at **IGEL Setup > Accessories**).

The following clients and features are not available in this release:

- Cherry eGK Channel
- Open VPN Smartcard Support
- Asian Input Methods
- Composite Manager

## Known Issues 10.05.830

### Citrix

- With activated **DRI3** and an AMD GPU Citrix **H264 acceleration plugin** could **freeze**. Selective H.264 mode (API v2) is not affected from this issue.
- Citrix has known issues with **GStreamer 1.0** which describe problems with **multimedia redirection** of H264, MPEG1 and MPEG2. GStreamer 1.0 is used if browser content redirection is active.
- Browser content redirection does not work with **activated DRI3** and hardware accelerated **H.264 deep compression codec**.
- Citrix **StoreFront Login** with **Gemalto smartcard middleware** does not detect smartcard correctly if the card is inserted after start of login.  
As a workaround, insert the smartcard before starting StoreFront Login.
- When using **Citrix Workspace App 18.10** in combination with **Philips Speech driver**, the **session** occasionally **terminates improperly at logout** and hangs.  
As a workaround, the usage of Citrix Receiver 13.10 is recommended when Philips Speech driver is needed.
- **Citrix H264 acceleration plugin** does not work with **enabled** server policy "Optimize for 3D graphics workload" in combination with server policy "Use video codec compression" > "For the entire screen".
- When "Expand the session over a self-selected number of monitors" (for "Multimonitor full-screen mode") is used and Setup is restarted, "Restrict full-screen session to one monitor" is indicated and the **monitor selection** is **greyed out**. The functionality is available, only the notification in Setup is broken.
- To launch **multiple desktop sessions** with Citrix HDX RTME and Citrix H.264 acceleration plugin, the following **registry key** must be enabled:  
**More...**

|           |                                                                  |
|-----------|------------------------------------------------------------------|
| Parameter | Activate workaround for dual RTME sessions and H264 acceleration |
| Registry  | ica.workaround-dual-rtme                                         |
| Range     | enabled / <u>disabled</u>                                        |

This workaround is not applicable when "Enable Secure ICA" is active for the specific delivery group.

#### VMware Horizon

- **External drives** mounted already before connection **do not appear in the remote desktop**.  
Workaround: map the directory /media as a drive. Then the external devices will show up inside the media drive.
- **Client drive mapping** and **USB redirection for storage devices** should not be enabled both at the same time.
  - On the one hand, if you want to use **USB redirection** for your storage devices, you should note that the **USB on-insertion feature** is only working if the **client drive mapping** is switched off.  
In the **IGEL Setup** client drive mapping can be found under **Sessions > Horizon Client > Horizon Client Global > Drive Mapping > Enable Drive Mapping**.  
It is also recommended to **disable** local **Storage Hotplug** under Setup > **Devices > Storage Devices > Storage Hotplug**.
  - On the other hand, if you use **drive mapping** instead, it is recommended to either **switch off USB redirection** entirely or at least to **deny storage devices** by adding a filter to the USB class rules. Furthermore, since Horizon Client relies on the OS to mount the storage devices itself, go to Setup > **Devices > Storage Devices > Storage Hotplug**, enable **dynamic drive mapping** and put **number of storage hotplug devices** to at least **1**.

#### Parallels Client

- **Native USB redirection** does not work with Parallels Client.
- For using the new **FIPS 140-2 compliance mode**, it is necessary to connect to the **Parallels RAS** one time with FIPS support disabled.

#### Smartcard

- In some cases, there are instabilities when using **A.E.T. SafeSign smartcards**.

#### Appliance Mode

- Appliance mode **RHEV/Spice**: spice-xpi firefox plugin is no longer supported. The **Console Invocation** has to allow **Native client** (auto is also possible) and it should start in fullscreen to prevent opening windows.

#### Base system

- **Display resolution and rotation** could not be changed with NVIDIA GPU driver via tcsetup.

#### Multimedia

- **Multimedia redirection** with **GStreamer** could fail with Nouveau GPU driver.

## New Features 10.05.830

#### Citrix

- Added support for **Citrix Workspace Launcher** functionality as described at <https://support.citrix.com/article/CTX237727>.
- Updated **Citrix HDX RTME** used for optimization of Skype for Business to version **2.8.0-2235**.

- Integrated **Citrix Workspace App 19.03**.
- Added: new registry key supports **1536-bit RSA keys for client authentication**.

#### VMware Horizon

- Added possibility to easily evaluate **Horizon Blast decoder states**. By default, sessions are evaluated after the use and the result is put to the journal log. But it can also be used with GUI notifications at runtime.

#### Driver

- Added registry keys to modify the Intel graphic driver usage of **framebuffer compression** and **power management**.

New registry keys:

## X11 system

- Added some registry keys to disable loading of **DRM kernel modules** (graphic).

New registry keys:

|           |                                                  |
|-----------|--------------------------------------------------|
| Parameter | Disable the loading of the RADEON DRM driver.    |
| Registry  | x.drivers.ati.disable                            |
| Value     | <u>"0"</u>                                       |
| Parameter | Disable the loading of the AMDGPU DRM driver.    |
| Registry  | x.drivers.amdgpu.disable                         |
| Value     | <u>"0"</u>                                       |
| Parameter | Disable the loading of the i915 DRM driver.      |
| Registry  | x.drivers.intel.disable                          |
| Value     | <u>"0"</u>                                       |
| Parameter | Disable the loading of the NVIDIA kernel driver. |
| Registry  | x.drivers.nvidia.disable                         |
| Value     | <u>"0"</u>                                       |
| Parameter | Disable the loading of the NOUVEAU DRM driver.   |
| Registry  | x.drivers.nouveau.disable                        |
| Value     | <u>"0"</u>                                       |
| Parameter | Disable the loading of the QXL DRM driver.       |
| Registry  | x.drivers.qxl.disable                            |
| Value     | <u>"0"</u>                                       |
| Parameter | Disable the loading of the VMGFX DRM driver.     |
| Registry  | x.drivers.vmware.disable                         |
| Value     | <u>"0"</u>                                       |
| Parameter | Disable the loading of the VBOXVIDEO DRM driver. |

|          |                             |
|----------|-----------------------------|
| Registry | x.drivers.vboxvideo.disable |
| Value    | <u>"0"</u>                  |

## IBM\_5250

- Improved **startup time** of IBM iAccess Client.
- Improved **configuration** of IBM iAccess Client **via IGEL Setup**.

**More...**

## Resolved Issues 10.05.830

### Firefox

- Fixed not working **browserglobal.app.local\_subdirs\_whitelist**.
- Fixed **print hotkey disable** option with Firefox 60+.

## RDP/IGEL RDP Client 2

- Fixed **smart card redirection in RDP: SCardGetAttrib** was failing if **pbAttr** was NULL. The fix should help running Dutch Zorg-ID applications.

## VMware Horizon

- Fixed: the configuration choice to **use the relative mouse feature**.

## Citrix

- Citrix Workspace App 19.03: Improved **USB redirection handling**.
- Issue solved: **Online meeting in VDI**: "enable webcam will cut the audio streaming".
- Fixed **stability issues** with Citrix Browser Content Redirection.

## Citrix Receiver 13

- Added a switch to enable the **possibility to launch multiple desktop sessions** with **RTME** and **H264 acceleration**. This switch should not be used when "Enable Secure ICA" is active for the specific delivery group.

**More...**

|          |                                  |
|----------|----------------------------------|
| Registry | ica.workaround-dual-rtme         |
| Value    | <u>enabled</u> / <u>disabled</u> |

## Network

- Fixed: The **second Ethernet interface** did not get configured when the first one was disabled.
- Added a possibility to switch between the third party **r8168** and **kernel r8169 realtek network driver**.

New registry key:

**More...**

|                                        |                                     |
|----------------------------------------|-------------------------------------|
| Parameter                              | Use thirdparty r8168 kernel module. |
| Registry                               | network.drivers.r8169.prefer_r8168  |
| Range                                  | [Auto] [Yes] [No]                   |
| Info: "Auto" (use r8169 in most cases) |                                     |

- Added a possibility to **choose the variant of the realtek r8168 driver**.

New registry key:

**More...**

|------------------------------------------|-----------------------------------------------------------------------|
| Parameter                                | Choose realtek r8168 variant (only if <b>prefer r8168</b> is chosen). |
| Registry                                 | network.drivers.r8169.r8168_variant                                   |
| Range                                    | [Default] [No NAPI] [NAPI]                                            |
| Info: "Default" (use NAPI in most cases) |                                                                       |

## Base system

- Fixed: **System logout** waits for Citrix logout now.
- Fixed: **Migration tool** did not start with the **Spanish** language setting.
- Added new registry key to set **USB quirks**.

|           |                                                                                                       |
|-----------|-------------------------------------------------------------------------------------------------------|
| Parameter | Set XHCI USB quirks to fix some hardware issues.                                                      |
| Registry  | system.kernel.bootparams.xhci-hcd_quirks                                                              |
| Range     | [ <u>No quirk</u> ] [Spurious Reboot quirk] [Spurious Wakeup quirk]<br>[Spurious Reboot Wakeup quirk] |

- **Lenovo ThinkCentre M73** needs the system.kernel.bootparams.xhci-hcd\_quirks registry key set to "Spurious Reboot quirk" to fix reboot after shutdown problem.

## X11 system

- There is now a **registry key to ignore a 3Dconnexion SpaceMouse** for IGEL graphical use (X11). If activated, the SpaceMouse is only passed through to the desktop session. If disabled, it acts also as the standard mouse.

| 0x256F | **     | 3Dconnexion    | SpaceMouse                               |

- **USB device reset** via USB powercycle is now available on **UD6/UD7**.
- Fixed problems with **internal graphic cards** and **NVIDIA graphic cards**.
- Fixed **Display Switch** utility not starting with some translations.
- Fixed an issue with the **noDDC mode** not always working as expected.
- Fixed some **multimonitor** (>4) issues with **Nvidia** graphic cards.
- Updated **DisplayLink driver** to version **5.1.26** to solve some startup issues.

#### Driver

- Fixed not working **WACOM** device **DTU-1141B**.

#### Hardware

- Fixed **not working network** on Beckhoff CB3163, CB6263 and CB6363 systems.
- Fixed **not working network** on Lex 3I380D.
- Fixed **black screen issue** with some monitors and 2560x1440 resolution (occurred on UD2 LX50).
- Added possibility to **change** some **DRM settings** and limit the **DisplayPort lane bandwidth** on Intel devices.
- Added new registry keys:

## Security Fixes 10.05.830

### Firefox

- Updated Mozilla **Firefox** to version **60.7.2 ESR**.
- Fixed **mfsa2019-19** security issue CVE-2019-11708.
- Fixed **mfsa2019-18** security issue CVE-2019-11707.
- Fixed **mfsa2019-10** security issues CVE-2019-9810 and CVE-2019-9813.
- Fixed **mfsa2019-08** security issues.

[More...](#)

CVE-2019-9790, CVE-2019-9791, CVE-2019-9792, CVE-2019-9793, CVE-2019-9795, CVE-2019-9796, CVE-2018-18506, CVE-2019-9788.

- Fixed **mfsa2019-05** security issues CVE-2018-18356 and CVE-2019-5785.
- Fixed **mfsa2019-02** security issues CVE-2018-18500, CVE-2018-18505 and CVE-2018-18501.
- Fixed **mfsa2018-30** security issues.

[More...](#)

CVE-2018-17466, CVE-2018-18492, CVE-2018-18493, CVE-2018-18494, CVE-2018-18498, CVE-2018-12405.

### Base system

- Fixed kernel TCP vulnerabilities CVE-2019-11477: **SACK Panic**, CVE-2019-11478: **SACK Slowness** and CVE-2019-11479: **Excess Resource Consumption Due to Low MSS Values**.
- Changed **minimally allowed MSS size** to '1000' to prevent possible denial-of-service attacks.
- Updated **libwebkit2gtk-4.0-37** to version **1.24.2**.

## General Information 10.05.800

The following clients and features are not supported anymore

- Citrix Receiver 12.1 and 13.1 - 13.4
- Citrix Access Gateway Standard Plug-in
- Dell vWorkspace Connector for Linux
- Ericom PowerTerm Emulation 9 and 11
- Ericom Webconnect
- IGEL Legacy RDP Client (rdesktop)
- Virtual Bridges VERDE Client
- PPTP VPN Support
- IGEL Upgrade License Tool with IGEL Smartcard Token
- Remote Management by setup.ini file transfer (TFTP)
- Remote Access via RSH
- Legacy Philips Speech Driver
- t-Systems TCOS Smartcard Support
- DUS Series touch screens
- Elo serial touch screens
- IGEL Smartcard without locking desktop
- Video Hardware Acceleration Support is discontinued on UD3-LX 42, UD3-LX 41, UD3-LX 40 (M320C/M330C) and UD10-LX Touch 10, UD10-LX 10
- H.264 Hardware Acceleration Support is discontinued on UD3-LX 42, UD3-LX 41, UD3-LX 40 (M320C/M330C) and UD10-LX Touch 10, UD10-LX 10
- Storage Hotplug devices are not automatically removed anymore, instead they must be always ejected manually:
  - by panel tray icon
  - by an icon in the 'In-Session Control Bar' (configurable at **IGEL Setup > User Interface > Desktop**)
  - by a 'Safely Remove Hardware' session (configurable at **IGEL Setup > Accessories**)

The following clients and features are not available in this release

- Cherry eGK Channel
- Open VPN Smartcard Support
- Asian Input Methods
- Composite Manager

## Known Issues 10.05.800

### Citrix

- With **activated DRI3** and an **amd gpu** citrix **H.264 acceleration** plugin could **freeze**. Selective H.264 mode (api v2) is not affected from this issue.
- Citrix has known issues with **gstreamer1.0** which describe problems with **multimedia redirection of H264, MPEG1 and MPEG2**. Gstreamer1.0 is used if browser content redirection is active.
- **Browser content redirection** does not work with **activated DRI3** and hardware accelerated **H.264 deep compression codec**.

- Citrix **StoreFront** login with **Gemalto smartcard middleware** does not detect smartcard correctly if the card is **inserted after start** of Login.  
As a workaround, insert the smartcard before starting StoreFront login.
- When using **Citrix Workspace App 18.10** in combination with **Philips Speech** driver, the session occasionally **does not proper terminate** at logoff and hangs.  
As a workaround, usage of **Citrix Receiver 13.10** is recommended when Philips Speech driver is needed.
- Citrix **H.264 acceleration plugin** does not work with **enabled** server policy **Optimize for 3D graphics workload** in combination with server policy **Use video codec compression** > \*\*For the entire screen\*\*.
- When **Expand the session over a self-selected number of monitors** (for **Multi-monitor full screen mode**) is used and setup is restarted, **Restrict full screen session to one monitor** is indicated and the **monitor selection is greyed out**. The functionality is available, only the notification in setup is broken.

#### VMware Horizon

- **External drives** mounted already before connection **do not appear in the remote desktop**.  
Workaround: map the directory /media as a drive in your desktop. Then the external devices will show up inside the media drive.
- **Client drive mapping** and **USB redirection for storage devices** should not be enabled both at the same time.
  - On the one hand, if you want to use **USB redirection** for your storage devices: Note that the **USB on-insertion feature** is only working if the **client drive mapping is switched off**.  
In the **IGEL Setup** client drive mapping can be found in: **Sessions > Horizon Client > Horizon Client Global > Drive Mapping > Enable Drive Mapping**.  
It is also recommended to **disable local Storage Hotplug**: On page **Devices > Storage Devices > Storage Hotplug**, put **number** of storage hotplug devices to **0**.
  - On the other hand, if you use **drive mapping** instead, it is recommended that you should either **switch off USB redirection entirely** or at least **deny storage devices** by adding a filter to the USB class rules. And because Horizon Client relies on the OS to mount the storage devices itself, please go to setup page: **Devices > Storage Devices > Storage Hotplug** and switch on **Enable dynamic drive mapping** and put **Number of storage hotplug devices** to at least **1**.

#### Parallels Client

- **Native USB redirection does not work** with Parallels Client.
- For using the new **FIPS 140-2 compliance mode** it is necessary to connect to the **Parallels RAS** one time with FIPS support disabled.

#### Smartcard

- In some cases there are instabilities when using **A.E.T. SafeSign smartcards**.

#### Appliance Mode

- Appliance mode **RHEV/Spice**: spice-xpi firefox plugin is no longer supported. The **Console Invocation** has to allow **Native client** (auto is also possible) and it should start in fullscreen to prevent opening windows.

## Hardware

- Suspend on **UD10** is disabled.

## New Features 10.05.800

### OS 11 Upgrade

- It is now possible to **upgrade to IGEL OS 11**. For more information, please see [Upgrading IGEL Devices from IGEL OS 10 to IGEL OS 11](#)(see page 174). The parameters for the upgrade:

## Firefox

- Updated **Mozilla Firefox to version 60.6.2ESR**: Repaired certificate chain to re-enable web extensions that had been disabled.

## Network

- Added **NCP Secure Enterprise** VPN Client version **5.10\_rev40552**: Configurable at IGEL Setup > Network > VPN > NCP VPN Client

## Driver

- Updated **deviceTRUST Client to version 19.1.200**. These are the release notes: Welcome to the release of the deviceTRUST 19.1.200 IGEL client, providing the context of IGEL thin client and UD Pocket devices into your virtual sessions. This release includes support for logical disks attached to the IGEL endpoint, plus bug fixes and stability improvements over the previous 19.1.100 release.

### Logical Disks

Added support for real-time properties representing the LOGICAL DISKS attached to the IGEL endpoint.

#### This includes...

- DEVICE\_LOGICALDISK\_X\_TYPE – Either Fixed or Removable.
- DEVICE\_LOGICALDISK\_X\_LABEL – The volume label.
- DEVICE\_LOGICALDISK\_X\_FILESYSTEM – The type of file system.
- DEVICE\_LOGICALDISK\_X\_PATHS – The paths that the disk is mounted.
- DEVICE\_LOGICALDISK\_X\_TOTALMB – The total space available on the disk. This property is only available for mounted disks.
- DEVICE\_LOGICALDISK\_X\_FREEMB – The free space available on the disk. This property is only available for mounted disks.
- DEVICE\_LOGICALDISK\_X\_NAME – The name of the underlying physical disk.
- DEVICE\_LOGICALDISK\_X\_VENDORID – The vendor identifier uniquely identifying the manufacturer. This property is only available for USB or PCI connected devices.
- DEVICE\_LOGICALDISK\_X\_PRODUCTID – The product identifier uniquely identifying the product. This property is only available for USB or PCI connected devices.
- DEVICE\_LOGICALDISK\_X\_SERIALNUMBER – The serial number of the physical disk.
- DEVICE\_LOGICALDISK\_X\_BUSTYPE – The storage bus type linked to the physical disk.
- DEVICE\_LOGICALDISK\_COUNT – The number of logical disks.

## Resolved Issues 10.05.800

### Network

- Added possibility to **switch between thirdparty r8168 and kernel r8169 realtek network driver**. [More...](#)

|                                       |                                     |
|---------------------------------------|-------------------------------------|
| Parameter                             | Use thirdparty r8168 kernel module. |
| Registry                              | network.drivers.r8169.prefer_r8168  |
| Range                                 | [Auto] [Yes] [No]                   |
| Info: "Auto" uses r8169 in most cases |                                     |

## WiFi

- Fixed non working **TP Link Archer T2UH**.

## Base system

- Added possibility to set `intel_idle.max_cstate` kernel cmdline parameter with registry keys to work against **Intel CPU freezes**.
- Enhanced **bootloader** to allow the setting of some kernel commandline parameters with registry keys.

| Range     | [On] [Off] [Passthrough] [Force]          |
| Info:     | Use IOMMU if possible                     |
| Parameter | IOMMU usage setting for AMD systems.      |
| Registry  | system.kernel.bootparams.amd_iommu        |
| Range     | [On] [Off]                                |
| Info:     | Use IOMMU if possible                     |
| Parameter | IOMMU usage setting for Intel systems.    |
| Registry  | system.kernel.bootparams.intel_iommu      |
| Range     | [On] [Off]                                |
| Info:     | Use IOMMU if possible                     |

## Driver

- Updated **deviceTRUST** Client to version **19.1.200**. Bug Fixes:
  - Fixed an issue reading the **DEVICE\_IGEL\_ICG\_SERVER** property.
  - Fixed an issue where the **NETWORK** and **LOCATION** property providers could cause the client to freeze if a disconnection occurred whilst these property providers were checking for changes.
  - Fixed an **open file handle leak** which lead to the client process reaching its file handle limits when left running for a long period of time.

## X11 system

- Fixed a bug with thinclients **reporting the wrong monitor serial number**.

## Hardware

- Updated **AMDGPU Pro driver to 19.10** version. The new version fixes a disappearing mouse cursor issue. Enable AMDGPU Pro driver instead of kernel integrated driver by registry key (settings to this key will only work after reboot):

## General Information 10.05.800

The following clients and features are not supported anymore:

- Citrix Receiver 12.1 and 13.1 - 13.4
- Citrix Access Gateway Standard Plug-in
- Dell vWorkspace Connector for Linux
- Ericom PowerTerm Emulation 9 and 11
- Ericom Webconnect
- IGEL Legacy RDP Client (rdesktop)
- Virtual Bridges VERDE Client
- PPTP VPN Support
- IGEL Upgrade License Tool with IGEL Smartcard Token
- Remote Management by setup.ini file transfer (TFTP)
- Remote Access via RSH
- Legacy Philips Speech Driver
- t-Systems TCOS Smartcard Support
- DUS Series touch screens
- Elo serial touch screens
- IGEL Smartcard without locking desktop
- VIA Graphics Support
- Storage Hotplug devices are not automatically removed anymore, instead they must be always ejected manually:
  - by panel tray icon
  - by an icon in the 'In-Session Control Bar' (configurable at **IGEL Setup > User Interface > Desktop**)
  - by a 'Safely Remove Hardware' session (configurable at **IGEL Setup > Accessories**)

The following clients and features are not available in this release:

- Cherry eGK Channel
- Open VPN Smartcard Support
- Asian Input Methods
- Composite Manager

## Known Issues 10.05.800

### Citrix

- With **activated DRI3** and an AMD GPU Citrix **H.264 acceleration** plugin could **freeze**. Selective H.264 mode (API v2) is not affected from this issue.
- Citrix has known issues with **GStreamer 1.0** which describe problems with **multimedia redirection of H264, MPEG1 and MPEG2**. GStreamer 1.0 is used if browser content redirection is active.
- **Browser content redirection** does not work with **activated DRI3** and hardware accelerated **H.264 deep compression codec**.
- Citrix **StoreFront** login with **Gemalto smartcard middleware** does not detect smartcard correctly if the card is **inserted after start** of login.  
As a workaround, insert the smartcard before starting StoreFront login.

- When using **Citrix Workspace App 18.10** in combination with **Philips Speech** driver, the **session** occasionally **terminates improperly** at logout and hangs.  
As a workaround, usage of **Citrix Receiver 13.10** is recommended when Philips Speech driver is needed.
- Citrix H.264 acceleration plugin** does not work with **enabled** server policy **Optimize for 3D graphics workload** in combination with server policy **Use video codec compression** > "For the entire screen".
- When "Expand the session over a self-selected number of monitors" (for "Multimonitor full-screen mode") is used and Setup is restarted, "Restrict full screen session to one monitor" is indicated and the **monitor selection is greyed out**. The functionality is available, only the notification in Setup is broken.

#### VMware Horizon

- External drives** mounted already before connection **do not appear in the remote desktop**.  
Workaround: map the directory /media as a drive in your desktop. Then the external devices will show up inside the media drive.
- Client drive mapping** and **USB redirection for storage devices** should not be enabled both at the same time.
  - On the one hand, if you want to use **USB redirection** for your storage devices: Note that the **USB on-insertion feature** is only working if the **client drive mapping is switched off**. In the **IGEL Setup** client drive mapping can be found in: **Sessions > Horizon Client > Horizon Client Global > Drive Mapping > Enable Drive Mapping**. It is also recommended to **disable local Storage Hotplug**: On page **Devices > Storage Devices > Storage Hotplug**, put **number** of storage hotplug devices to **0**.
  - On the other hand, if you use **drive mapping** instead, it is recommended that you should either **switch off USB redirection entirely** or at least **deny storage devices** by adding a filter to the USB class rules. And because Horizon Client relies on the OS to mount the storage devices itself, please go to setup page: **Devices > Storage Devices > Storage Hotplug** and switch on **Enable dynamic drive mapping** and put **Number of storage hotplug devices** to at least **1**.

#### Parallels Client

- Native USB redirection does not work** with Parallels Client.
- For using the new **FIPS 140-2 compliance mode**, it is necessary to connect to the **Parallels RAS** one time with FIPS support disabled.

#### Smartcard

- In some cases, there are instabilities when using **A.E.T. SafeSign smartcards**.

#### Appliance Mode

- Appliance mode **RHEV/Spice**: spice-xpi firefox plugin is no longer supported. The **Console Invocation** has to allow **Native client** (auto is also possible) and it should start in fullscreen to prevent opening windows.

#### Base system

- Display resolution and rotation** could not be changed with NVIDIA GPU driver via tcsetup.

#### Multimedia

- **Multimedia redirection** with **GStreamer** could fail with Nouveau GPU driver.

## New Features 10.05.800

### RDP/IGEL RDP Client 2

- Add **field collection** to RDP session **server** page.

| Registry  | vmware.view.rtav-frame-rate   |
| Value     | <empty_string>                |

### Firefox

- Updated **Mozilla Firefox** to version **60.6.2ESR**:  
 Repaired certificate chain to re-enable web extensions that had been disabled.
- Fixes for **mfsa2019-10**, also known as: CVE-2019-9810, CVE-2019-9813.

- Fixes for **mfsa2019-08**, also known as: CVE-2019-9790, CVE-2019-9791, CVE-2019-9792, CVE-2019-9793, CVE-2019-9795, CVE-2019-9796, CVE-2018-18506, CVE-2019-9788.
- Fixes for **mfsa2019-05**, also known as: CVE-2018-18356, CVE-2019-5785.
- Fixes for **mfsa2019-02**, also known as: CVE-2018-18500, CVE-2018-18505, CVE-2018-18501.
- Fixes for **mfsa2018-30**, also known as: CVE-2018-17466, CVE-2018-18492, CVE-2018-18493, CVE-2018-18494, CVE-2018-18498, CVE-2018-12405.
- Added new parameters: Allow a **custom command** before and after browser session.

## Citrix

- Updated **Citrix HDX RTME** used for optimization of **Skype for Business** to version **2.7.0-2113**.

## Parallels Client

- Updated Parallels Client to **version 16.5.2 (64-Bit)**

## CUPS Printing

- Added **SMB Network Print Client** function. The printer could be created on page **Devices > Printer > CUPS > Printers > Dialog**, **SMB Network Printer** as **Printer Port**. The settings for the SMB printer must be done in Setup Registry:

## IBM\_5250

- Updated **IBM iAccess Client Solutions** to version **1.1.8.1**.

## WiFi

- Added support for **Realtek 8821CE wireless cards**.
- Added switch to determine the **source of WiFi scan results** within the **Wireless Manager**. Selecting default is currently identical with the old mechanism (using the iwlist command). This may change in the future. When iwlist fails, **NetworkManager** is automatically used as a fallback.

| Info: "default" is currently equal to "iwlist" |                                                      |

## X11 System

- Added **xprintidle** tool to firmware.
- The new **Display Switch** tool can use **multiple different profiles**, automatically chosen **at runtime** depending on the currently connected monitors. A profile is created, when the current

monitor layout/resolution is configured via the **Display Switch** utility. The profile will be associated with the **current connected displays** automatically (manufacturer, model and used connector are used for allocation) and if applicable, the state of the **laptop lid**. The setup will be restored by hot-(un)plugging known displays, means the system will automatically switch to the already configured profile. The **Display Switch** utility itself got a new interface. All base functionality can be configured via drag & drop.

An example workflow:

- Connect the hardware and **close/open lid**
- Open the **Display Switch** Utility
  - A quick (simple) setting can be selected directly.
  - Should the desired application deviate from the possibilities provided, the **Advanced** button opens a drag & drop interface for further settings.
- In this interface the displays can be **dragged and dropped** for the intended configuration. The **display will snap adjacent** to others.
- If a **display should not be used**, it can be dragged to the **Disabled** area on the top right - the screen will be reactivated when it is dragged back to the active area.
- To show the **same content on multiple displays**, one display should be dragged onto an other active screen. The interface will show **Mirror**. The mirroring monitor will be displayed on the lower right.
- With the **Apply** button the current state will be set, with **Yes** on the **Keep configuration** dialog the current settings will be saved to persistent storage and associated with the profile.
- **Advanced functionality** (panning/scaling/resolutions) can be configured in drop-down boxes, hidden in a **drawer** on the right side. The drawer can be expanded by clicking the < button on the right edge.
- For the **Display Switch** functionality the following parameters should be enabled for proper usage:

|------------|-----------------------------------------------------|
| IGEL Setup | <b>Accessories &gt; Display Switch &gt; Options</b> |
| Parameter  | Preserve settings over reboot                       |
| Registry   | sessions.user_display0.options.preserve_settings    |
| Value      | enabled / disabled                                  |
| IGEL Setup | <b>Accessories &gt; Display Switch &gt; Options</b> |
| Parameter  | Smart display configuration                         |
| Registry   | x.auto_associate                                    |
| Value      | enabled / disabled                                  |

- The **IGEL Display Switch** utility is now used for **NVIDIA graphics** devices as well.

Network

- Added **NCP Secure Enterprise** VPN Client version 5.10\_rev40552: Configurable at **IGEL Setup > Network > VPN > NCP VPN Client**

#### Driver

- Updated **deviceTRUST** Client to version **19.1.200**. These are the release notes:  
Welcome to the release of the deviceTRUST 19.1.200 IGEL client, providing the context of IGEL thin client and UD Pocket devices into your virtual sessions. This release includes support for logical disks attached to the IGEL endpoint, plus bug fixes and stability improvements over the previous 19.1.100 release.

#### Logical Disks

We've added support for real-time properties representing the LOGICAL DISKS attached to the IGEL endpoint.

##### This includes...

- DEVICE\_LOGICALDISK\_X\_TYPE – Either Fixed or Removable.
- DEVICE\_LOGICALDISK\_X\_LABEL – The volume label.
- DEVICE\_LOGICALDISK\_X\_FILESYSTEM – The type of file system.
- DEVICE\_LOGICALDISK\_X\_PATHS – The paths that the disk is mounted.
- DEVICE\_LOGICALDISK\_X\_TOTALMB – The total space available on the disk. This property is only available for mounted disks.
- DEVICE\_LOGICALDISK\_X\_FREEMB – The free space available on the disk. This property is only available for mounted disks.
- DEVICE\_LOGICALDISK\_X\_NAME – The name of the underlying physical disk.
- DEVICE\_LOGICALDISK\_X\_VENDORID – The vendor identifier uniquely identifying the manufacturer. This property is only available for USB or PCI connected devices.
- DEVICE\_LOGICALDISK\_X\_PRODUCTID – The product identifier uniquely identifying the product. This property is only available for USB or PCI connected devices.
- DEVICE\_LOGICALDISK\_X\_SERIALNUMBER – The serial number of the physical disk.
- DEVICE\_LOGICALDISK\_X\_BUSTYPE – The storage bus type linked to the physical disk.
- DEVICE\_LOGICALDISK\_COUNT – The number of logical disks.

#### Resolved Issues 10.05.800

##### Citrix Receiver 13

- Fixed crash when **H.264 acceleration** and **RTME** will be used on two or more concurrent VDI sessions.

##### VMware Horizon

- Fixed optimization for **Skype for Business**.
  - Added switch to use **system-wide proxy** in VMware Horizon appliance mode.
- More...**

|           |                           |
|-----------|---------------------------|
| Parameter | Use the systemwide proxy. |
| Registry  | vmwarevdmapp.use_proxy    |

|       |                           |
|-------|---------------------------|
| Range | <u>enabled / disabled</u> |
|-------|---------------------------|

## PowerTerm

- Fixed editing of parameter sessions.powerterm\<INST>.logindialog.loginscript in Setup Registry: **now multiple lines are possible.**

## Network

- Changed **e1000e** driver to **3.4.2.3** - directly from Intel.
  - Changed **igb** driver to **5.3.5.22** - also directly from Intel.
  - Added possibility to switch between thirdparty r8168 and kernel r8169 realtek network driver.
- More...**

|           |                                     |
|-----------|-------------------------------------|
| Parameter | Use thirdparty r8168 kernel module. |
| Registry  | network.drivers.r8169.prefer_r8168  |
| Range     | <u>[Auto]</u> [Yes] [No]            |

Info: use r8169 in most cases

## Base system

- Added package **ldap-utils** which could be used via **custom scripts**.
  - Fixed **delay in logon as local user**, when logon with **IGEL Smartcard** is also active.
  - Fixed **random 90 seconds shutdown delay** (systemd).
  - Fixed **custom bootsplash** installation.
  - Added possibility to set intel\_idle.max\_cstate kernel cmdline parameter with registry keys to work against **Intel CPU freezes**.
  - Enhanced **bootloader** to allow the setting of some kernel commandline parameters with registry keys.
- More...**

|           |                                               |
|-----------|-----------------------------------------------|
| Parameter | Disable use of APIC controller.               |
| Registry  | system.kernel.bootparams.noapic               |
| Value     | <u>enabled / disabled</u>                     |
| Parameter | Disable use of ACPI.                          |
| Registry  | system.kernel.bootparams.noacpi               |
| Value     | <u>enabled / disabled</u>                     |
| Parameter | Use only one CPU core and disable all others. |
| Registry  | system.kernel.bootparams.nosmp                |
| Value     | <u>enabled / disabled</u>                     |

|                                        |                                               |
|----------------------------------------|-----------------------------------------------|
| Parameter                              | Enable debug console on serial port 1.        |
| Registry                               | system.kernel.bootparams.serial_console_debug |
| Value                                  | enabled / <u>disabled</u>                     |
| Parameter                              | Limit CPU core usage (0 means no limit).      |
| Registry                               | system.kernel.bootparams.maxcpus              |
| Value                                  | "0"                                           |
| Parameter                              | Set maximum allowed cstate on intel cpus.     |
| Registry                               | system.kernel.bootparams.max_cstate           |
| Range                                  | [No limit] [1] [2] [3] [4] [5] [6]            |
| <i>Info:</i> do not limit intel cstate |                                               |
| Parameter                              | IOMMU usage setting.                          |
| Registry                               | system.kernel.bootparams.iommu                |
| Range                                  | [On] [Off] [Passthrough] [Force]              |
| <i>Info:</i> Use IOMMU if possible     |                                               |
| Parameter                              | IOMMU usage setting for AMD systems.          |
| Registry                               | system.kernel.bootparams.amd_iommu            |
| Range                                  | [On] [Off]                                    |
| <i>Info:</i> Use IOMMU if possible     |                                               |
| Parameter                              | IOMMU usage setting for Intel systems.        |
| Registry                               | system.kernel.bootparams.intel_iommu          |
| Range                                  | [On] [Off]                                    |
| <i>Info:</i> Use IOMMU if possible     |                                               |

## Storage Devices

- Fixed **auto mounting of storage devices** inside of **Olympus DS-9500 Digital Voice Recorder**.

## WiFi

- Fixed non working TP Link Archer T2UH.

## Driver

- Updated deviceTRUST Client to version 19.1.200. Bug Fixes:
  - Fixed an issue reading the DEVICE\_IGEL\_ICG\_SERVER property.
  - Fixed an issue where the NETWORK and LOCATION property providers could cause the client to freeze if a disconnection occurred whilst these property providers were checking for changes.
  - Fixed an open file handle leak which lead to the client process reaching its file handle limits when left running for a long period of time.

#### X11 system

- Fixed a bug with thinclients reporting the **wrong monitor serial number**.
- There is now a registry key to **ignore a 3Dconnexion SpaceMouse** for IGEL graphical use (X11). If activated, the **SpaceMouse** is only passed thru to the desktop session. If false, it acts like the standard mouse.
- The following **SpaceMouse** products are included (VID, PID, Vendor, Product).

[More...](#)

0x046D; 0xC603; Logitech, Inc.; 3Dconnexion Spacemouse Plus XT  
 0x046D; 0xC605; Logitech, Inc.; 3Dconnexion CADman  
 0x046D; 0xC606; Logitech, Inc.; 3Dconnexion Spacemouse Classic  
 0x046D; 0xC621; Logitech, Inc.; 3Dconnexion Spaceball 5000  
 0x046D; 0xC623; Logitech, Inc.; 3Dconnexion Space Traveller 3D Mouse  
 0x046D; 0xC625; Logitech, Inc.; 3Dconnexion Space Pilot 3D Mouse  
 0x046D; 0xC626; Logitech, Inc.; 3Dconnexion Space Navigator 3D Mouse  
 0x046D; 0xC627; Logitech, Inc.; 3Dconnexion Space Explorer 3D Mouse  
 0x046D; 0xC628; Logitech, Inc.; 3Dconnexion Space Navigator for Notebooks  
 0x046D; 0xC629; Logitech, Inc.; 3Dconnexion SpacePilot Pro 3D Mouse  
 0x046D; 0xC62B; Logitech, Inc.; 3Dconnexion Space Mouse Pro  
 0x256F; \*\*; 3Dconnexion; SpaceMouse

- **USB device reset via USB powercycle on UD6 / UD7 available.**
- Fixed **screen flicker** in some cases if **Force NumLock On** (x.global.forceenumlock) is active.

#### Window manager

- Fixed option to **disable the local window manager**.

#### Hardware

- Fixed non working **Laptop Display** for **Dell Latitude E5510**
- **Ryzen 3 devices** (1200, 1300X, 2200G, 2200U and 2300U) will use the **AMDGPU PRO** driver if registry key x.drivers.amdgpu.use\_amdgpu\_pro is set to auto (default).
- Added **AMDGPU Pro driver 19.10** version. The new version fixes a disappearing mouse cursor issue. Enable AMDGPU Pro driver instead of kernel integrated driver by registry key (settings to this key will only work after reboot).

|                                                         |                                 |
|---------------------------------------------------------|---------------------------------|
| Parameter                                               | Use AMDGPU PRO driver           |
| Registry                                                | x.drivers.amdgpu.use_amdgpu_pro |
| Value                                                   | [Auto] [True] [False]           |
| Info: Settings to this key will only work after reboot. |                                 |

## IGEL Cloud Gateway

- Fixed support for **UMS file transfer status** in **ICG protocol**.
- When TC is managed over ICG, settings received in connection stage will not be applied immediately. **The settings must be applied after user prompt dialog**.

## 7.27 Notes for Release 10.05.700

## 7.27.1 IGEL Linux Universal Desktop

### Supported Devices

#### **Universal Desktop:**

|          |                  |
|----------|------------------|
| UD2-LX:  | UD2-LX 40        |
| UD3-LX:  | UD3-LX 51        |
|          | UD3-LX 50        |
|          | UD3-LX 42        |
|          | UD3-LX 41        |
| UD5-LX:  | UD5-LX 50        |
| UD6-LX:  | UD6-LX 51        |
| UD7-LX:  | UD7-LX 10        |
| UD9-LX:  | UD9-LX Touch 41  |
|          | UD9-LX 40        |
| UD10-LX: | UD10-LX Touch 10 |
|          | UD10-LX 10       |

#### **IGEL Zero:**

|             |
|-------------|
| IZ2-RFX     |
| IZ2-HDX     |
| IZ2-HORIZON |
| IZ3-RFX     |
| IZ3-HDX     |

## IZ3-HORIZON

- **Features with Limited IGEL Support**

Mobile Device Access USB

VPN OpenConnect

Scanner support

VirtualBox

- **Features with Limited Functionality**

|                   |      |
|-------------------|------|
| Cisco JVDI Client | 12.1 |
|-------------------|------|

## General Information 10.05.700

The following clients and features are **not supported** anymore:

- Citrix Receiver 12.1 and 13.1 - 13.4
- Citrix Access Gateway Standard Plug-in
- Dell vWorkspace Connector for Linux
- Ericom PowerTerm Emulation 9 and 11
- Ericom Webconnect
- IGEL Legacy RDP Client (rdesktop)
- Virtual Bridges VERDE Client
- PPTP VPN Support
- IGEL Upgrade License Tool with IGEL Smartcard Token
- Remote Management by setup.ini file transfer (TFTP)
- Remote Access via RSH
- Legacy Philips Speech Driver
- t-Systems TCOS Smartcard Support
- DUS Series touch screens
- Elo serial touch screens
- IGEL Smartcard without locking desktop

- **Video Hardware Acceleration** support is discontinued on UD3-LX 42, UD3-LX 41, UD3-LX 40 (M320C/M330C) and UD10-LX Touch 10, UD10-LX 10
- **H.264 Hardware Acceleration** support is discontinued on UD3-LX 42, UD3-LX 41, UD3-LX 40 (M320C/M330C) and UD10-LX Touch 10, UD10-LX 10
- **Storage Hotplug devices are not automatically removed anymore**, instead they must be always ejected manually:
  - by panel tray icon
  - by an icon in the 'In-Session Control Bar' (configurable at `IGEL Setup > User Interface > Desktop`)
  - by a 'Safely Remove Hardware' session (configurable at `IGEL Setup > Accessories`)

The following clients and features are **not available** in this release:

- Cherry eGK Channel
- Open VPN Smartcard Support
- NCP Secure Client
- Asian Input Methods
- Composite Manager

## Known Issues 10.05.700

### Citrix

- With **activated DRI3** and an **amd gpu** citrix **H.264 acceleration** plugin could **freeze**. Selective H.264 mode (api v2) is not affected from this issue.
- Citrix has known issues with **gstreamer1.0** which describe problems with **multimedia redirection of H264, MPEG1 and MPEG2**. Gstreamer1.0 is used if browser content redirection is active.
- **Browser content redirection** does not work with **activated DRI3** and hardware accelerated **H.264 deep compression codec**.
- Citrix **StoreFront** login with **Gemalto smartcard middleware** does not detect smartcard correctly if the card is **inserted after start** of Login.  
As a workaround, insert the smartcard before starting StoreFront login.
- When using **Citrix Workspace App 18.10** in combination with **Philips Speech** driver, the session occasionally **does not proper terminate** at logoff and hangs.  
As a workaround, usage of **Citrix Receiver 13.10** is recommended when Philips Speech driver is needed.

Citrix **H.264 acceleration plugin** does not work with **enabled** server policy **Optimize for 3D graphics workload** in combination with server policy **Use video codec compression** > \*"For the entire screen"\*\*.

- When **Expand the session over a self-selected number of monitors** (for **Multi-monitor full screen mode**) is used and setup is restarted, **Restrict full screen session to one monitor** is indicated and the **monitor selection is greyed out**. The functionality is available, only the notification in setup is broken.

### VMware Horizon

- **External drives** mounted already before connection **do not appear in the remote desktop**.  
Workaround: map the directory /media as a drive in your desktop. Then the external devices will show up inside the media drive.

- **Client drive mapping** and **USB redirection for storage devices** should not be enabled both at the same time.
  - On the one hand, if you want to use **USB redirection** for your storage devices: Note that the **USB on-insertion feature** is only working if the **client drive mapping is switched off**. In the **IGEL Setup** client drive mapping can be found in: **Sessions > Horizon Client > Horizon Client Global > Drive Mapping > Enable Drive Mapping**. It is also recommended to **disable local Storage Hotplug**: On page **Devices > Storage Devices > Storage Hotplug**, put **number** of storage hotplug devices to **0**.
  - On the other hand, if you use **drive mapping** instead, it is recommended that you should either **switch off USB redirection entirely** or at least **deny storage devices** by adding a filter to the USB class rules. And because Horizon Client relies on the OS to mount the storage devices itself, please go to setup page: **Devices > Storage Devices > Storage Hotplug** and switch on **Enable dynamic drive mapping** and put **Number of storage hotplug devices** to at least **1**.

#### Parallels Client

- **Native USB redirection does not work** with Parallels Client.
- For using the new **FIPS 140-2 compliance mode** it is necessary to connect to the **Parallels RAS** one time with FIPS support disabled.

#### Smartcard

- In some cases there are instabilities when using **A.E.T. SafeSign smartcards**.

#### Appliance Mode

- Appliance mode **RHEV/Spice**: spice-xpi firefox plugin is no longer supported. The **Console Invocation** has to allow **Native client** (auto is also possible) and it should start in fullscreen to prevent opening windows.

#### Hardware

- Suspend on **UD10** is disabled.

#### New Features 10.05.700

##### RDP/IGEL RDP Client 2

- Add **field collection** to RDP session **server** page.

## Citrix

- Updated **Citrix HDX RTME** used for optimization of **Skype for Business** to version **2.7.0-2113**.

## Parallels Client

- Updated Parallels Client to **version 16.5.2 (64-Bit)**

## CUPS Printing

- Added **SMB Network Print Client** function. The printer could be created on page **Devices > Printer > CUPS > Printers > Dialog**, **SMB Network Printer** as **Printer Port**. The settings for the SMB printer must be done in Setup Registry:  
[More...](#)

| IGEL Setup | <b>Devices &gt; Printer &gt; CUPS &gt; Printers &gt; Dialog</b>                                                                                     |

| Registry | print.cups.printer<NR>.crypt_password |
|----------|---------------------------------------|

## IBM\_5250

- Updated **IBM iAccess Client Solutions** to version **1.1.8.1**.

## WiFi

- Added support for **Realtek 8821CE wireless cards**.
- Added switch to determine the **source of WiFi scan results** within the **Wireless Manager**. Selecting default is currently identical with the old mechanism (using the iwlist command). This may change in the future. When iwlist fails, **NetworkManager** is automatically used as a fallback.

**More...**

|           |                                                          |
|-----------|----------------------------------------------------------|
| Parameter | WiFi Scanner                                             |
| Registry  | network.interfaces.wirelesslan.device0.mssid<br>_scanner |
| Range     | <u>default</u> / iwlist / NetworkManager                 |

Info: "default" is currently equal to "iwlist"

## X11 System

- Added **xprintidle** tool to firmware.
- The new **Display Switch** tool can use **multiple different profiles**, automatically chosen **at runtime** depending on the currently connected monitors. A profile is created, when the current monitor layout/resolution is configured via the **Display Switch** utility. The profile will be associated with the **current connected displays** automatically (manufacturer, model and used connector are used for allocation) and if applicable, the state of the **laptop lid**. The setup will be restored by hot-(un)plugging known displays, means the system will automatically switch to the already configured profile. The **Display Switch** utility itself got a new interface. All base functionality can be configured via drag & drop.

An example workflow:

- Connect the hardware and **close/open lid**
- Open the **Display Switch** Utility
  - A quick (simple) setting can be selected directly.
  - Should the desired application deviate from the possibilities provided, the **Advanced** button opens a drag & drop interface for further settings.
- In this interface the displays can be **dragged and dropped** for the intended configuration. The **display will snap adjacent** to others.
- If a **display should not be used**, it can be dragged to the **Disabled** area on the top right - the screen will be reactivated when it is dragged back to the active area.
- To show the **same content on multiple displays**, one display should be dragged onto an other active screen. The interface will show **Mirror**. The mirroring monitor will be displayed on the lower right.

- With the **Apply** button the current state will be set, with **Yes** on the **Keep configuration** dialog the current settings will be saved to persistent storage and associated with the profile.
- Advanced functionality** (panning/scaling/resolutions) can be configured in drop-down boxes, hidden in a **drawer** on the right side. The drawer can be expanded by clicking the < button on the right edge.
- For the **Display Switch** functionality the following parameters should be enabled for proper usage:  
[More...](#)

|            |                                                     |
|------------|-----------------------------------------------------|
| IGEL Setup | <b>Accessories &gt; Display Switch &gt; Options</b> |
| Parameter  | Preserve settings over reboot                       |
| Registry   | sessions.user_display0.options.preserve_settings    |
| Value      | enabled / <u>disabled</u>                           |
| IGEL Setup | <b>Accessories &gt; Display Switch &gt; Options</b> |
| Parameter  | Smart display configuration                         |
| Registry   | x.auto_associate                                    |
| Value      | enabled / <u>disabled</u>                           |

- The **IGEL Display Switch** utility is now used for **NVIDIA graphics** devices as well.

#### Smartcard

- Updated **SecMaker NetiD** to version **6.7.2.36**: now **Yubikey 5** is supported.

#### Resolved Issues 10.05.700

##### Citrix

- Appropriate icons** arise with IGEL and Citrix authentication
- Fixed crash when **H.264 acceleration** and **RTME** will be used on two or more concurrent VDI sessions.

##### VMware Horizon

- Added recognition for **password-change-dialog** in Horizon **local-logon** sessions or appliance mode.
- Fixed optimization for **Skype for Business**.
- Added switch to use **system-wide proxy** in VMware Horizon appliance mode.  
[More...](#)

|           |                          |
|-----------|--------------------------|
| Parameter | Use the systemwide proxy |
|-----------|--------------------------|

|          |                           |
|----------|---------------------------|
| Registry | vmwarevdmapp.use_proxy    |
| Value    | <u>enabled</u> / disabled |

#### Parallels Client

- Fixed: **Maximized windows** for published applications can be displayed incorrectly.
- Fixed: Incorrect **user credentials** can be picked up during connection, when same farm is registered multiple times with different user credentials
- Fixed: **Linux** client not consider **universal printing policies**, set from the server

#### PowerTerm

- Fixed editing of parameter sessions.powerterm\<INST>.logindialog.loginscript in Setup Registry: **now multiple lines are possible**.

#### Firefox

- Fixed an occasional issue with Firefox **not being in fullscreen** after a suspend.

#### Network

- Improved **SCEP** client robustness
  - The **cert\_agent script** does not terminate anymore, when a problem occurs (e.g. the SCEP server is unreachable) but tries again after the expiry check interval.
  - When the **client certificate has expired**, there is still one attempt for a renewal. However, when that fails, a new one is requested. That obviously will fail, if the client presents a challenge password that is not valid anymore.
- Improved expiration time of **ethernet no-link notification**
- Fixed **MBB router configuration** (broken since 10.05.500)
- Added all **Ethernet network drivers** from OS to LX version.
- Changed **e1000e** driver to **3.4.2.3** - directly from Intel.
- Changed **igb** driver to **5.3.5.22** - also directly from Intel.

#### Smartcard

- Fixed **OpenSC** setting **max\_send\_size** for reader driver **pcsc** in /etc/opensc/opensc.conf.
- Fixed **Dell KB813 Smartcard Keyboard** in combination with certain smartcards, driven by **OpenSC PKCS#11 module**. Before this fix, authentication to Citrix StoreFront and VMWare Horizon failed.

#### Application Launcher

- Fixed confusion in **nameserver list** caused by comments in /etc/resolv.conf

#### Base system

- Fixed sporadic **bootsplash** issue.
- Fixed **Screensaver** and **Screenlock timeouts** to be independent. When both timeouts are set, the start of screenlock will not reset the screensaver timeout anymore.
- Added package **ldap-utils** which could be used via **custom scripts**.
- Fixed playback of **AAC coded audio streams** on **IGEL Zero** products.
- Fixed **delay in logon as local user**, when logon with **IGEL Smartcard** is also active.
- Fixed **random 90 seconds shutdown delay** (systemd).

- Fixed **custom bootsplash** installation.

#### Appliance Mode

- Fixed a **regression in 10.05.570** that prevents appliance mode from restarting after a suspend.

#### Storage Devices

- Fixed **auto mounting of storage devices** inside of **Olympus DS-9500 Digital Voice Recorder**.

#### Base System

- Fixed issues with **gen4/5 intel graphic driver** in kernel **4.18.20**.
- Fixed **suspend/resume hangs** when logged into **Citrix sessions**.
- Fixed **CPU scaler and volume control** applet suspend/resume issue.

#### X11 system

- Fixed the **missing volume control** in the panel, when the panel is configured to disappear while the login/lock screen is shown.
- The **In-Session Control Bar** now scales with the current DPI setting.
- There is now a registry key to **ignore a 3Dconnexion SpaceMouse** for IGEL graphical use (X11). If activated, the **SpaceMouse** is only passed thru to the desktop session. If false, it acts like the standard mouse.

[More...](#)

|           |                                                          |
|-----------|----------------------------------------------------------|
| Parameter | Deactivates a 3Dconnexion SpaceMouse as a standard mouse |
| Registry  | <code>userinterface.mouse.spacemouse.x11_ignore</code>   |
| Value     | <u>enabled</u> / disabled                                |

- The following **SpaceMouse** products are included (VID, PID, Vendor, Product).

[More...](#)

0x046D; 0xC603; Logitech, Inc.; 3Dconnexion Spacemouse Plus XT  
 0x046D; 0xC605; Logitech, Inc.; 3Dconnexion CADman  
 0x046D; 0xC606; Logitech, Inc.; 3Dconnexion Spacemouse Classic  
 0x046D; 0xC621; Logitech, Inc.; 3Dconnexion Spaceball 5000  
 0x046D; 0xC623; Logitech, Inc.; 3Dconnexion Space Traveller 3D Mouse  
 0x046D; 0xC625; Logitech, Inc.; 3Dconnexion Space Pilot 3D Mouse  
 0x046D; 0xC626; Logitech, Inc.; 3Dconnexion Space Navigator 3D Mouse  
 0x046D; 0xC627; Logitech, Inc.; 3Dconnexion Space Explorer 3D Mouse  
 0x046D; 0xC628; Logitech, Inc.; 3Dconnexion Space Navigator for Notebooks  
 0x046D; 0xC629; Logitech, Inc.; 3Dconnexion SpacePilot Pro 3D Mouse  
 0x046D; 0xC62B; Logitech, Inc.; 3Dconnexion Space Mouse Pro  
 0x256F; \*\*; 3Dconnexion; SpaceMouse

- **USB device reset via USB powercycle on UD6 / UD7 available.**
- Fixed **screen flicker** in some cases if **Force NumLock On** (x.global.forcenumlock) is active.

#### Caradigm

- Fixed **Horizon session** teardown.

#### Window manager

- Fixed option to **disable the local window manager**.

#### Audio

- Fixed bad quality sound over **DisplayPort** in a **Citrix ICA session** or other applications using **ALSA API**.
- Fixed configuration of **default audio** output and input.

#### Hardware

- Added possibility to use **AMDGPU PRO** driver instead of the kernel integrated driver.  
**More...**

|           |                                 |
|-----------|---------------------------------|
| Parameter | Use AMDGPU PRO driver           |
| Registry  | x.drivers.amdgpu.use_amdgpu_pro |
| Value     | [Auto] [True] [False]           |

Info: Settings to this key will only work after reboot.

#### IGEL Cloud Gateway

- Fixed support for **UMS file transfer status** in **ICG protocol**.
- When TC is managed over ICG, settings received in connection stage will not be applied immediately. **The settings must be applied after user prompt dialog**.

## 7.28 Notes for Release 10.05.500

## 7.28.1 IGEL Linux Universal Desktop

### Supported Devices

#### **Universal Desktop:**

|          |                  |
|----------|------------------|
| UD2-LX:  | UD2-LX 40        |
| UD3-LX:  | UD3-LX 51        |
|          | UD3-LX 50        |
|          | UD3-LX 42        |
|          | UD3-LX 41        |
| UD5-LX:  | UD5-LX 50        |
| UD6-LX:  | UD6-LX 51        |
| UD7-LX:  | UD7-LX 10        |
| UD9-LX:  | UD9-LX Touch 41  |
|          | UD9-LX 40        |
| UD10-LX: | UD10-LX Touch 10 |
|          | UD10-LX 10       |

#### **IGEL Zero:**

|             |
|-------------|
| IZ2-RFX     |
| IZ2-HDX     |
| IZ2-HORIZON |
| IZ3-RFX     |
| IZ3-HDX     |

## IZ3-HORIZON

- Component Versions 10.05.500(see page 2130)
- General Information 10.05.500(see page 2134)
- Known Issues 10.05.500(see page 2135)
- New Features 10.05.500(see page 2136)
- Resolved Issues 10.05.500(see page 2143)

## Component Versions 10.05.500

• **Clients**

| <b>Product</b>                     | <b>Version</b>                  |
|------------------------------------|---------------------------------|
| Citrix HDX Realtime Media Engine   | 2.6.0-2030                      |
| Citrix Receiver                    | 13.10.0.20                      |
| Citrix Receiver                    | 13.5.0.10185126                 |

## General Information 10.05.500

The following clients and features are **not supported** anymore:

- **Citrix Receiver 12.1 and 13.1 - 13.4**
- **Citrix Access Gateway** Standard Plug-in
- **Dell vWorkspace Connector** for Linux
- **Ericom PowerTerm Emulation 9** and **11**
- **Ericom Webconnect**
- **IGEL Legacy RDP Client** (rdesktop)
- Virtual Bridges **VERDE Client**
- **PPTP VPN** Support
- **IGEL Upgrade License Tool** with **IGEL Smartcard Token**
- Remote Management by **setup.ini file transfer** (TFTP)
- Remote Access via **RSH**
- Legacy **Philips Speech Driver**
- t-Systems **TCOS Smartcard Support**
- **DUS Series** touch screens
- **Elo serial** touch screens
- **IGEL Smartcard without locking desktop**

- **Video Hardware Acceleration Support is discontinued** on UD3-LX 42, UD3-LX 41, UD3-LX 40 (M320C/M330C) and UD10-LX Touch 10, UD10-LX 10
- **H.264 Hardware Acceleration Support is discontinued** on UD3-LX 42, UD3-LX 41, UD3-LX 40 (M320C/M330C) and UD10-LX Touch 10, UD10-LX 10
- **Storage Hotplug devices are not automatically removed anymore**, instead they must be always ejected manually:
  - by panel tray icon
  - by an icon in the **In-Session Control Bar** (configurable at **IGEL Setup > User Interface > Desktop**)
  - by a **Safely Remove Hardware** session (configurable at **IGEL Setup > Accessories**)

The following clients and features are **not available** in this release:

- **Cherry eGK Channel**
- **Open VPN Smartcard Support**
- **NCP Secure Client**
- **Asian Input Methods**
- **Composite Manager**

## Known Issues 10.05.500

### Citrix

- **With activated DRI3 and an amd gpu citrix h264 acceleration plugin could freeze.** Selective H.264 mode (api v2) is not affected from this issue.
- Citrix has known issues with **gstreamer1.0** which describe problems with multimedia redirection of H264, MPEG1 and PEG2. Gstreamer1.0 is used if browser content redirection is active.
- **Browser content redirection does not work with** activated DRI3 and hardware accelerated H.264 deep compression codec.
- **Citrix StoreFront Login with Gemalto smartcard middleware does not detect smartcard correctly** if the card is inserted after start of Login. As a workaround, insert the smartcard before starting StoreFront Login.
- When using **Citrix Workspace App 18.10 in combination with Philips Speech driver**, the session occasionally does not properly terminate at logoff and hangs. As a workaround, usage of **Citrix Receiver 13.10** is recommended when Philips Speech driver is needed.
- **Citrix H264 acceleration plugin does not work with \*\*enabled\*\* server policy "Optimize for 3D graphics workload"** in combination with server policy **Use video codec compression > For the entire screen**.
- When **Expand the session over a self-selected number of monitors** (for "Multi-Monitor full screen mode") is used and setup is restarted, **Restrict full screen session to one monitor** is indicated and the monitor selection is greyed out. **The functionality is available, only the notification in setup is broken.**

### VMware Horizon

- **External drives** mounted already before connection **do not appear in the remote desktop**.  
Workaround: map the directory /media as a drive in your desktop. Then the external devices will show up inside the media drive.
- **Client drive mapping** and **USB redirection for storage devices** should **not** be enabled both at the same time.
  - On the one hand, if you want to use USB redirection for your storage devices.

Note that the USB on-insertion feature is only working if the **Client Drive Mapping** is switched off. In the IGEL Setup client drive mapping can be found in: **Sessions > Horizon Client > Horizon Client Global > Drive Mapping > Enable Drive Mapping**.

It is also recommended to disable local **Storage Hotplug**: On page **Devices > Storage Devices > Storage Hotplug**, put number of storage hotplug devices to 0.

- On the other hand, if you use drive mapping instead, it is recommended that you should either switch off USB redirection entirely or at least deny storage devices by adding a filter to the USB class rules. And because Horizon Client relies on the OS to mount the storage devices itself, please go to setup page: **Devices > Storage Devices > Storage Hotplug** and switch on **Enable dynamic drive mapping** and put **Number of storage hotplug devices** to at least 1.

#### Parallels Client

- **Native USB redirection** does not work with Parallels Client.
- For using the new **FIPS 140-2 compliance mode** it is necessary to connect to the Parallels RAS one time with FIPS support disabled.

#### Smartcard

- In some cases, there are instabilities when using **A.E.T. SafeSign smartcards**.

#### Appliance Mode

- **Appliance mode RHEV/Spice**: spice-xpi firefox plugin is no longer supported. The "Console Invocation" has to allow Native client (auto is also possible) and it should start in fullscreen to prevent opening windows.

#### Hardware

- **Suspend on UD10 is disabled**.

#### IGEL Cloud Gateway

- **No support for UMS file transfer status** in ICG protocol.

## New Features 10.05.500

#### Citrix

- Integrated **Citrix Workspace app 18.10**.
  - There is now a registry key to enable **Citrix Workspace App selfservice web UI mode**.  
[More...](#)

|           |                                                      |
|-----------|------------------------------------------------------|
| Parameter | Enable Citrix Workspace app self-service web UI mode |
| Registry  | ica.authman.cwacapableenabled                        |
| Value     | <u>enabled</u> / disabled                            |

- There is now a registry key to make a **Bloomberg v4 keyboard** available across multiple sessions. Additionally USB redirection has to be enabled at least for this device: vid=1188 pid=9545.

[More...](#)

|           |                                     |
|-----------|-------------------------------------|
| Parameter | Bloomberg v4 keyboard               |
| Registry  | ica.allregions.bloombergredirection |
| Value     | <u>default</u> / true / false       |

- Removed parameter for **Citrix Cloud**. This parameter is not needed anymore.

[More...](#)

#### IGEL Setup **Sessions > Citrix > Citrix Global > Options**

Parameter Connect to cloud

Registry ica.cloudconnect

- Citrix client version 13.9.1 was removed.

Available Citrix client versions: **13.5.0, 13.10, 18.10** (default)

- It is now possible to **span a Citrix session over a self-defined number of consecutive monitors**. For this, the parameter ica.wfclient.usexdgfullscreen must be deactivated and ica.pnlogin.spanmonitorenable activated. The selection must be defined in the parameter ica.pnlogin.spanmonitor.

[More...](#)

#### IGEL Setup **Sessions > Citrix > Citrix Global > Window**

Parameter Expand the session over a self-selected number of monitors

Registry ica.pnlogin.spanmonitorenable

Value enabled / disabled

#### IGEL Setup **Sessions > Citrix > Citrix Global > Window**

Parameter Monitor selection

Registry ica.pnlogin.spanmonitor

|                                                                                                                                  |     |
|----------------------------------------------------------------------------------------------------------------------------------|-----|
| Value                                                                                                                            | " " |
| Sample: When using four monitors and expansion of session across monitor 2, 3 and 4 is wanted, insertion should be 2,3,4 or 2,4. |     |

- **Setup renaming**

[More...](#)

| Old Name                                     | New Name                                |
|----------------------------------------------|-----------------------------------------|
| Citrix XenDesktop / XenApp                   | Citrix                                  |
| Citrix Receiver Selection                    | Citrix Workspace Client Selection       |
| Citrix Receiver version                      | Citrix Client version                   |
| HDX / ICA Global                             | Citrix Global                           |
| Legacy ICA Sessions                          | Citrix Legacy ICA Sessions              |
| Citrix Storefront/Webinterface               | Citrix Storefront                       |

| XenDesktop                                   | Citrix Virtual Desktops                 |
| XenApp / XenDesktop                          | Citrix Virtual Apps / Desktops          |
| Server Location: XenApp 6.x or older         | Server Location: Web Interface          |
| Server Location: XenApp/XenDesktop 7.x Store | Server Location: Storefront             |
| Server Location: XenApp/XenDesktop 7.x       | Server Location: StoreFront Legacy Mode |
| Legacy Mode                                  |                                         |

- Updated **deviceTrust** client to version **19.1.100**.

#### IGEL Linux Recovery

- Enhanced **IGEL Linux Recovery installer** by a new option to force a legacy installation if booted in EFI mode.
- Updated **preparestick** tool to version 3.3.0.0 with the following fixes:
  - WMI NullReferenceException
  - dd.exe Processbar asynchronous
  - diskpart->clean failed with access denied

#### RDP/IGEL RDP Client 2

- Updated **deviceTrust** client to version 19.1.100.

#### VMware Horizon

- Updated **Horizon Client** for Linux to **version 4.10.0-11053294**. Added support for the new features:
  - **H.264 High Color Accuracy**
  - [More...](#)

| Registry  | ibm.sessions.iaccess%.options.deletemenus                 |
| Value     | list of visible menu entries                              |

## Firefox

- Updated Mozilla Firefox to **version 60.3.0ESR**  
Fixes for **mfsa2018-27**, also known as: CVE-2018-12392, CVE-2018-12393, CVE-2018-12395, CVE-2018-12396, CVE-2018-12397, CVE-2018-12389, CVE-2018-12390.

## Cisco JVDI Client

- Updated Cisco JVDI client to **version 12.1**

## Base system

- Updated **French** and **Dutch** user interface translation.

## Driver

- **Philips Speech Drivers** for Citrix and RDP version 12.6.36  
Support of the new Philips dictation devices **SpeechOne 6000** and **SpeechAir 2000**

## Audio

- Added support for **Jabra Xpress** mechanism to deploy firmware updates and settings on **Jabra USB headsets**.

| Value     | <u>enabled</u> / <u>disabled</u> |

## Java

- Updated Oracle Java Runtime Environment to **version 1.8.0 U192**.

## IGEL Cloud Gateway

- Added support for ICG High Availability and ICG load balancing to the **IGEL remote management service**.

## Resolved Issues 10.05.500

### Citrix

- Fixed tool **icacontrol**
- Added: clear error message is returned when a **published desktop is occupied by another user**.
- Added: clear error message is returned when **misconfiguration inhibits start of an application**.

### RDP/IGEL RDP Client 2

- Fixed login error message being displayed in **English** only.
- **Allow server side per user scaling for multimonitor configurations** as well (RDP sessions desktop scaling factor must be set to 100% for this to work):
  - Global setting
  - [More...](#)

| IGEL Setup | <b>Sessions &gt; RDP &gt; RDP Global &gt; Window</b> |
|------------|------------------------------------------------------|
| Parameter  | Desktop scale factor                                 |
| Registry   | rdp.winconnect.desktop-scale-factor                  |
| Value      | <u>auto</u> / 100% / 125% / 150%                     |

- Session setting
- [More...](#)

| IGEL Setup | <b>Sessions &gt; RDP &gt; RDP Sessions &gt; **RDP Session** &gt; Window</b> |
|------------|-----------------------------------------------------------------------------|
| Parameter  | Desktop scale factor                                                        |
| Registry   | sessions.winconnect%.option.desktop-scale-factor                            |
| Value      | Global setting / auto / 100% / 125% / 150%                                  |

### Evidian

- Fixed **NLA support** in Evidian AuthMgr RDP session type

### Network

- Fixed handling of the following registry keys:
  - network.interfaces.wirelesslan.device0.driver.disable\_ht
  - network.interfaces.wirelesslan.device0.driver.chain\_num
  - network.interfaces.wirelesslan.device0.driver.cfg80211.cfg80211\_disable\_40mhz\_24ghz

The first and the second parameters only affect the driver **rt2800ub** (used e.g. for Ralink RT3372 and RT5572)

- Fixed **iptables IPv6 support** by adding IPv6 netfilter kernel modules.

#### WiFi

- Fixed connection to **hidden WiFi networks**

#### Cisco JVDI Client

- Fixed: Applications are now startable via **desktop**, start menu and **application launcher**.
- Fixed Webcam support with **32Bit Citrix Receiver** for JVDI.

#### Open VPN

- Fixed **desktop folder support** for OpenVPN session.

#### Smartcard

- Improved **waiting for smartcard events**.

#### Base system

- **IGEL Setup Assistant will no longer start multiple times**, the existing instance will be raised instead.
- Fixed **automatic firmware update** on shutdown.

#### Storage Devices

- Fixed potential **hangs on suspend/shutdown** when a **USB memory stick** was in use at that time.

#### X11 system

- Fixed **huge icons** in GTK applications when DPI setting was below 96.
- Fixed problems with **Avaya VDI Communicator** and webcams.
- **Disabled SNA sprite X video support as default** because it is unstable and could crash X server.
  - New registry key:  
[More...](#)

|           |                                                  |
|-----------|--------------------------------------------------|
| Parameter | Use SNA sprite video feature (could be unstable) |
| Registry  | x.drivers.intel.sprite_video                     |
| Value     | enabled / <u>disabled</u>                        |

#### Window manager

- Fixed the **custom UI colors for the window manager decoration** that was broken in 10.05.100. The custom UI colors are now applied to the window borders again.

#### Audio

- Applied workarounds concerning **USB control requests on Plantronics C510 and 520**.
- Fixed **initialization of sound card** in **Dell Wyse 3040**.
- Fixed blocking mode in compatibility **Pulseaudio PCM plugin for ALSA**. The blocking mode is used by Parallels client to playback sound.

#### Media Player (Parole)

- Parole media player now displays a **looping animation** while initiating the connection for **rtmp streams**.
- **Extended integration** of Parole media player configuration in the setup. The following configuration keys are now respected.

## General Information 10.05.500

The following clients and features are **not supported** anymore:

- **Citrix Receiver 12.1 and 13.1 - 13.4**
- **Citrix Access Gateway** Standard Plug-in
- **Dell vWorkspace Connector** for Linux
- **Ericom PowerTerm Emulation 9 and 11**
- **Ericom Webconnect**
- **IGEL Legacy RDP Client** (rdesktop)
- Virtual Bridges **VERDE Client**
- **PPTP VPN** Support
- **IGEL Upgrade License Tool with IGEL Smartcard Token**
- Remote Management by **setup.ini file transfer** (TFTP)
- Remote Access via **RSH**
- Legacy **Philips Speech Driver**
- t-Systems **TCOS Smartcard Support**
- **DUS Series** touch screens
- **Elo serial** touch screens
- **IGEL Smartcard without locking desktop**
- **VIA Graphics Support**
- **Storage Hotplug devices are not automatically removed anymore**, instead they must be always ejected manually:
  - by panel tray icon
  - by an icon in the **In-Session Control Bar** (configurable at **IGEL Setup > User Interface > Desktop**)
  - by a **Safely Remove Hardware** session (configurable at **IGEL Setup > Accessories**)

The following clients and features are **not available** in this release:

- **Cherry eGK Channel**
- **Open VPN Smartcard Support**
- **NCP Secure Client**
- **Asian Input Methods**
- **Composite Manager**

## Known Issues 10.05.500

### Citrix

- **With activated DRI3 and an amd gpu citrix h264 acceleration plugin could freeze.** Selective H.264 mode (api v2) is not affected from this issue.

- Citrix has known issues with **gstreamer1.0** which describe problems with multimedia redirection of H264, MPEG1 and PEG2. Gstreamer1.0 is used if browser content redirection is active.
- **Browser content redirection does not work with** activated DRI3 and hardware accelerated H.264 deep compression codec.
- **Citrix StoreFront Login with Gemalto smartcard middleware does not detect smartcard correctly** if the card is inserted after start of Login. As a workaround, insert the smartcard before starting StoreFront Login.
- When using **Citrix Workspace App 18.10 in combination with Philips Speech driver**, the session occasionally does not properly terminate at logoff and hangs. As a workaround, usage of **Citrix Receiver 13.10** is recommended when Philips Speech driver is needed.
- **Citrix H264 acceleration plugin does not work with "enabled" server policy "Optimize for 3D graphics workload"** in combination with server policy **Use video codec compression > For the entire screen**.
- When **Expand the session over a self-selected number of monitors** (for "Multi-Monitor full screen mode") is used and setup is restarted, **Restrict full screen session to one monitor** is indicated and the monitor selection is greyed out. **The functionality is available, only the notification in setup is broken.**

#### VMware Horizon

- **External drives** mounted already before connection **do not appear in the remote desktop**. Workaround: map the directory /media as a drive in your desktop. Then the external devices will show up inside the media drive.
- **Client drive mapping** and **USB redirection for storage devices** should **not** be enabled both at the same time.
  - On the one hand, if you want to use USB redirection for your storage devices.

Note that the USB on-insertion feature is only working if the **Client Drive Mapping** is switched off. In the IGEL Setup client drive mapping can be found in: **Sessions > Horizon Client > Horizon Client Global > Drive Mapping > Enable Drive Mapping**.

It is also recommended to disable local **Storage Hotplug**: On page **Devices > Storage Devices > Storage Hotplug**, put number of storage hotplug devices to 0.

- On the other hand, if you use drive mapping instead, it is recommended that you should either switch off USB redirection entirely or at least deny storage devices by adding a filter to the USB class rules. And because Horizon Client relies on the OS to mount the storage devices itself, please go to setup page: **Devices > Storage Devices > Storage Hotplug** and switch on **Enable dynamic drive mapping** and put **Number of storage hotplug devices** to at least 1.

#### Parallels Client

- **Native USB redirection** does not work with Parallels Client.
- For using the new **FIPS 140-2 compliance mode** it is necessary to connect to the Parallels RAS one time with FIPS support disabled.

#### Base system

- **Display resolution and rotation** could not be changed with nvidia gpu driver via tcsetup.

#### Multimedia

- Multimedia redirection with **gstreamer** could fail with **nouveau gpu driver**.

#### Smartcard

- In some cases, there are instabilities when using **A.E.T. SafeSign smartcards**.

#### Appliance Mode

- **Appliance mode RHEV/Spice**: spice-xpi firefox plugin is no longer supported. The "Console Invocation" has to allow Native client (auto is also possible) and it should start in fullscreen to prevent opening windows.

#### Hardware

- **Suspend on UD10 is disabled**.

#### IGEL Cloud Gateway

- **No support for UMS file transfer status** in ICG protocol.

### New Features 10.05.500

#### Citrix

- Integrated **Citrix Workspace app 18.10**.
  - There is now a registry key to enable **Citrix Workspace App selfservice web UI mode**.  
[More...](#)

|           |                                                      |
|-----------|------------------------------------------------------|
| Parameter | Enable Citrix Workspace app self-service web UI mode |
| Registry  | ica.authman.cwacapableenabled                        |
| Value     | <u>enabled</u> / disabled                            |

- There is now a registry key to make a **Bloomberg v4 keyboard** available across multiple sessions. Additionally USB redirection has to be enabled at least for this device: vid=1188 pid=9545.  
[More...](#)

|           |                                     |
|-----------|-------------------------------------|
| Parameter | Bloomberg v4 keyboard               |
| Registry  | ica.allregions.bloombergredirection |
| Value     | <u>default</u> / true / false       |

- Removed parameter for **Citrix Cloud**. This parameter is not needed anymore.  
[More...](#)

IGEL Setup **Sessions > Citrix > Citrix Global > Options**

|           |                  |
|-----------|------------------|
| Parameter | Connect to cloud |
| Registry  | ica.cloudconnect |

- Citrix client version 13.9.1 was removed.  
Available Citrix client versions: **13.5.0, 13.10, 18.10** (default)
- It is now possible to **span a citrix session over a self-defined number of consecutive monitors**.  
For this, the parameter `ica.wfclient.usexdgfullscreen` must be deactivated and `ica.pnlogin.spanmonitorenable` activated. The selection must be defined in the parameter `ica.pnlogin.spanmonitor`.

[More...](#)

|            |                                                            |
|------------|------------------------------------------------------------|
| IGEL Setup | <b>Sessions &gt; Citrix &gt; Citrix Global &gt; Window</b> |
| Parameter  | Expand the session over a self-selected number of monitors |
| Registry   | <code>ica.pnlogin.spanmonitorenable</code>                 |
| Value      | <code>enabled</code> / <u><a href="#">disabled</a></u>     |

|            |                                                            |
|------------|------------------------------------------------------------|
| IGEL Setup | <b>Sessions &gt; Citrix &gt; Citrix Global &gt; Window</b> |
| Parameter  | Monitor selection                                          |
| Registry   | <code>ica.pnlogin.spanmonitor</code>                       |
| Value      | " "                                                        |

Sample: When using four monitors and expansion of session across monitor 2, 3 and 4 is wanted, insertion should be 2,3,4 or 2,4.

- **Setup renaming**

|----------------------------------------------------|-----------------------------------------|
| Server Location: XenApp/XenDesktop 7.x Legacy Mode | Server Location: StoreFront Legacy Mode |

- Updated **deviceTrust** client to version **19.1.100**.

#### UDC3 Installer

- Added **UEFI support in UDC Deployment Appliance 5.0**, downloadable via download section on [www.igel.com](http://www.igel.com)<sup>455</sup>
- Enhanced **UDC3 Converter** by a new option to force **MS-DOS partitioning for EFI installations**.
- Updated "preparestick" tool to version 3.3.0.0 with the following fixes:
  - WMI NullReferenceException
  - dd.exe Processbar asynchronous
    - diskpart->clean failed with access denied
- RDP/IGEL RDP Client 2
  - Updated **deviceTrust** client to version 19.1.100.

#### VMware Horizon

- Updated **Horizon Client** for Linux to **version 4.10.0-11053294**. Added support for the new features:

- H.264 High Color Accuracy**

| Range     | [Disable and Hide] [Run the Same] [Run Other...]       |
| Parameter | Tab Placement                                          |
| Registry  | ibm.iaccess.acssm.tabplacement                         |
| Range     | [Top][Bottom] [Left] [Right]                           |
| Parameter | List of visible menu entries                           |
| Registry  | ibm.sessions.iaccess%.options.deletemenus              |
| Value     | list of visible menu entries                           |

#### Firefox

- Updated Mozilla Firefox to **version 60.3.0ESR**  
Fixes for **mfsa2018-27**, also known as: CVE-2018-12392, CVE-2018-12393, CVE-2018-12395, CVE-2018-12396, CVE-2018-12397, CVE-2018-12389, CVE-2018-12390.

#### Cisco JVDI Client

- Updated Cisco JVDI client to **version 12.1**

#### Base system

- Updated **French** and **Dutch** user interface translation.

#### Driver

- Philips Speech Drivers** for Citrix and RDP version 12.6.36  
Support of the new Philips dictation devices **SpeechOne 6000** and **SpeechAir 2000**

#### Audio

- Added support for **Jabra Xpress** mechanism to deploy firmware updates and settings on **Jabra USB headsets**.

| Registry  | userinterface.sound.force        |
| Value     | <u>enabled</u> / <u>disabled</u> |

## Hardware

- Added **LG CK 500** to supported hardware.
  - Added **Dell Wyse 5070** to supported hardware.
- Known issues:
- Headset connectors sometimes not recognises a plugged device.
  - USB3.0 ports on back panel sporadic not recognises USB3.0 devices correctly.
  - USB-C front displayport usage is not recommended, connection problems could occur.
  - Wake-up after standby could lead to delay when using multimonitor setup
  - Screen rotation does not work reliable
- Added **ONYX VENUS 223** to supported hardware.
  - Added support for following **Plantronics** devices:
    - Blackwire 5210
    - Voyager Focus UC B825
    - Voyager 8200 UC

## Java

- Updated Oracle Java Runtime Environment to **version 1.8.0 U192**.

## IGEL Cloud Gateway

- Added support for ICG High Availability and ICG load balancing to the **IGEL remote management service**.

## Resolved Issues 10.05.500

### Citrix

- Fixed tool **icacontrol**
- Added: clear error message is returned when a **published desktop is occupied by another user**.
- Added: clear error message is returned when **misconfiguration inhibits start of an application**.

### RDP/IGEL RDP Client 2

- Fixed login error message being displayed in **English** only.

- **Allow server side per user scaling for multimonitor configurations** as well (RDP sessions desktop scaling factor must be set to 100% for this to work):

- Global setting

[More...](#)

|            |                                                      |
|------------|------------------------------------------------------|
| IGEL Setup | <b>Sessions &gt; RDP &gt; RDP Global &gt; Window</b> |
| Parameter  | Desktop scale factor                                 |
| Registry   | rdp.winconnect.desktop-scale-factor                  |
| Value      | <u>auto</u> / 100% / 125% / 150%                     |

- Session setting

[More...](#)

|            |                                                                             |
|------------|-----------------------------------------------------------------------------|
| IGEL Setup | <b>Sessions &gt; RDP &gt; RDP Sessions &gt; **RDP Session** &gt; Window</b> |
| Parameter  | Desktop scale factor                                                        |
| Registry   | sessions.winconnect%.option.desktop-scale-factor                            |
| Value      | Global setting / auto / 100% / 125% / 150%                                  |

## Evidian

- Fixed **NLA support** in Evidian AuthMgr RDP session type

## Network

- Fixed handling of the following registry keys:

- network.interfaces.wirelesslan.device0.driver.disable\_ht
- network.interfaces.wirelesslan.device0.driver.chain\_num
- network.interfaces.wirelesslan.device0.driver.cfg80211.cfg80211\_disable\_40mhz\_24ghz

The first and the second parameters only affect the driver **rt2800ub** (used e.g. for Ralink RT3372 and RT5572)

- Fixed **iptables IPv6 support** by adding IPv6 netfilter kernel modules.

## WiFi

- Fixed connection to **hidden WiFi networks**

## Cisco JVDI Client

- Fixed: Applications are now startable via **desktop**, start menu and **application launcher**.
- Fixed Webcam support with **32Bit Citrix Receiver** for JVDI.

## Open VPN

- Fixed **desktop folder support** for OpenVPN session.

## Smartcard

- Improved **waiting for smartcard events**.

## Base system

- **IGEL Setup Assistant will no longer start multiple times**, the existing instance will be raised instead.
- Fixed **automatic firmware update** on shutdown.

## Storage Devices

- Fixed potential **hangs on suspend/shutdown** when a **USB memory stick** was in use at that time.

## X11 system

- Fixed **huge icons** in GTK applications when DPI setting was below 96.
- Fixed problems with **Avaya VDI Communicator** and webcams.
- **Disabled SNA sprite X video support as default** because it is unstable and could crash X server.
  - New registry key:  
[More...](#)

|           |                                                  |
|-----------|--------------------------------------------------|
| Parameter | Use SNA sprite video feature (could be unstable) |
| Registry  | x.drivers.intel.sprite_video                     |
| Value     | enabled / <u>disabled</u>                        |

## Window manager

- Fixed the **custom UI colors for the window manager decoration** that was broken in 10.05.100. The custom UI colors are now applied to the window borders again.

## Audio

- Applied workarounds concerning **USB control requests on Plantronics C510 and 520**.
- Fixed **initialization of sound card** in **Dell Wyse 3040**.
- Fixed blocking mode in compatibility **Pulseaudio PCM plugin for ALSA**. The blocking mode is used by Parallels client to playback sound.

## Media Player (Parole)

- Parole media player now displays a **looping animation** while initiating the connection for **rtmp streams**.
- **Extended integration** of Parole media player configuration in the setup. The following configuration keys are now respected.

## New Features 10.05.500

### UDC3 Installer

- Added **UEFI support in UDC Deployment Appliance 5.0**, downloadable via download section on [www.igel.com](http://www.igel.com)<sup>456</sup>
- Enhanced UDC3 Converter** by a new option to force MS-DOS partitioning for EFI installations.
- Updated "preparestick" tool to version 3.3.0.0 with the following fixes:
  - WMI NullReferenceException
  - dd.exe Processbar asynchronous
  - diskpart->clean failed with access denied

## 7.29 Notes for Release 10.05.100

## Component Versions 10.05.100

- **Clients**

| Product                          | Version    |
|----------------------------------|------------|
| Citrix HDX Realtime Media Engine | 2.6.0-2030 |
| Citrix Receiver                  | 13.10.0.20 |

|                                         |                                 |
|-----------------------------------------|---------------------------------|
| Citrix Receiver                         | 13.5.0.10185126                 |
| Citrix Receiver                         | 13.9.1.6                        |
| deviceTRUST Citrix Channel              | 17.2.100.0                      |
| deviceTRUST RDP Channel                 | 17.2.100.0                      |
| Ericom PowerTerm                        | 12.0.1.0.20170219.2-_dev_-34574 |
| Evidian AuthMgr                         | 1.5.6840                        |
| Evince PDF Viewer                       | 3.18.2-1ubuntu4.3               |
| FabulaTech USB for Remote Desktop       | 5.2.29                          |
| Firefox                                 | 60.2.2                          |
| IBM iAccess Client Solutions            | 1.1.5.0                         |
| IGEL RDP Client                         | 2.2                             |
| Imprivata OneSign ProveID Embedded      |                                 |
| Leostream Java Connect                  | 3.3.7.0                         |
| NX Client                               | 5.3.12                          |
| Open VPN                                | 2.3.10-1ubuntu2.1               |
| Oracle JRE                              | 1.8.0_181                       |
| Parallels Client (32 bit)               | 16.5.1.20446                    |
| Parole Media Player                     | 1.0.1-0ubuntu1igel11            |
| Remote Viewer (RedHat Virtualization)   | 7.0-igel47                      |
| Spice GTK (Red Hat Virtualization)      | 0.35                            |
| Spice Protocol (Red Hat Virtualization) | 0.12.14                         |
| Usbredir (Red Hat Virtualization)       | 0.8.0                           |
| Systancia AppliDis                      | 4.0.0.17                        |

|                       |                         |
|-----------------------|-------------------------|
| Thinlinc Client       | 4.9.0-5775              |
| ThinPrint Client      | 7.5.86                  |
| Totem Media Player    | 2.30.2                  |
| VMware Horizon Client | 4.8.0-8518891           |
| VNC Viewer            | 1.8.0+git20180123-igel1 |
| Voip Client Ekiga     | 4.0.1                   |

- **Dictation**

|                                                       |          |
|-------------------------------------------------------|----------|
| Diktamen driver for dictation                         |          |
| Driver for Grundig Business Systems dictation devices |          |
| Nuance Audio Extensions for dictation                 | B048     |
| Olympus driver for dictation                          | 20180621 |
| Philips Speech Driver                                 | 12.5.4   |

- **Signature**

|                           |          |
|---------------------------|----------|
| Kofax SPVC Citrix Channel | 3.1.41.0 |
| signotec Citrix Channel   | 8.0.6    |
| signotec VCOM Daemon      | 2.0.0    |
| StepOver TCP Client       | 2.1.0    |

- **Smartcard**

| VirtualBox |
|------------|

- **Features with Limited Functionality**

Cisco JVDI Client

12.0

## General Information 10.05.100

The following clients and features are not supported anymore:

- Citrix Receiver 12.1 and 13.1 - 13.4
- Citrix Access Gateway Standard Plug-in
- Dell vWorkspace Connector for Linux
- Ericom PowerTerm Emulation 9 and 11
- Ericom Webconnect
- IGEL Legacy RDP Client (rdesktop)
- Virtual Bridges VERDE Client
- PPTP VPN Support
- IGEL Upgrade License Tool with IGEL Smartcard Token
- Remote Management by setup.ini file transfer (TFTP)
- Remote Access via RSH
- Legacy Philips Speech Driver
- t-Systems TCOS Smartcard Support
- DUS Series touch screens
- Elo serial touch screens
- IGEL Smartcard without locking desktop
- Video Hardware Acceleration Support is discontinued on UD3-LX 42, UD3-LX 41, UD3-LX 40 (M320C/M330C) and UD10-LX Touch 10, UD10-LX 10
- H.264 Hardware Acceleration Support is discontinued on UD3-LX 42, UD3-LX 41, UD3-LX 40 (M320C/M330C) and UD10-LX Touch 10, UD10-LX 10
- Storage Hotplug devices are not automatically removed anymore, instead they must be always ejected manually:
  - by panel tray icon
  - by an icon in the **In-Session Control Bar** (configurable at **IGEL Setup > User Interface > Desktop**)
  - by a **Safely Remove Hardware** session (configurable at **IGEL Setup > Accessories**)

The following clients and features are not available in this release:

- Cherry eGK Channel
- Open VPN Smartcard Support
- NCP Secure Client
- Asian Input Methods
- Composite Manager

## Security Fixes 10.05.100

Firefox

- Updated Mozilla Firefox to version **60.2.2esr**.

 mfsa2018-10: CVE-2018-5148

- Firefox profile partition is now **mounted at /userhome/.mozilla instead of /.ffpro**.
- Firefox could only be started as **user**.
- For security reasons **Java processes could not be started from a browser session now**.
- Added a registry parameter `java.browser.access` to **control java access for all browser sessions**.

| Registry  | <code>system.security.apparmor</code> |
| Value     | <u>enabled</u> / <u>disabled</u>      |

- For security reasons **graphical terminal sessions** could now only be started by an administrator when an **admin password** is set. Administrator must authenticate before a terminal session is started. This does also affect graphical terminal sessions spawned by applications.

- To **allow users to start a terminal session again** a registry key is defined.

- Fixed **libonig** security issues CVE-2017-9229, CVE-2017-9228, CVE-2017-9227, CVE-2017-9226 and CVE-2017-9224.
- Fixed **libxcursor** security issue CVE-2015-9262.
- Fixed **heimdal** security issue CVE-2017-17439.
- Fixed **libarchive** security issues CVE-2017-14503, CVE-2017-14501, CVE-2017-14166, CVE-2016-10350, CVE-2016-10349 and CVE-2016-10209.
- Fixed **libxml2** security issues CVE-2018-14567, CVE-2018-14404, CVE-2017-18258 and CVE-2016-9318.
- Fixed **confuse** security issue CVE-2018-14447.
- Fixed **libgd2** security issues CVE-2018-5711 and CVE-2018-1000222.

- Fixed **libx11** security issues CVE-2018-14600, CVE-2018-14599, CVE-2018-14598, CVE-2016-7943 and CVE-2016-7942.
- Fixed **mpg123** security issues CVE-2017-10683 and CVE-2016-1000247.
- Fixed **libtirpc** security issues CVE-2018-14622, CVE-2017-8779 and CVE-2016-4429.
- Fixed **jq** security issue CVE-2015-8863.
- Fixed **bind9** security issue CVE-2018-5740.
- Fixed **lcms2** security issue CVE-2018-16435.
- Fixed **xdg-utils** security issue CVE-2017-18266.
- **Restricted access to command su to root and user.**
- Root home is now **/root**.
- **Removed system group (GID 0)** which shadowed root group (GID 0).
- **Stricter folder and file permissions.**

#### X11 system

- Restricted desktop icon creation to administrator only. Therefore, "**/userhome/Desktop**" is **owned by root now**.

#### Known Issues 10.05.100

##### Citrix Receiver 13

- On devices with **AMD/Radeon graphics chipsets** and **activated DRI3 X driver option** the **hardware accelerated Citrix H.264 decoder plugin can hang**. To solve this issue deactivation of DRI3 option is necessary (default setting). Selective H.264 mode (api v2) is not affected from this issue.
- **Citrix StoreFront login with Gemalto smartcard middleware** does not detect smartcard correctly when the card is inserted after start of login. As a workaround, insert the smartcard before starting StoreFront login.
- The Citrix Receiver has known issues with **GStreamer1.x**. This causes **problems with multimedia redirection of H264, MPEG1 and MPEG2**. GStreamer1.x is used if browser content redirection is active.

##### Parallels Client

- **Native USB redirection** does not work with Parallels Client.
- Due to a bug in the Parallels-Client, for using the new **FIPS 140-2 compliance mode** it is necessary to connect to the Parallels RAS one time with FIPS support disabled.

##### VMware Horizon

- VMware Horizon Client for **Linux 4.8.0 supports FIPS Mode on only VMware Horizon server installations up to version 7.5**.
- **External drives are mounted already before connection, do not appear in the remote desktop**. Workaround: mapping the directory /media as a drive on desktop. The external devices will show up within the media drive then.
- **Client drive mapping and USB redirection for storage devices** should not be enabled both at the same time.
  - On the one hand, when using USB redirection for storage devices: The USB on-insertion feature is only working when the client drive mapping is switched off. In the IGEL Setup

client drive mapping can be found in: **Sessions > Horizon Client > Horizon Client Global > Drive Mapping > Enable Drive Mapping**. It is also recommended to disable local **Storage Hotplug** on setup page **Devices > Storage Devices > Storage Hotplug**.

- On the other hand, when using drive mapping instead, it is recommended to either switch off USB redirection entirely or at least deny storage devices by adding a filter to the USB class rules. Furthermore, Horizon Client relies on the OS to mount the storage devices itself. Enable local **Storage Hotplug** on setup page **Devices > Storage Devices > Storage Hotplug**.

#### OpenConnect VPN

- VPNs which requires the **OpenConnect client** cannot be used for firmware updates.

#### Appliance Mode

- Appliance mode **RHEV/Spice: spice-xpi Firefox plugin is no longer supported**. The **Console Invocation** has to allow native client (auto is also possible) and it should start in fullscreen to prevent opening windows.

#### Hardware

- Sometimes the **DVI Port on a UD6 is not recognized by the Linux system after booting up**. The only available way to solve the issue is to shut down and disconnect the thin client from power (1-2 minutes) and connect and power up it again.
- **Suspend** is not working on **UD10** so the support for suspend is disabled.

#### Smartcard

- In seldom cases the authentication hung when using A.E.T. SafeSign smartcards.

#### IGEL Cloud Gateway

- **No support for UMS file transfer status** in ICG protocol.

## New Features 10.05.100

#### Citrix Receiver 13

- Integrated **Citrix Receiver 13.10**. Citrix Receiver version 13.7.0 was removed. Citrix Receiver version 13.8.0 was removed. Available Citrix Receiver versions: 13.5.0, 13.9.1, [13.10](#) (default)
    - Enable **Browser content redirection for rendering of whitelisted webpages** on the IGEL Thin Client.

| Parameter  | Connect to cloud                                                          |
| Registry   | ica.cloudconnect                                                          |
| Value      | <u>enabled / disabled</u>                                                 |

- Added a registry key to **control the visibility of the Citrix connection bar** for desktop sessions. If activated, the In-Session Control Bar should be disabled at `userinterface.igel_toolbar.enable` and `userinterface.igel_toolbar.show_always`.

This enables the control of the new **Multi-monitor layout persistence** feature.

[More...](#)

|           |                       |
|-----------|-----------------------|
| Parameter | Citrix Connection Bar |
|-----------|-----------------------|

|          |                                                       |
|----------|-------------------------------------------------------|
| Registry | <code>ica.allregions.connectionbar</code>             |
| Value    | <u>factory default</u> / off / on / server determined |

- Added a registry key to control the availability of deprecated cipher suites:
- TLS\_RSA\_AES256\_GCM\_SHA384, TLS\_RSA\_AES128\_GCM\_SHA256,**  
**TLS\_RSA\_AES256\_CBC\_SHA256, TLS\_RSA\_AES256\_CBC\_SHA,**  
**TLS\_RSA\_AES128\_CBC\_SHA,**  
**TLS\_RSA\_3DES\_CBC\_EDE\_SHA.**

|           |                                            |
|-----------|--------------------------------------------|
| Parameter | TLS RSA cipher suites                      |
| Registry  | <code>ica.allregions.enable_tls_rsa</code> |
| Value     | <u>factory default</u> / false / true      |

Factory default: true/enabled. Citrix explicitly remarks: **Important:** Set the flag `enable_tls_rsa` to true to use the other two cipher suites **Enable\_RC4-MD5** and **Enable\_RC4\_128\_SHA**.

- Added a registry key to control the availability of the deprecated cipher suite: **RC4-MD5**.

|           |                                            |
|-----------|--------------------------------------------|
| Parameter | RC4-MD5 cipher suite                       |
| Registry  | <code>ica.allregions.enable_rc4_md5</code> |
| Value     | <u>factory default</u> / false / true      |

Factory default: false/disabled.

- Added a registry key to control the availability of the deprecated cipher suite: **RC4\_128\_SHA**.

|           |                                                |
|-----------|------------------------------------------------|
| Parameter | RC4_128_SHA cipher suite                       |
| Registry  | <code>ica.allregions.enable_rc4_128_sha</code> |
| Value     | <u>factory default</u> / false / true          |

Factory default: false/disabled.

- Added **Selective H.264** (API v2) to the hardware accelerated Citrix deep compression codec. XenDesktop/XenApp server policy: **Use video codec for compression -> For actively changing regions**

- Added **DRI3 acceleration support** to the hardware accelerated Citrix deep compression codec (for INTEL and AMD graphics adapters).
- Enable **debugging to log file `/var/log/user/ctxh264.log`**.

[More...](#)

|           |                                                        |
|-----------|--------------------------------------------------------|
| Parameter | Enable H264 codec debug output                         |
| Registry  | <code>ica.hw-accelerated-h264-codec-debug</code>       |
| Value     | <code>enabled</code> / <a href="#"><u>disabled</u></a> |

- Added **Kerberos Passthrough (domain passthrough) authentication to StoreFront**. Configurable at **Sessions > Citrix XenDesktop / XenApp > HDX / ICA Global > StoreFront Logon > Authentication Type**.
- Updated **Citrix HDX RTME** used for optimization of **Skype for Business to 2.6.0-2030**. This new version adds the support for hardware accelerated H.264 en- and decoding on AMD platforms. See <https://support.citrix.com/article/CTX236304> section **Capability Checker for Linux platforms** how to enable hardware decoding with Citrix VDA registry keys `DisableLinuxAMDH264HardwareDecoding` and `SupportedAMDHWAVideoCardList`. The capability check program **RTOP-CapabilityChk-x64** is already installed at path `/services/ica/hdx_rtme/RTOP-CapabilityChk-x64`. The check program must be run with user permissions.
- Added display of **logged on Citrix username in screen lock**, when screen lock password is synchronized with Citrix password.
- Added checkbox to **activate autostart of a single published application/desktop session**.

## RDP/IGEL RDP Client 2

- Support for new **RDP 10 codec AVC444 (H.264)**, which reduces network bandwidth with Server 2016 and Windows 10 hosts. AMD Radeon graphics is required on the client side. Other graphics hardware (e.g. Intel) as well as other RDP 10 codecs (AVC420 and AVC444V2) will be supported in the future.

|            |                                                                               |
|------------|-------------------------------------------------------------------------------|
| IGEL Setup | <b>Sessions &gt; RDP &gt; RDP Global &gt; Performance</b>                     |
| Parameter  | Hardware accelerated codecs AVC420/AVC444 (H.264)                             |
| Registry   | rdp.winconnect.enable-h264                                                    |
| Value      | <u>auto</u> / on / off                                                        |
| IGEL Setup | <b>Sessions &gt; RDP &gt; RDP Sessions &gt; Session Name &gt; Performance</b> |
| Parameter  | Hardware accelerated codecs AVC420/AVC444 (H.264)                             |
| Registry   | sessions.winconnect%.option.enable-h264                                       |
| Value      | <u>Global setting</u> / auto / on / off                                       |

The value "auto" enables supported codecs on supported hardware.

The value "on" enables supported codecs on all hardware.

The value "off" disables H.264 codecs.

- Added new parameter **ignore\_errors** to RDP Session config to **suppress RDP error messages**.

| Registry   | sessions.twox%.connection.fips_compliance |
| Value      | <u>enabled / disabled</u>                 |

## VMware Horizon

- Updated **Horizon client to version 4.8.0-8518891**.

## ThinLinc

- Updated **ThinLinc client to version 4.9.0**.
  - Shadowing notification is now more reliable and interactive, allowing end users more control of their sessions.
  - More than 80 minor enhancements and fixes. See <https://www.cendio.com/thinlinc/docs/relnotes/4.9.0>.

## RedHat Enterprise Virtualization client

- **Updated spice components** (virt-viewer 7.0, spice-gtk 0.35).
- **Removed support for spice-xpi plugin**.

## X session (Xephyr)

- Added support for X sessions configurable at `IGEL Setup > Sessions > X Sessions`. The available XDMCP connection types: indirect via localhost, indirect, direct and broadcast. With the additional connection type "local display", a command can be specified that will be displayed inside the X session window.

**IGEL Setup Sessions > X Sessions > X Session > Server**

Parameter Command to be displayed

Registry sessions.xnest&lt;NR&gt;.server.runcommand

## Firefox

- Updated Mozilla Firefox to **version 60.2.2 ESR**.
- The **initial page** displayed by firefox with default settings is now **<https://kb.igel.com>** instead of the older **<https://edocs.igel.com>**.
- Updated **Adobe Flash Player** download URL to **version 31.0.0.122**.
- **Removed the webapp specific options**, this feature was removed from Firefox and is not relevant anymore.
- Moved **Browser Certificate** configuration to page **Sessions > Browser > Browser Global > Certificates**.
- Moved **Browser Security Device** configuration to page **Sessions > Browser > Browser Global > Smartcard Middleware**.
- Added **Fluendo FFmpeg GStreamer** proxy: Provides ffmpeg-libavcodec-compatible library, which is needed for H.264 playback in firefox. Instead decoding by standard ffmpeg libraries, the video stream is redirected to GStreamer framework.

## Network

- **SCEP**: Added subject alternative name type **DNS Name as UPN (auto)**. This is similar to **DNS Name (auto)**. In the CSR the result is a Microsoft User Principal Name (UPN) that consists of the hostname.
- **NetworkManager** updated to version **1.2.6**.

## Cisco JVDI Client

- Integrated new **Cisco Jabber Softphone for VDI** (Cisco JVDI client) **version 12.0.0** as feature with limited functionality. See product documentation for details -> <https://kb.igel.com/cisco-jvdi/en>. Activation of this feature at: **System > Firmware Customization > Features > Cisco JVDI client**. Only Citrix Receiver 13.9.1 is supported.

Registry path for Common JVDI options: `multimedia.ciscovxme.\*\*` The Cisco JVDI Client configuration is only displayed if the Multimedia Codec Pack (MMC) is present.

## Java

- Updated **Oracle Java Runtime Environment to version 1.8.0 U181**.

## Smartcard

- Updated **SecMaker Net iD to version 6.7.0.23**.
- Updated **HID Global Omnikey smartcard reader driver to version 4.3.3**.
- Updated **cryptovision sc/interface to version 7.1.9**. Changelog since version 7.0.5:
  - Fixed **an error during certificate registration** using the MS Minidriver for MS VSC. Compatible with sc/interface cache version 1.2 or higher.
  - Fixed an error where **writing a certificate using the Minidriver for MS VSC corrupted the Container-ID**. As a result, the key could not be used using CNG/CAPI.
  - Fixed an error during **certificate registration using the Minidriver for MS VSC where some Container-ID's could not be used by CNG/CAPI**.
  - General Bug Fixes.
  - Fixed **error during profile creation on JCOP3 with ePasslet-Suite 3.0**.
  - Added support for **additional BWI card profiles based on CardOS-5.x**. Versions **1.7, 1.8, 1.9, 4.2, 4.3 and 4.4**. Support **4k RSA for 1.9 and 4.4**.
  - Fixed support for **remote logon in sc/interface cache**.
  - Fixed **Free after use** in ReadOnly Minidriver.
  - PKCS#11 Fixed **MS VSC (GIDSv2) support**.
  - PKCS#11 Fixed **CardOS-4.x "non sc/interface card profile" support**.
  - **MS VSC (GIDSv2)** Support for PKCS#11 - Maximum CKA\_ID length reduced to 25 bytes!
  - Support for **JCOP3 and Infineon JTOP - DolphinV2**.
  - Support for **cryptovision's ePasslet-Suite-3.0**.
  - New **ePKIAppllet-2.129 for JCOP3, SCE7 and JTOP (DolphinV2)** with up to 4096 bits RSA and 512 bits
  - **EC** support, **PACE** optional.
  - **RegisterTool plugins now available in Setup**. Removed from "support\RegisterTool\_Plugins".
  - **New sc/interface Minidriver support for MS VSC** (instead of the MS Minidriver) to allow extended PIN cache configuration.
  - Added support for **sc/interface cache version 1.0** for Minidriver/ReadOnly Minidriver and PKCS#11.
  - **Cross-application PIN cache for Windows 8.1** and later.
  - **WARNING: No longer compatible with Credential Cache (CSP)**. When there are any questions, [support@cryptovision.com](mailto:support@cryptovision.com)<sup>457</sup> should be contacted.

---

<sup>457</sup> mailto:support@cryptovision.com

- Added **macOS CTK Token Driver for 10.12 and later**. Unfortunately, after the installation, a shell script must be executed to enable the full functionality.
- **Removed macOS tokend support** beginning with version 10.12, installation of 10.10 can be used if needed.
- **WARNING: macOS tokend support will discontinue, usage of new CTK Token Driver is necessary.**
- Re-Added **cvSimpleCardProv for Windows** (based on 6.4.2) to enabled the default login selection, see "support\CredentialProvider".
- Updated **OpenSC library to version 0.19.0**. Improved handling of PIV and CAC ALT token.

#### Base system

- Updated to **kernel version 4.18.11**.
- Added new **GStreamer 1.x support version 1.14.2**.

There will only ever be GStreamer in version 1.0 or version 0.10. By default, clients run with the version they have best support for. The provided registry key can be used to override the automatic detection/setting and pin a single version if required.

[More...](#)

|           |                                   |
|-----------|-----------------------------------|
| Parameter | Fluendo GStreamer Codec Version   |
| Registry  | multimedia.gstreamer.version      |
| Value     | [1.x] [0.10] [ <u>automatic</u> ] |

- With **GStreamer 1.x the new Parole player is used** for media player sessions. When there occur problems with the new player, a switch back to totem/GStreamer 0.10 media player is possible by **Fluendo GStreamer Codec Version** parameter.
- Added **optional logoff button in taskbar** when the screenlock is active.

- **Mobile broadband configuration dialog now provides a simple mode**, that displays 3 dropdown boxes to select country, provider and access point (plan). The former version is available via an **Expert Mode** button.
- **IGEL Setup Assistant enhancements:**
  - displaying page for **mobile broadband configuration** when any mobile broadband modem is detected.
  - displaying page to **show broken network connectivity**
  - **desktop icon** will now be displayed **when the assistant was not yet finished**.

- **the assistant is now always started on devices without IGEL license**, that are not registered at UMS
  - new **icon design**
  - Added support for **Chinese, Japanese, Korean** and **Thai** fonts.
  - **KVM kernel modules added**.
  - Added **USB power off on shutdown in IGEL UD7 (H850C) and IGEL UD3 (M340C)**. The feature can be configured by the parameter: (default: deactivated).
- More...**

- **Shutdown or suspend by inactivity.**

[More...](#)

IGEL Setup **System > Power Options > System**

Parameter System action on inactivity

Registry system.power\_management.system\_standby.ac\_action

Value Suspend / Shutdown

- Enhanced **Change Password** utility to be able changing the following items of the logged on user:

- **Password of local user** (screen lock password).
- **PIN of IGEL smartcard**.
- **PIN of PKCS#11 smartcard**.

#### CUPS Printing

- Added **PrinterLogic support, Version 18.2.1.128**.

[More...](#)

IGEL Setup **Devices > Printer > PrinterLogic**

Parameter Manage printers by Printer Installer Client

Registry printerlogic.active

Value enabled / disabled

Parameter HomeURL Protocol

Registry printerlogic.homeurl.protocol

Value http:// / https://

Parameter HomeURL Hostname

Registry printerlogic.homeurl.hostname

|           |                                                 |
|-----------|-------------------------------------------------|
| Value     | <u>.printercloud.com</u>                        |
| Parameter | Authorization Code                              |
| Registry  | printerlogic.auth.crypt_password                |
| Parameter | (Mapping in sessions) ICA Sessions              |
| Registry  | printerlogic.map_ica                            |
| Value     | <u>enabled</u> / disabled                       |
| Parameter | (Mapping in sessions) RDP Sessions              |
| Registry  | printerlogic.map_rdp                            |
| Value     | <u>enabled</u> / disabled                       |
| Parameter | (Mapping in sessions) NX Sessions               |
| Registry  | printerlogic.map_nxclient                       |
| Value     | <u>enabled</u> / <u>disabled</u>                |
| Parameter | (Mapping in sessions) Parallels Client Sessions |
| Registry  | printerlogic.map_twox                           |
| Value     | <u>enabled</u> / <u>disabled</u>                |

## Driver

- Added **Kofax virtual channel for signature pads in Citrix sessions.**

|----------|-------------------------------|
| Registry | x.drivers.via.use_modesetting |
| Value    | enabled / <u>disabled</u>     |

## Bluetooth

- Added new **Bluetooth Autopairing Wizard** for IGEL OS installations without keyboard or mouse available, but with unpaired bluetooth keyboard/mouse. The **Autopairing Wizard** is started together with **IGEL Setup Assistant**.

## Appliance Mode

- The wireless manager can now be invoked from the In-Session control bar.** Furthermore, it will be automatically started when no network connection can be established.  
**Prerequisites:** A WiFi device is available and the following registry keys are set to true.  
[More...](#)

|           |                                               |
|-----------|-----------------------------------------------|
| Parameter | Activate Wireless Interface                   |
| Registry  | network.interfaces.wirelesslan.device0.active |
| Value     | enabled / <u>disabled</u>                     |

|           |                                                  |
|-----------|--------------------------------------------------|
| Parameter | Enable wireless manager                          |
| Registry  | network.applet.wireless.enable_connection_editor |
| Value     | enabled / <u>disabled</u>                        |

- It is possible to use **Accessories**, **VPN connections** and **other session types** in **Appliance Mode** now. The access to those session types must be explicitly enabled by a new parameter **Appliance Mode Access**. Possible starting methods:

- XDMCP Appliance mode:** Hotkey
- All other Appliance modes:** Desktop icon, Desktop Context Menu, Application Launcher (+ System tab), Hotkey, Autostart.

#### X11 system

- Set of **User Interface > Display > Options > Monitor DPI** now automatically affects the size of the **mouse cursor**, the **panel height**, the **desktop icons**, the **application launcher**, the **size of the start menu** and the **window manager decorations**.

#### VirtualBox

- Added VirtualBox as **feature with limited support**. Activation of the feature at: **System > Firmware Customization > Features > VirtualBox**. Added new registry keys under `virtualbox` and `sessions.virtualbox<NR>`.

#### Audio

- Updated **Pulseaudio to version 12.0-1**.
- The resample method in Pulseaudio can now be configured by the newly introduced parameter **resample-method**.

## Media Player (Parole/Totem)

- Added new **Parole Media Player 1.0.1-0ubuntu1**. It is used for media player sessions **by default** now. When there occur problems with the new player, switch back to totem/GStreamer 0.10 media player is possible by setting **Fluendo GStreamer Codec Version** parameter to 0.10.

| Parameter | Fluendo GStreamer Codec Version           |
| Registry  | <code>multimedia.gstreamer.version</code> |
| Range     | [1.x] [0.10] [ <u>automatic</u> ]         |

- Added **RTSP/RTMP** support to parole media player / gstreamer 1.x.
- The following parameters are only functional with **Totem media player/GStreamer 0.10** and not for Parole media player.

## Evidian

- Integrated **Evidian AuthMgr version 1.5.6840.**
  - Evidian AuthMgr sessions can be configured at **IGEL Setup > Sessions > Evidian AuthMgr > Evidian AuthMgr Sessions** (registry keys: sessions.rsuserauth%).
  - Evidian AuthMgr global settings can be configured at **IGEL Setup > Sessions > Evidian AuthMgr > Evidian AuthMgr Global** (registry keys: evidian).
- Added support for **Custom catalog of messages.**

## Misc

- Added support for **local scanning as feature with limited support**. Activate the feature at: **System > Firmware Customization > Features > Scanner support**. This has been tested with a Canon LiDE 120 scanner.

| The key determines the daemon to be started. <code>scanbd</code> is necessary for handling buttons on the scanner. It runs <code>saned</code> when necessary (and the scanner is available). <code>saned</code> alone provides scanning functionality to local and remote applications ( <code>xsane</code> , <code>scanimate</code> , ..). If <code>none</code> is selected the system can still be used as a client for remote scanner servers (using <code>xsane</code> or <code>scanimate</code> ). |                                                                |
| Parameter                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Allowed remote clients                                         |

| Registry                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <code>devices.scannerclient.remote</code>                      |
| This may contain a space-separated list of remote scanner servers to be used by local applications ( <code>xsane</code> , <code>scanimate</code> ). It is only relevant if no local server is configured.                                                                                                                                                                                                                                                                                               |                                                                |

- **The remaining keys influence scanner button handling.** For each button there is an instance of the `devices.scanner.scanbd.action%` template.
- In order to keep scanner button handling flexible **the default handling may be replaced by custom scripts.** Details of the default handling are listed at the end of this section.

| Value                                                        | 0                                                 |
| Determines the brightness (passed as argument to scanimage). |                                                   |

- **Default button handling script:** There is a default button handling script /etc/scanbd/scripts/action. It might be used as a potential starting point for custom button handling. The script handles the four buttons of a **Canon LiDE 120** in the following ways:
  - **file** results in a PDF document that contains a series of pages where each page contains a scan result acquired with scanimage according to the settings. This needs user interaction on the local machine's desktop.
  - **scan** results in an image file that is silently created and stored according to the settings.
  - **copy** makes the script use scanimage according to the settings, convert the resulting image to PDF and send it to the default printer. This obviously requires that a printer is configured.
  - **email** just results in xsane being started. The following settings are not respected in this case:
    - devices.scanner.scanbd.action%.directory
    - devices.scanner.scanbd.action%.format
    - devices.scanner.scanbd.action%.mode
    - devices.scanner.scanbd.action%.resolution
    - devices.scanner.scanbd.action%.brightness

#### TC Setup (Java)

- Updated **TC Setup to version 5.9.11**.
- Added an **additional local administrator access** to IGEL setup. The local administrator password is configurable at **Security > Password** setup page. The page permissions are configurable at **Accessories > Setup > Setup Administrator Permissions** setup page.
- Reworked **Accessories > Commands** and **User Interface > Hotkeys > Commands** setup pages.
- Reworked **Storage Hotplug** setup page.

#### Remote Management

- Added support for **UMS File Transfer Status**.
  - Added a new configuration to **prevent a user from canceling UMS actions like firmware update, reboot, shutdown, etc.** through the UMS notification dialog.
- More...**

|           |                                          |

|-------|---------------------------|

## Fabulatech

- **FabulaTech USB for Remote Desktop** updated to **versions 5.2.29; FabulaTech FTPlugin** updated to **version 3.4.0**.
- Support for some specific devices has been improved.

## Resolved Issues 10.05.100

## Citrix Receiver 13

- Fixed: Now **applications may be displayed in application launcher** independently from startmenu.
- Fixed **Citrix Azure Cloud** login window.
- Added a **new window manager tweak** to automatically unmap unwanted Citrix fragment windows when seamless apps are used.

[More...](#)

|           |                                                                |
|-----------|----------------------------------------------------------------|
| Parameter | Auto-close unwanted Wfica windows                              |
| Registry  | windowmanager.tweaks.suppress_wfica_window_in_seamless_session |
| Value     | <u>enabled / disabled</u>                                      |

- Fixed **native USB redirection with Citrix receiver 13.10**.
- Fixed **black rectangle around 32-bit mouse icons**.
- Fixed **sound playback over Nuance channel**.
- Fixed stopping of the **Pulseaudio PCM I/O plugin** which is used by Citrix Receiver for sound output and recording.
- When using the **Citrix login method the system language is used now**.
- Fixed a problem with the parameter `ica.pnlogin.suppressconnectiondialog`, **connection messages are suppressed** as desired.

## RDP/IGEL RDP Client 2

- Fixed **locking in smartcard transactions**.
- Fixed **audio recording in RDP sessions**.
- Fixed **\$HOSTNAME** to work for RDP login when variable substitution is enabled.

| Value                | <u>enabled</u> / disabled                                                    |
| IGEL Setup Parameter | <b>Sessions &gt; RDP &gt; RDP Global &gt; Local Logon</b>                    |
| Registry             | rdp.login.saveusertype                                                       |
| Value                | Set user/domain from session setup / <u>Set user/ domain from last login</u> |

- Added **Arabic (101) keyboard layout** to RDP client.
- Added **MultiPointServer 2016** to supported servers for **RDP MultiPoint Server** appliance.

#### RD Web Access

- Fixed **wrong RDP Remote Application icon** when opening a application twice.
- Fixed unexpected behavior when maximizing/minimizing **RDP Remote Applications**.

#### VMware Horizon

- Added possibility to **make certificate verification mandatory**.  
**More...**

|           |                                               |
|-----------|-----------------------------------------------|
| Parameter | Allow change of certificate verification mode |
| Registry  | vmware.view.ssl-verify-mode-change-allow      |
| Value     | <u>enabled</u> / disabled                     |

- Fixed **H.264 hardware decoding** for Horizon.

#### PowerTerm

- Fixed **printing to CUPS printers in PowerTerm**.
- Added **TLS-1.2 in list of SSL Versions for PowerTerm** on page **Sessions > PowerTerm Terminal Emulation > PowerTerm Sessions > session name > Connection**.

#### Parallels Client

- Fixed: **Authentication fails with Gemalto smartcards**.
- Fixed: Sometimes **remote session windows remain on screen after one was logged off from the remote session**.
- Fixed: **Remote session closes unexpectedly**.
- Fixed: Combination of **CTRL-C** doesn't work in remote session.
- Improved: **Use of multiple monitors**.
- Fixed: **Client might hang while watching YouTube videos**.
- Fixed: **Multiple USB drives might not be auto-mapped to a remote session**.
- Fixed: **Logoff from a remote session blocks Linux desktop with a black screen**.

#### Firefox

- Fixed **occasional loss of trusted certificates** in Firefox. Certificates transmitted via UMS filetransfer were not reinstalled when Firefox profile was rebuilt.
- Fixed **PDF Plugin** in Firefox browser.
- Removed the browser plugin option from **RHEV/Spice** as it is no longer supported.
- Removed the browser plugin option from **SecMaker** as it is no longer supported.

## Network

- Fixed **failing Wake-on-LAN configuration after update on shutdown**. Particularly UD2-LX40 devices were affected.
- Fixed bug in the **GetCA operation for SCEP**: An intermediate certificate in addition to the root certificate and any RA certificates resulted in confusion.
- **sscep version is now 0.6.1**
- **CA certificate fingerprint is now mandatory for SCEP**. So far it could be left empty for debugging purposes.
- Added **parameter to specify whether a slash (/) is appended to SCEP URL**. The slash is needed e.g. with Microsoft servers, but not with Nexus servers.

[More...](#)

|           |                                             |
|-----------|---------------------------------------------|
| Parameter | Append slash (/) to SCEP server URL         |
| Registry  | network.scepclient.cert0.scepurlappendslash |
| Value     | <u>enabled</u> / disabled                   |

- Fixed **generating certificate request** if challenge password or other fields include **special characters like \$, #, quotes or spaces** in SCEP.
- Reaction to **Ethernet 802.1X reauthentication failure** is now configurable.

[More...](#)

|           |                                                                         |
|-----------|-------------------------------------------------------------------------|
| Parameter | Restart on reauthentication failure                                     |
| Registry  | network.interfaces.ethernet.device%.ieee8021x.restart_on_reauth_failure |
| Value     | <u>enabled</u> / disabled                                               |

The default value preserves the traditional behaviour. If the registry key is set to enabled the network connection will get restarted when a reauthentication failure occurs. This way the system might switch to a guest VLAN where authentication is not required.

- Added **support for SFTP protocol** (enabled as default) configurable with new registry key.

[More...](#)

|           |                    |
|-----------|--------------------|
| Parameter | Enable SFTP server |
|-----------|--------------------|

|          |                                       |
|----------|---------------------------------------|
| Registry | network.ssh_server.enable_sftp_server |
| Value    | <u>enabled</u> / disabled             |

- Improved **general security** in regards of SCEP

#### WiFi

- Fixed non working **Mediatek MT7630e WiFi driver**.
- Added several **WiFi drivers** (Realtek 8188eu, 8822be, 8150, 8187, 8192ce, 8192de, 8192ee, 8723ae, 8821ae....) to the firmware.
- Re-enforce configuration after **IGEL Setup Assistant** exits to ensure consistent state between configuration and system.
- Added drivers for **Realtek rtl8723de** and **rtl8822be WiFi** devices.
- Added support for **StarTech USB300WN2X2C Wireless-N WiFi adapter**.

#### Smartcard

- Updated **OpenSC library to version 0.19.0**. Improved handling of PIV and CAC ALT token and other improvements.
- Fixed problem with **ActivClient smartcards in VMware Horizon sessions**. Before this fix, smartcard access inside the session was blocked.

**More...**

|           |                                             |
|-----------|---------------------------------------------|
| Parameter | Smartcard SCardConnect in non-blocking mode |
| Registry  | vmware.view.pcsc-connect-nonblocking        |
| Value     | <u>enabled</u> / disabled                   |

- Improved **PC/SC lite daemon** to handle attributes SCARD\_ATTR\_DEVICE\_FRIENDLY\_NAME\_W and SCARD\_ATTR\_DEVICE\_SYSTEM\_NAME\_W.
- Updated **Cherry USB2LAN Proxy to version 3.0.0.6**.
  - Fixed an issue where the **SICCT listener was not restarted** when a SICCT connection has been closed by the EGK device (ORS-880).
  - Fixed **TLS errors** resulting from re-using channels before the EGK device confirmed the disconnection of the previous connection (ORS-735).
  - **Increase connection handshake timeout from 1 second to 20 seconds**. This is necessary as the EGK device (G87-1505, firmware 2.108.3) does not process the handshake immediately in all situations. (ORS-735).
  - Added **timestamp** to log output.
- Fixed **AD/Kerberos log on with smartcard** and **Smartcard Removal Action: Lock Thin Client**.
- Fixed custom **PKCS#11 module for VMware Horizon logon**. Before this fix, the parameters did not get effective.

**More...**

|           |                                          |
|-----------|------------------------------------------|
| Parameter | Horizon logon with custom PKCS#11 module |
|-----------|------------------------------------------|

|           |                                |
|-----------|--------------------------------|
| Registry  | vmware.view.pkcs11.use_custom  |
| Value     | enabled / <u>disabled</u>      |
| Parameter | Path to the library            |
| Registry  | vmware.view.pkcs11.custom_path |
| Value     |                                |

- Fixed **error in IGEL Smartcard which prevented login with personalized cards** when certain card holder names contained **non-ASCII characters**.

#### HID

- Added support for **Wacom HID 483C touchscreens** (HP Pro x2 612 g2).
- Fixed non working **Lenovo KBRFBU71 wireless keyboard**.
- Fixed **mouse button mapping**.

#### CUPS Printing

- Fixed **HPLIP related printer drivers**.
- Added missing **LaserJet 200 color MFP M276 Postscript to Printer Names** for manufacturer HP in the TC Setup under **Devices > Printer > CUPS > Printers**.

#### Application Launcher

- Fixed **display order** of DNS servers in **Application Launcher** and **About** dialog.

#### OpenVPN

- Fixed **no retry** in case the client **key passphrase** was entered incorrectly.

#### Base system

- **IGEL Setup Assistant** fixes:
  - Fixed **startup on first boot**.
  - **Retain network configuration** if exited via cancel.
  - Fixed **graphical glitches**
  - Fixed **WiFi configuration**
  - **Prevent startup if an administrator passphrase is set** (e.g. from a IGEL System 5 migration).
- Fixed **System suspend on inactivity** showing the suspend dialog directly after system resume.
- Fixed the **custom bootsplashscaling when multiple monitors are configured**. Necessary to force a re-installation of the custom bootsplash for this fix to take effect. To force a re-installation:
  - Trigger the **Update desktop customization** command via UMS or
  - Press the **Bootsplash update** button at **IGEL Setup > System > Firmware Customization > Corporate Design > Custom Bootsplash**.

- Fixed sporadic problems with **custom bootsplash and wallpaper installation**.
- Fixed the **buddy update server** so that UD Pocket devices can also update from buddy update servers.
- Fixed handling of **custom environment variables**. If values contained white spaces the variables could not be set.
- Fixed **reboot/shutdown** when triggered from the lock screen panel.
- Improved **support for IGEL UD7 with additional graphic card**.
- Removed **maximize button from on-screen keyboard window**.
- Fixed **deletion of debuglog partition content** when booted in emergency boot.
- Fixed **handling of optional partitions which are not active as default** while booting in emergency mode.
- Fixed instability in **authentication module pam\_igelsession.so** in some special cases.
- Fixed **ECDSA/ECDH support in HEIMDAL libraries**.
- Fixed **black screen issues** if hostname contains other characters as 'A-Z a-z 0-9 . \_ - '.
- Improved **debuglog partition based login**.
- **Restricted access to command \*\*su\*\* to root and user**.
- **Root home** is now `/root`.
- Removed **system** group (GID 0) which shadowed **root** group (GID 0).
- **Stricter folder and file permissions**.
- Prevent **flickering problems on 4k 60Hz screens**.

#### Storage Devices

- Fixed **mount issue of PTP devices** (Mobile Device Access USB feature must be enabled).
- Fixed **double detection of MTP and PTP**. MTP is preferred over PTP now (Mobile Device Access USB feature must be enabled).

#### Appliance Mode

- Fixed **configuration of post session commands via UMS profile**: There is no second reboot required anymore to apply the settings properly in Appliance Mode.

#### X11 system

- Fixed **automatic order selection of screens for IGEL UD7**.
- Fixed **order of desktop wallpapers for IGEL UD7** when the additional graphics card is installed.
- Fixed **screen stays black problem on UD3-LX**.
- Fixed **non loading DRM/KMS driver on Spectra Nise 106**.
- Added possibility to **change the framebuffer compression for AMDGPU driver**.

**More...**

|           |                                       |
|-----------|---------------------------------------|
| Parameter | AMDGPU framebuffer compression.       |
| Registry  | <code>x.drivers.amdgpu.use_fbc</code> |
| Range     | [default][enable][disable]            |

- Fixed `sessions.user_display0.options.lid_events` work for **eDP** also.
- Fixed **VESA only boot with UEFI system**.
- **AMDGPU stability** fixes applied.

- Fixed issue with **screen configuration for certain cases**.
- Fixed **screen configuration** getting in **endless loop** with multi monitor setups.
- Fixed **memleak in igel\_drm\_daemon**.
- Fixed **DRI2 memleak with AMDGPU driver**.
- Changed `x.xserver0.force_reconfig` registry key (former bool now range).

**More...**

|           |                                                            |
|-----------|------------------------------------------------------------|
| Parameter | Force a display reconfiguration                            |
| Registry  | <code>x.xserver0.force_reconfig</code>                     |
| Range     | <u>default</u> [only on Xorg start/restart][always][never] |

- Usage of **only on Xorg start/restart** as new default for **AMDGPU based devices**.
- Removed `x.xserver0.composite` registry key to prevent problems with **AMD/ATI devices**.
- Fixed **screen remains black when Monitor Probing (DDC)** option is "Off", configurable at setup page **User Interface > Display > Options**.
- Added possibility to configure **graphic displays only if DPMS state is not OFF**.

**More...**

|           |                                                      |
|-----------|------------------------------------------------------|
| Parameter | Do not reconfigure if monitors are in DPMS off state |
| Registry  | <code>x.xserver0.config_on_dpms_on</code>            |
| Value     | <u>enabled</u> / disabled                            |

## Window Manager

- **On-Screen Keyboard will keep aspect ratio** when resized via double click on edge.

## Shadowing/VNC

- Fixed instability of **Secure Shadowing** connector.

## Audio

- Added a workaround for **button handling of Sennheiser USB headsets**.
- Fixed saving and restoring of **volume controls in Pulseaudio and ALSA**.
- Improved consistency while **storing of changed volume values**.
- Fixed **missing audio output over DVI to HDMI/DP in IGEL UD2 (D220)**.
- Fixed configuration of the **default sound output or input on hardware** when presence detection in jack connector is missing.

## Hardware

- Fixed non working **StarTech.com USB2DVIPRO2 DisplayLink** graphics adapter.
- Fixed freezes of **Intel Baytrail** devices.
- Fixed non working **DisplayLink USB** graphics adapter after reboot.

## Remote Management

- Fixed **zero touch deployment** by adding a timeout to the Setup Assistant abort message.
- Fixed **computation of Unit ID**. The Unit ID is the identification key of the thin client in UMS, and also thin client licenses will be bound to the Unid ID. Now the Unit ID is computed once and persistently saved. It consists of the serial number of UD Pocket or the MAC address of a network interface. When multiple network interfaces are present, the interface is selected taking following attributes into account:  
If a license bound to the interface exists, how it is connected (PCI, SDIO, USB or other) and if it is wireless or wired.  
It is best practice not to connect external network interfaces when a freshly installed thin client device is booted for the first time, so that the Unit ID will consist of a MAC address of a network interface which cannot be removed from the thin client device.
- Fixed **monitor serial numbers** not shown in UMS.
- Fixed **Bluetooth Asset Inventory** zombie when bluetooth dongle is removed.
- Fixed **UMS filetransfer** - now filetransfer action is triggered also if only the file classification was changed.
- Fixed **Update on shutdown** UMS job which could be stucked if update is failed once for some reasons.

## 7.29.2 IGEL Universal Desktop OS3/IGEL UD Pocket

Supported Hardware:

<https://kb.igel.com/igelos/en/devices-supported-by-udc3-and-ud-pocket-3117174.html>

- Versions 10.05.100(see page 2212)
- General Information 10.05.100(see page 2217)
- Security Fixes 10.05.100(see page 2217)
- Known Issues 10.05.100(see page 2222)
- New Features 10.05.100(see page 2223)
- Resolved Issues 10.05.100(see page 2251)

### Versions 10.05.100

- **Clients**

| Product                          | Version         |
|----------------------------------|-----------------|
| Citrix HDX Realtime Media Engine | 2.6.0-2030      |
| Citrix Receiver                  | 13.10.0.20      |
| Citrix Receiver                  | 13.5.0.10185126 |
| Citrix Receiver                  | 13.9.1.6        |

|                                         |                                 |
|-----------------------------------------|---------------------------------|
| deviceTRUST Citrix Channel              | 17.2.100.0                      |
| deviceTRUST RDP Channel                 | 17.2.100.0                      |
| Ericom PowerTerm                        | 12.0.1.0.20170219.2-_dev_-34574 |
| Evidian AuthMgr                         | 1.5.6840                        |
| Evince PDF Viewer                       | 3.18.2-1ubuntu4.3               |
| FabulaTech USB for Remote Desktop       | 5.2.29                          |
| Firefox                                 | 60.2.2                          |
| IBM iAccess Client Solutions            | 1.1.5.0                         |
| IGEL RDP Client                         | 2.2                             |

|-------------------|------|

## General Information 10.05.100

The following clients and features are not supported anymore:

- Citrix Receiver 12.1 and 13.1 - 13.4
- Citrix Access Gateway Standard Plug-in
- Dell vWorkspace Connector for Linux
- Ericom PowerTerm Emulation 9 and 11
- Ericom Webconnect
- IGEL Legacy RDP Client (rdesktop)
- Virtual Bridges VERDE Client
- PPTP VPN Support
- IGEL Upgrade License Tool with IGEL Smartcard Token
- Remote Management by setup.ini file transfer (TFTP)
- Remote Access via RSH
- Legacy Philips Speech Driver
- t-Systems TCOS Smartcard Support
- DUS Series touch screens
- Elo serial touch screens
- IGEL Smartcard without locking desktop
- VIA Graphic Support
- Storage Hotplug devices are not automatically removed anymore, instead they must be always ejected manually:
  - by panel tray icon
  - by an icon in the **In-Session Control Bar** (configurable at **IGEL Setup > User Interface > Desktop**)
  - by a **Safely Remove Hardware** session (configurable at **IGEL Setup > Accessories**)

The following clients and features are not available in this release:

- Cherry eGK Channel
- Open VPN Smartcard Support
- NCP Secure Client
- Asian Input Methods
- Composite Manager

## Security Fixes 10.05.100

Firefox

- Updated Mozilla Firefox to version **60.2.2esr**.

 CVE-2018-5150.  
 mfsa2018-10: CVE-2018-5148

- Firefox profile partition is now **mounted at /userhome/.mozilla instead of /.ffpro**.
- Firefox could only be started as **user**.
- For security reasons **Java processes could not be started from a browser session now**.
- Added a registry parameter `java.browser.access` to **control java access for all browser sessions**.

**More...**

|           |                                  |
|-----------|----------------------------------|
| Parameter | Allow browser to use java        |
| Registry  | <code>java.browser.access</code> |
| Value     | <u>enabled</u> / <u>disabled</u> |

## Network

- **Disabled ICMP redirects.**
- Changed default **LoginGraceTime** from 120 to 30 sec.
- Added new registry keys for a **secure sshd configuration**.

**More...**

|           |                                                |
|-----------|------------------------------------------------|
| Parameter | Permit X11 forwarding                          |
| Registry  | <code>network.ssh_server.x11_forwarding</code> |
| Value     | <u>enabled</u> / <u>disabled</u>               |
| Parameter | Show banner                                    |
| Registry  | <code>network.ssh_server.show_banner</code>    |

|           |                                          |
|-----------|------------------------------------------|
| Value     | <u>enabled / disabled</u>                |
| Parameter | Permit tcp tunnel forwarding             |
| Registry  | network.ssh_server.permit_tcp_forwarding |
| Value     | <u>enabled / disabled</u>                |

- Fixed **SCEP client certificate request file access rights.**

#### Base system

- Added **apparmor** as an additional security layer for components like Firefox, evince, dhclient and cups.

[More...](#)

|           |                           |
|-----------|---------------------------|
| Parameter | Enable apparmor profiles  |
| Registry  | system.security.apparmor  |
| Value     | <u>enabled / disabled</u> |

- For security reasons **graphical terminal sessions** could now only be started by an administrator when an **admin password** is set. Administrator must authenticate before a terminal session is started. This does also affect graphical terminal sessions spawned by applications.
- To **allow users to start a terminal session again** a registry key is defined.

[More...](#)

|           |                           |
|-----------|---------------------------|
| Parameter | User shell terminal       |
| Registry  | system.security.usershell |
| Value     | <u>enabled / disabled</u> |

- Fixed **open-vm-tools** security issue CVE-2015-5191.
- Fixed **procps** security issues CVE-2018-1126, CVE-2018-1125, CVE-2018-1124, CVE-2018-1123 and CVE-2018-1122.
- Fixed **imagemagick** security issues.

- Fixed **file** security issue CVE-2018-10360.
- Fixed **gnupg2** security issue CVE-2018-12020.
- Fixed **isc-dhcp** security issues CVE-2018-5733, CVE-2018-5732, CVE-2018-573, CVE-2017-3144 and CVE-2016-2774.
- Fixed **curl** security issues CVE-2018-1000303, CVE-2018-1000301, CVE-2018-1000300, CVE-2018-1000122, CVE-2018-1000121, CVE-2018-1000120, CVE-2017-8818, CVE-2018-14618 and CVE-2018-0500.
- Fixed **python3.5** security issues CVE-2017-1000158, CVE-2016-5636, CVE-2016-1000110 and CVE-2016-0772.
- Fixed **zlib** security issues CVE-2016-9843, CVE-2016-9842, CVE-2016-9841 and CVE-2016-9840.
- Fixed **libsoup2.4** security issue CVE-2018-12910.
- Fixed **libjpeg-turbo** security issue CVE-2018-1152.
- Fixed **ntp** security issues CVE-2018-7185 and CVE-2018-7183.
- Fixed **libpng1.6** security issue CVE-2018-13785.
- Fixed **cups** security issues CVE-2018-6553, CVE-2018-4181, CVE-2018-4180, CVE-2018-418 and CVE-2017-18248.
- Fixed **libpng** security issue CVE-2016-10087.
- Fixed **policykit-1** security issue CVE-2018-1116.
- Fixed **jansson** security issue CVE-2016-4425.
- Fixed **libmspack** security issues CVE-2018-14682, CVE-2018-14681, CVE-2018-14680 and CVE-2018-14679.
- Fixed **libonig** security issues CVE-2017-9229, CVE-2017-9228, CVE-2017-9227, CVE-2017-9226 and CVE-2017-9224.
- Fixed **libxcursor** security issue CVE-2015-9262.
- Fixed **heimdal** security issue CVE-2017-17439.
- Fixed **libarchive** security issues CVE-2017-14503, CVE-2017-14501, CVE-2017-14166, CVE-2016-10350, CVE-2016-10349 and CVE-2016-10209.
- Fixed **libxml2** security issues CVE-2018-14567, CVE-2018-14404, CVE-2017-18258 and CVE-2016-9318.
- Fixed **confuse** security issue CVE-2018-14447.
- Fixed **libgd2** security issues CVE-2018-5711 and CVE-2018-1000222.

- Fixed **libx11** security issues CVE-2018-14600, CVE-2018-14599, CVE-2018-14598, CVE-2016-7943 and CVE-2016-7942.
- Fixed **mpg123** security issues CVE-2017-10683 and CVE-2016-1000247.
- Fixed **libtirpc** security issues CVE-2018-14622, CVE-2017-8779 and CVE-2016-4429.
- Fixed **jq** security issue CVE-2015-8863.
- Fixed **bind9** security issue CVE-2018-5740.
- Fixed **lcms2** security issue CVE-2018-16435.
- Fixed **xdg-utils** security issue CVE-2017-18266.
- Root home is now **/root**.
- **Removed system group (GID 0)** which shadowed root group (GID 0).
- **Stricter folder and file permissions**.

#### X11 system

- Restricted desktop icon creation to administrator only. Therefore, "**/userhome/Desktop**" is **owned by root now**.

#### Known Issues 10.05.100

##### Citrix Receiver 13

- On devices with **AMD/Radeon graphics chipsets** and **activated DRI3 X driver option** the **hardware accelerated Citrix H.264 decoder plugin can hang**. To solve this issue deactivation of DRI3 option is necessary (default setting). Selective H.264 mode (api v2) is not affected from this issue.
- **Citrix StoreFront login with Gemalto smartcard middleware** does not detect smartcard correctly when the card is inserted after start of login. As a workaround, insert the smartcard before starting StoreFront login.
- The Citrix Receiver has known issues with **GStreamer1.x**. This causes **problems with multimedia redirection of H264, MPEG1 and MPEG2**. GStreamer1.x is used if browser content redirection is active.

##### Parallels Client

- **Native USB redirection** does not work with Parallels Client.
- Due to a bug in the Parallels-Client, for using the new **FIPS 140-2 compliance mode** it is necessary to connect to the Parallels RAS one time with FIPS support disabled.

##### VMware Horizon

- VMware Horizon Client for Linux **4.8.0 supports FIPS Mode on only VMware Horizon server installations up to version 7.5**.
- **External drives are mounted already before connection, do not appear in the remote desktop**. Workaround: mapping the directory /media as a drive on desktop. The external devices will show up within the media drive then.
- **Client drive mapping and USB redirection for storage devices** should not be enabled both at the same time.
  - On the one hand, when using USB redirection for storage devices: The USB on-insertion feature is only working when the client drive mapping is switched off. In the IGEL Setup client drive mapping can be found in: **Sessions > Horizon Client > Horizon Client Global >**

**Drive Mapping > Enable Drive Mapping.** It is also recommended to disable local **Storage Hotplug** on setup page **Devices > Storage Devices > Storage Hotplug**.

- On the other hand, when using drive mapping instead, it is recommended to either switch off USB redirection entirely or at least deny storage devices by adding a filter to the USB class rules. Furthermore, Horizon Client relies on the OS to mount the storage devices itself. Enable local **Storage Hotplug** on setup page **Devices > Storage Devices > Storage Hotplug**.

#### OpenConnect VPN

- VPNs that require the **OpenConnect client** cannot be used for firmware updates.

#### Appliance Mode

- Appliance mode **RHEV/Spice: spice-xpi Firefox plugin is no longer supported.** The **Console Invocation** has to allow native client (auto is also possible) and it should start in fullscreen to prevent opening windows.

#### Smartcard

- In seldom cases, the authentication hung when using A.E.T. SafeSign smartcards.

#### IGEL Cloud Gateway

- **No support for UMS file transfer status** in ICG protocol.

## New Features 10.05.100

#### Citrix Receiver 13

- Integrated **Citrix Receiver 13.10.** Citrix Receiver version 13.7.0 was removed. Citrix Receiver version 13.8.0 was removed. Available Citrix Receiver versions: 13.5.0, 13.9.1, 13.10 (default)
  - Enable **Browser content redirection for rendering of whitelisted webpages** on the IGEL Thin Client.

| IGEL Setup | Sessions > Citrix XenDesktop > HDX / ICA Global > Options |
| Parameter  | Connect to cloud                                          |
| Registry   | ica.cloudconnect                                          |
| Value      | enabled / <u>disabled</u>                                 |

- Added a registry key to **control the visibility of the Citrix connection bar** for desktop sessions. If activated, the In-Session Control Bar should be disabled at `userinterface.igel_toolbar.enable`

and `userinterface.igel_toolbar.show_always`.

This enables the control of the new **Multi-monitor layout persistence** feature.

- Added **Selective H.264** (API v2) to the hardware accelerated Citrix deep compression codec. XenDesktop/XenApp server policy: **Use video codec for compression -> For actively changing regions**
- Added **DRI3 acceleration support** to the hardware accelerated Citrix deep compression codec (for INTEL and AMD graphics adapters).
- Enable **debugging to log file** `/var/log/user/ctxh264.log`.  
**More...**

| Value     | enabled / <u>disabled</u>                        |

- Added **Kerberos Passthrough (domain passthrough) authentication to StoreFront**. Configurable at **Sessions > Citrix XenDesktop / XenApp > HDX / ICA Global > StoreFront Logon > Authentication Type**.

- Updated **Citrix HDX RTME** used for optimization of **Skype for Business** to **2.6.0-2030**. This new version adds the support for hardware accelerated H.264 en- and decoding on AMD platforms. See <https://support.citrix.com/article/CTX236304> section **Capability Checker for Linux platforms** how to enable hardware decoding with Citrix VDA registry keys `DisableLinuxAMDH264HardwareDecoding` and `SupportedAMDHWAVideoCardList`. The capability check program **RTOP-CapabilityChk-x64** is already installed at path `/services/ica/hdx_rtme/RTOP-CapabilityChk-x64`. The check program must be run with user permissions.
- Added display of **logged on Citrix username in screen lock**, when screen lock password is synchronized with Citrix password.
- Added checkbox to **activate autostart of a single published application/desktop session**.

| IGEL Setup | <b>Sessions &gt; Citrix XenDesktop / XenApp &gt; HDX / ICA Global &gt; Mapping &gt; Device Support</b> |
| Parameter  | Crossmatch DigitalPersona fingerprint channel                                                          |
| Registry   | ica.module.virtualdriver.dpicacnt.enable                                                               |
| Value      | enabled / <u>disabled</u>                                                                              |

#### RDP/IGEL RDP Client 2

- Support for new **RDP 10 codec AVC444 (H.264)**, which reduces network bandwidth with Server 2016 and Windows 10 hosts. AMD Radeon graphics is required on the client side. Other graphics hardware (e.g. Intel) as well as other RDP 10 codecs (AVC420 and AVC444V2) will be supported in the future.

|            |                                                           |
|------------|-----------------------------------------------------------|
| IGEL Setup | <b>Sessions &gt; RDP &gt; RDP Global &gt; Performance</b> |
| Parameter  | Hardware accelerated codecs AVC420/AVC444 (H.264)         |

|            |                                                                               |
|------------|-------------------------------------------------------------------------------|
| Registry   | <code>rdp.winconnect.enable-h264</code>                                       |
| Value      | <u>auto</u> / on / off                                                        |
| IGEL Setup | <b>Sessions &gt; RDP &gt; RDP Sessions &gt; Session Name &gt; Performance</b> |
| Parameter  | Hardware accelerated codecs AVC420/AVC444 (H.264)                             |
| Registry   | <code>sessions.winconnect%.option.enable-h264</code>                          |
| Value      | <u>Global setting</u> / auto / on / off                                       |

The value "auto" enables supported codecs on supported hardware.

The value "on" enables supported codecs on all hardware.

The value "off" disables H.264 codecs.

- Added new parameter **ignore\_errors** to RDP Session config to **suppress RDP error messages**.

#### UD Pocket

- UD Pocket demo license registration dialog** will now show an option to **set up proxy servers when IGEL servers cannot be reached**.
- Updated the page displayed for the **UD Pocket demo registration**. It can be chosen now whether a partner or the customer is setting up the device, before displaying the form asking for customer information.

#### Parallels Client

- Updated **Parallels client to version 16.5.1.20446 (32-Bit)**
- Added support for **FIPS 140-2 compliance**.

[More...](#)

|            |                                           |

#### VMware Horizon

- Updated **Horizon client to version 4.8.0-8518891**.

#### ThinLinc

- Updated **ThinLinc client to version 4.9.0**.
  - Shadowing notification is now more reliable and interactive, allowing end users more control of their sessions.
  - More than 80 minor enhancements and fixes. See <https://www.cendio.com/thinlinc/docs/relnotes/4.9.0>.

#### RedHat Enterprise Virtualization client

- **Updated spice components** (virt-viewer 7.0, spice-gtk 0.35).
- **Removed support for spice-xpi plugin**.

#### X session (Xephyr)

- Added support for X sessions configurable at `IGEL Setup > Sessions > X Sessions`. The available XDMCP connection types: indirect via localhost, indirect, direct and broadcast. With the additional connection type "local display" a command can be specified, that will be displayed inside the X session window.

## Firefox

- Updated Mozilla Firefox to **version 60.2.2 ESR**.
- The **initial page** displayed by firefox with default settings is now <https://kb.igel.com/> instead of the older <https://edocs.igel.com/>.
- Updated **Adobe Flash Player** download URL to **version 31.0.0.122**.
- **Removed the webapp specific options**, this feature was removed from Firefox and is not relevant anymore.
- Moved **Browser Certificate** configuration to page **Sessions > Browser > Browser Global > Certificates**.
- Moved **Browser Security Device** configuration to page **Sessions > Browser > Browser Global > Smartcard Middleware**.
- Added **Fluendo FFmpeg GStreamer** proxy: Provides ffmpeg-libavcodec-compatible library, which is needed for H.264 playback in firefox. Instead decoding by standard ffmpeg libraries, the video stream is redirected to GStreamer framework.

## Network

- **SCEP**: Added subject alternative name type **DNS Name as UPN (auto)**. This is similar to **DNS Name (auto)**. In the CSR the result is a Microsoft User Principal Name (UPN) that consists of the hostname.
- **NetworkManager** updated to version **1.2.6**.

## Cisco JVDI Client

- Integrated new **Cisco Jabber Softphone for VDI** (Cisco JVDI client) **version 12.0.0** as feature with limited functionality. See product documentation for details -> <https://kb.igel.com/cisco-jvdi/en>. Activation of this feature at: **System > Firmware Customization > Features > Cisco JVDI client**. Only Citrix Receiver 13.9.1 is supported.

| Registry   | ica.module.virtualdriver.vdcisco.enable                                                                              |
| Value      | enabled / <u>disabled</u>                                                                                            |

Registry path for Common JVDI options: ` multimedia.ciscovxme.\*\*` The Cisco JVDI Client configuration is only displayed if the Multimedia Codec Pack (MMC) is present.

## Java

- Updated **Oracle Java Runtime Environment to version 1.8.0 U181.**

## Smartcard

- Updated **SecMaker Net iD to version 6.7.0.23.**
- Updated **HID Global Omnikey smartcard reader driver to version 4.3.3.**
- Updated **cryptovision sc/interface to version 7.1.9.** Changelog since version 7.0.5:
  - Fixed **an error during certificate registration** using the MS Minidriver for MS VSC. Compatible with sc/interface cache version 1.2 or higher.
  - Fixed an error where **writing a certificate using the Minidriver for MS VSC corrupted the Container-ID.** As a result the key could not be used using CNG/CAPI.
  - Fixed an error during **certificate registration using the Minidriver for MS VSC where some Container-ID's could not be used by CNG/CAPI.**
  - General Bug Fixes.
  - Fixed **error during profile creation on JCOP3 with ePasslet-Suite 3.0**
  - Added support for **additional BWI card profiles based on CardOS-5.x.** Versions **1.7, 1.8, 1.9, 4.2, 4.3 and 4.4.** Support **4k RSA for 1.9 and 4.4.**
  - Fixed support for **remote logon in sc/interface cache.**
  - Fixed **Free after use** in ReadOnly Minidriver.
  - PKCS#11 Fixed **MS VSC (GIDSv2) support.**
  - PKCS#11 Fixed **CardOS-4.x "non sc/interface card profile" support.**
  - **MS VSC (GIDSv2)** Support for PKCS#11 - Maximum CKA\_ID length reduced to 25 bytes!
  - Support for **JCOP3 and Infineon JTOP - DolphinV2.**
  - Support for **cryptovision's ePasslet-Suite-3.0.**
  - New **ePKIApplet-2.129 for JCOP3, SCE7 and JTOP (DolphinV2)** with up to 4096 bits RSA and 512 bits
  - **EC** support, **PACE** optional.
  - **RegisterTool plugins now available in Setup.** Removed from "support\RegisterTool\_Plugins".
  - **New sc/interface Minidriver support for MS VSC** (instead of the MS Minidriver) to allow extended PIN cache configuration.
  - Added support for **sc/interface cache version 1.0** for Minidriver/ReadOnly Minidriver and PKCS#11.
  - **Cross-application PIN cache for Windows 8.1** and later.
  - **WARNING: No longer compatible with Credential Cache (CSP).** When there are any questions, [support@cryptovision.com<sup>458</sup>](mailto:support@cryptovision.com) should be contacted.
  - Added **macOS CTK Token Driver for 10.12 and later.** Unfortunately, after the installation, a shell script must be executed to enable the full functionality.
  - **Removed macOS tokend support** beginning with version 10.12, installation of 10.10 can be used if needed.

---

<sup>458</sup> mailto:support@cryptovision.com

- **WARNING: macOS tokend support will discontinue, usage of new CTK Token Driver is necessary.**
- Re-Added **cvSimpleCardProv for Windows** (based on 6.4.2) to enable the default login selection, see "support\CredentialProvider".
- Updated **OpenSC library to version 0.19.0**. Improved handling of PIV and CAC ALT token.

#### Base system

- Updated to **kernel version 4.18.11**.
- Added new **GStreamer 1.x support version 1.14.2**.

There will only ever be GStreamer in version 1.0 or version 0.10. By default, clients run with the version they have best support for. The provided registry key can be used to override the automatic detection/setting and pin a single version if required.

**More...**

|           |                                   |
|-----------|-----------------------------------|
| Parameter | Fluendo GStreamer Codec Version   |
| Registry  | multimedia.gstreamer.version      |
| Value     | [1.x] [0.10] [ <u>automatic</u> ] |

- With **GStreamer 1.x the new Parole player is used** for media player sessions. When there occur problems with the new player, a switch back to totem/GStreamer 0.10 media player is possible by **Fluendo GStreamer Codec Version** parameter.
- Added **optional logoff button in taskbar** when the screenlock is active.

**More...**

|            |                                                          |
|------------|----------------------------------------------------------|
| IGEL Setup | <b>Security &gt; Logon &gt; Taskbar</b>                  |
| Parameter  | Show logoff button                                       |
| Registry   | userinterface.screenlock_taskbar_logged_in.logoff_button |
| Value      | enabled / <u>disabled</u>                                |

- **Mobile broadband configuration dialog now provides a simple mode**, that displays 3 dropdown boxes to select country, provider and access point (plan). The former version is available via an **Expert Mode** button.
- **IGEL Setup Assistant enhancements:**
  - displaying page for **mobile broadband configuration** when any mobile broadband modem is detected.
  - displaying page to **show broken network connectivity**
  - **desktop icon** will now be displayed **when the assistant was not yet finished**.
  - **the assistant is now always started on devices without IGEL license**, that are not registered at UMS
  - new **icon design**
- Added support for **chinese, japanese, korean** and **thai** fonts.

- **KVM kernel modules added.**
  - Added **policykit-1-gnome session agent** to get a gui interface for actions which requires root authentication.
  - Added **remote (network attached) logging via rsyslog**.

## Bluetooth

- Added new **Bluetooth Autopairing Wizard** for IGEL OS installations without keyboard or mouse available, but with unpaired bluetooth keyboard/mouse. The **Autopairing Wizard** is started together with **IGEL Setup Assistant**.

## Appliance Mode

- The wireless manager can now be invoked from the In-Session control bar. Furthermore, it will be automatically started when no network connection can be established.

**Prerequisites:** A WiFi device is available and the following registry keys are set to true.

#### X11 system

- Set of **User Interface > Display > Options > Monitor DPI** now automatically affects the size of the **mouse cursor**, the **panel height**, the **desktop icons**, the **application launcher**, the **size of the start menu** and the **window manager decorations**.

#### VirtualBox

- Added VirtualBox as **feature with limited support**. Activation of the feature at: **System > Firmware Customization > Features > VirtualBox**. Added new registry keys under `virtualbox` and `sessions.virtualbox<NR>`.

#### Audio

- Updated **Pulseaudio to version 12.0-1**.
  - The resample method in Pulseaudio can now be configured by the newly introduced parameter **resample-method**.
- More...**

|           |                                                                                                          |
|-----------|----------------------------------------------------------------------------------------------------------|
| Parameter | Resample method                                                                                          |

| Range     | [soxr-vhq] [soxr-hq] [soxr-mq] [speex-float-10] [speex-float-5] [speex-float-3] [ <u>speex-float-1</u> ] |

#### Media Player (Parole/Totem)

- Added new **Parole Media Player 1.0.1-0ubuntu1**. It is used for media player sessions **by default** now. When there occur problems with the new player, switch back to totem/GStreamer 0.10 media player is possible by setting **Fluendo GStreamer Codec Version** parameter to 0.10.
- More...**

|           |                                   |
|-----------|-----------------------------------|
| Parameter | Fluendo GStreamer Codec Version   |
| Registry  | multimedia.gstreamer.version      |
| Range     | [1.x] [0.10] [ <u>automatic</u> ] |

- Added **RTSP/RTMP** support to parole media player / gstreamer 1.x.
- The following parameters are only functional with **Totem media player/GStreamer 0.10** and not for Parole media player.

| Value     | enabled / <u>disabled</u>          |

|           |                              |
|-----------|------------------------------|
| Parameter | Enable debug                 |
| Registry  | multimedia.mediaplayer.debug |
| Value     | enabled / <u>disabled</u>    |

|           |                                                 |
|-----------|-------------------------------------------------|
| Parameter | Network buffering threshold                     |
| Registry  | multimedia.mediaplayer.network_buffer_threshold |
| Value     | <u>2</u>                                        |

- As the **Media Player Browser Plugin** is not supported with **Firefox 60 ESR**, the following parameters are not available anymore.

[More...](#)

#### IGEL Setup **Sessions > Media Player > Media Player Global > Browser Plugin**

Parameter Video output

Registry multimedia.mediaplayer.browser\_plugin.video\_sink

Range [Default] [Auto] [Hardware Accelerated] [X Video Extension] [X Window System]

#### IGEL Setup **Sessions > Media Player > Media Player Global > Browser Plugin**

Parameter Aspect ratio

Registry multimedia.mediaplayer.browser\_plugin.aspect\_ratio

Range [Default] [Auto] [Square] [4:3 (TV)] [16:9 (Widescreen)] [2.11:1 (DVB)]

## Evidian

- Integrated **Evidian AuthMgr version 1.5.6840**.
  - Evidian AuthMgr sessions can be configured at **IGEL Setup > Sessions > Evidian AuthMgr > Evidian AuthMgr Sessions** (registry keys: sessions.rususerauth%).
  - Evidian AuthMgr global settings can be configured at **IGEL Setup > Sessions > Evidian AuthMgr > Evidian AuthMgr Global** (registry keys: evidian).
- Added support for **Custom catalog of messages**.

| This must be enabled for the feature to become active and the remaining keys to be valid. |                              |
| Parameter                                                                                 | Enable scanner daemon        |

|                                                                                                                                                                                                                                                                                                                                                                                             |                                              |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------|
| Registry                                                                                                                                                                                                                                                                                                                                                                                    | <code>devices.scanner.daemon</code>          |
| Range                                                                                                                                                                                                                                                                                                                                                                                       | [none] [scanbd] [saned]                      |
| The key determines the daemon to be started. scanbd is necessary for handling buttons on the scanner. It runs saned when necessary (and the scanner is available). saned alone provides scanning functionality to local and remote applications (xsane, scanimage, ..). If none is selected the system can still be used as a client for remote scanner servers (using xsane or scanimage). |                                              |
| Parameter                                                                                                                                                                                                                                                                                                                                                                                   | Allowed remote clients                       |
| Registry                                                                                                                                                                                                                                                                                                                                                                                    | <code>devices.scanner.allowed_clients</code> |
| The key may contain a space-separated list of hosts and networks (CIDR > notation) that are allowed to connect to a local server.                                                                                                                                                                                                                                                           |                                              |
| Parameter                                                                                                                                                                                                                                                                                                                                                                                   | Remote scanners                              |
| Registry                                                                                                                                                                                                                                                                                                                                                                                    | <code>devices.scannerclient.remote</code>    |
| This may contain a space-separated list of remote scanner servers to be used by local applications (xsane, scanimage). It is only relevant if no local server is configured.                                                                                                                                                                                                                |                                              |

- **The remaining keys influence scanner button handling.** For each button there is an instance of the `devices.scanner.scanbd.action%` template.
- In order to keep scanner button handling flexible **the default handling may be replaced by custom scripts.** Details of the default handling are listed at the end of this section.

|                                                                                                                                                                                                                                                                                           |                                                                        |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------|
| Parameter                                                                                                                                                                                                                                                                                 | Scanner button name                                                    |
| Registry                                                                                                                                                                                                                                                                                  | <code>devices.scanner.scanbd.action%.button</code>                     |
| This contains the (symbolic) name of the button. There are currently four predefined instances of the template where the value is 'file', 'scan', 'copy', and 'email' respectively. (These refer to the buttons on a Canon LiDE 120 from left to right where 'file' may be labeled 'PDF') |                                                                        |
| Parameter                                                                                                                                                                                                                                                                                 | Allow while nobody is logged in                                        |
| Registry                                                                                                                                                                                                                                                                                  | <code>devices.scanner.scanbd.action%.allow_lockpanel_logged_out</code> |
| Value                                                                                                                                                                                                                                                                                     | <u>enabled</u> / <u>disabled</u>                                       |
| If this is set to false, the button is ignored when nobody is logged in (only > relevant when local logon is configured)                                                                                                                                                                  |                                                                        |

|           |                                                          |
|-----------|----------------------------------------------------------|
| Parameter | Allow while screen is locked                             |
| Registry  | devices.scanner.scanbd.action%.allow_lockpanel_logged_in |
| Value     | <u>enabled</u> / <u>disabled</u>                         |

When this is set to false, the button is ignored while the screen is locked.

|                                                                                                                                                                                                                                                                                         |                                               |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------|
| Parameter                                                                                                                                                                                                                                                                               | scanbd custom action                          |
| Registry                                                                                                                                                                                                                                                                                | devices.scanner.scanbd.action%.custom_cm<br>d |
| This may contain a custom button handling command. The value is empty by default. If it is not, the value will be passed to "bash -c .." and the default button handling will not be effective. The consequence is that entering some space characters results in disabling the button. |                                               |

|           |                                          |
|-----------|------------------------------------------|
| Parameter | Directory                                |
| Registry  | devices.scanner.scanbd.action%.directory |
| Value     | <u>/tmp</u>                              |

Set the target directory for scan results.

|           |                                       |
|-----------|---------------------------------------|
| Parameter | Format                                |
| Registry  | devices.scanner.scanbd.action%.format |
| Range     | [pnm] [tiff] [png] [jpeg]             |

Determines the image format (passed as argument to scanimage).

|           |                                     |
|-----------|-------------------------------------|
| Parameter | Color mode                          |
| Registry  | devices.scanner.scanbd.action%.mode |
| Value     | [Color] [Gray] [Lineart]            |

Determines the color mode (passed as argument to scanimage).

|           |                                                   |
|-----------|---------------------------------------------------|
| Parameter | Resolution in dpi                                 |
| Registry  | devices.scanner.scanbd.action%.resolution         |
| Range     | [75] [100] [150] [300] [600] [1200] [2400] [4800] |

Determines the resolution (passed as argument to scanimage).

|           |            |
|-----------|------------|
| Parameter | Brightness |
|-----------|------------|

|          |                                           |
|----------|-------------------------------------------|
| Registry | devices.scanner.scanbd.action%.brightness |
| Value    | 0                                         |

Determines the brightness (passed as argument to scanimage).

- **Default button handling script:** There is a default button handling script /etc/scanbd/scripts/action. It might be used as a potential starting point for custom button handling. The script handles the four buttons of a **Canon LiDE 120** in the following ways:

- **file** results in a PDF document that contains a series of pages where each page contains a scan result acquired with scanimage according to the settings. This needs user interaction on the local machine's desktop.
- **scan** results in an image file that is silently created and stored according to the settings.
- **copy** makes the script use scanimage according to the settings, convert the resulting image to PDF and send it to the default printer. This obviously requires that a printer is configured.
- **email** just results in xsane being started. The following settings are not respected in this case:
  - devices.scanner.scanbd.action%.directory
  - devices.scanner.scanbd.action%.format
  - devices.scanner.scanbd.action%.mode
  - devices.scanner.scanbd.action%.resolution
  - devices.scanner.scanbd.action%.brightness

## Hardware

- Added official support for **HP T630**.
- Added official support for **Intel NUC 6CAYH and 5i5MYHE**.
- Added official support for **Dell/Wyse 3040**.
- Added official support for **Toshiba Tecra C50-B1503**.
- Added official support for **Toshiba R50**.
- Added official support for **Dell/Wyse AIO 5212**.
- Added official support for **LG 24CK550W AiO Thin Client**.

## TC Setup (Java)

- Updated **TC Setup to version 5.9.11**.
- Added an **additional local administrator access** to IGEL setup. The local administrator password is configurable at **Security > Password** setup page. The page permissions are configurable at **Accessories > Setup > Setup Administrator Permissions** setup page.
- Reworked **Accessories > Commands** and **User Interface > Hotkeys > Commands** setup pages.
- Reworked **Storage Hotplug** setup page.

## Remote Management

- Added support for **UMS File Transfer Status**.
- Added a new configuration to **prevent a user from canceling UMS actions like firmware update, reboot, shutdown, etc.** through the UMS notification dialog.  
**More...**

|           |                                  |
|-----------|----------------------------------|
| Parameter | Allow user to cancel UMS actions |
|-----------|----------------------------------|

|          |                                                       |
|----------|-------------------------------------------------------|
| Registry | <code>userinterface.rmagent.cancel_usermessage</code> |
| Value    | <u>enabled</u> / disabled                             |

## Fabulatech

- **FabulaTech USB for Remote Desktop** updated to **versions 5.2.29; FabulaTech FTPPlugin** updated to **version 3.4.0**.
- Support for some specific devices has been improved.

## Resolved Issues 10.05.100

## Citrix Receiver 13

- Fixed: Now **applications may be displayed in application launcher** independently from startmenu.
- Fixed **Citrix Azure Cloud** login window.
- Added a **new window manager tweak** to automatically unmap unwanted Citrix fragment windows when seamless apps are used.

**More...**

|           |                                                                             |
|-----------|-----------------------------------------------------------------------------|
| Parameter | Auto-close unwanted Wfica windows                                           |
| Registry  | <code>windowmanager.tweaks.suppress_wfica_window_in_seamless_session</code> |
| Value     | <u>enabled</u> / disabled                                                   |

- Fixed **native USB redirection with Citrix receiver 13.10**.
- Fixed **black rectangle around 32-bit mouse icons**.
- Fixed **sound playback over Nuance channel**.
- Fixed stopping of the **Pulseaudio PCM I/O plugin** which is used by Citrix Receiver for sound output and recording.
- When using the **Citrix login method the system language is used now**.
- Fixed a problem with the parameter `ica.pnlogin.suppressconnectiondialog`, **connection messages are suppressed** as desired.

## RDP/IGEL RDP Client 2

- Fixed **locking in smartcard transactions**.
- Fixed **audio recording in RDP sessions**.
- Fixed **\$HOSTNAME** to work for RDP login when variable substitution is enabled.

**More...**

|            |                                                                      |
|------------|----------------------------------------------------------------------|
| IGEL Setup | <b>System &gt; Firmware Customization &gt; Environment Variables</b> |
| Parameter  | Enable variable substitution in session                              |

|                      |                                                                             |
|----------------------|-----------------------------------------------------------------------------|
| Registry             | system.environment_variables.enable_application_variables                   |
| Value                | <u>enabled</u> / disabled                                                   |
| IGEL Setup Parameter | <b>Sessions &gt; RDP &gt; RDP Global &gt; Local Logon</b>                   |
| Registry             | rdp.login.saveusertype                                                      |
| Value                | Set user/domain from session setup / <u>Set user/domain from last login</u> |

- Added **Arabic (101) keyboard layout** to RDP client.
- Added **MultiPointServer 2016** to supported servers for **RDP MultiPoint Server** appliance.

#### RD Web Access

- Fixed **wrong RDP Remote Application icon** when opening a application twice.
- Fixed unexpected behavior when maximizing/minimizing **RDP Remote Applications**.

#### UD Pocket

- Fixes for **UD Pocket demo license registration** dialog:
  - Fixed **german translation**.
  - The **toolbar context menu** is not available anymore (it could hide the toolbar without a way to restore it).
  - The javascript confirm **popup from igel.com is hidden now**.

#### VMware Horizon

- Added possibility to **make certificate verification mandatory**.  
**More...**

|           |                                               |
|-----------|-----------------------------------------------|
| Parameter | Allow change of certificate verification mode |
| Registry  | vmware.view.ssl-verify-mode-change-allow      |
| Value     | <u>enabled</u> / disabled                     |

- Fixed **H.264 hardware decoding** for Horizon.

#### PowerTerm

- Fixed **printing to CUPS printers in PowerTerm**.
- Added **TLS-1.2 in list of SSL Versions for PowerTerm** on page **Sessions > PowerTerm Terminal Emulation > PowerTerm Sessions > session name > Connection**.

#### Parallels Client

- Fixed: **Authentication fails with Gemalto smartcards.**
- Fixed: Sometimes **remote session windows remain on screen after one was logged off from the remote session.**
- Fixed: **Remote session closes unexpectedly.**
- Fixed: Combination of **CTRL-C** doesn't work in remote session.
- Improved: **Use of multiple monitors.**
- Fixed: **Client might hang while watching YouTube videos.**
- Fixed: **Multiple USB drives might not be auto-mapped to a remote session.**
- Fixed: **Logoff from a remote session blocks Linux desktop with a black screen.**

#### Firefox

- Fixed **occasional loss of trusted certificates** in Firefox. Certificates transmitted via UMS filetransfer were not reinstalled when Firefox profile was rebuilt.
- Fixed **PDF Plugin** in Firefox browser.
- Removed the browser plugin option from **RHEV/Spice** as it is no longer supported.
- Removed the browser plugin option from **SecMaker** as it is no longer supported.

#### Network

- Fixed **failing Wake-on-LAN configuration after update on shutdown.** Particularly UD2-LX40 devices were affected.
- Fixed bug in the **GetCA operation for SCEP**: An intermediate certificate in addition to the root certificate and any RA certificates resulted in confusion.
- **sscep version is now 0.6.1**
- **CA certificate fingerprint is now mandatory for SCEP.** So far it could be left empty for debugging purposes.
- Added **parameter to specify whether a slash (/) is appended to SCEP URL.** The slash is needed e.g. with Microsoft servers, but not with Nexus servers.

**More...**

|           |                                             |
|-----------|---------------------------------------------|
| Parameter | Append slash (/) to SCEP server URL         |
| Registry  | network.scepclient.cert0.scepurlappendslash |
| Value     | <u>enabled</u> / disabled                   |

- Fixed **generating certificate request** if challenge password or other fields include **special characters like \$, #, quotes or spaces** in SCEP.
- Reaction to **Ethernet 802.1X reauthentication failure** is now configurable.

**More...**

|           |                                                                         |
|-----------|-------------------------------------------------------------------------|
| Parameter | Restart on reauthentication failure                                     |
| Registry  | network.interfaces.ethernet.device%.ieee8021x.restart_on_reauth_failure |
| Value     | <u>enabled</u> / disabled                                               |

The default value preserves the traditional behaviour. If the registry key is set to enabled the network connection will get restarted when a reauthentication failure occurs. This way the system might switch to a guest VLAN where authentication is not required.

- Added **support for SFTP protocol** (enabled as default) configurable with new registry key.  
[More...](#)

|           |                                       |
|-----------|---------------------------------------|
| Parameter | Enable SFTP server                    |
| Registry  | network.ssh_server.enable_sftp_server |
| Value     | <u>enabled</u> / disabled             |

- Improved **general security** in regards of SCEP

#### WiFi

- Fixed non working **Mediatek MT7630e WiFi driver**.
- Added several **WiFi drivers** (Realtek 8188eu, 8822be, 8150, 8187, 8192ce, 8192de, 8192ee, 8723ae, 8821ae....) to the firmware.
- Re-enforce configuration after **IGEL Setup Assistant** exits to ensure consistent state between configuration and system.
- Added drivers for **Realtek rtl8723de** and **rtl8822be WiFi devices**.
- Added support for **StarTech USB300WN2X2C Wireless-N WiFi adapter**.

#### Smartcard

- Updated **OpenSC library to version 0.19.0**. Improved handling of PIV and CAC ALT token and other improvements.
- Fixed problem with **ActivClient smartcards in VMware Horizon sessions**. Before this fix, smartcard access inside the session was blocked.

[More...](#)

|           |                                             |
|-----------|---------------------------------------------|
| Parameter | Smartcard SCardConnect in non-blocking mode |
| Registry  | vmware.view.pcsc-connect-nonblocking        |
| Value     | <u>enabled</u> / disabled                   |

- Improved **PC/SC lite daemon** to handle attributes SCARD\_ATTR\_DEVICE\_FRIENDLY\_NAME\_W and SCARD\_ATTR\_DEVICE\_SYSTEM\_NAME\_W.
- Updated **Cherry USB2LAN Proxy to version 3.0.0.6**.
  - Fixed an issue where the **SICCT listener was not restarted** when a SICCT connection has been closed by the EGK device (ORS-880).
  - Fixed **TLS errors** resulting from re-using channels before the EGK device confirmed the disconnection of the previous connection (ORS-735).

- **Increase connection handshake timeout from 1 second to 20 seconds.** This is necessary as the EGK device (G87-1505, firmware 2.108.3) does not process the handshake immediately in all situations. (ORS-735).
- Added **timestamp** to log output.
- Fixed **AD/Kerberos log on with smartcard** and **Smartcard Removal Action: Lock Thin Client**.
- Fixed custom **PKCS#11 module for VMware Horizon logon**. Before this fix, the parameters did not get effective.

[More...](#)

|           |                                          |
|-----------|------------------------------------------|
| Parameter | Horizon logon with custom PKCS#11 module |
| Registry  | vmware.view.pkcs11.use_custom            |
| Value     | enabled / <u>disabled</u>                |
| Parameter | Path to the library                      |
| Registry  | vmware.view.pkcs11.custom_path           |
| Value     |                                          |

- Fixed **error in IGEL Smartcard which prevented login with personalized cards** when certain card holder names contained **non-ASCII characters**.

#### HID

- Added support for **Wacom HID 483C touchscreens** (HP Pro x2 612 g2).
- Fixed non working **Lenovo KBRFBU71 wireless keyboard**.
- Fixed **mouse button mapping**.

#### CUPS Printing

- Fixed **HPLIP related printer drivers**.
- Added missing **LaserJet 200 color MFP M276 Postscript to Printer Names** for manufacturer HP in the TC Setup under **Devices > Printer > CUPS > Printers**.

#### Application Launcher

- Fixed **display order** of DNS servers in **Application Launcher** and **About** dialog.

#### Base system

- **IGEL Setup Assistant** fixes:
  - Fixed **startup on first boot**.
  - **Retain network configuration** if exited via cancel.
  - Fixed **graphical glitches**
  - Fixed **WiFi configuration**
  - **Prevent startup if an administrator passphrase is set** (e.g. from a IGEL System 5 migration).
- Fixed **System suspend on inactivity** showing the suspend dialog directly after system resume.

- Fixed the **custom bootsplash scaling when multiple monitors are configured**. Necessary to force a re-installation of the custom bootsplash for this fix to take effect. To force a re-installation:
  - Trigger the **Update desktop customization** command via UMS or
  - Press the **Bootsplash update** button at **IGEL Setup > System > Firmware Customization > Corporate Design > Custom Bootsplash**.
- Fixed sporadic problems with **custom bootsplash and wallpaper installation**.
- Fixed the **buddy update server** so that UD Pocket devices can also update from buddy update servers.
- Fixed handling of **custom environment variables**. If values contained white spaces the variables could not be set.
- Fixed **reboot/shutdown** when triggered from the lock screen panel.
- Removed **maximize button from on-screen keyboard window**.
- Fixed **deletion of debuglog partition content** when booted in emergency boot.
- Fixed **handling of optional partitions which are not active as default** while booting in emergency mode.
- Fixed instability in **authentication module pam\_igelsession.so** in some special cases.
- Fixed **ECDSA/ECDH support in HEIMDAL libraries**.
- Fixed **black screen issues** if hostname contains other characters as 'A-Z a-z 0-9 . \_ - '.
- Improved **debuglog partition based login**.
- **Restricted access to command \*\*su\*\* to root and user**.
- **Root home** is now **/root**.
- Removed **system** group (GID 0) which shadowed **root** group (GID 0).
- **Stricter folder and file permissions**.
- Prevent **flickering problems on 4k 60Hz screens**.

#### Storage Devices

- Fixed **mount issue of PTP devices** (Mobile Device Access USB feature must be enabled).
- Fixed **double detection of MTP and PTP**. MTP is preferred over PTP now (Mobile Device Access USB feature must be enabled).

#### Appliance Mode

- Fixed **configuration of post session commands via UMS profile**: There is no second reboot required anymore to apply the settings properly in Appliance Mode.

#### X11 system

- Fixed graphic card support for **HP EliteBook 745 G5** (disabled AMDGPU framebuffer compression as default).
  - Fixed **non loading DRM/KMS driver on Spectra Nise 106**.
  - Added possibility to **change the framebuffer compression for AMDGPU driver**.
- More...**

|           |                                 |
|-----------|---------------------------------|
| Parameter | AMDGPU framebuffer compression. |
| Registry  | x.drivers.amdgpu.use_fbc        |
| Range     | [default][enable][disable]      |

- Fixed **DP MST handling** (fixes Dell XPS Notebook Dock Station monitor issues).
  - Fixed sessions.user\_display0.options.lid\_events work for **eDP** also.
  - Fixed **VESA** only boot with **UEFI system**.
  - **AMDGPU stability** fixes applied.
  - Fixed issue with **screen configuration for certain cases**.
  - Fixed **screen configuration** getting in **endless loop** with multi monitor setups.
  - Fixed **memleak in igel\_drm\_daemon**.
  - Fixed **DRI2 memleak with AMDGPU driver**.
  - Changed x.xserver0.force\_reconfig registry key (former bool now range).
- More...**

|           |                                                      |
|-----------|------------------------------------------------------|
| Parameter | Force a display reconfiguration                      |
| Registry  | x.xserver0.force_reconfig                            |
| Range     | [default][only on Xorg start/restart][always][never] |

- Usage of **only on Xorg start/restart** as new default for **AMDGPU based devices**.
  - Removed x.xserver0.composite registry key to prevent problems with **AMD/ATI devices**.
  - Fixed **screen remains black when Monitor Probing (DDC)** option is "Off", configurable at setup page **User Interface > Display > Options**.
  - Fixed wrong detected **DisplayPort (eDP instead of DP) for Dell Wyse 5070**.
  - Added possibility to configure **graphic displays only if DPMS state is not OFF**.
- More...**

|           |                                                      |
|-----------|------------------------------------------------------|
| Parameter | Do not reconfigure if monitors are in DPMS off state |
| Registry  | x.xserver0.config_on_dpms_on                         |
| Value     | <u>enabled</u> / disabled                            |

## Window Manager

- **On-Screen Keyboard will keep aspect ratio** when resized via double click on edge.

## Shadowing/VNC

- Fixed instability of **Secure Shadowing** connector.

## Audio

- Added a workaround for **button handling of Sennheiser USB headsets**.
- Fixed saving and restoring of **volume controls in Pulseaudio and ALSA**.
- Fixed **volume control** of the internal speaker in **Wyse ZX0D**.
- Improved consistency while **storing of changed volume values**.
- Fixed configuration of the **default sound output or input on hardware** when presence detection in jack connector is missing.

## Hardware

- Fixed shutdown problems for **Dell Wyse Thin Client AIO 5212** (use legacy boot instead of EFI).
- Fixed support for **four screens with Nvidia Quadro graphic cards** (all current cards which are able to drive four outputs).
- Fixed graphic issues for **HP ProBook 455 G5**.
- Fixed non working **StarTech.com USB2DVIPRO2 DisplayLink** graphics adapter.
- Fixed freezes of Intel **Baytrail devices**.
- Fixed **VDPAU** hardware accelerated video support for **NVIDIA graphics cards**.
- Fixed non working **DisplayLink USB graphics adapter** after reboot.

#### Remote Management

- Fixed **zero touch deployment** by adding a timeout to the Setup Assistant abort message.
- Fixed **computation of Unit ID**. The Unit ID is the identification key of the thin client in UMS, and also thin client licenses will be bound to the Unid ID. Now the Unit ID is computed once and persistently saved. It consists of the serial number of UD Pocket or the MAC address of a network interface. When multiple network interfaces are present, the interface is selected taking following attributes into account:  
If a license bound to the interface exists, how it is connected (PCI, SDIO, USB or other) and if it is wireless or wired.  
It is best practice not to connect external network interfaces when a freshly installed thin client device is booted for the first time, so that the Unit ID will consist of a MAC address of a network interface which cannot be removed from the thin client device.
- Fixed **monitor serial numbers** not shown in UMS.
- Fixed **Bluetooth Asset Inventory** zombie when bluetooth dongle is removed.
- Fixed **UMS filetransfer** - now filetransfer action is triggered also if only the file classification was changed.
- Fixed **Update on shutdown** UMS job which could be stucked if update is failed once for some reasons.

### 7.29.3 IGEL Universal Desktop Converter (UDC3)

#### Supported Hardware:

<https://kb.igel.com/igelos/en/devices-supported-by-udc3-and-ud-pocket-3117174.html>

- Versions 10.05.100(see page 2258)
- New Features 10.05.100(see page 2260)

#### Versions 10.05.100

- **Clients**

| Product    | Version   |
|------------|-----------|
| Oracle JRE | 1.8.0_181 |

- **System Components**

|                                         |                               |
|-----------------------------------------|-------------------------------|
| OpenSSL                                 | 1.0.2g-1ubuntu4.13            |
| Bluetooth stack (bluez)                 | 5.50-0ubuntu1igel5            |
| MESA OpenGL stack                       | 18.2.1-1igel51                |
| Graphics Driver INTEL                   | 2.99.917+git20180214-igel1830 |
| Graphics Driver ATI/RADEON              | 18.0.1-1igel831               |
| Graphics Driver ATI/AMDGPU              | 18.0.1-1igel831               |
| Graphics Driver Nouveau (Nvidia Legacy) | 1.0.15-2igel775               |
| Graphics Driver Vboxvideo               | 5.2.18-dfsg-2igel17           |
| Graphics Driver VMware                  | 13.3.0-2igel812               |
| Graphics Driver QXL (Spice)             | 0.1.5-2build1igel775          |
| Graphics Driver FBDEV                   | 0.5.0-1igel819                |
| Graphics Driver VESA                    | 2.3.4-1build2igel639          |
| Input Driver Evdev                      | 2.10.5-1ubuntu1igel750        |
| Input Driver Elographics                | 1.4.1-1build5igel633          |
| Input Driver eGalax                     | 2.5.5814                      |
| Input Driver Synaptics                  | 1.9.0-1ubuntu1igel748         |
| Input Driver Vmmouse                    | 13.1.0-1ubuntu2igel635        |
| Input Driver Wacom                      | 0.36.1-0ubuntu1igel813        |
| Kernel                                  | 4.18.11 #mainline-udos-r2463  |
| Xorg X11 Server                         | 1.19.6-1ubuntu4igel838        |
| Lightdm graphical login manager         | 1.18.3-0ubuntu1.1             |
| XFCE4 Windowmanager                     | 4.12.3-1ubuntu2igel653        |
| ISC DHCP Client                         | 4.3.3-5ubuntu12.10igel6       |

## New Features 10.05.100

### Hardware

- Added official support for **HP T630**.
- Added official support for **Intel NUC 6CAYH and 5i5MYHE**.
- Added official support for **Dell/Wyse 3040**.
- Added official support for **Toshiba Tecra C50-B1503**.
- Added official support for **Toshiba R50**.
- Added official support for **Dell/Wyse AIO 5212**.
- Added official support for **LG 24CK550W AiO Thin Client**.

## 7.30 Notes for Release 10.04.100

## General Information 10.04.100

The following clients and features are not supported anymore in version 10.04.100:

- Citrix Receiver 12.1 and 13.1
- Citrix Access Gateway Standard Plug-in
- Dell vWorkspace Connector for Linux
- Ericom PowerTerm Emulation 9 and 11
- Ericom Webconnect
- IGEL Legacy RDP Client (rdesktop)
- Virtual Bridges VERDE Client
- PPTP VPN Support
- IGEL Upgrade License Tool with IGEL Smartcard Token
- Remote Management by setup.ini file transfer (TFTP)
- Remote Access via RSH
- Legacy Philips Speech Driver
- Digital Persona Support
- Sane Scanner Support
- Softpro/Kofax Citrix Virtual Channel
- t-Systems TCOS Smartcard Support
- DUS Series touch screens
- Elo serial touch screens
- IGEL Smartcard without locking desktop
- Video Hardware Acceleration Support is discontinued on UD3-LX 42, UD3-LX 41, UD3-LX 40 (M320C/M330C) and UD10-LX Touch 10, D10-LX 10
- H.264 Hardware Acceleration Support is discontinued on UD3-LX 42, UD3-LX 41, UD3-LX 40 (M320C/M330C) and UD10-LX Touch 10, UD10-LX 10
- Storage Hotplug devices are not automatically removed anymore, instead they must always be ejected manually:

- by panel tray icon
- by an icon in the 'In-Session Control Bar' (configurable at **IGEL Setup > User Interface > Desktop**)
- by a 'Safely Remove Hardware' session (configurable at **IGEL Setup > Accessories**)

The following clients and features are not available in release 10.04.100:

- X session (Xorg Xephyr)
- Cherry eGK Channel
- Open VPN Smartcard Support
- NCP Secure Client
- Asian Input Methods
- Composite Manager
- Softpro/Kofax Citrix Virtual Channel

## Security Fixes 10.04.100

### Firefox

- Fixes for **mfsa2018-08**, also known as CVE-2018-5146, CVE-2018-5147.
- Fixes for **mfsa2018-07**, also known as CVE-2018-5127, CVE-2018-5129, CVE-2018-5130, CVE-2018-5131, CVE-2018-5144, CVE-2018-5125, CVE-2018-5145.

### Base System

- Added support for UEFI Secure Boot.

When booted with Secure Boot the downgrade to a firmware version older than 10.04.100 is locked.

- When booted with Secure Boot the downgrade to a firmware version older than 10.04.100 is locked.
- Fixed evince security issue CVE-2017-1000159.
- Fixed bind9 security issue CVE-2017-3145.
- Fixed glibc security issues CVE-2018-1000001, CVE-2017-16997, CVE-2017-15804, CVE-2017-15670, CVE-2017-1000409 and CVE-2017-1000408.
- Fixed gdk-pixbuf security issues CVE-2017-6314, CVE-2017-6313, CVE-2017-6312 and CVE-2017-1000422.
- Fixed webkit2gtk security issues CVE-2017-7156, CVE-2017-5753, CVE-2017-5715, CVE-2017-13870, CVE-2017-13866, CVE-2017-13856, CVE-2018-4096, CVE-2018-4088, CVE-2017-7165, CVE-2017-7161, CVE-2017-7160, CVE-2017-7153, CVE-2017-13885 and CVE-2017-13884.
- Fixed poppler security issues CVE-2017-14976 and CVE-2017-1000456.
- Fixed openssl security issues CVE-2017-3738 and CVE-2017-3737.
- Fixed libxml2 security issues CVE-2017-16932 and CVE-2017-15412.
- Fixed nvidia-graphics-drivers-384 security issue CVE-2017-5753.
- Fixed openssh security issues CVE-2017-15906, CVE-2016-10012, CVE-2016-10011, CVE-2016-10010 and CVE-2016-10009.
- Fixed libtasn1-6 security issues CVE-2018-6003 and CVE-2017-10790.
- Fixed curl security issues CVE-2018-1000005 and CVE-2018-1000007.

- Fixed libvorbis security issues CVE-2017-14633 and CVE-2017-14632.
- Fixed wavpack security issue CVE-2016-10169.
- Fixed cups security issue CVE-2017-18190.
- Fixed sensible-utils security issue CVE-2017-17512.
- Removed terminal start function from task manager menu bar.
- Updated kernel to version 4.15.15
  - Fixed Meltdown (CVE-2017-5754) by PTI (page table isolation)
  - Fixed Spectre Variant 1 (CVE-2017-5753) by \_\_user pointer sanitization
  - Fixed Spectre Variant 2 (CVE-2017-5715) by full generic retrampoline
- Fixed beep security issue CVE-2018-0492.
- Added Intel Processor Microcode Updates to provide IBRS/IBPB/STIBP microcode support for Spectre Variant 2 (CVE-2017-5715) mitigation.

| Product Name                                                                   | CPU ID | Platform ID | Microcode Revision |
|--------------------------------------------------------------------------------|--------|-------------|--------------------|
| IGEL UD9-LX Touch 41, IGEL UD9-LX 40, IGEL UD6-LX 51, IGEL UD5-LX 50 Bay Trail | 30678  | 0C          | 0x836              |
| IGEL UD2-LX 40 Bay Trail                                                       | 30679  | 0F          | 0x90A              |
| IGEL UD5-LX 40 Sandy Bridge                                                    | 206A7  | 12          | 0x2D               |

## Network

- Disabled **weak message authentication codes** for SSH server and client as default. If problems occur change the default setting.

### More

|           |                                           |
|-----------|-------------------------------------------|
| Parameter | Disable weak message authentication codes |
| Registry  | network.ssh_client.disable_weak_macs      |
| Value     | <u>enabled</u> / disabled                 |

|           |                                           |
|-----------|-------------------------------------------|
| Parameter | Disable weak message authentication codes |
| Registry  | network.ssh_server.disable_weak_macs      |
| Value     | <u>enabled</u> / disabled                 |

- Disabled **weak key exchange algorithms** for SSH server and client as default. If problems occur, change the default setting.

**More**

|           |                                               |
|-----------|-----------------------------------------------|
| Parameter | Disable weak key exchange algorithms          |
| Registry  | network.ssh_client.disable_weak_kexalgorithms |
| Value     | <u>enabled</u> / disabled                     |
| Parameter | Disable weak key exchange algorithms          |
| Registry  | network.ssh_server.disable_weak_kexalgorithms |
| Value     | <u>enabled</u> / disabled                     |

- Disabled **weak hostkeys** (server) and **hostkey algorithms** (client) for SSH server and client as default. If problems occur, change the default setting.

**More**

|           |                                               |
|-----------|-----------------------------------------------|
| Parameter | Disable weak Hostkey algorithms               |
| Registry  | network.ssh_client.disable_weak_hostkey_algos |
| Value     | <u>enabled</u> / disabled                     |
| Parameter | Disable weak Hostkeys                         |
| Registry  | network.ssh_server.disable_weak_hostkeys      |
| Value     | <u>enabled</u> / disabled                     |

- Changed **SMB protocol version default** v1.0 to **v2.0** for mounting windows shares to improve security.
- Added the possibility to change the **SMB protocol** version for windows shares. The windows shares are configurable at **IGEL Setup > Network > Network Drives > Windows Drive**.

**More**

|           |                      |
|-----------|----------------------|
| Parameter | SMB protocol version |
|-----------|----------------------|

|          |                                           |
|----------|-------------------------------------------|
| Registry | <code>network.smbmount.smb_version</code> |
| Range    | 1.0 / <u>2.0</u> / 2.1 / 3.0              |

When using a very old Windows file server, the change to version 1.0 is necessary.

#### RDP / IGEL RDP Client 2

- Fixed RDP: CVE-2018-0886.

#### Java

- Fixed in **Oracle JRE 1.8U162** : CVE-2018-2638, CVE-2018-2639, CVE-2018-2633, CVE-2018-2627, CVE-2018-2637, CVE-2018-2634, CVE-2018-2582, CVE-2018-2641, CVE-2018-2618, CVE-2018-2629, CVE-2018-2603, CVE-2018-2657, CVE-2018-2599, CVE-2018-2581, CVE-2018-2602, CVE-2018-2677, CVE-2018-2678, CVE-2018-2588, CVE-2018-2663, CVE-2018-2675, CVE-2018-2579

#### Known Issues 10.04.100

##### Citrix Receiver 13

- On devices with AMD/Radeon graphics chipsets and activated DRI3 X driver option **the hardware accelerated Citrix H.264 decoder plugin can hang**. To solve this issue deactivation of DRI3 option is necessary (default setting).

[More](#)

|           |                                                                                   |
|-----------|-----------------------------------------------------------------------------------|
| Parameter | Use DRI3                                                                          |
| Registry  | <code>x.drivers.use_dri3</code>                                                   |
| Value     | enabled / <u>disabled</u>                                                         |
| Parameter | Force usage of DRI3                                                               |
| Registry  | <code>x.drivers.amdgpu.force_dri3</code><br><code>x.drivers.ati.force_dri3</code> |
| Value     | enabled / <u>disabled</u>                                                         |

- Citrix StoreFront login with **Gemalto smartcard middleware** does not detect smartcard correctly when the card is inserted after start of login. As a workaround, insert the smartcard before starting StoreFront login.
- **No smooth playback** over **Nuance** channel if the dictation device isn't attached.

##### VMware Horizon

- **External drives** mounted already before connection do not appear in the remote desktop.  
**Workaround:** mapping the directory /media as a drive on desktop.  
 Then the external devices will show up inside the media drive.
- **Client drive mapping** and **USB redirection for storage devices** should not be enabled both at the same time.
  - On the one hand, when using USB redirection for storage devices: The USB on-insertion feature is only working when the client drive mapping is switched off. In the IGEL Setup client drive mapping can be found in: **Sessions > Horizon Client > Horizon Client Global > Drive Mapping > Enable Drive Mapping**. It is also recommended to disable local Storage Hotplug: On page **Devices > Storage Devices > Storage Hotplug**, put number of storage hotplug devices to 0.
  - On the other hand, when using drive mapping instead, it is recommended to either switch off USB redirection entirely or at least deny storage devices by adding a filter to the USB class rules. Furthermore, Horizon Client relies on the OS to mount the storage devices itself. Change on the following setup page is required: **Devices > Storage Devices > Storage Hotplug**.  
 Activate **Enable dynamic drive mapping** and set **Number of storage hotplug devices** to at least 1.

#### Firefox

- Because the **support for the gstreamer framework** was dropped by recent Firefox versions, support for H264 decoding in the browser is not possible anymore due to licensing restrictions.

#### OpenConnect VPN

- **VPNs which need the OpenConnect** client cannot be used for firmware updates.

#### Evidian

- Active Directory users with a **password containing special characters** may have problems to authenticate with the configured session.  
 Known special characters which result in errors are:
  - ˋ (grave accent, ASCII code 96)
  - ˊ (acute accent, ASCII code 239)

#### New Features 10.04.100

##### Citrix Receiver 13

- Integrated **Citrix Receiver 13.8.0**.  
**More**

|           |                                              |
|-----------|----------------------------------------------|
| Parameter | Use Citrix Cloud with receiver 13.8 or newer |
| Registry  | ica.cloudconnect                             |
| Value     | enabled / <u>disabled</u>                    |

- Support for **Azure** Active Directory (Azure AD) authentication

- Support for **Workspace** configuration from Citrix Cloud
- Integrated **Citrix Receiver 13.4.2**. Citrix Receiver version 13.5.0 was removed. Available Citrix Receiver versions: 13.3.2, 13.4.2, 13.7.0, 13.8.0 (default)
- Updated **Citrix HDX RTME** used for optimization of Skype for Business to 2.4.0.

#### RDP / IGEL RDP Client 2

- Added possibility to use **RDP local logon** for smartcard login. This can be activated in the setup.  
[More](#)

|           |                                          |
|-----------|------------------------------------------|
| Parameter | Enable smartcard support for local logon |
| Registry  | rdp.login.smartcard-local-logon          |
| Value     | enabled / <u>disabled</u>                |

By enabling this parameter local logon can be used for smartcard authentication. If **Username** is left empty the connection to the RDP server will be made without sending credentials, so you can choose **Smartcard** as login method in the microsoft login window . However this will not work with **NLA**.

- Added support for CredSSP up to version 6.

#### VMware Horizon

- Updated **VMware Horizon Client** to version **4.7.0-7395152**.
- Added key to enable **seamless window mode** in each application session.  
[More](#)

|           |                                                    |
|-----------|----------------------------------------------------|
| Parameter | Seamless Application Windows                       |
| Registry  | sessions.vdm_client.options.enable_seamless_window |
| Value     | enabled / <u>disabled</u>                          |

- Added possibility to use **Fabulatech USB Redirection** in a Horizon Client PCoIP session.  
[More](#)

| Parameter  | Enable Fabulatech USB Redirection                                                              |
| Registry   | vmware.view.usb.enable-fabulatech-usb                                                          |
| Value      | enabled / <u>disabled</u>                                                                      |

#### Parallels Client

- Integrated **Parallels Client** version **16.2.0 (19039)**
- Added support for USB Redirection, configurable at new IGEL Setup page **Sessions > Parallels Client > Parallels Client Global > USB Redirection.**

## VoIP

- Added **VoIP client Ekiga 4.0.1**.

## Firefox

- Updated **Firefox** to version **52.7.2 ESR**.
- Updated **Adobe Flash Player** download URL to version 29.0.0.113.

## Network

- Added **TTLS/PAP** and **TTLS/MSCHAPv2** to possible 802.1x authentication methods.
- Improved support for **Sierra EM7305 LTE** device (e.g. in Toshiba Portégé and Fujitsu LIFEBOOK E Series).

The EM7305 comes in various variants, e.g. one with ProductId 9041 and another one with ProductId 9063. The latter comes at least with one or with two USB configuration options. A device with only one configuration option has been observed on a Toshiba Tecra Z-50-D-115 notebook. It only works in MBIM mode and with IGEL firmware, when the device has successfully connected before with the same settings (particularly APN), e.g. under Microsoft Windows 10.

- Added support for **Sierra EM7455 WWAN module**.
- Added support for running the **Huawei E3531i WWAN** device in modem mode (in addition to HiLink mode).
- Added possibility to adopt the **hostname from a DHCP lease** as **permanent** terminal name. The purpose is to use the name received as part of a DHCP lease in future interactions with the DHCP server.

**More**

|           |                                               |
|-----------|-----------------------------------------------|
| Parameter | Adopt permanent Terminal Name from DHCP lease |
| Registry  | network.dns.hostname_adopt_from_dhcp          |
| Value     | <u>enabled</u> / disabled                     |

- NetworkManager** updated to version **1.2.2**
- ModemManager** updated to version **1.6.4**
- usb\_modeswitch** updated to version **2.5.1**

## Open VPN

- Added **Huawei HiLink Mobile Broadband USB** device as possible uplink to OpenVPN sessions.

## OpenConnect VPN

- Added **OpenConnect** client version **7.08** to connect to **Cisco AnyConnect** and **Juniper VPN**. The feature must be enabled.

| Value | <u>enabled / disabled</u> |
|-------|---------------------------|

- Updated **Gemalto SafeNet PKCS#11** library to version **10.0.37-0**. This package replaces **Gemalto/SafeNet eToken** and **Gemalto IDPrime** libraries.  
**Gemalto SafeNet** (formerly **Gemalto/SafeNet eToken**) now handles Gemalto cards and tokens including eToken and IDPrime.  
**Gemalto IDPrime** now handles IDPrime cards and tokens, preferred Common Criteria (CC) cards and tokens in Unlinked Mode.
- Added full integration of **OpenSC PKCS#11** library for access to smartcards.

- Updated **MUSCLE CCID** smartcard reader driver to version **1.4.28**.
- Updated **ACS CCID** smartcard reader driver to version **1.1.5**.
- Updated **REINER SCT cyberJack** smartcard reader driver to version **3.99.5final.sp11**.
- Added parameter to disable **Identive CCID** smartcard reader driver. If this driver is disabled, some of the readers are handled by the MUSCLE CCID driver. This can help when problems with Identive reader driver occur.

- Updated **cryptovision sc/interface PKCS#11** library to version **7.0.5.592**.
- New smartcard reader driver for **Fujitsu KB SCR eSIG** version **5.0.24**.

## HID

- Added **layout toggle** feature to on-screen keyboard.

**More**

|            |                                                                   |
|------------|-------------------------------------------------------------------|
| IGEL Setup | <b>Accessories &gt; On-Screen Keyboard &gt; Appearance</b>        |
| Parameter  | Enable switching to alternative layout                            |
| Registry   | <code>userinterface.softkeyboard.enable_alternative_layout</code> |
| Value      | <u>enabled</u> / <u>disabled</u>                                  |

If this is enabled there is a key on the on-screen keyboard for toggling between the normal layout and a reduced layout, that saves space on the screen and has more or less the same features as the number block of an ordinary keyboard with some extensions.

## Base System

- Added support for **UEFI Secure Boot**.

When booted with Secure Boot the downgrade to a firmware version older than 10.04.100 is locked.

- Updated **kernel to version 4.15.15**
- **Boot time optimization** (up to 25% faster)
- **Switch power off on USB ports on shutdown and reboot**. The feature can be enabled in IGEL Setup. At the moment only IGEL H830C is supported.

**More**

|            |                                            |
|------------|--------------------------------------------|
| IGEL Setup | <b>System &gt; Registry</b>                |
| Parameter  | Power off on shutdown                      |
| Registry   | <code>devices.usb.poweroff_shutdown</code> |
| Value      | <u>enabled</u> / <u>disabled</u>           |

- Added Unit ID in Application Launcher **About > Hardware** section.
- Showing **number of CPU cores** in Application Launcher **About > Hardware** section now.

## Storage Devices

- Added support for **Mobile Device Access** feature in **Appliance Mode**. The Mobile Device Access tool can be opened via a new icon in the **In-session control bar**. The Mobile Device Access tool can also be started automatically.

**More**

|           |                                 |
|-----------|---------------------------------|
| Parameter | Autostart                       |
| Registry  | sessions.mtp-devices0.autostart |
| Value     | enabled / <u>disabled</u>       |

Mobile Device Access must be enabled at **IGEL Setup > System > Firmware Customization > Features**. Appliance Mode must be enabled at **IGEL Setup > Sessions > Appliance Mode**.

- The **Mobile Device Access tool** is now configurable at **IGEL Setup > Accessories > Mobile Device Access**.
- The **Mobile Device Access tray icon** respects the current theme now.

## X11 System

- Added support for **XDMCP Appliance Mode**. The XDMCP connection is configurable.

**More**

|            |                                                               |
|------------|---------------------------------------------------------------|
| IGEL Setup | <b>Sessions &gt; Appliance Mode</b>                           |
| Parameter  | XDMCP for this Display                                        |
| Registry   | x.xdmcp0.enabled                                              |
| Value      | enabled / <u>disabled</u>                                     |
| IGEL Setup | <b>Sessions &gt; Appliance Mode</b>                           |
| Parameter  | Connection Type                                               |
| Registry   | x.xdmcp0.server.connectiontype                                |
| Range      | <b>indirect via localhost</b> / indirect / direct / broadcast |
| IGEL Setup | <b>Sessions &gt; Appliance Mode</b>                           |
| Parameter  | Name or IP of server                                          |
| Registry   | x.xdmcp0.server.servername                                    |

|            |                                     |
|------------|-------------------------------------|
| IGEL Setup | <b>Sessions &gt; Appliance Mode</b> |
| Parameter  | Enable hotkeys for XDMCP Display    |
| Registry   | x.xdmcp0.hotkeys.enabled            |
| Value      | <u>enabled</u> / <u>disabled</u>    |

The default hotkey to open IGEL Setup is: CTRL + ALT + F2. The setup page **User Interface > Display > XDMCP** was removed.

- Added **XC Font Service** support.

[More](#)

|            |                                                               |
|------------|---------------------------------------------------------------|
| IGEL Setup | <b>User Interface &gt; Font Services &gt; XC Font Service</b> |
| Parameter  | Enable XC Font Service                                        |
| Registry   | x.xc_fontservice.enabled                                      |

| Registry   | x.xc_fontservice.port                                         |
| Value      | <u>7100</u>                                                   |
| IGEL Setup | <b>User Interface &gt; Font Services &gt; XC Font Service</b> |
| Parameter  | Prefer Local Fonts                                            |
| Registry   | x.xc_fontservice.prefer_localfonts                            |
| Value      | <u>enabled</u> / <u>disabled</u>                              |

- Added **auto detection of monitor refresh rate**. This can be controlled with new parameters.  
**More**

|            |                                                  |
|------------|--------------------------------------------------|
| IGEL Setup | <b>User Interface &gt; Display &gt; Advanced</b> |
| Parameter  | Detect refresh rate automatically                |
| Registry   | x.xserver0.auto_frequency                        |
| Value      | <u>enabled</u> / disabled                        |

|            |                                                  |
|------------|--------------------------------------------------|
| IGEL Setup | <b>User Interface &gt; Display &gt; Advanced</b> |
| Parameter  | Detect refresh rate automatically                |
| Registry   | x.xserver0.screen.auto_frequency                 |
| Value      | <u>enabled</u> / disabled                        |

- Added xorg debug script **/etc/igel/igel\_debug\_tools/xorg-debug.sh** to make collecting Xorg debug data easier (a /tmp/xorg-debug.log file is generated).

## Window Manager

- Added possibility to
  - a) **change the preferred placement mode** and
  - b) **modify the threshold value** up to which window size this placement mode should be chosen (otherwise window placement defaults to so called smart mode which tries to minimize overlapping).

**More**

|           |                                                                        |
|-----------|------------------------------------------------------------------------|
| Parameter | Preferred Placement                                                    |
| Registry  | windowmanager.wm0.variables.placement_mode                             |
| Value     | At mouse position / <u>Centered</u>                                    |
| Parameter | Maximum window size for which the preferred placement should apply     |
| Registry  | windowmanager.wm0.variables.placement_ratio                            |
| Value     | 0% / 10% / <u>20%</u> / 30% / 40% / 50% / 60% / 70% / 80% / 90% / 100% |

## Audio

- **Volume** of audio output and input can now be configured up to 150% at **IGEL Setup page Accessories > Sound Preferences > Options**.
- Added a parameter for log level configuration of **Pulseaudio** service.  
[More](#)

| Parameter | Log level                                      |
|-----------|------------------------------------------------|
| Registry  | multimedia.pulseaudio.daemon.log-level         |
| Range     | debug / info / <u>notice</u> / warning / error |

## Misc

- An EULA must be accepted now in IGEL setup assistant before finalizing it and using the IGEL OS.

## Java

- Updated **Oracle JRE to 1.8U162**.

## Remote Management

- Added **new log file transfer mechanism** for UMS feature **Save TC files for support** (UMS 5.08.110 or higher required). By default, it collects all log files visible in system log viewer, system configuration files group.ini, setup.ini and dhclient lease files. More files can be specified at **IGEL Setup > Accessories > System Log Viewer > Options**. The resulting zip file has now a folder structure.

## IGEL Cloud Gateway

- Added **UMS structure tag** handling for usage with **ICG agent**.

## Hardware

- Added support for **IGEL UD7-LX 10**.

## Resolved Issues 10.04.100

### Citrix

- Fixed sporadic crashes of the **Citrix USB Daemon**.

### RDP / IGEL RDP Client 2

- Fixed passing **Ctrl+Alt+C keyboard shortcut** to RDP session.
- Fixed **smartcard redirection**: after session reconnection readers and cards were not connected any more in some cases.
- Fixed the **rdpdebugger** to work again (was broken in the previous release).
- Fixed misleading **RDP error message `Authentication failed`** on wakeup from suspend mode
- Fixed **TCP timeout value** to get more stable **RDP connections** under certain circumstances.

### VMware Horizon

- Fixed bug which prevented **microphone redirection** in Horizon Client RDP sessions.

**More**

|            |                                                                  |
|------------|------------------------------------------------------------------|
| IGEL Setup | <b>Sessions &gt; RDP &gt; RDP Global &gt; Mapping &gt; Audio</b> |
| Parameter  | Audio recording                                                  |
| Registry   | rdp.winconnect.rdppeai.enable                                    |
| Value      | enabled / <u>disabled</u>                                        |

RedHat Enterprise Virtualization Client

- Fixed **display corruption** with Windows connections.

Firefox

- Fixed possibility to **download files in the browser** if needed. The parameter to enable/disable file download is available here.

**More**

|            |                                                                |
|------------|----------------------------------------------------------------|
| IGEL Setup | <b>Sessions &gt; Browser &gt; Browser Sessions &gt; Window</b> |
| Parameter  | Hide local filesystem                                          |
| Registry   | sessions.browser.app.filepicker_dialog_hidden                  |
| Value      | enabled / <u>disabled</u>                                      |

If enabled, the user is not allowed to download or use any save-as functionality from menu, context or keyboard shortcut.

- Fixed bug which **prevented the download using the file dialog** (in the case you open a link to a file of unknown type).
- Fixed **unmounting of the Firefox profile partition during shutdown** - now it is unmounted in a determinate manner after Custom Partition.

Network

- Fixed bug: **Network tray icons** sometimes didn't reappear after network restart.
- Fixed bug: **tcpdump debug tool** terminated immediately during boot.
- Fixed issue with **naming of USB ethernet devices**.
- Fixed wrong **LinkMode (10baseT/Half)** with autonegotiation and some USB ethernet devices.

AppliDis

- Changed default value of **PasswordMode** from **cmdline** to **prompt** as suggested by Systancia.

Smartcard

- Fixed driver for **Elatec RFID readers**. Before this fix the readers sometimes were not available after boot.
- Fixed VMware Horizon logon with OpenSC smartcards.

## CUPS Printing

- Fixed bug where the **user for printjobs** was not set to the **domain user**.

## Base System

- Fixed **Kerberos password change** to work also with transport protocol **TCP**. To force protocol TCP, prepend Domain Controllers with prefix "tcp/", e.g. "tcp/dc.example.com".
- Fixed **occasional desktop hang** in the local login or the network login mask after successful authentication.
- Fixed **password expiry notification** showing negative expiry period.
- Fixed **update to connect to SFTP** servers with very restrictive key exchange settings.
- Fixed input of the **reset key in reset to defaults boot**, if the administrator password is not available anymore. If more than 255 characters were entered in the 1st try, it was not possible to enter the reset key for a 2nd or 3rd time.
- Fixed **Active Directory logon with smartcard**: If the smartcard contains logon certificates for multiple users, it is possible to switch between these certificates and log on with the chosen certificate now.
- Fixed missing names for some **partitions** in update notification when having a user interface **language other than English**.
- Fixed problems with **never ending bootcode** update with some EFI BIOS variants.
- Fixed **ssh server port** configuration.
- Fixed **signotec signature pad** channel for Citrix.
- Increased stability of **signotec VCOM Daemon**.
- Remove residual information belonging to a **removed content from a custom partition**.
- Fixed **crash of xfce4-power-manager** after adding or removing input devices.

## Custom Partition

- Fixed **automatic update of custom partition** - if download source isn't accessible then the content of the custom partition got lost.

## Appliance Mode

- Fixed post session command **Logoff** in Appliance Mode.

## X11 System

- Fixed **Elo-USB Touchscreen functionality** after reboot.
- Fixed **DisplayLink USB Support on UD3 LX50**.
- Fixed issue with **two monitors connected via DVI-D to HDMI adapter on a UD3 M330 (VIA)**. Added registry key to disable the new HDMI autodetection.

**More**

|           |                                             |
|-----------|---------------------------------------------|
| Parameter | Autodetect if DVI to HDMI adapter is in use |
| Registry  | x.drivers.via.autodetect_hdmi_output        |
| Value     | <u>enabled</u> / disabled                   |

- Fixed **wrong automatic resolution detection** if monitor does not have a preferred mode.
- Fixed **sporadic display corruptions** after monitors leaving the power saving mode.

- Improved handling of more than 2 screens.

#### Shadowing/VNC

- Fixed **sporadic VNC server crash**.

#### Audio

- Fixed **volume control of internal speaker in HP T610**.
- Fixed **automatic switch to output** over analog headphones.
- Not existing **S/PDIF inputs and outputs in Plantronics and Jabra USB headsets** are now ignored by audio subsystem (Pulseaudio).
- Added workaround in the kernel USB audio driver for **volume control on Sennheiser USB headsets**.

#### Remote Management

- Fixed **calculation of Unit ID for UMS management**. In some cases, it could happen that the MAC address of wrong network interface was chosen.
- Fixed **IGEL Setup Assistant** to get stopped when settings were received from UMS.

## 7.30.2 IGEL Universal Desktop OS3/IGEL UD Pocket 10.04.100

#### Supported Hardware:

[Third-Party Devices Supported by IGEL OS 10<sup>460</sup>](#)

- Versions for Release 10.04.100(see page 2286)
- General Information 10.04.100(see page 2290)

- **Features with Limited IGEL Support**

|                          |  |
|--------------------------|--|
| Mobile Device Access USB |  |
| VPN OpenConnect          |  |

## General Information 10.04.100

The following clients and features are not supported anymore in version 10.04.100:

- Citrix Receiver 12.1 and 13.1
- Citrix Access Gateway Standard Plug-in

- Dell vWorkspace Connector for Linux
- Ericom PowerTerm Emulation 9 and 11
- Ericom Webconnect
- IGEL Legacy RDP Client (rdesktop)
- Virtual Bridges VERDE Client
- PPTP VPN Support
- IGEL Upgrade License Tool with IGEL Smartcard Token
- Remote Management by setup.ini file transfer (TFTP)
- Remote Access via RSH
- Legacy Philips Speech Driver
- Digital Persona Support
- Sane Scanner Support
- t-Systems TCOS Smartcard Support
- DUS Series touch screens
- Elo serial touch screens
- IGEL Smartcard without locking desktop
- VIA Graphics Support
- Storage Hotplug devices are not automatically removed anymore, instead they must be always ejected manually:
  - by panel tray icon
  - by an icon in the **In-Session Control Bar** (configurable at **IGEL Setup > User Interface > Desktop**)
  - by a **Safely Remove Hardware** session (configurable at **IGEL Setup > Accessories**)

The following clients and features are not available in release 10.04.100:

- X session (Xorg Xephyr)
- Cherry eGK Channel
- Softpro/Kofax Citrix Virtual Channel
- Open VPN Smartcard Support
- NCP Secure Client
- Asian Input Methods
- Composite Manager

## Security Fixes 10.04.100

### Firefox

- Fixes for **mfsa2018-08**, also known as CVE-2018-5146, CVE-2018-5147.
- Fixes for **mfsa2018-07**, also known as CVE-2018-5127, CVE-2018-5129, CVE-2018-5130, CVE-2018-5131, CVE-2018-5144, CVE-2018-5125, CVE-2018-5145.

### Base System

- Added support for UEFI Secure Boot.

When booted with Secure Boot the downgrade to a firmware version older than 10.04.100 is locked.

- When booted with Secure Boot the downgrade to a firmware version older than 10.04.100 is locked.
- Fixed evince security issue CVE-2017-1000159.
- Fixed bind9 security issue CVE-2017-3145.
- Fixed glibc security issues CVE-2018-1000001, CVE-2017-16997, CVE-2017-15804, CVE-2017-15670, CVE-2017-1000409 and CVE-2017-1000408.
- Fixed gdk-pixbuf security issues CVE-2017-6314, CVE-2017-6313, CVE-2017-6312 and CVE-2017-1000422.
- Fixed webkit2gtk security issues CVE-2017-7156, CVE-2017-5753, CVE-2017-5715, CVE-2017-13870, CVE-2017-13866, CVE-2017-13856, CVE-2018-4096, CVE-2018-4088, CVE-2017-7165, CVE-2017-7161, CVE-2017-7160, CVE-2017-7153, CVE-2017-13885 and CVE-2017-13884.
- Fixed poppler security issues CVE-2017-14976 and CVE-2017-1000456.
- Fixed openssl security issues CVE-2017-3738 and CVE-2017-3737.
- Fixed libxml2 security issues CVE-2017-16932 and CVE-2017-15412.
- Fixed nvidia-graphics-drivers-384 security issue CVE-2017-5753.
- Fixed openssh security issues CVE-2017-15906, CVE-2016-10012, CVE-2016-10011, CVE-2016-10010 and CVE-2016-10009.
- Fixed libtasn1-6 security issues CVE-2018-6003 and CVE-2017-10790.
- Fixed curl security issues CVE-2018-1000005 and CVE-2018-1000007.
- Fixed libvorbis security issues CVE-2017-14633 and CVE-2017-14632.
- Fixed wavpack security issue CVE-2016-10169.
- Fixed cups security issue CVE-2017-18190.
- Fixed sensible-utils security issue CVE-2017-17512.
- Removed terminal start function from task manager menu bar.
- Updated kernel to version 4.15.15
  - Fixed Meltdown (CVE-2017-5754) by PTI (page table isolation)
  - Fixed Spectre Variant 1 (CVE-2017-5753) by \_\_user pointer sanitization
  - Fixed Spectre Variant 2 (CVE-2017-5715) by full generic retpoline
- Fixed beep security issue CVE-2018-0492.
- Added Intel Processor Microcode Updates to provide IBRS/IBPB/STIBP microcode support for Spectre Variant 2 (CVE-2017-5715) mitigation.

| <b>Product Name</b>                                                            | <b>CPU ID</b> | <b>Platform ID</b> | <b>Microcode Revision</b> |
|--------------------------------------------------------------------------------|---------------|--------------------|---------------------------|
| IGEL UD9-LX Touch 41, IGEL UD9-LX 40, IGEL UD6-LX 51, IGEL UD5-LX 50 Bay Trail | 30678         | 0C                 | 0x836                     |

Network

- Disabled **weak message authentication codes** for SSH server and client as default. If problems occur change the default setting.

**More**

|           |                                           |
|-----------|-------------------------------------------|
| Parameter | Disable weak message authentication codes |
| Registry  | network.ssh_client.disable_weak_macs      |
| Value     | <u>enabled</u> / disabled                 |

|           |                                           |
|-----------|-------------------------------------------|
| Parameter | Disable weak message authentication codes |
| Registry  | network.ssh_server.disable_weak_macs      |
| Value     | <u>enabled</u> / disabled                 |

- Disabled **weak key exchange algorithms** for SSH server and client as default. If problems occur, change the default setting.

**More**

|           |                                               |
|-----------|-----------------------------------------------|
| Parameter | Disable weak key exchange algorithms          |
| Registry  | network.ssh_client.disable_weak_kexalgorithms |
| Value     | <u>enabled</u> / disabled                     |
| Parameter | Disable weak key exchange algorithms          |
| Registry  | network.ssh_server.disable_weak_kexalgorithms |
| Value     | <u>enabled</u> / disabled                     |

- Disabled **weak hostkeys** (server) and **hostkey algorithms** (client) for SSH server and client as default. If problems occur, change the default setting.

**More**

|           |                                               |
|-----------|-----------------------------------------------|
| Parameter | Disable weak Hostkey algorithms               |
| Registry  | network.ssh_client.disable_weak_hostkey_algos |

|           |                                          |
|-----------|------------------------------------------|
| Value     | <u>enabled</u> / disabled                |
| Parameter | Disable weak Hostkeys                    |
| Registry  | network.ssh_server.disable_weak_hostkeys |
| Value     | <u>enabled</u> / disabled                |

- Changed **SMB protocol version default** v1.0 to **v2.0** for mounting windows shares to improve security.
- Added the possibility to change the **SMB protocol** version for windows shares. The windows shares are configurable at **IGEL Setup > Network > Network Drives > Windows Drive**.

**More**

|           |                              |
|-----------|------------------------------|
| Parameter | SMB protocol version         |
| Registry  | network.smbmount.smb_version |
| Range     | 1.0 / <u>2.0</u> / 2.1 / 3.0 |

When using a very old Windows file server, the change to version 1.0 is necessary.

#### RDP / IGEL RDP Client 2

- Fixed RDP: CVE-2018-0886.

#### Java

- Fixed in **Oracle JRE 1.8U162** : CVE-2018-2638, CVE-2018-2639, CVE-2018-2633, CVE-2018-2627, CVE-2018-2637, CVE-2018-2634, CVE-2018-2582, CVE-2018-2641, CVE-2018-2618, CVE-2018-2629, CVE-2018-2603, CVE-2018-2657, CVE-2018-2599, CVE-2018-2581, CVE-2018-2602, CVE-2018-2677, CVE-2018-2678, CVE-2018-2588, CVE-2018-2663, CVE-2018-2675, CVE-2018-2579

#### Known Issues 10.04.100

##### Citrix Receiver 13

- On devices with AMD/Radeon graphics chipsets and activated DRI3 X driver option **the hardware accelerated Citrix H.264 decoder plugin can hang**. To solve this issue deactivation of DRI3 option is necessary (default setting).

**More**

|           |                           |
|-----------|---------------------------|
| Parameter | Use DRI3                  |
| Registry  | x.drivers.use_dri3        |
| Value     | <u>enabled</u> / disabled |

|           |                                                         |
|-----------|---------------------------------------------------------|
| Parameter | Force usage of DRI3                                     |
| Registry  | x.drivers.amdgpu.force_dri3<br>x.drivers.ati.force_dri3 |
| Value     | enabled / <u>disabled</u>                               |

- Citrix StoreFront login with **Gemalto smartcard middleware** does not detect smartcard correctly when the card is inserted after start of login. As a workaround, insert the smartcard before starting StoreFront login.
- **No smooth playback** over **Nuance** channel if the dictation device isn't attached.

#### VMware Horizon

- **External drives** mounted already before connection do not appear in the remote desktop.  
**Workaround:** mapping the directory /media as a drive on desktop.  
Then the external devices will show up inside the media drive.
  - **Client drive mapping** and **USB redirection for storage devices** should not be enabled both at the same time.
    - On the one hand, when using USB redirection for storage devices: The USB on-insertion feature is only working when the client drive mapping is switched off. In the IGEL Setup client drive mapping can be found in: **Sessions > Horizon Client > Horizon Client Global > Drive Mapping > Enable Drive Mapping**. It is also recommended to disable local Storage Hotplug: On page **Devices > Storage Devices > Storage Hotplug**, put number of storage hotplug devices to 0.
    - On the other hand, when using drive mapping instead, it is recommended to either switch off USB redirection entirely or at least deny storage devices by adding a filter to the USB class rules. Furthermore, Horizon Client relies on the OS to mount the storage devices itself. Change on the following setup page is required: **Devices > Storage Devices > Storage Hotplug**.
- Activate **Enable dynamic drive mapping** and set **Number of storage hotplug devices** to at least 1.

#### Firefox

- Because the **support for the gstreamer framework** was dropped by recent Firefox versions, support for H264 decoding in the browser is not possible anymore due to licensing restrictions.

#### OpenConnect VPN

- **VPNs which need the OpenConnect** client cannot be used for firmware updates.

#### Evidian

- Active Directory users with a **password containing special characters** may have problems to authenticate with the configured session.  
Known special characters which result in errors are:
  - (grave accent, ASCII code 96)
  - (acute accent, ASCII code 239)

## New Features 10.04.100

### Citrix Receiver 13

- Integrated **Citrix Receiver 13.8.0**.

**More**

|           |                                              |
|-----------|----------------------------------------------|
| Parameter | Use Citrix Cloud with receiver 13.8 or newer |
| Registry  | ica.cloudconnect                             |
| Value     | enabled / <u>disabled</u>                    |

- Support for **Azure Active Directory (Azure AD)** authentication
- Support for **Workspace** configuration from Citrix Cloud
- Integrated **Citrix Receiver 13.4.2**. Citrix Receiver version 13.5.0 was removed. Available Citrix Receiver versions: 13.3.2, 13.4.2, 13.7.0, 13.8.0 (default)
- Updated **Citrix HDX RTME** used for optimization of Skype for Business to 2.4.0.

### RDP / IGEL RDP Client 2

- Added possibility to use **RDP local logon** for smartcard login. This can be activated in the setup.

**More**

|           |                                          |
|-----------|------------------------------------------|
| Parameter | Enable smartcard support for local logon |
| Registry  | rdp.login.smartcard-local-logon          |
| Value     | enabled / <u>disabled</u>                |

By enabling this parameter local logon can be used for smartcard authentication. If **Username** is left empty the connection to the RDP server will be made without sending credentials, so you can choose **Smartcard** as login method in the microsoft login window . However this will not work with **NLA**.

- Added support for CredSSP up to version 6.

### VMware Horizon

- Updated **VMware Horizon Client** to version **4.7.0-7395152**.
- Added key to enable **seamless window mode** in each application session.

**More**

|           |                                                    |
|-----------|----------------------------------------------------|
| Parameter | Seamless Application Windows                       |
| Registry  | sessions.vdm_client.options.enable_seamless_window |
| Value     | enabled / <u>disabled</u>                          |

- Added possibility to use **Fabulatech USB Redirection** in a Horizon Client PCoIP session.

[More](#)

|            |                                                                                                |
|------------|------------------------------------------------------------------------------------------------|
| IGEL Setup | <b>Sessions &gt; Horizon Client &gt; Horizon Client Global &gt; Fabulatech USB Redirection</b> |
| Parameter  | Enable Fabulatech USB Redirection                                                              |
| Registry   | vmware.view.usb.enable-fabulatech-usb                                                          |
| Value      | enabled / <u>disabled</u>                                                                      |

#### Parallels Client

- Integrated **Parallels Client** version **16.2.0 (19039)**
- Added support for USB Redirection, configurable at new IGEL Setup page **Sessions > Parallels Client > Parallels Client Global > USB Redirection**.

[More](#)

|            |                                                                                         |
|------------|-----------------------------------------------------------------------------------------|
| IGEL Setup | <b>Sessions &gt; Parallels Client &gt; Parallels Client Global &gt; USB Redirection</b> |
| Parameter  | Enable USB Redirection                                                                  |
| Registry   | twox.usb_redirection.usb_enable                                                         |
| Value      | enabled / <u>disabled</u>                                                               |
| Parameter  | Product ID                                                                              |
| Registry   | twox.usb_redirection.devicepolicy.product_rule.product                                  |
| Parameter  | Vendor ID                                                                               |
| Registry   | twox.usb_redirection.devicepolicy.product_rule.vendor                                   |
| Parameter  | Rule                                                                                    |
| Registry   | twox.usb_redirection.devicepolicy.product_rule.rule                                     |

| IGEL Setup | <b>Sessions &gt; Parallels Client &gt; Parallels Client Sessions &gt; Parallels Client Session &gt; Local Resources</b> |
| Parameter  | Connect clipboard                                                                                                       |
| Registry   | sessions.twox.local_resources.connect_clipboard                                                                         |
| Value      | <u>enabled / disabled</u>                                                                                               |

#### VoIP

- Added **VoIP client Ekiga 4.0.1**.

#### Firefox

- Updated **Firefox** to version **52.7.2 ESR**.
- Updated **Adobe Flash Player** download URL to version 29.0.0.113.

#### Network

- Added **TTLS/PAP** and **TTLS/MSCHAPv2** to possible 802.1x authentication methods.
- Improved support for **Sierra EM7305 LTE** device (e.g. in Toshiba Portégé and Fujitsu LIFEBOOK E Series).

The EM7305 comes in various variants, e.g. one with ProductId 9041 and another one with ProductId 9063. The latter comes at least with one or with two USB configuration options. A device with only one configuration option has been observed on a Toshiba Tecra Z-50-D-115 notebook. It only works in MBIM mode and with IGEL firmware, when the device has successfully connected before with the same settings (particularly APN), e.g. under Microsoft Windows 10.

- Added support for **Sierra EM7455 WWAN module**.
- Added support for running the **Huawei E3531i WWAN** device in modem mode (in addition to HiLink mode).
- Added possibility to adopt the **hostname from a DHCP lease** as **permanent** terminal name. The purpose is to use the name received as part of a DHCP lease in future interactions with the DHCP server.

**More**

|           |                                               |
|-----------|-----------------------------------------------|
| Parameter | Adopt permanent Terminal Name from DHCP lease |
| Registry  | network.dns.hostname_adopt_from_dhcp          |

|       |                           |
|-------|---------------------------|
| Value | <u>enabled / disabled</u> |
|-------|---------------------------|

- **NetworkManager** updated to version **1.2.2**
- **ModemManager** updated to version **1.6.4**
- **usb\_modeswitch** updated to version **2.5.1**

## Open VPN

- Added **Huawei HiLink Mobile Broadband USB** device as possible uplink to OpenVPN sessions.

## OpenConnect VPN

- Added **OpenConnect** client version **7.08** to connect to **Cisco AnyConnect** and **Juniper VPN**. The feature must be enabled.

**More**

| Value      | enabled / <u>disabled</u>                                  |

- Updated **Gemalto SafeNet PKCS#11** library to version **10.0.37-0**. This package replaces **Gemalto/ SafeNet eToken** and **Gemalto IDPrime** libraries.  
**Gemalto SafeNet** (formerly **Gemalto/SafeNet eToken**) now handles Gemalto cards and tokens including eToken and IDPrime.  
**Gemalto IDPrime** now handles IDPrime cards and tokens, preferred Common Criteria (CC) cards and tokens in Unlinked Mode.
- Added full integration of **OpenSC PKCS#11** library for access to smartcards.  
[More](#)

|            |                                                                               |
|------------|-------------------------------------------------------------------------------|
| IGEL Setup | <b>Sessions &gt; Browser &gt; Browser Global &gt; Encryption</b>              |

|          |                                      |
|----------|--------------------------------------|
| Registry | <code>scard.pkcs11.use_opensc</code> |
| Value    | <u>enabled</u> / <u>disabled</u>     |

- Updated **MUSCLE CCID** smartcard reader driver to version **1.4.28**.
- Updated **ACS CCID** smartcard reader driver to version **1.1.5**.
- Updated **REINER SCT cyberJack** smartcard reader driver to version **3.99.5final.sp11**.
- Added parameter to disable **Identive CCID** smartcard reader driver. If this driver is disabled, some of the readers are handled by the MUSCLE CCID driver. This can help when problems with Identive reader driver occur.

**More**

|           |                                         |
|-----------|-----------------------------------------|
| Parameter | Identive driver for smart card readers  |
| Registry  | <code>scard.pcscd.identiv_enable</code> |
| Value     | <u>enabled</u> / <u>disabled</u>        |

- Updated **cryptovision sc/interface PKCS#11** library to version **7.0.5.592**.
- New smartcard reader driver for **Fujitsu KB SCR eSIG** version **5.0.24**.

## HID

- Added **layout toggle** feature to on-screen keyboard.

**More**

|            |                                                                   |
|------------|-------------------------------------------------------------------|
| IGEL Setup | <b>Accessories &gt; On-Screen Keyboard &gt; Appearance</b>        |
| Parameter  | Enable switching to alternative layout                            |
| Registry   | <code>userinterface.softkeyboard.enable_alternative_layout</code> |
| Value      | <u>enabled</u> / <u>disabled</u>                                  |

If this is enabled there is a key on the on-screen keyboard for toggling between the normal layout and a reduced layout, that saves space on the screen and has more or less the same features as the number block of an ordinary keyboard with some extensions.

## Base System

- Added support for **UEFI Secure Boot**.

When booted with Secure Boot the downgrade to a firmware version older than 10.04.100 is locked.

- Updated **kernel to version 4.15.15**
- Boot time optimization** (up to 25% faster)

- **Switch power off on USB ports on shutdown and reboot.** The feature can be enabled in IGEL Setup. At the moment only IGEL H830C is supported.

**More**

|            |                               |
|------------|-------------------------------|
| IGEL Setup | <b>System &gt; Registry</b>   |
| Parameter  | Power off on shutdown         |
| Registry   | devices.usb.poweroff_shutdown |
| Value      | enabled / <u>disabled</u>     |

- Added Unit ID in Application Launcher **About > Hardware** section.
- Showing **number of CPU cores** in Application Launcher **About > Hardware** section now.

#### Storage Devices

- Added support for **Mobile Device Access** feature in **Appliance Mode**. The Mobile Device Access tool can be opened via a new icon in the **In-session control bar**. The Mobile Device Access tool can also be started automatically.

**More**

|           |                                 |
|-----------|---------------------------------|
| Parameter | Autostart                       |
| Registry  | sessions.mtp-devices0.autostart |
| Value     | enabled / <u>disabled</u>       |

Mobile Device Access must be enabled at **IGEL Setup > System > Firmware Customization > Features**. Appliance Mode must be enabled at **IGEL Setup > Sessions > Appliance Mode**.

- The **Mobile Device Access tool** is now configurable at **IGEL Setup > Accessories > Mobile Device Access**.
- The **Mobile Device Access tray icon** respects the current theme now.

#### X11 System

- Added support for **XDMCP Appliance Mode**. The XDMCP connection is configurable.

**More**

|            |                                     |
|------------|-------------------------------------|
| IGEL Setup | <b>Sessions &gt; Appliance Mode</b> |
| Parameter  | XDMCP for this Display              |
| Registry   | x.xdmcp0.enabled                    |
| Value      | enabled / <u>disabled</u>           |

|            |                                                               |
|------------|---------------------------------------------------------------|
| IGEL Setup | <b>Sessions &gt; Appliance Mode</b>                           |
| Parameter  | Connection Type                                               |
| Registry   | x.xdmcp0.server.connectiontype                                |
| Range      | <b>indirect via localhost</b> / indirect / direct / broadcast |
| IGEL Setup | <b>Sessions &gt; Appliance Mode</b>                           |
| Parameter  | Name or IP of server                                          |
| Registry   | x.xdmcp0.server.servername                                    |
| IGEL Setup | <b>Sessions &gt; Appliance Mode</b>                           |
| Parameter  | Enable hotkeys for XDMCP Display                              |
| Registry   | x.xdmcp0.hotkeys.enabled                                      |
| Value      | <u>enabled</u> / disabled                                     |

The default hotkey to open IGEL Setup is: CTRL + ALT + F2. The setup page **User Interface > Display > XDMCP** was removed.

- Added **XC Font Service** support.

#### **More**

|            |                                                               |
|------------|---------------------------------------------------------------|
| IGEL Setup | <b>User Interface &gt; Font Services &gt; XC Font Service</b> |
| Parameter  | Enable XC Font Service                                        |
| Registry   | x.xc_fontservice.enabled                                      |
| Value      | enabled / <u>disabled</u>                                     |
| IGEL Setup | <b>User Interface &gt; Font Services &gt; XC Font Service</b> |

| Registry   | x.xc_fontservice.fontserver                                   |
| IGEL Setup | <b>User Interface &gt; Font Services &gt; XC Font Service</b> |

|            |                                                               |
|------------|---------------------------------------------------------------|
| Parameter  | Port Number                                                   |
| Registry   | x.xc_fontservice.port                                         |
| Value      | <u>7100</u>                                                   |
| IGEL Setup | <b>User Interface &gt; Font Services &gt; XC Font Service</b> |
| Parameter  | Prefer Local Fonts                                            |
| Registry   | x.xc_fontservice.prefer_localfonts                            |
| Value      | <u>enabled / disabled</u>                                     |

- Added **auto detection of monitor refresh rate**. This can be controlled with new parameters.  
[More](#)

|            |                                                  |
|------------|--------------------------------------------------|
| IGEL Setup | <b>User Interface &gt; Display &gt; Advanced</b> |
| Parameter  | Detect refresh rate automatically                |
| Registry   | x.xserver0.auto_frequency                        |
| Value      | <u>enabled / disabled</u>                        |

|            |                                                  |
|------------|--------------------------------------------------|
| IGEL Setup | <b>User Interface &gt; Display &gt; Advanced</b> |
| Parameter  | Detect refresh rate automatically                |
| Registry   | x.xserver0.screen.auto_frequency                 |
| Value      | <u>enabled / disabled</u>                        |

- Added xorg debug script **/etc/igel/igel\_debug\_tools/xorg-debug.sh** to make collecting Xorg debug data easier (a /tmp/xorg-debug.log file is generated).

## Window Manager

- Added possibility to
  - a) **change the preferred placement mode** and

- b) **modify the threshold value** up to which window size this placement mode should be chosen (otherwise window placement defaults to so called smart mode which tries to minimize overlapping).

#### **More**

|           |                                                                        |
|-----------|------------------------------------------------------------------------|
| Parameter | Preferred Placement                                                    |
| Registry  | windowmanager.wm0.variables.placement_mode                             |
| Value     | At mouse position / <u>Centered</u>                                    |
| Parameter | Maximum window size for which the preferred placement should apply     |
| Registry  | windowmanager.wm0.variables.placement_ratio                            |
| Value     | 0% / 10% / <u>20%</u> / 30% / 40% / 50% / 60% / 70% / 80% / 90% / 100% |

#### Audio

- **Volume** of audio output and input can now be configured up to 150% at **IGEL Setup page Accessories > Sound Preferences > Options**.
- Added a parameter for log level configuration of **Pulseaudio** service.

#### **More**

|           |                                                |
|-----------|------------------------------------------------|
| Parameter | Log level                                      |
| Registry  | multimedia.pulseaudio.daemon.log-level         |
| Range     | debug / info / <u>notice</u> / warning / error |

#### Misc

- An EULA must be accepted now in IGEL setup assistant before finalizing it and using the IGEL OS.

#### Java

- Updated **Oracle JRE to 1.8U162**.

#### Remote Management

- Added **new log file transfer mechanism** for UMS feature **Save TC files for support** (UMS 5.08.110 or higher required). By default, it collects all log files visible in system log viewer, system configuration files group.ini, setup.ini and dhclient lease files. More files can be specified at **IGEL Setup > Accessories > System Log Viewer > Options**. The resulting zip file has now a folder structure.

#### IGEL Cloud Gateway

- Added **UMS structure tag** handling for usage with **ICG agent**.

## Hardware

- Added support for **IGEL UD7-LX 10**.

## Resolved Issues 10.04.100

## Citrix

- Fixed sporadic crashes of the **Citrix USB Daemon**.

## RDP / IGEL RDP Client 2

- Fixed passing **Ctrl+Alt+C keyboard shortcut** to RDP session.
- Fixed **smartcard redirection**: after session reconnection readers and cards were not connected any more in some cases.
- Fixed the **rdpdebugger** to work again (was broken in the previous release).
- Fixed misleading **RDP error message 'Authentication failed'** on wakeup from suspend mode
- Fixed **TCP timeout value** to get more stable **RDP connections** under certain circumstances.

## VMware Horizon

- Fixed bug which prevented **microphone redirection** in Horizon Client RDP sessions.

**More**

| IGEL Setup | <b>Sessions &gt; RDP &gt; RDP Global &gt; Mapping &gt; Audio</b> |
|------------|------------------------------------------------------------------|
| Parameter  | Audio recording                                                  |
| Registry   | rdp.winconnect.rdpai.enable                                      |
| Value      | enabled / <u>disabled</u>                                        |

## RedHat Enterprise Virtualization Client

- Fixed **display corruption** with Windows connections.

## Firefox

- Fixed possibility to **download files in the browser** if needed. The parameter to enable/disable file download is available here.

**More**

| IGEL Setup | <b>Sessions &gt; Browser &gt; Browser Sessions &gt; Window</b> |
|------------|----------------------------------------------------------------|
| Parameter  | Hide local filesystem                                          |
| Registry   | sessions.browser.app.filepicker_dialog_hidden                  |
| Value      | enabled / <u>disabled</u>                                      |

If enabled, the user is not allowed to download or use any save-as functionality from menu, context or keyboard shortcut.

- Fixed bug which **prevented the download using the file dialog** (in the case you open a link to a file of unknown type).
- Fixed **unmounting of the Firefox profile partition during shutdown** - now it is unmounted in a determinate manner after Custom Partition.

#### Network

- Fixed bug: **Network tray icons** sometimes didn't reappear after network restart.
- Fixed bug: **tcpdump debug tool** terminated immediately during boot.
- Fixed issue with **naming of USB ethernet devices**.
- Fixed wrong **LinkMode (10baseT/Half)** with autonegotiation and some USB ethernet devices.

#### AppliDis

- Changed default value of **PasswordMode** from **cmdline** to **prompt** as suggested by Systancia.

#### Smartcard

- Fixed driver for **Elatec RFID readers**. Before this fix the readers sometimes were not available after boot.
- Fixed VMware Horizon logon with OpenSC smartcards.

#### CUPS Printing

- Fixed bug where the **user for printjobs** was not set to the **domain user**.

#### Base System

- Fixed **Kerberos password change** to work also with transport protocol **TCP**. To force protocol TCP, prepend Domain Controllers with prefix "tcp/", e.g. "tcp/dc.example.com".
- Fixed **occasional desktop hang** in the local login or the network login mask after successful authentication.
- Fixed **password expiry notification** showing negative expiry period.
- Fixed **update to connect to SFTP** servers with very restrictive key exchange settings.
- Fixed input of the **reset key in reset to defaults boot**, if the administrator password is not available anymore. If more than 255 characters were entered in the 1st try, it was not possible to enter the reset key for a 2nd or 3rd time.
- Fixed **Active Directory logon with smartcard**: If the smartcard contains logon certificates for multiple users, it is possible to switch between these certificates and log on with the chosen certificate now.
- Fixed missing names for some **partitions** in update notification when having a user interface **language other than English**.
- Fixed problems with **never ending bootcode** update with some EFI BIOS variants.
- Fixed **ssh server port** configuration.
- Fixed **signotec signature pad** channel for Citrix.
- Increased stability of **signotec VCOM Daemon**.
- Remove residual information belonging to a **removed content from a custom partition**.
- Fixed **crash of xfce4-power-manager** after adding or removing input devices.

#### Custom Partition

- Fixed **automatic update of custom partition** - if download source isn't accessible then the content of the custom partition got lost.

#### Appliance Mode

- Fixed post session command **Logoff** in Appliance Mode.

#### X11 System

- Fixed **Elo-USB Touchscreen functionality** after reboot.
- Fixed **DisplayLink USB Support on UD3 LX50**.
- Fixed issue with **two monitors connected via DVI-D to HDMI adapter on a UD3 M330 (VIA)**.  
Added registry key to disable the new HDMI autodetection.

##### **More**

|           |                                             |
|-----------|---------------------------------------------|
| Parameter | Autodetect if DVI to HDMI adapter is in use |
| Registry  | x.drivers.via.autodetect_hdmi_output        |
| Value     | <u>enabled</u> / disabled                   |

- Fixed **wrong automatic resolution detection** if monitor does not have a preferred mode.
- Fixed **sporadic display corruptions** after monitors leaving the power saving mode.
- Improved handling of more than 2 screens.

#### Shadowing/VNC

- Fixed **sporadic VNC server crash**.

#### Audio

- Fixed **volume control of internal speaker in HP T610**.
- Fixed **automatic switch to output** over analog headphones.
- Non existing **S/PDIF inputs and outputs in Plantronics and Jabra USB headsets** are now ignored by audio subsystem (Pulseaudio).
- Added workaround in the kernel USB audio driver for **volume control on Sennheiser USB headsets**.

#### Remote Management

- Fixed **calculation of Unit ID for UMS management**. In some cases, it could happen that the MAC address of wrong network interface was chosen.
- Fixed **IGEL Setup Assistant** to get stopped when settings were received from UMS.

### 7.30.3 IGEL Universal Desktop Converter (UDC3) 10.04.100

#### Supported Hardware:

[Third-Party Devices Supported by IGEL OS 10<sup>461</sup>](#)

---

<sup>461</sup> <https://kb.igel.com/display/hardware/Third+Party+Devices+Supported+by+IGEL+OS+10>

- Versions for Release 10.04.100(see page 2311)
- New Features 10.04.100(see page 2312)

## Versions for Release 10.04.100

### • Clients

| Product    | Version   |
|------------|-----------|
| Oracle JRE | 1.8.0_162 |

### • System Components

|                                         |                            |
|-----------------------------------------|----------------------------|
| Bluetooth stack (bluez)                 | 5.46-0ubuntu3              |
| MESA OpenGL stack                       | 17.2.8-0igel3              |
| VAAPI ABI Version                       | 0.40                       |
| Graphics Driver INTEL                   | 2.99.917+git20180214-igel1 |
| Graphics Driver ATI/RADEON              | 7.10.0-2igel3              |
| Graphics Driver ATI/AMDGPU              | 1.4.0-2igel3               |
| Graphics Driver Nouveau (Nvidia Legacy) | 1.0.15-2                   |
| Graphics Driver Vboxvideo               | 5.2.6-dfsg-2               |
| Graphics Driver VMware                  | 13.2.1-1build1             |
| Graphics Driver QXL (Spice)             | 0.1.5-2build1              |
| Graphics Driver FBDEV                   | 0.4.4-1build5              |
| Graphics Driver VESA                    | 2.3.4-1build2              |
| Input Driver Evdev                      | 2.10.5-1ubuntu1            |
| Input Driver Elographics                | 1.4.1-1build5              |
| Input Driver Synaptics                  | 1.9.0-1ubuntu1             |

|                                 |                              |
|---------------------------------|------------------------------|
| Input Driver Vmmouse            | 13.1.0-1ubuntu2              |
| Input Driver Wacom              | 0.34.0-0ubuntu2              |
| Kernel                          | 4.15.15 #mainline-udos-r2141 |
| Xorg X11 Server                 | 1.19.6-2igel1                |
| Lightdm graphical login manager | 1.18.3-0ubuntu1.1            |
| XFCE4 Windowmanager             | 4.12.3-1ubuntu2              |
| ISC DHCP Client                 | 4.3.3-5ubuntu12.7            |

#### Security Fixes

- Added support for UEFI Secure Boot.

When booted with Secure Boot the downgrade to a firmware version older than 10.04.100 is locked.

#### New Features 10.04.100

##### Citrix Receiver 13

- Integrated **Citrix Receiver 13.8.0**.  
**More**

|           |                                              |
|-----------|----------------------------------------------|
| Parameter | Use Citrix Cloud with receiver 13.8 or newer |
| Registry  | ica.cloudconnect                             |
| Value     | enabled / <u>disabled</u>                    |

- Support for **Azure** Active Directory (Azure AD) authentication
- Support for **Workspace** configuration from Citrix Cloud
- Integrated **Citrix Receiver 13.4.2**. Citrix Receiver version 13.5.0 was removed. Available Citrix Receiver versions: 13.3.2, 13.4.2, 13.7.0, 13.8.0 (default)
- Updated **Citrix HDX RTME** used for optimization of Skype for Business to 2.4.0.

##### RDP / IGEL RDP Client 2

- Added possibility to use **RDP local logon** for smartcard login. This can be activated in the setup.  
**More**

|           |                                          |
|-----------|------------------------------------------|
| Parameter | Enable smartcard support for local logon |
| Registry  | rdp.login.smartcard-local-logon          |
| Value     | enabled / <u>disabled</u>                |

By enabling this parameter local logon can be used for smartcard authentication. If **Username** is left empty the connection to the RDP server will be made without sending credentials, so you can choose **Smartcard** as login method in the microsoft login window . However this will not work with **NLA**.

- Added support for CredSSP up to version 6.

#### VMware Horizon

- Updated **VMware Horizon Client** to version **4.7.0-7395152**.
- Added key to enable **seamless window mode** in each application session.

**More**

|           |                                                    |
|-----------|----------------------------------------------------|
| Parameter | Seamless Application Windows                       |
| Registry  | sessions.vdm_client.options.enable_seamless_window |
| Value     | enabled / <u>disabled</u>                          |

- Added possibility to use **Fabulatech USB Redirection** in a Horizon Client PCoIP session.

**More**

|            |                                                                                                |
|------------|------------------------------------------------------------------------------------------------|
| IGEL Setup | <b>Sessions &gt; Horizon Client &gt; Horizon Client Global &gt; Fabulatech USB Redirection</b> |
| Parameter  | Enable Fabulatech USB Redirection                                                              |
| Registry   | vmware.view.usb.enable-fabulatech-usb                                                          |
| Value      | enabled / <u>disabled</u>                                                                      |

#### Parallels Client

- Integrated **Parallels Client** version **16.2.0 (19039)**
- Added support for USB Redirection, configurable at new IGEL Setup page **Sessions > Parallels Client > Parallels Client Global > USB Redirection**.

**More**

|            |                                                                                         |
|------------|-----------------------------------------------------------------------------------------|
| IGEL Setup | <b>Sessions &gt; Parallels Client &gt; Parallels Client Global &gt; USB Redirection</b> |
| Parameter  | Enable USB Redirection                                                                  |

|           |                                                                     |
|-----------|---------------------------------------------------------------------|
| Registry  | <code>twox.usb_redirection.usb_enable</code>                        |
| Value     | <u>enabled</u> / <u>disabled</u>                                    |
| Parameter | Product ID                                                          |
| Registry  | <code>twox.usb_redirection.devicepolicy.product_rule.product</code> |
| Parameter | Vendor ID                                                           |
| Registry  | <code>twox.usb_redirection.devicepolicy.product_rule.vendor</code>  |
| Parameter | Rule                                                                |
| Registry  | <code>twox.usb_redirection.devicepolicy.product_rule.rule</code>    |

| Parameter  | Connect clipboard                                                                                                       |
| Registry   | <code>sessions.twox.local_resources.connect_clipboard</code>                                                            |
| Value      | <u>enabled / disabled</u>                                                                                               |

## VoIP

- Added **VoIP client Ekiga 4.0.1**.

## Firefox

- Updated **Firefox** to version **52.7.2 ESR**.
- Updated **Adobe Flash Player** download URL to version 29.0.0.113.

## Network

- Added **TTLS/PAP** and **TTLS/MSCHAPv2** to possible 802.1x authentication methods.
- Improved support for **Sierra EM7305 LTE** device (e.g. in Toshiba Portégé and Fujitsu LIFEBOOK E Series).

The EM7305 comes in various variants, e.g. one with ProductId 9041 and another one with ProductId 9063. The latter comes at least with one or with two USB configuration options. A device with only one configuration option has been observed on a Toshiba Tecra Z-50-D-115 notebook. It only works in MBIM mode and with IGEL firmware, when the device has successfully connected before with the same settings (particularly APN), e.g. under Microsoft Windows 10.

- Added support for **Sierra EM7455 WWAN module**.
- Added support for running the **Huawei E3531i WWAN** device in modem mode (in addition to HiLink mode).
- Added possibility to adopt the **hostname from a DHCP lease** as **permanent** terminal name. The purpose is to use the name received as part of a DHCP lease in future interactions with the DHCP server.

#### More

|           |                                               |
|-----------|-----------------------------------------------|
| Parameter | Adopt permanent Terminal Name from DHCP lease |
| Registry  | network.dns.hostname_adopt_from_dhcp          |
| Value     | enabled / <u>disabled</u>                     |

- NetworkManager** updated to version **1.2.2**
- ModemManager** updated to version **1.6.4**
- usb\_modeswitch** updated to version **2.5.1**

#### Open VPN

- Added **Huawei HiLink Mobile Broadband USB** device as possible uplink to OpenVPN sessions.

#### OpenConnect VPN

- Added **OpenConnect** client version **7.08** to connect to **Cisco AnyConnect** and **Juniper VPN**. The feature must be enabled.

#### More

|            |                                                                               |
|------------|-------------------------------------------------------------------------------|
| IGEL Setup | <b>Sessions &gt; Browser &gt; Browser Global &gt; Encryption</b>              |
| Parameter  | Coolkey Security Device                                                       |
| Registry   | <code>browserglobal.security_device.coolkey</code>                            |
| Value      | enabled / <u>disabled</u>                                                     |
| IGEL Setup | <b>Sessions &gt; Horizon Client &gt; Horizon Client Global &gt; Smartcard</b> |
| Parameter  | Horizon logon with smartcards supported by Coolkey library                    |
| Registry   | <code>vmware.view.pkcs11.use_coolkey</code>                                   |
| Value      | enabled / <u>disabled</u>                                                     |
| IGEL Setup | <b>Security &gt; Smartcard &gt; Middleware</b>                                |
| Parameter  | Coolkey                                                                       |
| Registry   | <code>scard.pkcs11.use_coolkey</code>                                         |
| Value      | enabled / <u>disabled</u>                                                     |

- Updated **Gemalto SafeNet PKCS#11** library to version **10.0.37-0**. This package replaces **Gemalto/ SafeNet eToken** and **Gemalto IDPrime** libraries.  
**Gemalto SafeNet** (formerly **Gemalto/SafeNet eToken**) now handles Gemalto cards and tokens including eToken and IDPrime.  
**Gemalto IDPrime** now handles IDPrime cards and tokens, preferred Common Criteria (CC) cards and tokens in Unlinked Mode.
- Added full integration of **OpenSC PKCS#11** library for access to smartcards.

**More**

|            |                                                                               |

| Value      | enabled / <u>disabled</u>                                                     |
| IGEL Setup | <b>Security &gt; Smartcard &gt; Middleware</b>                                |
| Parameter  | OpenSC                                                                        |
| Registry   | scard.pkcs11.use_opensc                                                       |
| Value      | enabled / <u>disabled</u>                                                     |

- Updated **MUSCLE CCID** smartcard reader driver to version **1.4.28**.
- Updated **ACS CCID** smartcard reader driver to version **1.1.5**.
- Updated **REINER SCT cyberJack** smartcard reader driver to version **3.99.5final.sp11**.
- Added parameter to disable **Identive CCID** smartcard reader driver. If this driver is disabled, some of the readers are handled by the MUSCLE CCID driver. This can help when problems with Identive reader driver occur.

**More**

|           |                                        |
|-----------|----------------------------------------|
| Parameter | Identive driver for smart card readers |
| Registry  | scard.pcscd.identiv_enable             |
| Value     | <u>enabled</u> / disabled              |

- Updated **cryptovision sc/interface PKCS#11** library to version **7.0.5.592**.
- New smartcard reader driver for **Fujitsu KB SCR eSIG** version **5.0.24**.

- Added **layout toggle** feature to on-screen keyboard.

[More](#)

|            |                                                            |
|------------|------------------------------------------------------------|
| IGEL Setup | <b>Accessories &gt; On-Screen Keyboard &gt; Appearance</b> |
| Parameter  | Enable switching to alternative layout                     |
| Registry   | userinterface.softkeyboard.enable_alternative_layout       |
| Value      | <u>enabled</u> / <u>disabled</u>                           |

If this is enabled there is a key on the on-screen keyboard for toggling between the normal layout and a reduced layout, that saves space on the screen and has more or less the same features as the number block of an ordinary keyboard with some extensions.

## Base System

- Added support for **UEFI Secure Boot**.

When booted with Secure Boot the downgrade to a firmware version older than 10.04.100 is locked.

- Updated **kernel to version 4.15.15**
- Boot time optimization** (up to 25% faster)
- Switch power off on USB ports on shutdown and reboot**. The feature can be enabled in IGEL Setup. At the moment only IGEL H830C is supported.

[More](#)

|            |                                  |
|------------|----------------------------------|
| IGEL Setup | <b>System &gt; Registry</b>      |
| Parameter  | Power off on shutdown            |
| Registry   | devices.usb.poweroff_shutdown    |
| Value      | <u>enabled</u> / <u>disabled</u> |

- Added Unit ID in Application Launcher **About > Hardware** section.
- Showing **number of CPU cores** in Application Launcher **About > Hardware** section now.

## Storage Devices

- Added support for **Mobile Device Access** feature in **Appliance Mode**. The Mobile Device Access tool can be opened via a new icon in the **In-session control bar**. The Mobile Device Access tool can also be started automatically.

[More](#)

|           |           |
|-----------|-----------|
| Parameter | Autostart |
|-----------|-----------|

|          |                                              |
|----------|----------------------------------------------|
| Registry | <code>sessions.mtp-devices0.autostart</code> |
| Value    | enabled / <u>disabled</u>                    |

Mobile Device Access must be enabled at **IGEL Setup > System > Firmware Customization > Features**. Appliance Mode must be enabled at **IGEL Setup > Sessions > Appliance Mode**.

- The **Mobile Device Access tool** is now configurable at **IGEL Setup > Accessories > Mobile Device Access**.
- The **Mobile Device Access tray icon** respects the current theme now.

#### X11 System

- Added support for **XDMCP Appliance Mode**. The XDMCP connection is configurable.

| Range      | <b>indirect via localhost</b> / indirect / direct / broadcast |
| IGEL Setup | <b>Sessions &gt; Appliance Mode</b>                           |
| Parameter  | Name or IP of server                                          |
| Registry   | <code>x.xdmcp0.server.servername</code>                       |
| IGEL Setup | <b>Sessions &gt; Appliance Mode</b>                           |
| Parameter  | Enable hotkeys for XDMCP Display                              |
| Registry   | <code>x.xdmcp0.hotkeys.enabled</code>                         |

|       |                           |
|-------|---------------------------|
| Value | <u>enabled</u> / disabled |
|-------|---------------------------|

The default hotkey to open IGEL Setup is: CTRL + ALT + F2. The setup page **User Interface > Display > XDMCP** was removed.

- Added **XC Font Service** support.

|-----------|-----------------------------------|

|          |                           |
|----------|---------------------------|
| Registry | x.xserver0.auto_frequency |
| Value    | <u>enabled</u> / disabled |

|            |                                                  |
|------------|--------------------------------------------------|
| IGEL Setup | <b>User Interface &gt; Display &gt; Advanced</b> |
| Parameter  | Detect refresh rate automatically                |
| Registry   | x.xserver0.screen.auto_frequency                 |
| Value      | <u>enabled</u> / disabled                        |

- Added xorg debug script **/etc/igel/igel\_debug\_tools/xorg-debug.sh** to make collecting Xorg debug data easier (a /tmp/xorg-debug.log file is generated).

#### Window Manager

- Added possibility to
  - a) **change the preferred placement mode** and
  - b) **modify the threshold value** up to which window size this placement mode should be chosen (otherwise window placement defaults to so called smart mode which tries to minimize overlapping).

#### More

|           |                                                                        |
|-----------|------------------------------------------------------------------------|
| Parameter | Preferred Placement                                                    |
| Registry  | windowmanager.wm0.variables.placement_mode                             |
| Value     | At mouse position / <u>Centered</u>                                    |
| Parameter | Maximum window size for which the preferred placement should apply     |
| Registry  | windowmanager.wm0.variables.placement_ratio                            |
| Value     | 0% / 10% / <u>20%</u> / 30% / 40% / 50% / 60% / 70% / 80% / 90% / 100% |

#### Audio

- Volume** of audio output and input can now be configured up to 150% at **IGEL Setup page Accessories > Sound Preferences > Options**.
- Added a parameter for log level configuration of **Pulseaudio** service.

#### More

|           |                                                |
|-----------|------------------------------------------------|
| Parameter | Log level                                      |
| Registry  | multimedia.pulseaudio.daemon.log-level         |
| Range     | debug / info / <u>notice</u> / warning / error |

## Misc

- An EULA must be accepted now in IGEL setup assistant before finalizing it and using the IGEL OS.

## Java

- Updated **Oracle JRE to 1.8U162**.

## Remote Management

- Added **new log file transfer mechanism** for UMS feature **Save TC files for support** (UMS 5.08.110 or higher required). By default, it collects all log files visible in system log viewer, system configuration files group.ini, setup.ini and dhclient lease files. More files can be specified at **IGEL Setup > Accessories > System Log Viewer > Options**. The resulting zip file has now a folder structure.

## IGEL Cloud Gateway

- Added **UMS structure tag** handling for usage with **ICG agent**.

## Hardware

- Added support for **IGEL UD7-LX 10**.

## 7.31 Notes for Release 10.03.570

## Security Fixes 10.03.570

- Fixed kernel security issues CVE-2017-16939, CVE-2017-12192, CVE-2017-1000370, CVE-2017-1000371, CVE-2017-12190, CVE-2017-15274, CVE-2017-14156, CVE-2017-14140,

CVE-2017-15115, CVE-2017-14489, CVE-2017-12153, CVE-2017-16525, CVE-2017-7542 and CVE-2017-8824.

- Removed Intel Spectre microcode updates due to various issues with them. (Intel officially withdrew the microcode updates.)
- Fixed kernel security issues CVE-2017-1000405 (aka Huge Dirty Cow).
- Fixed Intel meltdown problem CVE-2017-5754 with Kernel Page Table Isolation (KPTI) Patch

## General Information 10.03.570

The following clients and features are not supported anymore in version 10.03.570:

- Citrix Receiver 12.1 and 13.1
- Citrix Access Gateway Standard Plug-in
- Dell vWorkspace Connector for Linux
- Ericom PowerTerm Emulation 9 and 11
- Ericom Webconnect
- IGEL Legacy RDP Client (rdesktop)
- Virtual Bridges VERDE Client
- PPTP VPN Support
- IGEL Upgrade License Tool with IGEL Smartcard Token
- Remote Management by setup.ini file transfer (TFTP)
- XC Font Service
- Remote Access via RSH
- Legacy Philips Speech Driver
- Digital Persona Support
- Sane Scanner Support
- Softpro/Kofax Citrix Virtual Channel
- t-Systems TCOS Smartcard Support
- DUS Series touch screens
- Elo serial touch screens
- IGEL Smartcard without locking desktop
- Video Hardware Acceleration Support is discontinued on UD3-LX 42, UD3-LX 41, UD3-LX 40 (M320C/M330C) and UD10-LX Touch 10, UD10-LX 10
- H.264 Hardware Acceleration Support is discontinued on UD3-LX 42, UD3-LX 41, UD3-LX 40 (M320C/M330C) and UD10-LX Touch 10, UD10-LX 10
- Storage Hotplug devices are not automatically removed anymore, instead they must be always ejected manually:
  - by panel tray icon
  - by an icon in the 'In-Session Control Bar' (configurable at IGEL Setup > User Interface > Desktop )
  - by a 'Safely Remove Hardware' session (configurable at IGEL Setup > Accessories )

The following clients and features are not available in release 10.03.570:

- Voip Client Ekiga

- X session (Xorg Xephyr)
- XDMCP
- Cherry eGK Channel
- Open VPN Smartcard Support
- NCP Secure Client
- Asian Input Methods
- Composite Manager

## Known Issues 10.03.570

### Citrix Receiver 13

- With Citrix Receiver 13.5 print problems in legacy sessions can occur.

### VMware Horizon

- External drives mounted already before connection, do not appear in the remote desktop.  
Workaround: map the directory /media as a drive in your desktop. Then the external devices will show up inside the media drive.
- Client drive mapping and USB redirection for storage devices should not be enabled both at the same time.
  - On the one hand, if you want to use USB redirection for your storage devices: Note that the USB on-insertion feature is only working if the client drive mapping is switched off. In the IGEL Setup client drive mapping can be found in:  
Sessions > Horizon Client > Horizon Client Global > Drive Mapping > Enable Drive Mapping  
. It is also recommended to disable local Storage Hotplug: On page Devices > Storage Devices > Storage Hotplug , put number of storage hotplug devices to 0.
  - On the other hand, if you use drive mapping instead, it is recommended that you should either switch off USB redirection entirely or at least deny storage devices by adding a filter to the USB class rules. And because Horizon Client relies on the OS to mount the storage devices itself, please go to setup page:  
Devices > Storage Devices > Storage Hotplug and switch on 'Enable dynamic drive mapping' and put 'Number of storage hotplug devices' to at least 1.

### Firefox

- Support for the gstreamer framework was dropped by recent Firefox versions. Therefore support for H264 decoding in the browser is not possible anymore, due to licensing restrictions.
- After firmware update, a fullscreen browser session starts onetime in window mode. Afterwards the fullscreen mode is functional again.

### Audio

- Headphone jack detection doesn't properly work on IGEL UD3 (M330C and M340C). The audio controlling system is unable to notice status change of the audio jack.

## 7.31.2 IGEL Universal Desktop OS 3 / IGEL UD Pocket 10.03.570

- [Versions for Release 10.03.570](#)(see page 2332)
- [Security Fixes 10.03.570](#)(see page 2336)
- [General Information 10.03.570](#)(see page 2336)

### Versions for Release 10.03.570

- **Clients**

| <b>Product</b>                     | <b>Version</b>                |
|------------------------------------|-------------------------------|
| Citrix HDX Realtime Media Engine   | 2.3.0-1075                    |
| Citrix Receiver                    | 13.3.2.366713                 |
| Citrix Receiver                    | 13.5.0.10185126               |
| Citrix Receiver                    | 13.7.0.10276927               |
| deviceTRUST Citrix Channel         | 17.2.100.0                    |
| deviceTRUST RDP Channel            | 17.2.100.0                    |
| Ericom PowerTerm                   | 12.0.1.0.20170219.2-dev-34574 |
| Evidian AuthMgr                    | 1.5.6362                      |
| Evince PDF Viewer                  | 3.18.2-1ubuntu4.2             |
| FabulaTech USB for Remote Desktop  | 5.2.23                        |
| Firefox                            | 52.5.0                        |
| IBM iAccess Client Solutions       | 1.1.5.0                       |
| IGEL RDP Client                    | 2.2                           |
| Imprivata OneSign ProveID Embedded |                               |
| Leostream Java Connect             | 3.3.7.0                       |

|                                                             |                   |
|-------------------------------------------------------------|-------------------|
| NX Client                                                   | 5.3.12            |
| Open VPN                                                    | 2.3.10-1ubuntu2.1 |
| Oracle JRE                                                  | 1.8.0_152         |
| Parallels 2X Client                                         | 16.2.0.19039      |
| Remote Viewer for RedHat Enterprise Virtualization Desktops | 7.0               |
| Systancia AppliDis                                          | 4.0.0.17          |
| Thinlinc Client                                             | 4.8.0-5456        |
| ThinPrint Client                                            | 7.5.83            |
| Totem Media Player                                          | 2.30.2            |
| VMware Horizon Client                                       | 4.6.0-6617224     |

- **Dictation**

|                                                       |          |
|-------------------------------------------------------|----------|
| Diktamen driver for dictation                         |          |
| Driver for Grundig Business Systems dictation devices |          |
| Nuance Audio Extensions for dictation                 | B048     |
| Olympus driver for dictation                          | 20161103 |
| Philips Speech Driver                                 | 12.5.4   |

- **Signature**

|                         |       |
|-------------------------|-------|
| signotec Citrix Channel | 8.0.6 |
| signotec VCOM Daemon    | 2.0.0 |
| StepOver TCP Client     | 2.1.0 |

| NetworkManager                  | 1.2.0-0ubuntu0.16.04.3    |
| ModemManager                    | 1.4.12-1ubuntu1           |
| GStreamer                       | 0.10.36-2ubuntu0.1        |

- **Features with Limited IGEL Support**

## Mobile Device Access USB

### Security Fixes 10.03.570

- Fixed kernel security issues CVE-2017-16939, CVE-2017-12192, CVE-2017-1000370, CVE-2017-1000371, CVE-2017-12190, CVE-2017-15274, CVE-2017-14156, CVE-2017-14140, CVE-2017-15115, CVE-2017-14489, CVE-2017-12153, CVE-2017-16525, CVE-2017-7542 and CVE-2017-8824.
- Partially addressed CVE-2017-5715 (Spectre Branch Target Injection) with Intel microcode updates version 20180108. CPU Models with updated microcode:
  - IVT C0
  - SKL-U/Y D0 and SKL-H/S R0
  - BDW-U/Y E/F and BDW-H E/G
  - HSW-ULT Cx/Dx and HSW Cx/Dx
  - Crystalwell Cx
  - HSX-EX E0 and HSX C0
  - BDX-DE V0/V1 and BDX-DE V2
  - KBL-U/Y H0, KBL Y0 / CFL D0 and KBL-H/S B0
  - CFL U0 and CFL B0
  - SKX H0
  - GLK B0
- Fixed kernel security issues CVE-2017-1000405 (aka Huge Dirty Cow).
- Fixed Intel meltdown problem CVE-2017-5754 with Kernel Page Table Isolation (KPTI) Patch

### General Information 10.03.570

The following clients and features are not supported anymore in version 10.03.570:

- Citrix Receiver 12.1 and 13.1
- Citrix Access Gateway Standard Plug-in
- Dell vWorkspace Connector for Linux
- Ericom PowerTerm Emulation 9 and 11
- Ericom Webconnect
- IGEL Legacy RDP Client (rdesktop)
- Virtual Bridges VERDE Client
- PPTP VPN Support
- IGEL Upgrade License Tool with IGEL Smartcard Token
- Remote Management by setup.ini file transfer (TFTP)
- XC Font Service
- Remote Access via RSH
- Legacy Philips Speech Driver
- Digital Persona Support
- Sane Scanner Support
- Softpro/Kofax Citrix Virtual Channel
- t-Systems TCOS Smartcard Support

- DUS Series touch screens
- Elo serial touch screens
- IGEL Smartcard without locking desktop
- Video Hardware Acceleration Support is discontinued on UD3-LX 42, UD3-LX 41, UD3-LX 40 (M320C/M330C) and UD10-LX Touch 10, UD10-LX 10
- H.264 Hardware Acceleration Support is discontinued on UD3-LX 42, UD3-LX 41, UD3-LX 40 (M320C/M330C) and UD10-LX Touch 10, UD10-LX 10
- Storage Hotplug devices are not automatically removed anymore, instead they must be always ejected manually:
  - by panel tray icon
  - by an icon in the 'In-Session Control Bar' (configurable at IGEL Setup > User Interface > Desktop )
  - by a 'Safely Remove Hardware' session (configurable at IGEL Setup > Accessories )

The following clients and features are not available in release 10.03.570:

- Voip Client Ekiga
- X session (Xorg Xephyr)
- XDMCP
- Cherry eGK Channel
- Open VPN Smartcard Support
- NCP Secure Client
- Asian Input Methods
- Composite Manager

## Known Issues 10.03.570

### Citrix Receiver 13

- With Citrix Receiver 13.5 print problems in legacy sessions can occur.

### VMware Horizon

- External drives mounted already before connection, do not appear in the remote desktop. Workaround: map the directory /media as a drive in your desktop. Then the external devices will show up inside the media drive.
- Client drive mapping and USB redirection for storage devices should not be enabled both at the same time.
  - On the one hand, if you want to use USB redirection for your storage devices: Note that the USB on-insertion feature is only working if the client drive mapping is switched off. In the IGEL Setup client drive mapping can be found in:  
Sessions > Horizon Client > Horizon Client Global > Drive Mapping > Enable Drive Mapping . It is also recommended to disable local Storage Hotplug: On page Devices > Storage Devices > Storage Hotplug , put number of storage hotplug devices to 0.

- On the other hand, if you use drive mapping instead, it is recommended that you should either switch off USB redirection entirely or at least deny storage devices by adding a filter to the USB class rules. And because Horizon Client relies on the OS to mount the storage devices itself, please go to setup page:  
Devices > Storage Devices > Storage Hotplug  
and switch on 'Enable dynamic drive mapping' and put 'Number of storage hotplug devices' to at least 1.

#### Firefox

- Support for the gstreamer framework was dropped by recent Firefox versions. Therefore support for H264 decoding in the browser is not possible anymore, due to licensing restrictions.
- After firmware update, a fullscreen browser session starts onetime in window mode. Afterwards the fullscreen mode is functional again.

#### Audio

- Headphone jack detection doesn't properly work on IGEL UD3 (M330C and M340C). The audio controlling system is unable to notice status change of the audio jack.

## 7.32 Notes for Release 10.03.550

| <b>Product</b>                     | <b>Version</b>                |
|------------------------------------|-------------------------------|
| Citrix HDX Realtime Media Engine   | 2.3.0-1075                    |
| Citrix Receiver                    | 13.3.2.366713                 |
| Citrix Receiver                    | 13.5.0.10185126               |
| Citrix Receiver                    | 13.7.0.10276927               |
| deviceTRUST Citrix Channel         | 17.2.100.0                    |
| deviceTRUST RDP Channel            | 17.2.100.0                    |
| Ericom PowerTerm                   | 12.0.1.0.20170219.2-dev-34574 |
| Evidian AuthMgr                    | 1.5.6362                      |
| FabulaTech USB for Remote Desktop  | 5.2.23                        |
| Firefox                            | 52.5.0                        |
| IBM iAccess Client Solutions       | 1.1.5.0                       |
| IGEL RDP Client                    | 2.2                           |
| Imprivata OneSign ProveID Embedded |                               |
| Leostream Java Connect             | 3.3.7.0                       |
| NX Client                          | 5.3.12                        |
| Open VPN                           | 2.3.10-1ubuntu2.1             |
| Oracle JRE                         | 1.8.0_152                     |
| Parallels 2X Client                | 16.2.0.19039                  |

|                                                             |               |
|-------------------------------------------------------------|---------------|
| Remote Viewer for RedHat Enterprise Virtualization Desktops | 7.0           |
| Systancia AppliDis                                          | 4.0.0.17      |
| Thinlinc Client                                             | 4.8.0-5456    |
| ThinPrint Client                                            | 7.5.83        |
| Totem Media Player                                          | 2.30.2        |
| VMware Horizon Client                                       | 4.6.0-6617224 |

- **Dictation**

|                                                       |          |
|-------------------------------------------------------|----------|
| Diktamen driver for dictation                         |          |
| Driver for Grundig Business Systems dictation devices |          |
| Nuance Audio Extensions for dictation                 | B048     |
| Olympus driver for dictation                          | 20161103 |
| Philips Speech Driver                                 | 12.5.4   |

- **Signature**

|                         |       |
|-------------------------|-------|
| signotec Citrix Channel | 8.0.6 |
| signotec VCOM Daemon    | 2.0.0 |
| StepOver TCP Client     | 2.1.0 |

- **Smartcard**

|                                           |           |
|-------------------------------------------|-----------|
| PKCS#11 Library A.E.T SafeSign            | 3.0.101   |
| PKCS#11 Library Athena IDProtect          | 623.07    |
| PKCS#11 Library cryptovision sc/interface | 6.6.3.502 |
| PKCS#11 Library Gemalto IDPrime           | 1.2.3     |
| PKCS#11 Library SecMaker NetID            | 6.6.0.30  |

|                                               |                  |
|-----------------------------------------------|------------------|
| Reader Driver ACS CCID                        | 1.1.3            |

| Reader Driver HID Global Omnikey CCID         | 4.2.4            |
| Reader Driver Identiv / SCM Microsystems CCID | 5.0.35           |
| Reader Driver Identiv eHealth200              | 1.0.5            |
| Reader Driver MUSCLE CCID                     | 1.4.27           |
| Reader Driver REINER SCT cyberJack            | 3.99.5final.SP09 |
| Resource Manager PC/SC Lite                   | 1.8.22           |
| Cherry USB2LAN Proxy                          | 3.0.0.4          |

- **System Components**

|                            |                                |
|----------------------------|--------------------------------|
| Bluetooth stack (bluez)    | 5.46-0ubuntu3                  |
| MESA OpenGL stack          | 17.2.2-0ubuntu1                |
| VAAPI ABI Version          | 0.40                           |
| VDPAU Library version      | 1.1.1-3ubuntu1                 |
| Graphics Driver INTEL      | 2.99.917+git20171109-igel      |
| Graphics Driver ATI/RADEON | 7.10.0-1                       |
| Graphics Driver ATI/AMDGPU | 1.4.0-1                        |
| Graphics Driver VIA        | 5.76.52.92-009-005f78-20150730 |
| Graphics Driver FBDEV      | 0.4.4-1build5                  |
| Graphics Driver VESA       | 2.3.4-1build2                  |
| Input Driver Evdev         | 2.10.5-1ubuntu1                |
| Input Driver Elographics   | 1.4.1-1build5                  |

|                                 |                         |
|---------------------------------|-------------------------|
| Input Driver eGalax             | 2.5.5814                |
| Input Driver Synaptics          | 1.9.0-1ubuntu1          |
| Input Driver Vmmouse            | 13.1.0-1ubuntu2         |
| Input Driver Wacom              | 0.34.0-0ubuntu2         |
| Kernel                          | 4.10.17 #43.47-ud-r1949 |
| Xorg X11 Server                 | 1.19.5-0ubuntu2         |
| CUPS printing daemon            | 2.1.3-4ubuntu0.3        |
| Lightdm graphical login manager | 1.18.3-0ubuntu1.1       |
| XFCE4 Windowmanager             | 4.12.3-1ubuntu2         |
| ISC DHCP Client                 | 4.3.3-5ubuntu12.7       |
| NetworkManager                  | 1.2.0-0ubuntu0.16.04.3  |
| ModemManager                    | 1.4.12-1ubuntu1         |
| GStreamer                       | 0.10.36-2ubuntu0.1      |

- **Features with Limited IGEL Support**

## Security Fixes 10.03.550

- Fixed **kernel security issues** CVE-2017-16939, CVE-2017-12192, CVE-2017-1000370, CVE-2017-1000371, CVE-2017-12190, CVE-2017-15274, CVE-2017-14156, CVE-2017-14140, CVE-2017-15115, CVE-2017-14489, CVE-2017-12153, CVE-2017-16525, CVE-2017-7542 and CVE-2017-8824.
- Fixed **kernel security issues** CVE-2017-1000405 (aka Huge Dirty Cow).
- Fixed **Intel meltdown problem** CVE-2017-5754 with Kernel Page Table Isolation (KPTI) Patch.

## General Information 10.03.550

The following clients and features are not supported anymore:

- Citrix Receiver 12.1 and 13.1

- Citrix Access Gateway Standard Plug-in
- Dell vWorkspace Connector for Linux
- Ericom PowerTerm Emulation 9 and 11
- Ericom Webconnect
- IGEL Legacy RDP Client (rdesktop)
- Virtual Bridges VERDE Client
- PPTP VPN Support
- IGEL Upgrade License Tool with IGEL Smartcard Token
- Remote Management by setup.ini file transfer (TFTP)
- XC Font Service
- Remote Access via RSH
- Legacy Philips Speech Driver
- Digital Persona Support
- Sane Scanner Support
- Softpro/Kofax Citrix Virtual Channel
- t-Systems TCOS Smartcard Support
- DUS Series touch screens
- Elo serial touch screens
- IGEL Smartcard without locking desktop
- Video Hardware Acceleration Support is discontinued on UD3-LX 42, UD3-LX 41, UD3-LX 40 (M320C/M330C) and UD10-LX Touch 10, UD10-LX 10
- H.264 Hardware Acceleration Support is discontinued on UD3-LX 42, UD3-LX 41, UD3-LX 40 (M320C/M330C) and UD10-LX Touch 10, UD10-LX 10
- Storage Hotplug devices are not automatically removed anymore, instead they must be always ejected manually:
  - by panel tray icon
  - by an icon in the 'In-Session Control Bar' (configurable at **IGEL Setup > User Interface > Desktop**)
  - by a 'Safely Remove Hardware' session (configurable at **IGEL Setup > Accessories**)

The following clients and features are not available in this release:

- Voip Client Ekiga
- X session (Xorg Xephyr)
- XDMCP
- Cherry eGK Channel
- Open VPN Smartcard Support
- NCP Secure Client
- Asian Input Methods
- Composite Manager

## Known Issues 10.03.550

### Citrix Receiver 13

- With Citrix Receiver 13.5 **print problems** in legacy sessions can occur.

### VMware Horizon

- External drives mounted already before connection, do not appear in the remote desktop.  
Workaround: map the directory /media as a drive in your desktop. Then the external devices will show up inside the media drive.
- Client drive mapping and USB redirection for storage devices should not be enabled both at the same time.
  - On the one hand, if you want to use USB redirection for your storage devices: Note that the USB on-insertion feature is only working if the client drive mapping is switched off. In the IGEL Setup client drive mapping can be found in: Sessions > Horizon Client > Horizon Client Global > Drive Mapping > Enable Drive Mapping. It is also recommended to disable local Storage Hotplug: On page Devices > Storage Devices > Storage Hotplug, put number of storage hotplug devices to 0.
  - On the other hand, if you use drive mapping instead, it is recommended that you should either switch off USB redirection entirely or at least deny storage devices by adding a filter to the USB class rules. And because Horizon Client relies on the OS to mount the storage devices itself, please go to setup page: Devices > Storage Devices > Storage Hotplug and switch on 'Enable dynamic drive mapping' and put 'Number of storage hotplug devices' to at least 1.

#### Firefox

- Because the support for the gstreamer framework was dropped by recent Firefox versions, support for H264 decoding in the browser is not possible anymore due to licensing restrictions.
- After firmware update, a fullscreen browser session starts onetime in window mode. Afterwards the fullscreen mode is functional again.

#### Audio

- Headphone jack detection doesn't properly work on IGEL UD3 (M330C and M340C). The audio controlling system is unable to notice status change of the audio jack.

## New Features 10.03.550

### Parallels Client

- Integrated Parallels Client version 16.2.0 (19039) 64 bit.

## Resolved Issues 10.03.550

### RDP/IGEL RDP Client 2

- Fixed the rdpdebugger to work again (was broken in the previous release).
- Fixed smartcard redirection: after session reconnection readers and cards were not connected anymore in some cases.

### Parallels Client

- Fixed crash after closing one session if started 2 same sessions before

### Smartcard

- Fixed driver for Elatec RFID readers. Before this fix the readers sometimes were not available after boot.

## Base System

- Updated kernel to Ubuntu-hwe-4.10.0-43.47\_16.04.1.
- Fixed kernel security issues CVE-2017-16939, CVE-2017-12192, CVE-2017-1000370, CVE-2017-1000371, CVE-2017-12190, CVE-2017-15274, CVE-2017-14156, CVE-2017-14140, CVE-2017-15115, CVE-2017-14489, CVE-2017-12153, CVE-2017-16525, CVE-2017-7542 and CVE-2017-8824.
- Fixed kernel security issues CVE-2017-1000405 (aka Huge Dirty Cow).
- Fixed Intel meltdown problem CVE-2017-5754 with Kernel Page Table Isolation (KPTI) Patch.

## 7.32.2 IGEL Universal Desktop OS 3 / IGEL UD Pocket 10.03.550

Supported Hardware:

[Third-Party Devices Supported by IGEL OS 10<sup>462</sup>](#)

- Versions for Release 10.03.550(see page 2346)
- Security Fixes 10.03.550(see page 2350)

## Security Fixes 10.03.550

- Fixed kernel security issues CVE-2017-16939, CVE-2017-12192, CVE-2017-1000370, CVE-2017-1000371, CVE-2017-12190, CVE-2017-15274, CVE-2017-14156, CVE-2017-14140, CVE-2017-15115, CVE-2017-14489, CVE-2017-12153, CVE-2017-16525, CVE-2017-7542 and CVE-2017-8824.
- Partially addressed CVE-2017-5715 (Spectre Branch Target Injection) with Intel microcode updates version 20180108. CPU Models with updated microcode:
  - IVT C0
  - SKL-U/Y D0 and SKL-H/S R0
  - BDW-U/Y E/F and BDW-H E/G
  - HSW-ULT Cx/Dx and HSW Cx/Dx
  - Crystalwell Cx
  - HSX-EX E0 and HSX C0
  - BDX-DE V0/V1 and BDX-DE V2
  - KBL-U/Y H0, KBL Y0 / CFL D0 and KBL-H/S B0
  - CFL U0 and CFL B0
  - SKX H0
  - GLK B0
- Fixed kernel security issues CVE-2017-1000405 (aka Huge Dirty Cow).
- Fixed Intel meltdown problem CVE-2017-5754 with Kernel Page Table Isolation (KPTI) Patch.

## General Information 10.03.550

The following clients and features are not supported anymore in version 10.03.550:

- Citrix Receiver 12.1 and 13.1
- Citrix Access Gateway Standard Plug-in
- Dell vWorkspace Connector for Linux
- Ericom PowerTerm Emulation 9 and 11
- Ericom Webconnect
- IGEL Legacy RDP Client (rdesktop)
- Virtual Bridges VERDE Client
- PPTP VPN Support
- IGEL Upgrade License Tool with IGEL Smartcard Token
- Remote Management by setup.ini file transfer (TFTP)
- XC Font Service
- Remote Access via RSH
- Legacy Philips Speech Driver
- Digital Persona Support
- Sane Scanner Support
- Softpro/Kofax Citrix Virtual Channel
- t-Systems TCOS Smartcard Support
- DUS Series touch screens
- Elo serial touch screens
- IGEL Smartcard without locking desktop
- VIA Graphics Support
- Storage Hotplug devices are not automatically removed anymore, instead they must be always ejected manually:
  - by panel tray icon
  - by an icon in the 'In-Session Control Bar' (configurable at **IGEL Setup > User Interface > Desktop**)
  - by a 'Safely Remove Hardware' session (configurable at **IGEL Setup > Accessories**)

The following clients and features are not available in release 10.03.550:

- Voip Client Ekiga
- X session (Xorg Xephyr)
- XDMCP
- Cherry eGK Channel
- Open VPN Smartcard Support
- NCP Secure Client
- Asian Input Methods
- Composite Manager

## Known Issues 10.03.550

### Citrix Receiver 13

- With Citrix Receiver 13.5 print problems in legacy sessions can occur.

## VMware Horizon

- External drives mounted already before connection, do not appear in the remote desktop.  
Workaround: map the directory /media as a drive in your desktop. Then the external devices will show up inside the media drive.
- Client drive mapping and USB redirection for storage devices should not be enabled both at the same time.
  - On the one hand, if you want to use USB redirection for your storage devices: Note that the USB on-insertion feature is only working if the client drive mapping is switched off. In the IGEL Setup client drive mapping can be found in: Sessions > Horizon Client > Horizon Client Global > Drive Mapping > Enable Drive Mapping. It is also recommended to disable local Storage Hotplug: On page Devices > Storage Devices > Storage Hotplug, put number of storage hotplug devices to 0.
  - On the other hand, if you use drive mapping instead, it is recommended that you should either switch off USB redirection entirely or at least deny storage devices by adding a filter to the USB class rules. And because Horizon Client relies on the OS to mount the storage devices itself, please go to setup page: Devices > Storage Devices > Storage Hotplug and switch on 'Enable dynamic drive mapping' and put 'Number of storage hotplug devices' to at least 1.

## Firefox

- Because the support for the gstreamer framework was dropped by recent Firefox versions, support for H264 decoding in the browser is not possible anymore due to licensing restrictions.
- After firmware update, a fullscreen browser session starts onetime in window mode. Afterwards the fullscreen mode is functional again.

## Hardware

- The TrackPoint and TrackPoint keys of the Toshiba Portege X30-D laptop are not working.

## New Features 10.03.550

### Parallels Client

- Integrated Parallels Client version 16.2.0 (19039) 64 bit.

## Resolved Issues 10.03.550

### RDP/IGEL RDP Client 2

- Fixed the rdpdebugger to work again (was broken in the previous release).
- Fixed smartcard redirection: after session reconnection readers and cards were not connected anymore in some cases.

### Parallels Client

- Fixed crash after closing one session if started 2 same sessions before

### Smartcard

- Fixed driver for Elatec RFID readers. Before this fix the readers sometimes were not available after boot.

#### Base System

- Updated kernel to Ubuntu-hwe-4.10.0-43.47\_16.04.1.
- Fixed kernel security issues CVE-2017-16939, CVE-2017-12192, CVE-2017-1000370, CVE-2017-1000371, CVE-2017-12190, CVE-2017-15274, CVE-2017-14156, CVE-2017-14140, CVE-2017-15115, CVE-2017-14489, CVE-2017-12153, CVE-2017-16525, CVE-2017-7542 and CVE-2017-8824.
- Partially addressed CVE-2017-5715 (Spectre Branch Target Injection) with Intel microcode updates version 20180108. CPU Models with updated microcode:
  - IVT C0
  - SKL-U/Y D0 and SKL-H/S R0
  - BDW-U/Y E/F and BDW-H E/G
  - HSW-ULT Cx/Dx and HSW Cx/Dx
  - Crystalwell Cx
  - HSX-EX E0 and HSX C0
  - BDX-DE V0/V1 and BDX-DE V2
  - KBL-U/Y H0, KBL Y0 / CFL D0 and KBL-H/S B0
  - CFL U0 and CFL B0
  - SKX H0
  - GLK B0
- Fixed kernel security issues CVE-2017-1000405 (aka Huge Dirty Cow).
- Fixed Intel meltdown problem CVE-2017-5754 with Kernel Page Table Isolation (KPTI) Patch.

### 7.33 Notes for Release 10.03.500

  - Fixes for **mfsa2017-25**, also known as: CVE-2017-7828, CVE-2017-7830, CVE-2017-7826.

- Fixes for **mfsa2017-22**, also known as: CVE-2017-7793, CVE-2017-7818, CVE-2017-7819, CVE-2017-7824, CVE-2017-7805, CVE-2017-7814, CVE-2017-7823, CVE-2017-7810.

## General Information 10.03.500

The following clients and features are not supported anymore in version 10.03.500:

- Citrix Receiver 12.1 and 13.1
- Citrix Access Gateway Standard Plug-in
- Dell vWorkspace Connector for Linux
- Ericom PowerTerm Emulation 9 and 11
- Ericom Webconnect
- IGEL Legacy RDP Client (rdesktop)
- Virtual Bridges VERDE Client
- PPTP VPN Support
- IGEL Upgrade License Tool with IGEL Smartcard Token
- Remote Management by setup.ini file transfer (TFTP)
- XC Font Service
- Remote Access via RSH
- Legacy Philips Speech Driver
- Digital Persona Support
- Sane Scanner Support
- Softpro/Kofax Citrix Virtual Channel
- t-Systems TCOS Smartcard Support
- DUS Series touch screens
- Elo serial touch screens
- IGEL Smartcard without locking desktop
- Video Hardware Acceleration Support is discontinued on UD3-LX 42, UD3-LX 41, UD3-LX 40 (M320C/M330C) and UD10-LX Touch 10, UD10-LX 10
- H.264 Hardware Acceleration Support is discontinued on UD3-LX 42, UD3-LX 41, UD3-LX 40 (M320C/M330C) and UD10-LX Touch 10, UD10-LX 10
- Storage Hotplug devices are not automatically removed anymore, instead they must be always ejected manually:
  - by panel tray icon
  - by an icon in the 'In-Session Control Bar' (configurable at **IGEL Setup > User Interface > Desktop**)
  - by a 'Safely Remove Hardware' session (configurable at **IGEL Setup > Accessories**)

The following clients and features are not available in the release 10.03.500:

- Voip Client Ekiga
- X session (Xorg Xephyr)
- XDMCP
- Cherry eGK Channel
- Open VPN Smartcard Support
- NCP Secure Client
- Asian Input Methods
- Composite Manager

## Known Issues 10.03.500

### Citrix Receiver 13

- On devices with AMD/Radeon graphics chipsets and activated DRI3 X driver option **the hardware accelerated Citrix H.264 decoder plugin can hang**. To solve this issue deactivation of DRI3 option is necessary (default setting).

[More](#)

|           |                                                         |
|-----------|---------------------------------------------------------|
| Parameter | Use DRI3                                                |
| Registry  | x.drivers.use_dri3                                      |
| Value     | enabled / <u>disabled</u>                               |
| Parameter | Force usage of DRI3                                     |
| Registry  | x.drivers.amdgpu.force_dri3<br>x.drivers.ati.force_dri3 |
| Value     | enabled / <u>disabled</u>                               |

- Citrix StoreFront login with **Gemalto smartcard middleware** does not detect smartcard correctly when the card is inserted after start of login. As a workaround, insert the smartcard before starting StoreFront login.
- No smooth playback** over **Nuance** channel if the dictation device isn't attached.

### VMware Horizon

- External drives** mounted already before connection do not appear in the remote desktop. **Workaround:** mapping the directory /media as a drive on desktop. Then the external devices will show up inside the media drive.
- Client drive mapping** and **USB redirection for storage devices** should not be enabled both at the same time.
  - On the one hand, when using USB redirection for storage devices: The USB on-insertion feature is only working when the client drive mapping is switched off. In the IGEL Setup client drive mapping can be found in: **Sessions > Horizon Client > Horizon Client Global > Drive Mapping > Enable Drive Mapping**. It is also recommended to disable local Storage Hotplug: On page **Devices > Storage Devices > Storage Hotplug**, put number of storage hotplug devices to 0.
  - On the other hand, when using drive mapping instead, it is recommended to either switch off USB redirection entirely or at least deny storage devices by adding a filter to the USB class rules. Furthermore, Horizon Client relies on the OS to mount the storage devices itself. Change on the following setup page is required: **Devices > Storage Devices > Storage Hotplug**.

Activate **Enable dynamic drive mapping** and set **Number of storage hotplug devices** to at least 1.

#### Firefox

- Because the **support for the gstreamer framework** was dropped by recent Firefox versions, support for H264 decoding in the browser is not possible anymore due to licensing restrictions.

#### OpenConnect VPN

- VPNs which need the OpenConnect** client cannot be used for firmware updates.

#### Evidian

- Active Directory users with a **password containing special characters** may have problems to authenticate with the configured session.  
Known special characters which result in errors are:
  - ˋ (grave accent, ASCII code 96)
  - ˊ (acute accent, ASCII code 239)

### New Features 10.03.500

#### Citrix Receiver 13

- Integrated **Citrix Receiver 13.8.0**.

##### More

|           |                                              |
|-----------|----------------------------------------------|
| Parameter | Use Citrix Cloud with receiver 13.8 or newer |
| Registry  | ica.cloudconnect                             |
| Value     | enabled / <u>disabled</u>                    |

- Support for **Azure Active Directory** (Azure AD) authentication
- Support for **Workspace** configuration from Citrix Cloud
- Integrated **Citrix Receiver 13.4.2**. Citrix Receiver version 13.5.0 was removed. Available Citrix Receiver versions: 13.3.2, 13.4.2, 13.7.0, 13.8.0 (default)
- Updated **Citrix HDX RTME** used for optimization of Skype for Business to 2.4.0.

#### RDP / IGEL RDP Client 2

- Added possibility to use **RDP local logon** for smartcard login. This can be activated in the setup.

##### More

|           |                                          |
|-----------|------------------------------------------|
| Parameter | Enable smartcard support for local logon |
| Registry  | rdp.login.smartcard-local-logon          |
| Value     | enabled / <u>disabled</u>                |

By enabling this parameter local logon can be used for smartcard authentication. If **Username** is left empty the connection to the RDP server will be made without sending credentials, so you can choose **Smartcard** as login method in the microsoft login window . However this will not work with **NLA**.

- Added support for CredSSP up to version 6.

#### VMware Horizon

- Updated **VMware Horizon Client** to version **4.7.0-7395152**.
- Added key to enable **seamless window mode** in each application session.

[More](#)

|           |                                                    |
|-----------|----------------------------------------------------|
| Parameter | Seamless Application Windows                       |
| Registry  | sessions.vdm_client.options.enable_seamless_window |
| Value     | enabled / <u>disabled</u>                          |

- Added possibility to use **Fabulatech USB Redirection** in a Horizon Client PCoIP session.

[More](#)

|            |                                                                                                |
|------------|------------------------------------------------------------------------------------------------|
| IGEL Setup | <b>Sessions &gt; Horizon Client &gt; Horizon Client Global &gt; Fabulatech USB Redirection</b> |
| Parameter  | Enable Fabulatech USB Redirection                                                              |
| Registry   | vmware.view.usb.enable-fabulatech-usb                                                          |
| Value      | enabled / <u>disabled</u>                                                                      |

#### Parallels Client

- Integrated **Parallels Client** version **16.2.0 (19039)**
- Added support for USB Redirection, configurable at new IGEL Setup page **Sessions > Parallels Client > Parallels Client Global > USB Redirection**.

[More](#)

|            |                                                                                         |
|------------|-----------------------------------------------------------------------------------------|
| IGEL Setup | <b>Sessions &gt; Parallels Client &gt; Parallels Client Global &gt; USB Redirection</b> |
| Parameter  | Enable USB Redirection                                                                  |
| Registry   | twox.usb_redirection.usb_enable                                                         |
| Value      | enabled / <u>disabled</u>                                                               |
| Parameter  | Product ID                                                                              |

|           |                                                                     |
|-----------|---------------------------------------------------------------------|
| Registry  | <code>twox.usb_redirection.devicepolicy.product_rule.product</code> |

| Parameter  | Connect clipboard                                                                                                       |
| Registry   | <code>sessions.twox.local_resources.connect_clipboard</code>                                                            |
| Value      | <u>enabled</u> / <u>disabled</u>                                                                                        |

## VoIP

- Added **VoIP client Ekiga 4.0.1**.

## Firefox

- Updated **Firefox** to version **52.7.2 ESR**.
- Updated **Adobe Flash Player** download URL to version 29.0.0.113.

## Network

- Added **TTLS/PAP** and **TTLS/MSCHAPv2** to possible 802.1x authentication methods.
- Improved support for **Sierra EM7305 LTE** device (e.g. in Toshiba Portégé and Fujitsu LIFEBOOK E Series).

The EM7305 comes in various variants, e.g. one with ProductId 9041 and another one with ProductId 9063. The latter comes at least with one or with two USB configuration options. A device with only one configuration option has been observed on a Toshiba Tecra Z-50-D-115 notebook. It only works in MBIM mode and with IGEL firmware, when the device has successfully connected before with the same settings (particularly APN), e.g. under Microsoft Windows 10.

- Added support for **Sierra EM7455 WWAN module**.
- Added support for running the **Huawei E3531i WWAN** device in modem mode (in addition to HiLink mode).
- Added possibility to adopt the **hostname from a DHCP lease** as **permanent** terminal name. The purpose is to use the name received as part of a DHCP lease in future interactions with the DHCP server.

**More**

|           |                                               |
|-----------|-----------------------------------------------|
| Parameter | Adopt permanent Terminal Name from DHCP lease |
| Registry  | network.dns.hostname_adopt_from_dhcp          |
| Value     | enabled / <u>disabled</u>                     |

- **NetworkManager** updated to version **1.2.2**
- **ModemManager** updated to version **1.6.4**
- **usb\_modeswitch** updated to version **2.5.1**

#### Open VPN

- Added **Huawei HiLink Mobile Broadband USB** device as possible uplink to OpenVPN sessions.

#### OpenConnect VPN

- Added **OpenConnect** client version **7.08** to connect to **Cisco AnyConnect** and **Juniper VPN**. The feature must be enabled.

**More**

| Value      | enabled / <u>disabled</u>                                                      |

Tray icon is placed in the panel to disconnect from a running OpenConnect VPN connection.

## Smartcard

- Added **CoolKey PKCS#11** library for access to **Common Access Card (CAC)** smartcards.

| Registry   | scard.pkcs11.use_coolkey                                                      |
| Value      | enabled / <u>disabled</u>                                                     |

- Updated **Gemalto SafeNet PKCS#11** library to version **10.0.37-0**. This package replaces **Gemalto/SafeNet eToken** and **Gemalto IDPrime** libraries.  
**Gemalto SafeNet** (formerly **Gemalto/SafeNet eToken**) now handles Gemalto cards and tokens including eToken and IDPrime.  
**Gemalto IDPrime** now handles IDPrime cards and tokens, preferred Common Criteria (CC) cards and tokens in Unlinked Mode.
- Added full integration of **OpenSC PKCS#11** library for access to smartcards.

- Updated **MUSCLE CCID** smartcard reader driver to version **1.4.28**.
- Updated **ACS CCID** smartcard reader driver to version **1.1.5**.
- Updated **REINER SCT cyberJack** smartcard reader driver to version **3.99.5final.sp11**.
- Added parameter to disable **Identive CCID** smartcard reader driver. If this driver is disabled, some of the readers are handled by the MUSCLE CCID driver. This can help when problems with Identive reader driver occur.

**More**

|           |                                        |
|-----------|----------------------------------------|
| Parameter | Identive driver for smart card readers |
| Registry  | scard.pcscd.identiv_enable             |
| Value     | <u>enabled</u> / disabled              |

- Updated **cryptovision sc/interface PKCS#11** library to version **7.0.5.592**.
- New smartcard reader driver for **Fujitsu KB SCR eSIG** version **5.0.24**.

## HID

- Added **layout toggle** feature to on-screen keyboard.

**More**

|            |                                                            |
|------------|------------------------------------------------------------|
| IGEL Setup | <b>Accessories &gt; On-Screen Keyboard &gt; Appearance</b> |
|------------|------------------------------------------------------------|

|           |                                                                   |
|-----------|-------------------------------------------------------------------|
| Parameter | Enable switching to alternative layout                            |
| Registry  | <code>userinterface.softkeyboard.enable_alternative_layout</code> |
| Value     | <code>enabled</code> / <code>disabled</code>                      |

If this is enabled there is a key on the on-screen keyboard for toggling between the normal layout and a reduced layout, that saves space on the screen and has more or less the same features as the number block of an ordinary keyboard with some extensions.

#### Base System

- Added support for **UEFI Secure Boot**.

When booted with Secure Boot the downgrade to a firmware version older than 10.04.100 is locked.

- Updated **kernel to version 4.15.15**
- Boot time optimization** (up to 25% faster)
- Switch power off on USB ports on shutdown and reboot**. The feature can be enabled in IGEL Setup. At the moment only IGEL H830C is supported.

[More](#)

|            |                                              |
|------------|----------------------------------------------|
| IGEL Setup | <b>System &gt; Registry</b>                  |
| Parameter  | Power off on shutdown                        |
| Registry   | <code>devices.usb.poweroff_shutdown</code>   |
| Value      | <code>enabled</code> / <code>disabled</code> |

- Added Unit ID in Application Launcher **About > Hardware** section.
- Showing **number of CPU cores** in Application Launcher **About > Hardware** section now.

#### Storage Devices

- Added support for **Mobile Device Access** feature in **Appliance Mode**. The Mobile Device Access tool can be opened via a new icon in the **In-session control bar**. The Mobile Device Access tool can also be started automatically.

[More](#)

|           |                                              |
|-----------|----------------------------------------------|

| Registry  | <code>sessions.mtp-devices0.autostart</code> |
| Value     | <code>enabled</code> / <code>disabled</code> |

Mobile Device Access must be enabled at **IGEL Setup > System > Firmware Customization > Features**. Appliance Mode must be enabled at **IGEL Setup > Sessions > Appliance Mode**.

- The **Mobile Device Access tool** is now configurable at **IGEL Setup > Accessories > Mobile Device Access**.
- The **Mobile Device Access tray icon** respects the current theme now.

#### X11 System

- Added support for **XDMCP Appliance Mode**. The XDMCP connection is configurable.

| IGEL Setup | <b>Sessions &gt; Appliance Mode</b>                           |
| Parameter  | Connection Type                                               |
| Registry   | x.xdmcp0.server.connectiontype                                |
| Range      | <b>indirect via localhost</b> / indirect / direct / broadcast |
| IGEL Setup | <b>Sessions &gt; Appliance Mode</b>                           |
| Parameter  | Name or IP of server                                          |
| Registry   | x.xdmcp0.server.servername                                    |
| IGEL Setup | <b>Sessions &gt; Appliance Mode</b>                           |
| Parameter  | Enable hotkeys for XDMCP Display                              |
| Registry   | x.xdmcp0.hotkeys.enabled                                      |
| Value      | <u>enabled</u> / disabled                                     |

The default hotkey to open IGEL Setup is: CTRL + ALT + F2. The setup page **User Interface > Display > XDMCP** was removed.

- Added **XC Font Service** support.

|------------|--------------------------------------------------|
| IGEL Setup | <b>User Interface &gt; Display &gt; Advanced</b> |
| Parameter  | Detect refresh rate automatically                |
| Registry   | x.xserver0.screen.auto_frequency                 |
| Value      | <u>enabled</u> / disabled                        |

- Added xorg debug script **/etc/igel/igel\_debug\_tools/xorg-debug.sh** to make collecting Xorg debug data easier (a /tmp/xorg-debug.log file is generated).

#### Window Manager

- Added possibility to
  - a) **change the preferred placement mode** and
  - b) **modify the threshold value** up to which window size this placement mode should be chosen (otherwise window placement defaults to so called smart mode which tries to minimize overlapping).

#### More

|           |                                                                        |
|-----------|------------------------------------------------------------------------|
| Parameter | Preferred Placement                                                    |
| Registry  | windowmanager.wm0.variables.placement_mode                             |
| Value     | At mouse position / <u>Centered</u>                                    |
| Parameter | Maximum window size for which the preferred placement should apply     |
| Registry  | windowmanager.wm0.variables.placement_ratio                            |
| Value     | 0% / 10% / <u>20%</u> / 30% / 40% / 50% / 60% / 70% / 80% / 90% / 100% |

#### Audio

- Volume** of audio output and input can now be configured up to 150% at **IGEL Setup page Accessories > Sound Preferences > Options**.
- Added a parameter for log level configuration of **Pulseaudio** service.

#### More

|           |                                        |
|-----------|----------------------------------------|
| Parameter | Log level                              |
| Registry  | multimedia.pulseaudio.daemon.log-level |

|       |                                                |
|-------|------------------------------------------------|
| Range | debug / info / <u>notice</u> / warning / error |
|-------|------------------------------------------------|

## Misc

- An EULA must be accepted now in IGEL setup assistant before finalizing it and using the IGEL OS.

## Java

- Updated **Oracle JRE to 1.8U162**.

## Remote Management

- Added **new log file transfer mechanism** for UMS feature **Save TC files for support** (UMS 5.08.110 or higher required). By default, it collects all log files visible in system log viewer, system configuration files group.ini, setup.ini and dhclient lease files. More files can be specified at **IGEL Setup > Accessories > System Log Viewer > Options**. The resulting zip file has now a folder structure.

## IGEL Cloud Gateway

- Added **UMS structure tag** handling for usage with **ICG agent**.

## Hardware

- Added support for **IGEL UD7-LX 10**.

## Resolved Issues 10.03.500

## Citrix

- Fixed sporadic crashes of the **Citrix USB Daemon**.

## RDP / IGEL RDP Client 2

- Fixed passing **Ctrl+Alt+C keyboard shortcut** to RDP session.
- Fixed **smartcard redirection**: after session reconnection readers and cards were not connected any more in some cases.
- Fixed the **rdpdebugger** to work again (was broken in the previous release).
- Fixed misleading **RDP error message 'Authentication failed'** on wakeup from suspend mode
- Fixed **TCP timeout value** to get more stable **RDP connections** under certain circumstances.

## VMware Horizon

- Fixed bug which prevented **microphone redirection** in Horizon Client RDP sessions.

**More**

|            |                                                                  |
|------------|------------------------------------------------------------------|
| IGEL Setup | <b>Sessions &gt; RDP &gt; RDP Global &gt; Mapping &gt; Audio</b> |
| Parameter  | Audio recording                                                  |
| Registry   | <code>rdp.winconnect.rdppeai.enable</code>                       |
| Value      | enabled / <u>disabled</u>                                        |

## RedHat Enterprise Virtualization Client

- Fixed **display corruption** with Windows connections.

## Firefox

- Fixed possibility to **download files in the browser** if needed. The parameter to enable/disable file download is available here.

[More](#)

| IGEL Setup | Sessions > Browser > Browser Sessions > Window |
|------------|------------------------------------------------|
| Parameter  | Hide local filesystem                          |
| Registry   | sessions.browser.app.filepicker_dialog_hidden  |
| Value      | enabled / <u>disabled</u>                      |

If enabled, the user is not allowed to download or use any save-as functionality from menu, context or keyboard shortcut.

- Fixed bug which **prevented the download using the file dialog** (in the case you open a link to a file of unkown type).
- Fixed **unmounting of the Firefox profile partition during shutdown** - now it is unmounted in a determinate manner after Custom Partition.

## Network

- Fixed bug: **Network tray icons** sometimes didn't reappear after network restart.
- Fixed bug: **tcpdump debug tool** terminated immediately during boot.
- Fixed issue with **naming of USB ethernet devices**.
- Fixed wrong **LinkMode (10baseT/Half)** with autonegotiation and some USB ethernet devices.

## AppliDis

- Changed default value of **PasswordMode** from **cmdline** to **prompt** as suggested by Systancia.

## Smartcard

- Fixed driver for **Elatec RFID readers**. Before this fix the readers sometimes were not available after boot.
- Fixed VMware Horizon logon with OpenSC smartcards.

## CUPS Printing

- Fixed bug where the **user for printjobs** was not set to the **domain user**.

## Base System

- Fixed **Kerberos password change** to work also with transport protocol **TCP**. To force protocol TCP, prepend Domain Controllers with prefix "tcp/", e.g. "tcp/dc.example.com".
- Fixed **occasional desktop hang** in the local login or the network login mask after successful authentication.
- Fixed **password expiry notification** showing negative expiry period.
- Fixed **update to connect to SFTP** servers with very restrictive key exchange settings.

- Fixed input of the **reset key in reset to defaults boot**, if the administrator password is not available anymore. If more than 255 characters were entered in the 1st try, it was not possible to enter the reset key for a 2nd or 3rd time.
- Fixed **Active Directory logon with smartcard**: If the smartcard contains logon certificates for multiple users, it is possible to switch between these certificates and log on with the chosen certificate now.
- Fixed missing names for some **partitions** in update notification when having a user interface **language other than English**.
- Fixed problems with **never ending bootcode** update with some EFI BIOS variants.
- Fixed **ssh server port** configuration.
- Fixed **signotec signature pad** channel for Citrix.
- Increased stability of **signotec VCOM Daemon**.
- Remove residual information belonging to a **removed content from a custom partition**.
- Fixed **crash of xfce4-power-manager** after adding or removing input devices.

#### Custom Partition

- Fixed **automatic update of custom partition** - if download source isn't accessible then the content of the custom partition got lost.

#### Appliance Mode

- Fixed post session command **Logoff** in Appliance Mode.

#### X11 System

- Fixed **Elo-USB Touchscreen functionality** after reboot.
- Fixed **DisplayLink USB Support on UD3 LX50**.
- Fixed issue with **two monitors connected via DVI-D to HDMI adapter on a UD3 M330 (VIA)**. Added registry key to disable the new HDMI autodetection.

#### More

|           |                                             |
|-----------|---------------------------------------------|
| Parameter | Autodetect if DVI to HDMI adapter is in use |
| Registry  | x.drivers.via.autodetect_hdmi_output        |
| Value     | <u>enabled</u> / disabled                   |

- Fixed **wrong automatic resolution detection** if monitor does not have a preferred mode.
- Fixed **sporadic display corruptions** after monitors leaving the power saving mode.
- Improved handling of more than 2 screens.

#### Shadowing/VNC

- Fixed **sporadic VNC server crash**.

#### Audio

- Fixed **volume control of internal speaker in HP T610**.
- Fixed **automatic switch to output** over analog headphones.
- Not existing **S/PDIF inputs and outputs in Plantronics and Jabra USB headsets** are now ignored by audio subsystem (Pulseaudio).

- Added workaround in the kernel USB audio driver for **volume control on Sennheiser USB headsets.**

#### Remote Management

- Fixed **calculation of Unit ID for UMS management.** In some cases, it could happen that the MAC address of wrong network interface was chosen.
- Fixed **IGEL Setup Assistant** to get stopped when settings were received from UMS.

### 7.33.2 IGEL Universal Desktop OS3 / IGEL UD Pocket 10.03.500

- Fixed **libxcursor** security issue CVE-2017-16612.
- Fixed a security issue in the base system regarding of not resetting certain environment variables.
- Updated Firefox to version 52.5 ESR:
  - Fixes for **mfsa2017-25**, also known as: CVE-2017-7828, CVE-2017-7830, CVE-2017-7826.
  - Fixes for **mfsa2017-22**, also known as: CVE-2017-7793, CVE-2017-7818, CVE-2017-7819, CVE-2017-7824, CVE-2017-7805, CVE-2017-7814, CVE-2017-7823, CVE-2017-7810.

## General Information 10.03.500

The following clients and features are not supported anymore in version 10.03.550:

- Citrix Receiver 12.1 and 13.1
- Citrix Access Gateway Standard Plug-in
- Dell vWorkspace Connector for Linux
- Ericom PowerTerm Emulation 9 and 11
- Ericom Webconnect
- IGEL Legacy RDP Client (rdesktop)
- Virtual Bridges VERDE Client
- PPTP VPN Support
- IGEL Upgrade License Tool with IGEL Smartcard Token
- Remote Management by setup.ini file transfer (TFTP)
- XC Font Service
- Remote Access via RSH
- Legacy Philips Speech Driver
- Digital Persona Support
- Sane Scanner Support
- Softpro/Kofax Citrix Virtual Channel

- t-Systems TCOS Smartcard Support
- DUS Series touch screens
- Elo serial touch screens
- IGEL Smartcard without locking desktop
- VIA Graphics Support
- Storage Hotplug devices are not automatically removed anymore, instead they must be always ejected manually:
  - by panel tray icon
  - by an icon in the 'In-Session Control Bar' (configurable at **IGEL Setup > User Interface > Desktop**)
  - by a 'Safely Remove Hardware' session (configurable at **IGEL Setup > Accessories**)

The following clients and features are not available in release 10.03.550:

- Voip Client Ekiga
- X session (Xorg Xephyr)
- XDMCP
- Cherry eGK Channel
- Open VPN Smartcard Support
- NCP Secure Client
- Asian Input Methods
- Composite Manager

## Known Issues 10.03.500

### Citrix Receiver 13

- On devices with AMD/Radeon graphics chipsets and activated DRI3 X driver option **the hardware accelerated Citrix H.264 decoder plugin can hang**. To solve this issue deactivation of DRI3 option is necessary (default setting).

[More](#)

|           |                                                         |
|-----------|---------------------------------------------------------|
| Parameter | Use DRI3                                                |
| Registry  | x.drivers.use_dri3                                      |
| Value     | enabled / <u>disabled</u>                               |
| Parameter | Force usage of DRI3                                     |
| Registry  | x.drivers.amdgpu.force_dri3<br>x.drivers.ati.force_dri3 |
| Value     | enabled / <u>disabled</u>                               |

- Citrix StoreFront login with **Gemalto smartcard middleware** does not detect smartcard correctly when the card is inserted after start of login. As a workaround, insert the smartcard before starting StoreFront login.
- **No smooth playback** over **Nuance** channel if the dictation device isn't attached.

#### VMware Horizon

- **External drives** mounted already before connection do not appear in the remote desktop.  
**Workaround:** mapping the directory /media as a drive on desktop.  
 Then the external devices will show up inside the media drive.
- **Client drive mapping** and **USB redirection for storage devices** should not be enabled both at the same time.
  - On the one hand, when using USB redirection for storage devices: The USB on-insertion feature is only working when the client drive mapping is switched off. In the IGEL Setup client drive mapping can be found in: **Sessions > Horizon Client > Horizon Client Global > Drive Mapping > Enable Drive Mapping**. It is also recommended to disable local Storage Hotplug: On page **Devices > Storage Devices > Storage Hotplug**, put number of storage hotplug devices to 0.
  - On the other hand, when using drive mapping instead, it is recommended to either switch off USB redirection entirely or at least deny storage devices by adding a filter to the USB class rules. Furthermore, Horizon Client relies on the OS to mount the storage devices itself. Change on the following setup page is required: **Devices > Storage Devices > Storage Hotplug**.
 Activate **Enable dynamic drive mapping** and set **Number of storage hotplug devices** to at least 1.

#### Firefox

- Because the **support for the gstreamer framework** was dropped by recent Firefox versions, support for H264 decoding in the browser is not possible anymore due to licensing restrictions.

#### OpenConnect VPN

- **VPNs which need the OpenConnect** client cannot be used for firmware updates.

#### Evidian

- Active Directory users with a **password containing special characters** may have problems to authenticate with the configured session.  
 Known special characters which result in errors are:
  - ˋ (grave accent, ASCII code 96)
  - ˊ (acute accent, ASCII code 239)

#### New Features 10.03.500

##### Citrix Receiver 13

- Integrated **Citrix Receiver 13.8.0**.  
[More](#)

|           |                                              |
|-----------|----------------------------------------------|
| Parameter | Use Citrix Cloud with receiver 13.8 or newer |
|-----------|----------------------------------------------|

|          |                           |
|----------|---------------------------|
| Registry | ica.cloudconnect          |
| Value    | enabled / <u>disabled</u> |

- Support for **Azure** Active Directory (Azure AD) authentication
- Support for **Workspace** configuration from Citrix Cloud
- Integrated **Citrix Receiver 13.4.2**. Citrix Receiver version 13.5.0 was removed. Available Citrix Receiver versions: 13.3.2, 13.4.2, 13.7.0, 13.8.0 (default)
- Updated **Citrix HDX RTME** used for optimization of Skype for Business to 2.4.0.

#### RDP / IGEL RDP Client 2

- Added possibility to use **RDP local logon** for smartcard login. This can be activated in the setup.  
**More**

|           |                                          |
|-----------|------------------------------------------|
| Parameter | Enable smartcard support for local logon |
| Registry  | rdp.login.smartcard-local-logon          |
| Value     | enabled / <u>disabled</u>                |

By enabling this parameter local logon can be used for smartcard authentication. If **Username** is left empty the connection to the RDP server will be made without sending credentials, so you can choose **Smartcard** as login method in the microsoft login window. However this will not work with **NLA**.

- Added support for CredSSP up to version 6.

#### VMware Horizon

- Updated **VMware Horizon Client** to version **4.7.0-7395152**.
- Added key to enable **seamless window mode** in each application session.  
**More**

|           |                                                    |
|-----------|----------------------------------------------------|
| Parameter | Seamless Application Windows                       |
| Registry  | sessions.vdm_client.options.enable_seamless_window |
| Value     | enabled / <u>disabled</u>                          |

- Added possibility to use **Fabulatech USB Redirection** in a Horizon Client PCoIP session.  
**More**

|            |                                                                                                |
|------------|------------------------------------------------------------------------------------------------|
| IGEL Setup | <b>Sessions &gt; Horizon Client &gt; Horizon Client Global &gt; Fabulatech USB Redirection</b> |
| Parameter  | Enable Fabulatech USB Redirection                                                              |

|          |                                                    |
|----------|----------------------------------------------------|
| Registry | <code>vmware.view.usb.enable-fabulatech-usb</code> |
| Value    | <u>enabled</u> / <u>disabled</u>                   |

## Parallels Client

- Integrated **Parallels Client** version **16.2.0 (19039)**
  - Added support for USB Redirection, configurable at new IGEL Setup page **Sessions > Parallels Client > Parallels Client Global > USB Redirection.**
- [More](#)

| IGEL Setup | <b>Sessions &gt; Parallels Client &gt; Parallels Client Global &gt; USB Redirection</b> |
|------------|-----------------------------------------------------------------------------------------|
| Parameter  | Enable USB Redirection                                                                  |
| Registry   | <code>twox.usb_redirection.usb_enable</code>                                            |
| Value      | <u>enabled</u> / <u>disabled</u>                                                        |
| Parameter  | Product ID                                                                              |
| Registry   | <code>twox.usb_redirection.devicepolicy.product_rule.product</code>                     |
| Parameter  | Vendor ID                                                                               |
| Registry   | <code>twox.usb_redirection.devicepolicy.product_rule.vendor</code>                      |
| Parameter  | Rule                                                                                    |
| Registry   | <code>twox.usb_redirection.devicepolicy.product_rule.rule</code>                        |
| Value      | <u>Deny</u> / <u>Allow</u>                                                              |
| Parameter  | Name                                                                                    |
| Registry   | <code>twox.usb_redirection.devicepolicy.product_rule.name</code>                        |
| Value      | Policy Rule                                                                             |
| Parameter  | Automatically redirect all USB devices                                                  |
| Registry   | <code>twox.usb_redirection.devicepolicy.redirect_all</code>                             |

|       |                           |
|-------|---------------------------|
| Value | <u>enabled / disabled</u> |
|-------|---------------------------|

- Added support for **PTP/MTP** Redirection.

**More**

| IGEL Setup | <b>Sessions &gt; Parallels Client &gt; Parallels Client Global &gt; USB Redirection</b> |
|------------|-----------------------------------------------------------------------------------------|
| Parameter  | Enable PTP/MTP Redirection                                                              |
| Registry   | twox.mtp_redirection.mtp_enable                                                         |

| Parameter  | Automatically redirect all PTP/MTP devices                                              |
| Registry   | twox.mtp_redirection.devicepolicy.redirect_all                                          |
| Value      | <u>enabled / disabled</u>                                                               |

- Added support for **Clipboard** Redirection.

**More**

|            |                                                                                                                         |
|------------|-------------------------------------------------------------------------------------------------------------------------|
| IGEL Setup | <b>Sessions &gt; Parallels Client &gt; Parallels Client Sessions &gt; Parallels Client Session &gt; Local Resources</b> |
| Parameter  | Connect clipboard                                                                                                       |
| Registry   | sessions.twox.local_resources.connect_clipboard                                                                         |
| Value      | <u>enabled</u> / disabled                                                                                               |

## VoIP

- Added **VoIP client Ekiga 4.0.1**.

## Firefox

- Updated **Firefox** to version **52.7.2 ESR**.
- Updated **Adobe Flash Player** download URL to version 29.0.0.113.

## Network

- Added **TTLS/PAP** and **TTLS/MSCHAPv2** to possible 802.1x authentication methods.
- Improved support for **Sierra EM7305 LTE** device (e.g. in Toshiba Portégé and Fujitsu LIFEBOOK E Series).

The EM7305 comes in various variants, e.g. one with ProductId 9041 and another one with ProductId 9063. The latter comes at least with one or with two USB configuration options. A device with only one configuration option has been observed on a Toshiba Tecra Z-50-D-115 notebook. It only works in MBIM mode and with IGEL firmware, when the device has successfully connected before with the same settings (particularly APN), e.g. under Microsoft Windows 10.

- Added support for **Sierra EM7455 WWAN module**.
- Added support for running the **Huawei E3531i WWAN** device in modem mode (in addition to HiLink mode).
- Added possibility to adopt the **hostname from a DHCP lease** as **permanent** terminal name. The purpose is to use the name received as part of a DHCP lease in future interactions with the DHCP server.

**More**

|           |                                               |
|-----------|-----------------------------------------------|
| Parameter | Adopt permanent Terminal Name from DHCP lease |
| Registry  | network.dns.hostname_adopt_from_dhcp          |
| Value     | <u>enabled</u> / <u>disabled</u>              |

- NetworkManager** updated to version **1.2.2**
- ModemManager** updated to version **1.6.4**
- usb\_modeswitch** updated to version **2.5.1**

## Open VPN

- Added **Huawei HiLink Mobile Broadband USB** device as possible uplink to OpenVPN sessions.

## OpenConnect VPN

- Added **OpenConnect** client version **7.08** to connect to **Cisco AnyConnect** and **Juniper VPN**. The feature must be enabled.

| Registry   | scard.pkcs11.use_coolkey                       |
| Value      | <u>enabled / disabled</u>                      |

- Updated **Gemalto SafeNet PKCS#11** library to version **10.0.37-0**. This package replaces **Gemalto/ SafeNet eToken** and **Gemalto IDPrime** libraries.  
**Gemalto SafeNet** (formerly **Gemalto/SafeNet eToken**) now handles Gemalto cards and tokens including eToken and IDPrime.  
**Gemalto IDPrime** now handles IDPrime cards and tokens, preferred Common Criteria (CC) cards and tokens in Unlinked Mode.
- Added full integration of **OpenSC PKCS#11** library for access to smartcards.  
[More](#)

|            |                                                                               |

| Registry   | scard.pkcs11.use_opensc                                                       |
| Value      | <u>enabled / disabled</u>                                                     |

- Updated **MUSCLE CCID** smartcard reader driver to version **1.4.28**.

- Updated **ACS CCID** smartcard reader driver to version **1.1.5**.
- Updated **REINER SCT cyberJack** smartcard reader driver to version **3.99.5final.sp11**.
- Added parameter to disable **Identive CCID** smartcard reader driver. If this driver is disabled, some of the readers are handled by the MUSCLE CCID driver. This can help when problems with Identive reader driver occur.

**More**

|           |                                        |
|-----------|----------------------------------------|
| Parameter | Identive driver for smart card readers |
| Registry  | scard.pcscd.identiv_enable             |
| Value     | <u>enabled</u> / <u>disabled</u>       |

- Updated **cryptovision sc/interface PKCS#11** library to version **7.0.5.592**.
- New smartcard reader driver for **Fujitsu KB SCR eSIG** version **5.0.24**.

## HID

- Added **layout toggle** feature to on-screen keyboard.

**More**

|            |                                                            |
|------------|------------------------------------------------------------|
| IGEL Setup | <b>Accessories &gt; On-Screen Keyboard &gt; Appearance</b> |
| Parameter  | Enable switching to alternative layout                     |
| Registry   | userinterface.softkeyboard.enable_alternative_layout       |
| Value      | <u>enabled</u> / <u>disabled</u>                           |

If this is enabled there is a key on the on-screen keyboard for toggling between the normal layout and a reduced layout, that saves space on the screen and has more or less the same features as the number block of an ordinary keyboard with some extensions.

## Base System

- Added support for **UEFI Secure Boot**.

When booted with Secure Boot the downgrade to a firmware version older than 10.04.100 is locked.

- Updated **kernel to version 4.15.15**
- **Boot time optimization** (up to 25% faster)
- **Switch power off on USB ports on shutdown and reboot**. The feature can be enabled in IGEL Setup. At the moment only IGEL H830C is supported.

**More**

|            |                             |
|------------|-----------------------------|
| IGEL Setup | <b>System &gt; Registry</b> |
|------------|-----------------------------|

|           |                               |
|-----------|-------------------------------|
| Parameter | Power off on shutdown         |
| Registry  | devices.usb.poweroff_shutdown |
| Value     | enabled / <u>disabled</u>     |

- Added Unit ID in Application Launcher **About > Hardware** section.
- Showing **number of CPU cores** in Application Launcher **About > Hardware** section now.

#### Storage Devices

- Added support for **Mobile Device Access** feature in **Appliance Mode**. The Mobile Device Access tool can be opened via a new icon in the **In-session control bar**. The Mobile Device Access tool can also be started automatically.

**More**

|           |                                 |
|-----------|---------------------------------|
| Parameter | Autostart                       |
| Registry  | sessions.mtp-devices0.autostart |
| Value     | enabled / <u>disabled</u>       |

Mobile Device Access must be enabled at **IGEL Setup > System > Firmware Customization > Features**. Appliance Mode must be enabled at **IGEL Setup > Sessions > Appliance Mode**.

- The **Mobile Device Access tool** is now configurable at **IGEL Setup > Accessories > Mobile Device Access**.
- The **Mobile Device Access tray icon** respects the current theme now.

#### X11 System

- Added support for **XDMCP Appliance Mode**. The XDMCP connection is configurable.

**More**

|            |                                     |
|------------|-------------------------------------|
| IGEL Setup | <b>Sessions &gt; Appliance Mode</b> |
| Parameter  | XDMCP for this Display              |
| Registry   | x.xdmcp0.enabled                    |
| Value      | enabled / <u>disabled</u>           |
| IGEL Setup | <b>Sessions &gt; Appliance Mode</b> |
| Parameter  | Connection Type                     |

|            |                                                               |
|------------|---------------------------------------------------------------|
| Registry   | x.xdmcp0.server.connectiontype                                |
| Range      | <b>indirect via localhost</b> / indirect / direct / broadcast |
| IGEL Setup | <b>Sessions &gt; Appliance Mode</b>                           |
| Parameter  | Name or IP of server                                          |
| Registry   | x.xdmcp0.server.servername                                    |
| IGEL Setup | <b>Sessions &gt; Appliance Mode</b>                           |
| Parameter  | Enable hotkeys for XDMCP Display                              |
| Registry   | x.xdmcp0.hotkeys.enabled                                      |
| Value      | <u>enabled</u> / disabled                                     |

The default hotkey to open IGEL Setup is: CTRL + ALT + F2. The setup page **User Interface > Display > XDMCP** was removed.

- Added **XC Font Service** support.

**More**

|            |                                                               |
|------------|---------------------------------------------------------------|
| IGEL Setup | <b>User Interface &gt; Font Services &gt; XC Font Service</b> |

|            |                                                               |
|------------|---------------------------------------------------------------|
| Value      | <u>7100</u>                                                   |
| IGEL Setup | <b>User Interface &gt; Font Services &gt; XC Font Service</b> |
| Parameter  | Prefer Local Fonts                                            |
| Registry   | x.xc_fontservice.prefer_localfonts                            |
| Value      | <u>enabled / disabled</u>                                     |

- Added **auto detection of monitor refresh rate**. This can be controlled with new parameters.  
**More**

|            |                                                  |
|------------|--------------------------------------------------|
| IGEL Setup | <b>User Interface &gt; Display &gt; Advanced</b> |
| Parameter  | Detect refresh rate automatically                |
| Registry   | x.xserver0.auto_frequency                        |
| Value      | <u>enabled / disabled</u>                        |

|            |                                                  |
|------------|--------------------------------------------------|
| IGEL Setup | <b>User Interface &gt; Display &gt; Advanced</b> |
| Parameter  | Detect refresh rate automatically                |
| Registry   | x.xserver0.screen.auto_frequency                 |
| Value      | <u>enabled / disabled</u>                        |

- Added xorg debug script **/etc/igel/igel\_debug\_tools/xorg-debug.sh** to make collecting Xorg debug data easier (a /tmp/xorg-debug.log file is generated).

## Window Manager

- Added possibility to
  - a) **change the preferred placement mode** and
  - b) **modify the threshold value** up to which window size this placement mode should be chosen (otherwise window placement defaults to so called smart mode which tries to minimize overlapping).

**More**

|           |                     |
|-----------|---------------------|
| Parameter | Preferred Placement |
|-----------|---------------------|

|           |                                                                        |
|-----------|------------------------------------------------------------------------|
| Registry  | windowmanager.wm0.variables.placement_mode                             |
| Value     | At mouse position / <u>Centered</u>                                    |
| Parameter | Maximum window size for which the preferred placement should apply     |
| Registry  | windowmanager.wm0.variables.placement_ratio                            |
| Value     | 0% / 10% / <u>20%</u> / 30% / 40% / 50% / 60% / 70% / 80% / 90% / 100% |

## Audio

- **Volume** of audio output and input can now be configured up to 150% at **IGEL Setup page Accessories > Sound Preferences > Options**.
- Added a parameter for log level configuration of **Pulseaudio** service.  
[More](#)

|           |                                                |
|-----------|------------------------------------------------|
| Parameter | Log level                                      |
| Registry  | multimedia.pulseaudio.daemon.log-level         |
| Range     | debug / info / <u>notice</u> / warning / error |

## Misc

- An EULA must be accepted now in IGEL setup assistant before finalizing it and using the IGEL OS.

## Java

- Updated **Oracle JRE to 1.8U162**.

## Remote Management

- Added **new log file transfer mechanism** for UMS feature **Save TC files for support** (UMS 5.08.110 or higher required). By default, it collects all log files visible in system log viewer, system configuration files group.ini, setup.ini and dhclient lease files. More files can be specified at **IGEL Setup > Accessories > System Log Viewer > Options**. The resulting zip file has now a folder structure.

## IGEL Cloud Gateway

- Added **UMS structure tag** handling for usage with **ICG agent**.

## Hardware

- Added support for **IGEL UD7-LX 10**.

## Resolved Issues 10.03.500

### Citrix

- Fixed sporadic crashes of the **Citrix USB Daemon**.

#### RDP / IGEL RDP Client 2

- Fixed passing **Ctrl+Alt+C keyboard shortcut** to RDP session.
- Fixed **smartcard redirection**: after session reconnection readers and cards were not connected any more in some cases.
- Fixed the **rdpdebugger** to work again (was broken in the previous release).
- Fixed misleading **RDP error message 'Authentication failed'** on wakeup from suspend mode
- Fixed **TCP timeout value** to get more stable **RDP connections** under certain circumstances.

#### VMware Horizon

- Fixed bug which prevented **microphone redirection** in Horizon Client RDP sessions.  
**More**

| IGEL Setup | <b>Sessions &gt; RDP &gt; RDP Global &gt; Mapping &gt; Audio</b> |
|------------|------------------------------------------------------------------|
| Parameter  | Audio recording                                                  |
| Registry   | rdp.winconnect.rdpai.enable                                      |
| Value      | enabled / <u>disabled</u>                                        |

#### RedHat Enterprise Virtualization Client

- Fixed **display corruption** with Windows connections.

#### Firefox

- Fixed possibility to **download files in the browser** if needed. The parameter to enable/disable file download is available here.

**More**

| IGEL Setup | <b>Sessions &gt; Browser &gt; Browser Sessions &gt; Window</b> |
|------------|----------------------------------------------------------------|
| Parameter  | Hide local filesystem                                          |
| Registry   | sessions.browser.app.filepicker_dialog_hidden                  |
| Value      | enabled / <u>disabled</u>                                      |

If enabled, the user is not allowed to download or use any save-as functionality from menu, context or keyboard shortcut.

- Fixed bug which **prevented the download using the file dialog** (in the case you open a link to a file of unknown type).
- Fixed **unmounting of the Firefox profile partition during shutdown** - now it is unmounted in a determinate manner after Custom Partition.

#### Network

- Fixed bug: **Network tray icons** sometimes didn't reappear after network restart.
- Fixed bug: **tcpdump debug tool** terminated immediately during boot.
- Fixed issue with **naming of USB ethernet devices**.
- Fixed wrong **LinkMode (10baseT/Half)** with autonegotiation and some USB ethernet devices.

#### AppliDis

- Changed default value of **PasswordMode** from **cmdline** to **prompt** as suggested by Systancia.

#### Smartcard

- Fixed driver for **Elatec RFID readers**. Before this fix the readers sometimes were not available after boot.
- Fixed VMware Horizon logon with OpenSC smartcards.

#### CUPS Printing

- Fixed bug where the **user for printjobs** was not set to the **domain user**.

#### Base System

- Fixed **Kerberos password change** to work also with transport protocol **TCP**. To force protocol TCP, prepend Domain Controllers with prefix "tcp/", e.g. "tcp/dc.example.com".
- Fixed **occasional desktop hang** in the local login or the network login mask after successful authentication.
- Fixed **password expiry notification** showing negative expiry period.
- Fixed **update to connect to SFTP** servers with very restrictive key exchange settings.
- Fixed input of the **reset key in reset to defaults boot**, if the administrator password is not available anymore. If more than 255 characters were entered in the 1st try, it was not possible to enter the reset key for a 2nd or 3rd time.
- Fixed **Active Directory logon with smartcard**: If the smartcard contains logon certificates for multiple users, it is possible to switch between these certificates and log on with the chosen certificate now.
- Fixed missing names for some **partitions** in update notification when having a user interface **language other than English**.
- Fixed problems with **never ending bootcode** update with some EFI BIOS variants.
- Fixed **ssh server port** configuration.
- Fixed **signotec signature pad** channel for Citrix.
- Increased stability of **signotec VCOM Daemon**.
- Remove residual information belonging to a **removed content from a custom partition**.
- Fixed **crash of xfce4-power-manager** after adding or removing input devices.

#### Custom Partition

- Fixed **automatic update of custom partition** - if download source isn't accessible then the content of the custom partition got lost.

#### Appliance Mode

- Fixed post session command **Logoff** in Appliance Mode.

#### X11 System

- Fixed **Elo-USB Touchscreen functionality** after reboot.

- Fixed **DisplayLink USB Support on UD3 LX50**.
- Fixed issue with **two monitors connected via DVI-D to HDMI adapter on a UD3 M330 (VIA)**.  
Added registry key to disable the new HDMI autodetection.

[More](#)

|           |                                             |
|-----------|---------------------------------------------|
| Parameter | Autodetect if DVI to HDMI adapter is in use |
| Registry  | x.drivers.via.autodetect_hdmi_output        |
| Value     | <u>enabled</u> / disabled                   |

- Fixed **wrong automatic resolution detection** if monitor does not have a preferred mode.
- Fixed **sporadic display corruptions** after monitors leaving the power saving mode.
- Improved handling of more than 2 screens.

#### Shadowing/VNC

- Fixed **sporadic VNC server crash**.

#### Audio

- Fixed **volume control of internal speaker in HP T610**.
- Fixed **automatic switch to output** over analog headphones.
- Not existing **S/PDIF inputs and outputs in Plantronics and Jabra USB headsets** are now ignored by audio subsystem (Pulseaudio).
- Added workaround in the kernel USB audio driver for **volume control on Sennheiser USB headsets**.

#### Remote Management

- Fixed **calculation of Unit ID for UMS management**. In some cases, it could happen that the MAC address of wrong network interface was chosen.
- Fixed **IGEL Setup Assistant** to get stopped when settings were received from UMS.

### 7.33.3 IGEL Universal Desktop Converter (UDC3) 10.03.500

| ISC DHCP Client                 | 4.3.3-5ubuntu12.7 |

## New Features 10.03.500

### Citrix Receiver 13

- Integrated **Citrix Receiver 13.8.0**.

[More](#)

|           |                                              |
|-----------|----------------------------------------------|
| Parameter | Use Citrix Cloud with receiver 13.8 or newer |
| Registry  | ica.cloudconnect                             |
| Value     | enabled / <u>disabled</u>                    |

- Support for **Azure** Active Directory (Azure AD) authentication
- Support for **Workspace** configuration from Citrix Cloud
- Integrated **Citrix Receiver 13.4.2**. Citrix Receiver version 13.5.0 was removed. Available Citrix Receiver versions: 13.3.2, 13.4.2, 13.7.0, 13.8.0 (default)
- Updated **Citrix HDX RTME** used for optimization of Skype for Business to 2.4.0.

### RDP / IGEL RDP Client 2

- Added possibility to use **RDP local logon** for smartcard login. This can be activated in the setup.

[More](#)

|           |                                          |
|-----------|------------------------------------------|
| Parameter | Enable smartcard support for local logon |
| Registry  | rdp.login.smartcard-local-logon          |
| Value     | enabled / <u>disabled</u>                |

By enabling this parameter local logon can be used for smartcard authentication. If **Username** is left empty the connection to the RDP server will be made without sending credentials, so you can choose **Smartcard** as login method in the microsoft login window. However this will not work with **NLA**.

- Added support for CredSSP up to version 6.

### VMware Horizon

- Updated **VMware Horizon Client** to version **4.7.0-7395152**.
- Added key to enable **seamless window mode** in each application session.

[More](#)

|           |                                                    |
|-----------|----------------------------------------------------|
| Parameter | Seamless Application Windows                       |
| Registry  | sessions.vdm_client.options.enable_seamless_window |
| Value     | enabled / <u>disabled</u>                          |

- Added possibility to use **Fabulatech USB Redirection** in a Horizon Client PCoIP session.

[More](#)

|            |                                                                                                |
|------------|------------------------------------------------------------------------------------------------|
| IGEL Setup | <b>Sessions &gt; Horizon Client &gt; Horizon Client Global &gt; Fabulatech USB Redirection</b> |
| Parameter  | Enable Fabulatech USB Redirection                                                              |
| Registry   | vmware.view.usb.enable-fabulatech-usb                                                          |
| Value      | enabled / <u>disabled</u>                                                                      |

#### Parallels Client

- Integrated **Parallels Client** version **16.2.0 (19039)**
- Added support for USB Redirection, configurable at new IGEL Setup page **Sessions > Parallels Client > Parallels Client Global > USB Redirection**.

[More](#)

|            |                                                                                         |
|------------|-----------------------------------------------------------------------------------------|
| IGEL Setup | <b>Sessions &gt; Parallels Client &gt; Parallels Client Global &gt; USB Redirection</b> |
| Parameter  | Enable USB Redirection                                                                  |
| Registry   | twox.usb_redirection.usb_enable                                                         |
| Value      | enabled / <u>disabled</u>                                                               |
| Parameter  | Product ID                                                                              |
| Registry   | twox.usb_redirection.devicepolicy.product_rule.product                                  |
| Parameter  | Vendor ID                                                                               |
| Registry   | twox.usb_redirection.devicepolicy.product_rule.vendor                                   |
| Parameter  | Rule                                                                                    |
| Registry   | twox.usb_redirection.devicepolicy.product_rule.rule                                     |

|           |                                                     |

| Registry   | sessions.twox.local_resources.connect_clipboard                                                                         |
| Value      | <u>enabled</u> / <u>disabled</u>                                                                                        |

## VoIP

- Added **VoIP client Ekiga 4.0.1**.

## Firefox

- Updated **Firefox** to version **52.7.2 ESR**.
- Updated **Adobe Flash Player** download URL to version 29.0.0.113.

## Network

- Added **TTLS/PAP** and **TTLS/MSCHAPv2** to possible 802.1x authentication methods.
- Improved support for **Sierra EM7305 LTE** device (e.g. in Toshiba Portégé and Fujitsu LIFEBOOK E Series).

The EM7305 comes in various variants, e.g. one with ProductId 9041 and another one with ProductId 9063. The latter comes at least with one or with two USB configuration options. A device with only one configuration option has been observed on a Toshiba Tecra Z-50-D-115 notebook. It only works in MBIM mode and with IGEL firmware, when the device has successfully connected before with the same settings (particularly APN), e.g. under Microsoft Windows 10.

- Added support for **Sierra EM7455 WWAN module**.
- Added support for running the **Huawei E3531i WWAN** device in modem mode (in addition to HiLink mode).
- Added possibility to adopt the **hostname from a DHCP lease** as **permanent** terminal name. The purpose is to use the name received as part of a DHCP lease in future interactions with the DHCP server.

**More**

|           |                                               |
|-----------|-----------------------------------------------|
| Parameter | Adopt permanent Terminal Name from DHCP lease |
| Registry  | network.dns.hostname_adopt_from_dhcp          |
| Value     | enabled / <u>disabled</u>                     |

- **NetworkManager** updated to version **1.2.2**
- **ModemManager** updated to version **1.6.4**
- **usb\_modeswitch** updated to version **2.5.1**

## Open VPN

- Added **Huawei HiLink Mobile Broadband USB** device as possible uplink to OpenVPN sessions.

## OpenConnect VPN

- Added **OpenConnect** client version **7.08** to connect to **Cisco AnyConnect** and **Juniper VPN**. The feature must be enabled.

**More**

| Registry   | scard.pkcs11.use_coolkey                                                      |
| Value      | enabled / <u>disabled</u>                                                     |

- Updated **Gemalto SafeNet PKCS#11** library to version **10.0.37-0**. This package replaces **Gemalto/SafeNet eToken** and **Gemalto IDPrime** libraries.  
**Gemalto SafeNet** (formerly **Gemalto/SafeNet eToken**) now handles Gemalto cards and tokens including eToken and IDPrime.  
**Gemalto IDPrime** now handles IDPrime cards and tokens, preferred Common Criteria (CC) cards and tokens in Unlinked Mode.
- Added full integration of **OpenSC PKCS#11** library for access to smartcards.

| IGEL Setup | <b>Security &gt; Smartcard &gt; Middleware</b> |
| Parameter  | OpenSC                                         |
| Registry   | scard.pkcs11.use_opensc                        |
| Value      | <u>enabled / disabled</u>                      |

- Updated **MUSCLE CCID** smartcard reader driver to version **1.4.28**.
- Updated **ACS CCID** smartcard reader driver to version **1.1.5**.
- Updated **REINER SCT cyberJack** smartcard reader driver to version **3.99.5final.sp11**.
- Added parameter to disable **Identive CCID** smartcard reader driver. If this driver is disabled, some of the readers are handled by the MUSCLE CCID driver. This can help when problems with Identive reader driver occur.

[More](#)

|           |                                        |
|-----------|----------------------------------------|
| Parameter | Identive driver for smart card readers |
| Registry  | scard.pcscd.identiv_enable             |
| Value     | <u>enabled / disabled</u>              |

- Updated **cryptovision sc/interface PKCS#11** library to version **7.0.5.592**.
- New smartcard reader driver for **Fujitsu KB SCR eSIG** version **5.0.24**.

## HID

- Added **layout toggle** feature to on-screen keyboard.

[More](#)

|            |                                                            |
|------------|------------------------------------------------------------|
| IGEL Setup | <b>Accessories &gt; On-Screen Keyboard &gt; Appearance</b> |
| Parameter  | Enable switching to alternative layout                     |
| Registry   | userinterface.softkeyboard.enable_alternative_layout       |
| Value      | <u>enabled / disabled</u>                                  |

If this is enabled there is a key on the on-screen keyboard for toggling between the normal layout and a reduced layout, that saves space on the screen and has more or less the same features as the number block of an ordinary keyboard with some extensions.

## Base System

- Added support for **UEFI Secure Boot**.

When booted with Secure Boot the downgrade to a firmware version older than 10.04.100 is locked.

- Updated **kernel to version 4.15.15**
- Boot time optimization** (up to 25% faster)
- Switch power off on USB ports on shutdown and reboot.** The feature can be enabled in IGEL Setup. At the moment only IGEL H830C is supported.

[More](#)

|            |                               |
|------------|-------------------------------|
| IGEL Setup | <b>System &gt; Registry</b>   |
| Parameter  | Power off on shutdown         |
| Registry   | devices.usb.poweroff_shutdown |
| Value      | enabled / <u>disabled</u>     |

- Added Unit ID in Application Launcher **About > Hardware** section.
- Showing **number of CPU cores** in Application Launcher **About > Hardware** section now.

## Storage Devices

- Added support for **Mobile Device Access** feature in **Appliance Mode**. The Mobile Device Access tool can be opened via a new icon in the **In-session control bar**. The Mobile Device Access tool can also be started automatically.

[More](#)

|           |                                 |
|-----------|---------------------------------|
| Parameter | Autostart                       |
| Registry  | sessions.mtp-devices0.autostart |
| Value     | enabled / <u>disabled</u>       |

Mobile Device Access must be enabled at **IGEL Setup > System > Firmware Customization > Features**. Appliance Mode must be enabled at **IGEL Setup > Sessions > Appliance Mode**.

- The **Mobile Device Access tool** is now configurable at **IGEL Setup > Accessories > Mobile Device Access**.
- The **Mobile Device Access tray icon** respects the current theme now.

## X11 System

- Added support for **XDMCP Appliance Mode**. The XDMCP connection is configurable.

| Parameter  | Detect refresh rate automatically                |
| Registry   | x.xserver0.screen.auto_frequency                 |
| Value      | <u>enabled</u> / disabled                        |

- Added xorg debug script **/etc/igel/igel\_debug\_tools/xorg-debug.sh** to make collecting Xorg debug data easier (a /tmp/xorg-debug.log file is generated).

## Window Manager

- Added possibility to
  - a) **change the preferred placement mode** and
  - b) **modify the threshold value** up to which window size this placement mode should be chosen (otherwise window placement defaults to so called smart mode which tries to minimize overlapping).

**More**

|           |                                                                        |
|-----------|------------------------------------------------------------------------|
| Parameter | Preferred Placement                                                    |
| Registry  | windowmanager.wm0.variables.placement_mode                             |
| Value     | At mouse position / <u>Centered</u>                                    |
| Parameter | Maximum window size for which the preferred placement should apply     |
| Registry  | windowmanager.wm0.variables.placement_ratio                            |
| Value     | 0% / 10% / <u>20%</u> / 30% / 40% / 50% / 60% / 70% / 80% / 90% / 100% |

## Audio

- Volume** of audio output and input can now be configured up to 150% at **IGEL Setup page Accessories > Sound Preferences > Options**.
- Added a parameter for log level configuration of **Pulseaudio** service.

**More**

|           |                                                |
|-----------|------------------------------------------------|
| Parameter | Log level                                      |
| Registry  | multimedia.pulseaudio.daemon.log-level         |
| Range     | debug / info / <u>notice</u> / warning / error |

## Misc

- An EULA must be accepted now in IGEL setup assistant before finalizing it and using the IGEL OS.

## Java

- Updated **Oracle JRE to 1.8U162**.

## Remote Management

- Added **new log file transfer mechanism** for UMS feature **Save TC files for support** (UMS 5.08.110 or higher required). By default, it collects all log files visible in system log viewer, system configuration files group.ini, setup.ini and dhclient lease files. More files can be specified at **IGEL**

**Setup > Accessories > System Log Viewer > Options.** The resulting zip file has now a folder structure.

#### IGEL Cloud Gateway

- Added **UMS structure tag** handling for usage with **ICG agent**.

#### Hardware

- Added support for **IGEL UD7-LX 10**.

### Resolved Issues 10.03.500

#### Citrix

- Fixed sporadic crashes of the **Citrix USB Daemon**.

#### RDP / IGEL RDP Client 2

- Fixed passing **Ctrl+Alt+C keyboard shortcut** to RDP session.
- Fixed **smartcard redirection**: after session reconnection readers and cards were not connected any more in some cases.
- Fixed the **rdpdebugger** to work again (was broken in the previous release).
- Fixed misleading **RDP error message 'Authentication failed'** on wakeup from suspend mode
- Fixed **TCP timeout value** to get more stable **RDP connections** under certain circumstances.

#### VMware Horizon

- Fixed bug which prevented **microphone redirection** in Horizon Client RDP sessions.
- More**

| IGEL Setup | Sessions > RDP > RDP Global > Mapping > Audio |
|------------|-----------------------------------------------|
| Parameter  | Audio recording                               |
| Registry   | rdp.winconnect.rdppeai.enable                 |
| Value      | enabled / <u>disabled</u>                     |

#### RedHat Enterprise Virtualization Client

- Fixed **display corruption** with Windows connections.

#### Firefox

- Fixed possibility to **download files in the browser** if needed. The parameter to enable/disable file download is available here.

| IGEL Setup | Sessions > Browser > Browser Sessions > Window |
|------------|------------------------------------------------|
| Parameter  | Hide local filesystem                          |

|          |                                               |
|----------|-----------------------------------------------|
| Registry | sessions.browser.app.filepicker_dialog_hidden |
| Value    | enabled / <u>disabled</u>                     |

If enabled, the user is not allowed to download or use any save-as functionality from menu, context or keyboard shortcut.

- Fixed bug which **prevented the download using the file dialog** (in the case you open a link to a file of unknown type).
- Fixed **unmounting of the Firefox profile partition during shutdown** - now it is unmounted in a determinate manner after Custom Partition.

#### Network

- Fixed bug: **Network tray icons** sometimes didn't reappear after network restart.
- Fixed bug: **tcpdump debug tool** terminated immediately during boot.
- Fixed issue with **naming of USB ethernet devices**.
- Fixed wrong **LinkMode (10baseT/Half)** with autonegotiation and some USB ethernet devices.

#### AppliDis

- Changed default value of **PasswordMode** from **cmdline** to **prompt** as suggested by Systancia.

#### Smartcard

- Fixed driver for **Elatec RFID readers**. Before this fix the readers sometimes were not available after boot.
- Fixed VMware Horizon logon with OpenSC smartcards.

#### CUPS Printing

- Fixed bug where the **user for printjobs** was not set to the **domain user**.

#### Base System

- Fixed **Kerberos password change** to work also with transport protocol **TCP**. To force protocol TCP, prepend Domain Controllers with prefix "tcp/", e.g. "tcp/dc.example.com".
- Fixed **occasional desktop hang** in the local login or the network login mask after successful authentication.
- Fixed **password expiry notification** showing negative expiry period.
- Fixed **update to connect to SFTP** servers with very restrictive key exchange settings.
- Fixed input of the **reset key in reset to defaults boot**, if the administrator password is not available anymore. If more than 255 characters were entered in the 1st try, it was not possible to enter the reset key for a 2nd or 3rd time.
- Fixed **Active Directory logon with smartcard**: If the smartcard contains logon certificates for multiple users, it is possible to switch between these certificates and log on with the chosen certificate now.
- Fixed missing names for some **partitions** in update notification when having a user interface **language other than English**.
- Fixed problems with **never ending bootcode** update with some EFI BIOS variants.
- Fixed **ssh server port** configuration.
- Fixed **signotec signature pad** channel for Citrix.

- Increased stability of **signotec VCOM Daemon**.
- Remove residual information belonging to a **removed content from a custom partition**.
- Fixed **crash of xfce4-power-manager** after adding or removing input devices.

#### Custom Partition

- Fixed **automatic update of custom partition** - if download source isn't accessible then the content of the custom partition got lost.

#### Appliance Mode

- Fixed post session command **Logoff** in Appliance Mode.

#### X11 System

- Fixed **Elo-USB Touchscreen functionality** after reboot.
- Fixed **DisplayLink USB Support on UD3 LX50**.
- Fixed issue with **two monitors connected via DVI-D to HDMI adapter on a UD3 M330 (VIA)**.  
Added registry key to disable the new HDMI autodetection.

##### [More](#)

|           |                                             |
|-----------|---------------------------------------------|
| Parameter | Autodetect if DVI to HDMI adapter is in use |
| Registry  | x.drivers.via.autodetect_hdmi_output        |
| Value     | <u>enabled</u> / disabled                   |

- Fixed **wrong automatic resolution detection** if monitor does not have a preferred mode.
- Fixed **sporadic display corruptions** after monitors leaving the power saving mode.
- Improved handling of more than 2 screens.

#### Shadowing/VNC

- Fixed **sporadic VNC server crash**.

#### Audio

- Fixed **volume control of internal speaker in HP T610**.
- Fixed **automatic switch to output** over analog headphones.
- Not existing **S/PDIF inputs and outputs in Plantronics and Jabra USB headsets** are now ignored by audio subsystem (Pulseaudio).
- Added workaround in the kernel USB audio driver for **volume control on Sennheiser USB headsets**.

#### Remote Management

- Fixed **calculation of Unit ID for UMS management**. In some cases, it could happen that the MAC address of wrong network interface was chosen.
- Fixed **IGEL Setup Assistant** to get stopped when settings were received from UMS.
